## EXECUTIVE SUMMARY

Fisher Engineering Limited was retained by the City of Toronto, Corporate Real Estate Management to conduct a reassessment survey for designated substances and hazardous materials in the Toronto Long Term Care Homes & Services building named Lakeshore Lodge, located at 3197 Lake Shore Boulevard West in Toronto, Ontario.

The objective of the survey was to determine the condition of previously identified asbestos-containing materials (ACM), identify and assess the condition of designated substances and other hazardous materials, and, if necessary, provide recommendations to assist the City of Toronto in fulfilling requirements to achieve regulatory compliance, as set forth under the Ontario Occupational Health and Safety Act, and enforced by the Ontario Ministry of Labour regulations for designated substances; O. Reg. 490/09 – Designated Substances and O. Reg. 278/05 – Asbestos on Construction Projects and in Buildings and Repair Operations.

This document should be filed as an addendum to the original survey report, which was issued by Fisher Environmental Ltd. on April 14 and 15, 2015.

These Designated Substances and Hazardous Materials survey report is intended for management purposes only. It is not to be used to establish the presence of designated substances or hazardous materials in building materials prior to renovation or demolition activities. A pre-renovation/pre-demolition audit of the work area for designated substances and hazardous materials should be conducted prior to any work activities that may disturb building materials potentially containing designated materials or hazardous substances.

Iqbal Fattah of Fisher Engineering Limited performed the fieldwork on May 17, 2023.

Material	Findings
Lead	Paint finishes were generally noted to be in GOOD condition throughout the Site. It is possible that lead-based paint and lead plumbing are present within the facility.
Mercury	Mercury can be found in fluorescent light bulbs and building thermostats.
Silica	As the building is constructed of concrete block and brick, with concrete floors, silica is expected to be found within these components of the building.
Other Designated Substances	No evidence of Acrylonitrile, Arsenic, Benzene, Coke Oven Emissions, Ethylene Oxide, Isocyanates, and Vinyl Chloride was found during the building survey.
PCB	No PCB containing equipment with the potential exception of fluorescent lighting ballasts was observed.
UFFI	No UFFI containing insulation was observed on site.
Mould	During the visual inspection of the surveyed areas, visible mould growth and water staining on non-ACM ceiling tiles or non-ACM fibreglass insulation were observed.

## RECOMMENDATIONS

Fisher Engineering Limited would report any deficiencies and recommendations to the City of Toronto using a 2023 Reassessment Program Corrective Actions Reporting Form. On completion of the recommended actions, an Addendum is made to confirm completion of all corrective actions.

## **1. INTRODUCTION AND REGULATORY REQUIREMENTS**

### **1.1 Introduction and Scope**

Fisher Engineering Limited was retained by the City of Toronto, Corporate Real Estate Management to conduct a reassessment survey for designated substances and hazardous materials in the Toronto Long Term Care Homes & Services building named Lakeshore Lodge, located at 3197 Lake Shore Boulevard West in Toronto, Ontario.

The objective of the survey was to determine the condition of previously identified asbestos-containing materials (ACM), identify and assess the condition of designated substances and other hazardous materials, and, if necessary, provide recommendations to assist the City of Toronto in fulfilling requirements to achieve regulatory compliance, as set forth under the Ontario Occupational Health and Safety Act, and enforced by the Ontario Ministry of Labour regulations for designated substances; O. Reg. 490/09 – Designated Substances and O. Reg. 278/05 – Asbestos on Construction Projects and in Buildings and Repair Operations.

This document should be filed as an addendum to the original survey, which was completed by Fisher Environmental Ltd. on April 14 and 15, 2015.

The Designated Substances and Hazardous Materials survey report is intended for management purposes only. It is not to be used to establish the presence of designated substances or hazardous materials in building materials prior to renovation or demolition activities. A pre-renovation/pre-demolition audit of the work area for designated substances and hazardous materials should be conducted prior to any work activities that may disturb building materials potentially containing designated materials or hazardous substances.

Iqbal Fattah of Fisher Engineering Limited performed the fieldwork on May 17, 2023.

## **2. SURVEY METHODOLOGY**

### **2.1 General Approach**

To ensure familiarity with the building, the Surveyor made reference to the previous assessment and reassessment reports provided by the City of Toronto prior to commencing the survey. The Surveyor also referred to facility floor plans included in the previous assessment reports, or provided independently by the City of Toronto. Site drawings identifying locations of asbestos-containing materials, if present, are included in Appendix III. Site photographs are included in Appendix IV.

### **2.2 Survey Methodology**

The City of Toronto provided the consultant with the previous Designated Substances and Hazardous Materials Survey report and / or other survey reports identified for the facility, if available. Prior to conducting the current survey, previous reports were reviewed by Fisher

Engineering Limited and the current report is updated with all available information regarding ACM, including that from past assessments and reassessments.

The survey was conducted in compliance with the Ontario Ministry of Labour (MOL) regulations for designated substances; O. Reg. 490/09 - *Designated Substances* and O. Reg. 278/05 - *Asbestos on Construction Projects and in Buildings and Repair Operations* made under the Occupational Health and Safety Act (OHSA), R.S.O. 1990.

The Surveyor conducted a visual reassessment of all known and assumed asbestos-containing materials in all accessible areas of the building, as detailed in past survey reports, and recorded the condition (GOOD, FAIR or POOR) of each known or assumed ACM on the Designated Substances and Hazardous Materials Inventory Sheet. The Surveyor also recorded detailed descriptions of previously-unidentified potential ACM, if observed. Please refer to Appendix I for the updated Designated Substances and Hazardous Materials Inventory Sheet.

Materials confirmed to be asbestos-containing during previous assessments were not sampled for this reassessment survey. Additionally, samples were not collected of materials that were previously confirmed to be non-asbestos by the requirements of O. Reg. 278/05.

Any other potential asbestos-containing materials noted during the reassessment survey that had not been identified in a previous survey, or were not sampled in accordance with the requirements of O. Reg. 278/05, were noted as part of the reassessment.

The Designated Substances and Hazardous Materials Survey is based on a walk-through assessment of the facility and shall be conducted room by room to establish locations, conditions and types of designated substances. The survey shall also include an examination for the presence of polychlorinated biphenyls (PCBs), urea-formaldehyde foam insulation (UFFI), and visible mould growth.

### **3. FINDINGS AND RECOMMENDATIONS**

#### **3.1 Asbestos**

Asbestos fibres may be released into the air by the disturbance of ACM during product use, demolition work, building or home maintenance, repair and remodeling. In general, exposure may occur only when the ACM is disturbed in some way to release particles and fibres into the air.

No samples were collected for analysis during the current survey.

Unless previously determined to be non-asbestos, plaster, drywall joint compound, vinyl floor tiles, mastics and window caulking in other areas of the facility should continue to be assumed to be asbestos-containing, and should be sampled prior to renovation and/or demolition activities.

### 3.1.2 Recommendations

All confirmed and assumed ACM were observed in GOOD condition at the time of the reassessment. Therefore, no recommended corrective actions are made at this time.

Any other building materials suspected to contain asbestos which are not outlined in this report should be assumed to be asbestos-containing until sample analysis determines asbestos content.

O. Reg. 278/05 requires that an Asbestos Management Program (AMP) be implemented as long as ACM are present in a building. The AMP, original survey report and subsequent reassessment reports must be available at the work place, and must identify the type of asbestos, and where asbestos can be found on a room-by-room basis.

**NOTE:** Interpretation of all sources of asbestos-related information, including but not limited to the original asbestos survey report, asbestos reassessment reports, room-by-room survey data, survey drawings and reports from previous asbestos abatement projects, should be completed by a competent person trained in the historical application of asbestos in building materials, building design and preferably by a person with site-specific knowledge and/or experience.

Information contained within any of the above-noted sources may not relieve the Regulatory responsibility of building Owners, or project Employers/Constructors, to complete a detailed site inspection prior to commencement of a project.

This report should not be used as a substitute for a detailed site inspection to identify asbestos-containing building materials, which must be specifically tailored to the scope and nature of any given project, and completed prior to any maintenance, renovation or demolition work that may cause disturbance to building materials.

### 3.2 **Lead**

Most lead in the environment comes from human activities such as burning fossil fuels, mining and manufacturing. Lead is used in the production of batteries, ammunition, metal products such as solder and pipes, and x-ray devices. Exposure happens when eating food or drinking water that contains lead. Deteriorated lead paint can contribute to lead dust. The main target for lead toxicity is the nervous system.

The regulation for lead applies to every employer and worker at a workplace where lead is present, produced, processed, used, handled or stored and at which a worker is likely to be exposed to lead.

Additionally, in 2004 the MOL issued *Guideline: Lead on Construction Projects* outlining practices that should be followed during construction projects to protect workers from exposure to lead. This includes the methods and equipment employed in the removal of lead containing coatings that reduce the creation of dust, providing appropriate facilities for workers to wash after each shift, and providing protective clothing and respirators where necessary.

#### 3.2.1 **Findings**

Paint finishes were generally noted to be in GOOD condition throughout the Site. Based on the age of the building, it is possible that lead-based paint and lead plumbing are present within the building. During the current investigation, no lead samples were collected for analysis.

No other indication of lead containing materials was observed during the building survey, with the exception of that which may be contained within batteries.

#### 3.2.2 **Recommendations**

During the disturbance of any painted surfaces that contain lead, it would be recommended that appropriate procedures and use of respirators be followed to protect workers.

No immediate corrective actions were recommended with regard to lead.

### 3.3 **Acrylonitrile**

Acrylonitrile is used to make other chemicals such as plastics, synthetic rubber and acrylic fibres. Breathing high concentrations of acrylonitrile will cause nose and throat irritation, tightness in chest, difficulty breathing, nausea, dizziness, weakness, headache, impaired judgment and convulsions. These symptoms usually disappear when exposure has stopped. If spilled on the skin, acrylonitrile will burn the skin and cause blisters and redness. Acrylonitrile is believed to be carcinogenic.

### 3.3.1 Findings

Acrylonitrile based polymers may have been utilized in the production of some of the building construction materials (e.g., paints, sealants, and adhesives). Although these polymers are generally volatile, they are expected to produce significant acrylonitrile exposure only during or shortly after application of the subject material. If present on site, acrylonitrile would not be expected to be a concern during future renovation or demolition works. Acrylonitrile was not evident in its pure form anywhere within the subject areas of the building.

### 3.3.2 Recommendations

No immediate corrective actions were recommended with regard to acrylonitrile.

## 3.4 Arsenic

Inorganic arsenic compounds are mainly used to preserve wood. Organic arsenic compounds are used as pesticides. Arsenic occurs naturally in soil and minerals and therefore may enter air and water. Breathing high levels of arsenic may cause sore throat and irritated lungs. Ingesting high levels of arsenic can result in death. Arsenic is a suspected carcinogenic substance.

### 3.4.1 Findings

Low levels of arsenic may be contained within paints or coatings utilized on building construction materials, however exposure levels resulting from personal contact are not expected to be significant. Arsenic or arsenic containing compounds were not encountered during the building survey works.

### 3.4.2 Recommendations

No immediate corrective actions were recommended with regard to arsenic.

## 3.5 Benzene

Benzene is colourless liquid with a sweet odour. Benzene utilization has historically been associated with solvents, paints, stains, adhesives, and in the manufacturing of various rubber products. While its current use in building materials has greatly decreased due to an increased awareness of associated health concerns, it may still be present in trace quantities in various industrial solvents. Gasoline sold in Canada contains approximately 4% benzene.

Breathing very high levels of benzene can result in death, while high levels may cause drowsiness, dizziness, rapid heart rate, headaches, and unconsciousness.

### 3.5.1 Findings

While it may be expected, given the age of the building, that the original construction materials utilized did contain some trace levels of benzene, it is likely that any has since

volatized and would not exceed the permissible exposure values. During future renovation or demolition works, it would not be expected to be a concern. No evidence of benzene was noted during the building survey, with the exception of that which may be contained in regular gasoline fuel burning equipment.

### **3.5.2 Recommendations**

No immediate corrective actions were recommended with regard to benzene.

## **3.6 Coke Oven Emissions**

Coke oven emissions are released during the carbonization of bituminous coal for the production of coke. Exposure routes include inhalation, skin and / or eye contact. Coke oven emissions are potential occupational carcinogens.

### **3.6.1 Findings**

This substance would not be expected to be found in the building. No evidence of the burning of coke was found during the building survey.

### **3.6.2 Recommendations**

No immediate corrective actions were recommended with regard to coke oven emissions.

## **3.7 Ethylene Oxides**

Ethylene oxide is a man-made chemical used primarily to make ethylene glycol (antifreeze and polyester). Breathing low levels of ethylene oxides for a prolonged period of time causes eye, skin and respiratory irritations, and can affect nervous system. Higher levels of exposure for shorter time produce symptoms that are similar but more severe.

### **3.7.1 Findings**

This substance would not be expected to be found in the building. No evidence of ethylene oxides was found during the building survey.

### **3.7.2 Recommendations**

No immediate corrective actions were recommended with regard to ethylene oxides.

## **3.8 Isocyanates**

Isocyanates are a family of highly reactive, low molecular weight chemicals. They are widely used in the manufacture of flexible and rigid foams, fibres, and coatings such as paints and varnishes, and elastomers and various building materials (e.g. spray on polyurethane products). Isocyanates are powerful irritants to the eyes, skin, and respiratory and gastrointestinal tracts.

### 3.8.1 Findings

Use of isocyanates or isocyanate compounds would not be expected in the building. No evidence of isocyanates was found during the building survey.

### 3.8.2 Recommendations

No immediate corrective actions were recommended with regard to isocyanates.

## 3.9 Mercury

Mercury is a naturally occurring metal. It is a shiny, silver-white and odourless liquid. It combines with other elements to form inorganic compounds or salts. Metallic mercury is used to produce chlorine gas and caustic soda, and is used in thermostats and thermometers, fluorescent light bulbs, dental fillings and batteries. Exposure occurs when breathing vapours from spills, incinerators, etc.

The nervous system is very sensitive to all forms of mercury. Exposure to high levels of metallic inorganic or organic mercury can permanently damage the brain, kidneys and developing fetus. Short-term exposure may cause lung damage, nausea, vomiting and diarrhea as well as skin and eye irritation.

### 3.9.1 Findings

Mercury can be found in fluorescent light bulbs and building thermostats. Prior to future renovation or demolition works, it would be recommended that these products be safely removed. The disposal of mercury containing items are regulated under the Environmental Protection Act, and it would be recommended that for disposal purposes any mercury containing thermostats and fluorescent light bulbs be disposed of at an MOE licensed receiver. With the exception of fluorescent light bulbs and building thermostats, no other evidence of mercury was noted during the building survey.

### 3.9.2 Recommendations

No immediate corrective actions were recommended with regard to mercury.

## 3.10 Silica

Silica is a crystalline compound occurring abundantly as quartz, sand, and many other minerals, and used to manufacture a variety of materials, especially glass and concrete. When mining this substance, silica can be deadly when it becomes airborne. If inhaled, silica dust can cause silicosis which can be fatal.

Additionally, in 2004 the MOL issued *Guideline: Silica on Construction Projects* outlining practices that should be followed during construction projects to protect workers' from exposure to silica. This includes the methods and equipment employed in the removal of silica containing materials that reduce the creation of dust, providing appropriate facilities

for workers to wash after each shift, and providing protective clothing and respirators where necessary.

### **3.10.1 Findings**

As the building is constructed of concrete block and brick, with concrete floors, silica is expected to be found within these components of the building. During any significant renovation or demolition works where concrete dust is generated, dust suppression techniques should be utilized to control worker exposure to silica. Silica is expected to be present in concrete and masonry products in the building.

### **3.10.2 Recommendations**

No immediate corrective actions were recommended with regard to silica.

## **3.11 Vinyl Chloride**

Vinyl chloride is used to make polyvinyl chloride (PVC) which is found in a variety of plastic products, including pipes, wires, cable coatings and packaging materials. Breathing high levels of vinyl chloride can cause dizziness, unconsciousness and death. Prolonged exposure causes changes in liver, nerve damage, immune reactions and changes in blood flow.

### **3.11.1 Findings**

PVC pipe is generally stable and does not allow for the liberation of vinyl chloride, under normal conditions. During future renovation or demolition works, this substance would not be expected to be a concern. Vinyl chloride was not evident in its pure form, anywhere in the subject dwellings.

### **3.11.2 Recommendations**

No immediate corrective actions were recommended with regard to vinyl chloride.

## **3.12 Polychlorinated Biphenyls (PCBs)**

PCBs are mixtures of synthetic organic chemicals with the same basic chemical structure and similar physical properties ranging from oily liquids to waxy solids. Due to their non-flammability, chemical stability, high boiling point and electrical insulating properties, PCBs were used in hundreds of industrial and commercial applications including electrical, heat transfer, and hydraulic equipment; as plasticizers in paints, plastics and rubber products; in pigments, dyes and carbonless copy paper and many other applications.

PCBs have been demonstrated to cause a variety of adverse health effects. PCBs have been shown to cause cancer.

### 3.12.1 Findings

No PCB containing equipment with the potential exception of fluorescent lighting ballasts was observed on site. Fluorescent lighting was observed in use in several areas of the building and inspection of three random light ballasts revealed that they did not contain PCB's. The disposal of PCB containing equipment is regulated under MOE Reg. 558, and it would be recommended that during any ballast replacement works the generated ballasts be evaluated for PCB content, with any PCB ballasts being consolidated and sent for disposal to an MOE licensed PCB receiver under waste class 243D.

### 3.12.2 Recommendations

It would be recommended that during any ballast replacement works the generated ballasts be evaluated for PCB content. Any PCB ballasts identified should be consolidated and sent for disposal to an MOE licensed PCB receiver under waste class 243D.

## 3.13 *Urea Formaldehyde Foam Insulation (UFFI)*

UFFI was developed in Europe in the 1950s as an improved means of insulating difficult-to-reach cavities in house walls. UFFI is composed of a mixture of urea-formaldehyde resin, a foaming agent, and compressed air. It was commonly injected into exterior wood frame walls in order to insulate difficult to reach cavities, until its ban in Canada in December 1980. When the mixture is injected into the wall, urea and formaldehyde unite and "cure" into an insulating foam plastic. In the insulating process, a slight excess of formaldehyde was often added to ensure complete "curing" with the urea to produce the urea-formaldehyde foam. That excess was given off during the curing, almost entirely within a day or two of injection. Properly installed, UFFI might not have resulted in any problem. Unfortunately, however, UFFI was sometimes improperly installed or used in locations where it should not have been.

While small amounts of formaldehyde are harmless, it is an irritating and toxic gas in significant concentrations. Symptoms of overexposure to formaldehyde include irritation to eyes, nose, and throat; persistent cough and respiratory distress; skin irritation; nausea; headache; and dizziness.

### 3.13.1 Findings

No UFFI containing insulation was observed on site.

### 3.13.2 Recommendations

No immediate corrective action is recommended with regard to UFFI.

## 3.14 *Mould*

Mould contamination inside buildings has become a concern to both building owners and occupants. Exposure to moulds is known to cause a variety of health effects in some people. Many fungal spores are considered to be allergenic to susceptible persons, though individual susceptibility varies greatly.

Elevated levels of indoor mould are usually attributed to the chronic moist conditions due to water leaks, floods or elevated humidity. Under these conditions, already low levels of fungal spores in air from plants and other sources may multiply on cellulose containing materials such as carpets, wallboards, and wood, and result in mould contamination and, if left untreated, can be destructive to certain building materials.

Currently, no Canadian regulations govern the presence of mould and/or water-damaged materials in the workplace environment. However, the Health Canada document “Fungal Contamination in Public Buildings: Health Effects and Investigation Methodology” (2004) concludes that current knowledge supports the need to prevent damp conditions and mould growth and remediate any fungal growth and/or contamination in buildings.

Therefore, the presence of mould growth, mould-contaminated materials and/or water-damaged materials in the occupied environment is interpreted as a failure of Health Canada guidelines for microbial contamination in indoor environments, and as such, requires remedial action.

The MOL issued a document titled “Alert: Mould in Workplace Buildings.” This document explains the MOL’s position with respect to the presence of mould in workplace buildings.

The Environmental Abatement Council of Canada (EACC) has provided guidelines regarding investigation and remediation works Mould Abatement Guidelines Edition 3 (2015). Mould Guidelines for the EACC to protect the health of workers who may be exposed to mould during building renovations.

#### **3.14.1 Findings**

During the visual inspection of the surveyed areas, visible mould growth and water staining on non-ACM ceiling tiles or non-ACM fibreglass insulation were observed in the following locations: B-020 Corridor (South End), B-002 Office Storage, B-007 Disaster Supplies Storage, B-009 Maintenance Workshop, 1-039 Laundry Room, 1-45 Vestibule, 2-066 Clean Linen Room and 3-026 Clean Linen Room.

#### **3.14.2 Recommendations**

Removal of the mould-impacted building materials should be conducted as a Level 1 Mould Remediation Operations, based on EACC guidelines. Following abatement, the source of water ingress should be determined and addressed to prevent potential future fungal amplification.

### **4. CORRECTIVE ACTIONS**

Fisher Engineering Limited communicated the reported deficiencies and recommendations for corrective actions to the City of Toronto. These activities have been completed and an Addendum was made to this report to confirm completion of the corrective actions. Details of the abatement work can be found in the Corrective Actions Inspection Report (Project No. FE 23-13254), which are provided in Appendix V.

Fisher Engineering Limited believes that all recommendations made as a result of the findings of the reassessment survey have been addressed.

## 5. STATEMENT OF LIMITATIONS

Fisher Engineering Limited accepts responsibility for the competent performance of its duties in executing this assignment within the normal standards of the profession, but disclaims responsibility for consequential damages, if any.

The extent of the building survey of designated substances and hazardous materials is based on prior agreement of the scope of work with the client, and the rationale given in this report. The building survey findings rely on professional interpretation of selective sampling and analysis. Sample analysis results have been applied to homogenous materials in unsampled locations; it was not within the scope of work to carry out an exhaustive sampling and analysis program. For non-accessible building spaces, the likelihood of the presence or absence of asbestos and other designated substances has been described, but such assessment is not a definitive statement of presence or absence.

This report was prepared for the City of Toronto, Corporate Real Estate Management. The scope of services performed may not be appropriate for the purposes of other users, and any use or reuse of this document or its findings or recommendations represented herein is at the sole risk of any other user.

We trust that the information provided in the report meets your current requirements. If you have any questions or concerns, please do not hesitate to contact the undersigned.

## 6. SIGN-OFF

We trust that this report meets with City of Toronto requirements and we thank you for the opportunity to be of service. Should you have any questions, please do not hesitate to contact us.

**Re: Level I Mould Abatement at Long Term Care Home, 3197 Lakeshore Blvd West, Toronto, ON**

As requested, Fisher Engineering Limited (Fisher) has provided environmental monitoring services with respect to mould abatement activities recently undertaken at Lakeshore Lodge Long Term Care Home, located at 3197 Lakeshore Blvd West, Toronto, Ontario (the "Site"). Mould remediation was initiated following the discovery of mould impacted and water-stained ceiling tiles and pipe insulation, during the Annual Survey, conducted on May 17, 2023, Fisher Project No. FE 23-12800.

The City of Toronto retained Fisher as the environmental health and safety consultant to provide project monitoring. Fisher retained Furcon Environmental Inc. (Furcon) as the environmental contractor to undertake the specified remedial action. Abatement work was conducted in accordance with Level 1 mould remediation protocols, as outlined by the Environmental Abatement Council of Canada (EACC) Mould Abatement Guidelines, Edition 3 (2015). The fieldwork was conducted on August 28, 2023.

Based on the recommendations provided in a corrective action form, the ceiling tiles and pipe insulation are to be removed from the rooms listed below, following Level 1 Mould Remediation Procedures, and replaced with new materials.

Loc. B-020, Corridor
Loc. B-002, Office Storage
Loc. B-007, Disaster Supplies

Loc. B-009, Workshop
Loc. 1-039, Laundry Room
Loc. 1-045, Vestibule

Loc. 2-066, Clean Linen Room
Loc. 3-026, Clean Linen Room

Based on the Site observation, the remediation scope of work had been completed and the work area was cleaned to an acceptable level.

Respectfully submitted,
