Question 146:

In regards to ADD#1 Q&A #79(4) and Q&A #80(2), Please consider either providing a detailed description and or schedule of anticipated road work/road closures on goreway or removing the liquidated damages clause. The current

contract could potentially expose the successful bidder to liquidated damages due to access and scheduling issues outside of our control.
For example, If road work or closures limited access to the site and forced us to reschedule a key trade such as the hollow core precast installation, this could have a “snowball effect” and completely destroy the schedule, forcing the GC to be exposed to a multitude of unexpected costs.
The 60 day validity only amplifies the risk to the GC. We understand that it would be very challenging for the owner to provide a detailed schedule of roadwork on Goreway and it is for this reason we ask the owner please consider removing the liquidated damages from the contract.

Answer 146:

Fire Station 215 GC to coordinate with Road Works Contractor for access to site, when required.

Question 147:

In regards to ADD#1 Q&A 79 (5), Please consider that all works associated with the road beacons be carried under cash allowance. We have no way of anticipating what the cost would be to provide trenching and rough in work to the beacons due to the road widening and infrastructure works and there may be concealed or unknown conditions that could cause delays or cost increases.

Question 150:

• The thickness of the panels needs to be the other way around.

Aside from that the Bearclaw Dynamic bond can be another option as well.

Answer 150:

Refer to response in Question 131.

4.2 Roof Assembly RF-1 shows a 13mm protection board on top of the stone

Q1: as per Dwg A00.03, the wall assembly is to be Alumicor TW2200 with a 2 1/2” x 8” Depth frame, please note TW2200 Series comes only in 2” width and the maximum frame depth available with this series is 5”. , can we propose to use Windspec 5500 HTP Curtain wall System (Catalogue available on request) which has 2 ½” Frames with different mullion depth ranging from 4”- 10” .

Answer 159:

Alumicor TW2200 comes in a 5” to 8” system depth for triple glazed assemblies in a 2” (50.8mm) profile.

Question 160:

Q2: can we use a smaller depth mullion wherever it passes structurally? For example, some curtain wall frames will pass structurally by using 2 ½” x 4” mullion instead of an 8” depth mullion as per the wall assembly on Page A00.03.

50kW DC Mobile Charger CCS1 UL
Product Code HE9819025-01

The Heliox 50 kW Mobile charger is a high powered Level 3 DC charger that provides cost effective, flexible mobile charging for fleet owners, transit operators and EV service and maintenance providers. It is powerful enough to provide entry level depot charging solutions for EV owners starting out with electrification of fleets but not yet ready to invest in an expensive fixed depot charging installation.

This charger is typically used by:

- OEM's charging BEV's on their production line and for interoperability testing
- Transit operators charging small fleets or as a backup charger for fixed chargers installation
- Fleet operators purchasing their first BEV's
- In maintenance garages of Transit and Fleet operators to charge BEV's in for service

This charger is made in America is UL listed and can normally be delivered out of stock with a short lead time.

Power requirements
480Vac
3 phase (no neutral)
65 A circuit (minimum) 100A recommended

Product Code HE9819025-01

The Heliox 50 kW Mobile charger is a high powered Level 3 DC charger that provides cost effective, flexible mobile charging for fleet owners, transit operators and EV service and maintenance providers. It is powerful enough to provide entry level depot charging solutions for EV owners starting out with electrification of fleets but not yet ready to invest in an expensive fixed depot charging installation.

This charger is typically used by:

- OEM's charging BEV's on their production line and for interoperability testing
- Transit operators charging small fleets or as a backup charger for fixed chargers installation
- Fleet operators purchasing their first BEV's
- In maintenance garages of Transit and Fleet operators to charge BEV's in for service

This charger is made in America is UL listed and can normally be delivered out of stock with a short lead time.
