PARKIN

YORK REGIONAL POLICE
HELICOPTER HANGAR
CONTRACT NO. T-24-33

Project No.	2402
Date:	September 09, 2024
Issued:	For Bid

PART 1 - THE CONSULTANTS

1.1 ARCHITECTURAL CONSULTANT

.1 Parkin Architects Limited
1 Valleybrook Drive, Suite 500
Toronto, Ontario M3B 2S7

Telephone: (416) 467-8000

1.2 STRUCTURAL CONSULTANT

.1 DK Watson Consulting
464 Willard Ave.
Toronto, ON M6S 3R6
Telephone: (416) 399-7173

1.3 MECHANICAL, ELECTRICAL CONSULTANT

.1 Quasar Consulting Group
250 Rowntree Dairy Road
Woodbridge, Ontario L4L 9J7
Telephone: (905) 507-0800

1.4 HARDWARE CONSULTANTS

.1 Allegion Canada
1076 Lakeshore Road East
Mississauga, ON L5E 1E4
Telephone: (800) 900-4734

1.5 CIVIL CONSULTANT

.1 Counterpoint Engineering Inc.
8395 Jane Street, Suite 100,
Vaughan ON, L4K 5Y2
Telephone: (905) 326-1404

1.6 LANDSCAPE CONSULTANT

.1 Ron Koudys Landscape Architects Inc. (RKLA)
368 Oxford St E,
London, ON N6A 1V7
Tel: (519) 667-3322

1.7 COST CONSULTANT

.1 Altus Group
33 Yonge St #500,
Toronto, ON M5E 1G4
Telephone: (416) 641-9500

1.8 ENERGY CONSULTANT

.1 Pratus Group Inc.
213 Sterling Rd Unit 108,
Toronto, ON M6R 2B2
Telephone: (416) 947-6918

1.9 CODE CONSULTANT

.1 LMDG
Suite 100 290 North Queen Street
Toronto, ON M9C 5L2
Telephone: (416) 646-0162

1.10 AVIATION CONSULTANT

.1 RGHeliservices Consulting Inc.
174 Skylark Ave,
Parksville, BC V9P1M3
Telephone: (604) 626-6834

PART 1 - GENERAL

1.1 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.2 INFORMATION AVAILABLE TO BIDDERS

.1 The following information is available to Bidders and is bound in specifications appended to this document.

.2 The Following reports are for information only. Neither the Consultant nor the Owner assume any liability for items extracted from or contained in the reports.

1.3 GEOTECHNICAL AND ENVIRONMENTAL INVESTIGATION REPORT(S):

.1 A copy of the following geotechnical and environmental investigation reports and related letters, prepared by the Owner's geotechnical consultant for the Place of the Work, are bound herein:

.1 Geotechnical Investigation Proposed Helicopter Hangar, Project 44148, dated August 30, 2024, by Patriot Engineering Ltd.

.2 Partial Site Plan Showing the Approximate Borehole Locations, Project 44148, dated August 2024, by Patriot Engineering Ltd.

.2 Geotechnical investigation documents are not guaranteed to be representative of actual subsurface conditions of the Place of the Work.

.3 When calculating soil volumes for bidding purposes, Bidders should assume flat plane geometric layers formed by straight lines drawn between subgrade elevations, for each material identified in the soils report.

.4 This soils report shall not form part of the Contract Documents. The geotechnical report is provided for information purposes only and the Owner assumes no responsibility for their correctness or completeness.

.5 Bidders shall ensure the Estimated Contract Price in their Bid includes and accounts for any work that is implied in, or reasonably inferable from, the soils report.

1.4 TRAINING CENTRE EFERENCE DRAWINGS

.1 The following Drawings are issued with this Contract for reference only. Be responsible for properly assessing the information contained in these reference Drawings which has affect on the Work of this Contract. Consultant and Owner assumes no responsibility about their accuracy and/or completeness:

.1 Training Electrical Site Plan E-001

.2 Training Centre Site Plan Details E-901

.3 Training Centre Grading Plan C-102

.4 Training Centre Grading Plan C-103

.5 Training Centre Servicing Plan C-100

APPENDIX A

RFT PARTICULARS

TABLE OF CONTENTS

A. The Deliverables

The Deliverables include, but are not limited to, the construction of a helicopter hangar and related interior and exterior spaces in the Town of East Gwillimbury, Ontario, as further described in the Specifications and the Drawings included in Appendix C – Form of Contract.

B. Material Disclosures

1. Contract for Deliverables

The selected bidder will be required to enter into a contract with the Board for the provision of the Deliverables in the form of contract attached as Appendix C. Bidders should review the form of contract before submitting their bid. Any concerns or questions regarding the terms and conditions of the contract should be directed to the Board through the 'Submit a Question' feature on the Bidding System before the Closing Time.

2. Term of Contract

The Deliverables shall be completed in accordance with the Contract Time specified in Appendix C.

3. COVID-19

The bidder that enters into a contract with the Board for the provision of the Deliverables will be required to comply with all legislative amendments, controls, regulations, requirements and orders that were or are issued by the Government of Canada, the Province of Ontario, the Region or other municipal authority in response to the global pandemic of the virus leading to COVID-19 including any resurgence or mutation thereof (the "**Pandemic**").

Bidders shall consider all legislative amendments, controls, regulations, requirements and orders that were issued, prior to the Closing Time, by the Government of Canada, the Province of Ontario, the Region or other municipal authority in response to the Pandemic, including any impacts such legislative amendments, controls, regulations, requirements and orders could have on pricing, and the bidder's prices will be deemed to include all costs associated with the foregoing.

4. Electronic Monitoring Policy

The Board has implemented an Electronic Monitoring Policy, as may be amended from time to time. This policy outlines when and how employees and contractors may be electronically monitored while performing work-related duties and activities or while using YRP assets, equipment, systems or information.

5. Examination of the Site

Site investigation(s) have been conducted and the following document(s) are provided for information purposes only:

- Geotechnical Investigation Proposed Helicopter Hangar, Project 44148, dated August 30, 2024, by Patriot Engineering Ltd.;
- Partial Site Plan Showing the Approximate Borehole Locations, Project 44148, dated August 2024, by Patriot Engineering Ltd.; and
- Phase One Environmental Site Assessment dated December 2013 prepared by Conestoga-Rovers and Associates.

The Board and the Region assume no responsibility for the correctness or completeness of any reports or other information provided by the Board in relation to site investigations or conditions. Bidders rely on these documents at their own risk.

Prior to submitting a bid, bidders shall thoroughly acquaint themselves with the RFT and carefully examine the site where the Deliverables will be performed, to fully inform themselves of the existing conditions and limitations. Access to the site may be provided during the bidding period when requested.

Bidders shall not claim, after the submission of their bid, that there was any misunderstanding of the terms and conditions of the contract relating to site conditions.

6. Designated Substances Notice

A site hazard assessment has been conducted and all known designated substances under the Occupational Health and Safety Act, RSO 1990, c O.1 are listed in the Pre-Work Hazard Assessment Form attached as Appendix G.

The Pre-Work Hazard Assessment Form is provided for information purposes only and the Board and the Region assume no responsibility for its correctness or completeness.

7. Award of Contract

The award of the contract will be subject to the approval of the Board or its authorized delegate and, if applicable, the receipt of sufficient funding.

C. Mandatory Submission Requirements

1. Bid Deposit

Bidders shall submit a bid deposit in the amount of not less than 10% of the Subtotal Contract Amount generated on the Bidding System in the Schedule of Prices (the "**Bid Price**"), to act as security for the satisfaction of the pre-conditions of award listed in Section E.

The bid deposit shall be in the form of a digital Bid Bond from a recognized guarantee or surety company acceptable to the Board and the Region and authorized by law to do business in the province of Ontario. The form of Bid Bond acceptable to the Board and the Region is attached as Appendix E. In lieu of the Bid Bond form attached as Appendix E, the Board and the Region may at their sole discretion accept Bid Bonds that are substantially in the form of Appendix E or substantially in the form issued by the Canadian Construction Documents Committee (CCDC220 Form) or the Surety Association of Canada.

Bidders shall upload the digital Bid Bond in the document upload field titled "Bid Bond (Digital Bond)" in the Documents & Bonding step in the Bidding System.

2. Undertaking to Bond

Bidders shall submit a digital Undertaking to Bond. The Undertaking to Bond shall be in the form of a digital Undertaking to Bond from a recognized guarantee or surety company acceptable to the Board and the Region and authorized by law to do business in the province of Ontario. The form of Undertaking to Bond acceptable to the Board and the Region is attached as Appendix F. In lieu of the Undertaking to Bond form attached as Appendix F, the Board and the Region may at their sole discretion accept Undertakings to Bond that are substantially in the form of Appendix F or substantially in the form issued by the Surety Association of Canada, including digital Agreements to Bond or Consents of Surety.

Bidders shall upload the digital Undertaking to Bond in the document upload field titled "Undertaking to Bond (Digital Bond)" in the Documents & Bonding step in the Bidding System.

D. Mandatory Technical Requirements

Not applicable.

E. Pre-Conditions of Award

1. Executed Contract

The selected bidder shall execute a contract with the Board for the provision of the Deliverables.

2. WSIB Certificate of Clearance

The selected bidder shall submit a current Certificate of Clearance from the Workplace Safety and Insurance Board.

3. Insurance

The selected bidder shall provide proof of insurance coverage as specified in Appendix D. Bidders should review the insurance requirements with their insurance provider to ensure that each requirement can be met before submitting their bid. Any concerns or questions regarding the insurance requirements should be directed to the Board through the 'Submit a Question' feature on the Bidding System before the Closing Time.

4. Bonds

The selected bidder shall provide:

(a) a Performance Bond in an amount equal to 100% of the Bid Price and conforming to Form 32 - Performance Bond under Section 85.1 of the Construction Act; and

(b) a Labour and Material Payment Bond in an amount equal to 50% of the Bid Price and conforming to Form 31 - Labour and Material Payment Bond under Section 85.1 of the Construction Act

Form 32 – Performance Bond under Section 85.1 of the Construction Act and Form 31 – Labour and Material Payment Bond under Section 85.1 of the Construction Act can be found at http://ontariocourtforms.on.ca/en/construction-lien-act-forms/.

The bonds shall be issued by a recognized guarantee or surety company acceptable to the Board and authorized by law to do business in the province of Ontario.

5. AODA Training Certificate

The selected bidder shall submit a completed AODA Training Certificate in the form attached as Appendix H.

6. Security Clearances

The selected bidder shall submit a completed Confidential Personal History Form for each individual who will be performing the Deliverables or may be required to enter a YRP facility.

The selected bidder and any individuals who may be involved in the performance of the Deliverables under the contract will be subject to a security clearance by the YRP and the selected bidder hereby consents to the security clearance.

Approval of the selected bidder's employees and subcontractors will be at the sole discretion of the Board.

The Confidential Personal History Form may be reviewed and downloaded from yrp.bidsandtenders.ca.

T-24-33
APPENDIX B
PRICING

Instructions on How to Submit Pricing

Bidders must submit their pricing information electronically in Step 1 – Schedule of Prices within the Bidding Website. Bids that contain pricing information in any location other than the Schedule of Prices may be deemed non-compliant and may be disqualified from further consideration.

Prices shall not include escalation clauses or any other qualifications for the term of the contract.

Rates quoted by the bidder must be all-inclusive and must include, without limitation, all equipment, labour and material costs, all travel and carriage costs, all insurance and bonding costs, all costs of delivery, all costs of installation and set-up, including any pre-delivery inspection charges, profit and all other overhead, disbursements and administrative costs, including any fees or other charges required by law, other than HST.

Evaluation of Pricing

Pricing will be evaluated based on the Subtotal Contract Amount indicated in the Summary Table in the Schedule of Prices.

T-24-33 - General Contractor for the Construction of a Helicopter Hangar and Related Interior and Exterior Spaces in the Town of East Gwillimbury, Ontario

Opening Date: September 10, 2024 9:50 AM

Closing Date: October 1, 2024 2:00 PM

Schedule of Prices

All prices must be quoted in Canadian dollars, (excluding H.S.T.) and shall include all duty, custom clearances, tariffs and exchange, travel time, wages and delivery charges; no other charges shall apply. Shipping shall be FOB destinations within Ontario. YRP reserves the right to award by item or part thereof, groups of items or parts thereof, or all items of the Request for Bid, if in so doing, the best interests of the Board will be served.

*Denotes a "MANDATORY" field.

Bidders/Proponents must insert prices for all mandatory items. If a Bidder/Proponent cannot provide any mandatory item, it shall not submit a Bid/Proposal. If an item is not mandatory and is not being bid on, it should be left blank. If a Bidder/Proponent inserts a price of $0.00 for any item, it will be required to provide that item at no cost to the Board.

Scope of Work - Lump Sum

Item Description	Quantity	Unit of Measure	Unit Price *	Extended Total
Lump sum price to complete the construction of a helicopter hangar and related interior and exterior spaces in the Town of East Gwillimbury, Ontario as specified in the Contract Documents, excluding cash allowances.	1	Lump Sum		
			Subtotal:	

Cash Allowance

Cash Allowance will be administered in accordance with GC 4.1 of the Contract.

Item	Description	Quantity	Unit Price	Extender Price
CA1	Inspection and Testing: For inspection and testing services provided by in-dependent inspection and testing companies and consultants	1	$150,000.0000	$ 150,000.00
CA2	Commissioning of mechanical and electrical work by independent commissioning consultant in compliance with specified requirements. Normal commissioning by mechanical and electrical trades shall be included in Total Bid Price and excluded from this cash allowance item	1	$100,000.0000	$ 100,000.00
CA3	Electrical Municipal Utilities connection charges. All Work shown on the Drawings shall be included as part of Total Bid Price and excluded from this cash allowance	1	$50,000.0000	$ 50,000.00
CA4	Supply and installation of security system and equipment (excluding empty conduit which shall be included in Total Bid Price)	1	$75,000.0000	$ 75,000.00
CA5	Supply and Installation of fuel tank including the fuel tank equipment and its components, layout, testing and engineering fees. The empty conduit shall be included in Total Bid Price and excluded from this cash allowance	1	$150,000.0000	$ 150,000.00
			Subtotal:	$ 525,000.00

Provisional Prices

Refer to GC 4.2 of Appendix C - Form of Contract

Should work noted in the Description below add to the Contract Price, enter Pricing as a positive number. Should work noted in the Description below reduce the Contract Price, enter Pricing as a negative number.

Item	Description	Unit of Measurement	Pricing *
PP1	Reduce extent of snow melt system from entire area noted as 'heated concrete' on drawing A-002 to only the area noted as Separate Price #2 Helicopter Parking. Maintain Boilers B-1 and B-2 for redundancy but reduce capacity to suit reduced area. Revise pumps P2 and P2A, exterior manifolds and all snow melt piping shown of Mechanical drawing M-702 as appropriate for reduced snow melt area.	Lump Sum	
PP2	Delete entire snow melt system from area noted as 'heated concrete' on drawing A-002. Delete Boilers B-1 and B-2, pumps P2 and P2A, all related interior piping and wiring and all exterior manifolds and snow melt piping indicated on Mechanical drawing M-702.	Lump Sum	
PP3	Provide prefinished interior metal liner panel to exposed pre-engineered purlins from ground floor to approximately 5000 AFF on east and north hangar walls	Lump Sum	

Unit Prices

Unit prices are values to be used after contract award to predetermine the cost to add or delete work from the contract.

Item	Description	Unit of Measurement	Pricing *
UP1	Revise underside of footing elevation (per 300mm) from footing elevations indicated on Structural Drawing S100. Footing thickness to remain as shown, increase or decrease pier height as required	per vertical foot of pier height change

Documents & Bonding

Bidders shall submit with their bid a Digital Bid Deposit and Digital Undertaking to Bond in accordance with the RFT documents. Both documents must be capable of verification.

- Digital Bid Bond * (mandatory)
- Digital Undertaking to Bond * (mandatory)

Addenda, Terms and Conditions

1. The Bidder, by submitting this Bid, agrees that it will not claim, in contract, tort, or otherwise, for any costs, expenses, compensation, damages, or anything whatsoever, in respect of this Request for Tender process.
2. The Bidder, by submitting this Bid, represents that it has read and completely understands the terms and conditions of this Request for Tender in full, and agrees to comply with the terms and conditions set out in this Request for Tender, failing which The Regional Municipality of York Police Services Board (the “Board”) may reject the Bid.
3. The Bidder, by submitting this Bid, offers to enter into a contract with the Board to perform the Work described in the Bid Documents, do and fulfill everything indicated in the Contract, and complete the Work strictly in accordance with the Contract Documents within the Contract Time at the unit and lump sum prices submitted in the Schedule of Prices.
4. The Bidder acknowledges that the quantities included in the Schedule of Prices are an estimate of the Board’s requirements and there is no guarantee that the full quantities of products or work will be required or purchased. The Bidder agrees that the unit prices quoted in the Schedule of Prices are not subject to change regardless of whether the final Contract quantities exceed, or are less than, the estimated quantities shown in the Schedule of Prices.
5. The Bidder confirms that all prices submitted are in Canadian funds.
6. The Bidder confirms that its prices exclude Harmonized Sales Tax ("HST"), but include all other taxes and duties, as well as any reduction in the Contractor's operating costs due to rebating of any sales taxes. The Bidder agrees that all work performed under the Contract will be subject to HST only.
7. In the event that the Board requests a breakdown of lump sum prices after the bid closing date, the Bidder agrees to complete, and submit to the Board, a breakdown of its lump sum price for each Division/Part within two Business Days of the Board’s request. The Bidder acknowledges that the sum of the individual prices submitted for each Division/Part shall be the same as the lump sum price submitted for that Division/Part in its electronic Bid submission.
8. The Bidder agrees that this Bid shall remain open for acceptance, and that the prices will remain firm and unchanged, for the irrevocability period specified in the Bid Documents and the Board may, at any time within this period, accept this Bid regardless of whether any other Bid has been previously accepted or not.
9. The Bidder acknowledges that if its Bid is accepted and the Bidder fails to properly execute and return the Contract to the Board, or fails to deliver the bonds, proof of insurance and all other documents required to be delivered to the Board prior to commencing the Work, within eight Business Days of the date of award of the Contract to the Bidder, or if the Bidder withdraws its Bid, the Board may, at its option, consider that the Bidder has abandoned its Bid and the acceptance by the Board shall be null and void and:
    1. the Board may retain the proceeds of the bid deposit as liquidated damages; and
    2. the Bidder shall immediately pay to the Board the difference between the amount of the Bidder’s Bid and any other Bid that the Board accepts if the other Bid is for a greater amount and any costs that the Board incurs by reason of recalling the Bids.
10. In addition, the Bidder shall indemnify, hold harmless and defend the Board, York Regional Police (“YRP”), The Regional Municipality of York (the “Region”), their Council members, board members, employees, agents, partners, successors and assigns (collectively the “Indemnified Parties”), from and against all actions, claims, demands, losses, costs, damages, suits and proceedings whatsoever which may be brought against or made upon the Indemnified Parties and against all losses, liabilities, judgments, claims, suits, demands and expenses which the Indemnified Parties may sustain, suffer or be put to resulting from, or arising out of, the undersigned’s withdrawal of its Bid or failure to execute the Contract.
11. The Bidder agrees that if this Bid is accepted, and the Bidder is non-resident in Ontario or Canada, it shall obtain a GST/HST Registration Number prior to commencement of the Work.
12. The Bidder confirms that it has the necessary experience, skill and expertise required to fulfill the obligations, duties, liabilities and responsibilities of the Contractor under the Contract.
13. The Bidder declares that no person, firm or organization, other than the Bidder, has any interest in this Bid or in the proposed contract for which this Bid is submitted.
14. The Bidder declares that this Bid is made without any connection to, comparison of figures against, arrangement with, or knowledge of, any other corporation, firm or person submitting a Bid and is in all respects fair and without collusion or fraud.
15. The Bidder agrees that no member of Regional Council, YRP, the Board, or officer or employee of the Region, YRP or the Board is, will be, or has become, interested directly or indirectly, as a contracting party, partner, shareholder, surety or otherwise, in the performance of the Work, or in any portion of the profit thereof, or any supplies to be used therein, or in any of the monies to be derived therefrom.
16. The Bidder confirms that it has examined the Site and the Bid Documents and is fully informed as to the nature of the Work and conditions relating to its performance.

17. The Bidder acknowledges that any reports made available by the Board and/or the Region were compiled for the use of the Board and/or the Region and no responsibility will be assumed by the Board or the Region for the correctness or completeness of the reports.
18. The Bidder acknowledges that it has received information regarding the Region's Health and Safety Guide for Construction Contractors and is aware of the hazards identified in the Board's Pre-Work Hazard Assessment Form. The Bidder agrees to execute all of the documentation required under the Region's Health and Safety Guide for Construction Contractors at the pre-construction meeting and to comply with the Occupational Health and Safety Act, RSO 1990, c O.1 and regulations.
19. If the Bidder is an incorporated company, the Bidder represents to the Board that:
    1. the Bidder is a corporation validly subsisting under the laws of Ontario and has full corporate power and capacity to enter into this Bid and any documents arising from this Bid; and
    2. all necessary corporate action has been taken by the Bidder to authorize the execution and delivery of this Bid.
20. The Bidder acknowledges that the Contractor may be subject to a performance evaluation during the course of, and/or at the conclusion of, the Contract.
21. The Bidder agrees to be bound by all terms and conditions contained in the Bid Documents.
22. The Bidder, by submitting this Bid, represents that it has considered all legislative amendments, controls, regulations, requirements and orders that have been issued by the Government of Canada and the Province of Ontario in response to the global pandemic of the virus leading to COVID-19, including any impacts such legislative amendments, controls, regulations, requirements and orders could have on its pricing, and confirms that its prices submitted in the Schedule of Prices include all costs associated with the foregoing.
23. The Bidder agrees that if this Bid is accepted, it shall comply with all legislative amendments, controls, regulations, requirements and orders that have been, or will be, issued by the Government of Canada or the Province of Ontario in response to the global pandemic of the virus leading to COVID-19 including any resurgence or mutation thereof.
24. The Bidder agrees that if this Bid is accepted, it shall comply with the Board's and the Board's policies, protocols and procedures including, but not limited to, the Board's COVID-19 Vaccination Policy for Contractors, as may be amended or replaced from time to time.

☐ I/We, the Undersigned, having examined the Instructions to Bidders, Special Instructions and/or Scope of Work-Specifications, do hereby offer to enter into a Contract with the Board.

The Bidder shall declare any potential conflict of interest that could arise from participating in this bid. Do you have a potential conflict of interest?

○ **Yes** ○ **No**

The Bidder acknowledges and agrees that the addendum/addenda below form part of the Bid Document

Please check the box in the column "**I have reviewed this addendum"** below to acknowledge each of the addenda.

File Name	I have reviewed the below addendum and attachments (if applicable)	Pages
There have not been any addenda issued for this bid.		

APPENDIX B

Health and Safety Guide for Construction Contractors

Human Resource Services – Workplace Health, Safety, Wellness & Benefits Division
Updated: February 2019

Table of Contents

1. Introduction

This Guide is intended to ensure that, pursuant to the *Occupational Health and Safety Act*, the Regional Municipality of York (the "Region") complies with its obligations as Owner and the General Contractor complies with its obligations as Constructor on Construction projects.

This Guide serves as a guideline for bidders to ensure that adequate resources and appropriate measures are utilized to perform the Work safely and to ensure that appropriate procedures are established for monitoring and evaluating health and safety performance.

The purpose of this Guide is to ensure that all Work undertaken by General Contractors is conducted in a manner that:

- Considers and protects the health and safety of York Region residents and members of the public;
- Considers and protects the health and safety of all Workers.

All bidders are required to acknowledge that they have reviewed this Guide and the Pre-Work Hazard Assessment Form. The General Contractor is required to submit a signed copy of the Pre-Work Hazard Assessment Form (template shown at Appendix A) prior to commencing Work.

2. Definitions

***Accessibility for Ontarians with Disabilities Act*:**

The Ontario *Accessibility for Ontarians with Disabilities Act, 2005*, S.O. 2005, c. 11 and its regulations.

Bid Documents:

The documentation issued by the Region in the form of a request for quotation, proposal or tender. Bidders submit their quotes, proposals or tenders in response to Bid Documents.

Competent Person:

A person who:

(a) is qualified because of knowledge, training and experience to organize the Work and its performance,
(b) is familiar with the *Occupational Health and Safety Act* and the regulations that apply to the Work, and
(c) has knowledge of any potential or actual danger to health or safety in the Workplace. (*Occupational Health and Safety Act*, s. 1)

Construction:

The erection, alteration, repair, dismantling, demolition, structural maintenance, painting, land clearing, earth moving, grading, excavating, trenching, digging, boring, drilling, blasting, or concreting, the installation of any machinery or plant, and any Work or undertaking in connection with a project but does not include any Work or undertaking underground in a mine. (*Occupational Health and Safety Act*, s. 1)

Constructor:

A person who undertakes a project for an Owner and includes an Owner who undertakes all or part of a project by himself or by more than one Employer. (*Occupational Health and Safety Act*, s. 1)

Consultant:

The person, firm or corporation, if any, retained by the Region to perform consulting services in relation to the Work.

Contract:

The undertaking by the Region and the General Contractor to perform their respective duties, responsibilities and obligations as prescribed in the Contract Documents and represents the entire agreement between the Region and the General Contractor. The Contract supersedes all prior negotiations, representations or agreements, either written or oral, except to the extent specifically referred to in the Contract.

Contract Documents:

Any documents that form part of the Contract, including any amendments incorporated before the execution of the Contract and any subsequent amendments made pursuant to the provisions of the Contract.

Contractor Safety Specialist:

A person employed or retained by the Region who conducts periodic Site Safety Audits to promote hazard awareness and ensure safe Work practices.

Critical Injury:

An injury of a serious nature that:

(a) places life in jeopardy,
(b) produces unconsciousness,
(c) results in substantial loss of blood,
(d) involves the fracture of an arm or leg, but not a finger or toe,
(e) involves the amputation of an arm, leg or foot, but not a finger or toe,
(f) consists of burns to a major portion of the body, or

(g) causes the loss of sight in an eye.
(*Occupational Health and Safety Act*, Reg. 834, s.1)

Designated Substance:

A biological, chemical or physical agent or combination thereof prescribed as a designated substance to which the exposure to a Worker is prohibited, regulated, restricted, limited or controlled. (*Occupational Health and Safety Act*, s. 1)

Employer:

A person who employs one or more Workers or contracts for the services of one or more Workers and includes a [General] Contractor or Subcontractor who performs Work or supplies services and a [General] Contractor or Subcontractor who undertakes with an Owner, Constructor, [General] Contractor or Subcontractor to perform Work or supply services. (*Occupational Health and Safety Act*, s. 1)

General Contractor:

The person, firm or corporation with whom the Region enters into a Contract as a result of a request for quotation, proposal or tender. The obligations of the General Contractor include those of a Constructor as defined in the *Occupational Health and Safety Act*.

Incident:

An undesired event causing:

(a) personal injury;
(b) no injury, but is described as a near miss or potential for injury; and/or
(c) damage to property or equipment.

***Occupational Health and Safety Act*:**

The Ontario *Occupational Health and Safety Act*, R.S.O. 1990, c. O.1 and its regulations.

Owner:

A trustee, receiver, mortgagee in possession, tenant, lessee, or occupier of any lands or premises used or to be used as a Workplace, or a person who acts for or on behalf of an Owner as an agent or delegate. (*Occupational Health and Safety Act*, s. 1)

In most cases, when the Region procures the services of a Constructor, the Region is considered to be the Owner.

Pre-Work Hazard Assessment Form:

A form which identifies all known hazards existing on the Site at the time the hazard assessment is conducted, including any Designated Substances that may be present on the Site.

Project Administrator/Coordinator:

A person employed by the Region who reports to the Project Manager and is responsible for ensuring that the terms of the Contract are adhered to once the Contract has been awarded to a General Contractor.

Project Manager:

Any person employed by the Region who is responsible for ensuring that the terms of the Contract are adhered to and enforced. A Project Manager may delegate to a Project Administrator/Coordinator.

Site:

The designated site or location of the Work.

Site Safety Audit:

A process performed by the Contractor Safety Specialist to ensure safety compliance that includes, but is not limited to, a visual inspection of the Site, review of relevant documents, and interviews with Workers and representatives of the General Contractor. The results of a Site Safety Audit are produced in a Site Safety Audit Report.

Subcontractor:

A person, firm or corporation having a direct contract with the General Contractor to perform a part or parts of the Work, supply products, or provide a service on behalf of the General Contractor.

Supervisor:

A person who has charge of a Workplace or authority over a Worker. (*Occupational Health and Safety Act*, s. 1)

The Region:

The Regional Municipality of York, its employees, authorized agents and representatives.

Visitor:

Any individual accessing the Site who is not a General Contractor, Subcontractor, Consultant, Worker or representative of the Region.

Work:

The total Construction and related services required by the Contract. Work may include, but is not limited to, the supply of services, labour and materials for the installation, removal, application, demolition, erection, renovation, re-furbishing or construction of a building,

bridge, shaft, tunnel, caisson, trench, excavation, roadway, cofferdam, conduit, sewer, water-main, service connection, duct or well, and other undertakings.

Worker:

A person who performs Work or supplies services for monetary compensation. (*Occupational Health and Safety Act*, s. 1, in part)

Workplace:

Any land, premises, location or thing at, upon, in or near which a Worker works. *(Occupational Health and Safety Act*, s. 1)

Workplace Hazardous Materials Information System (WHMIS):

R.R.O. 1990, Reg. 860 of the *Occupational Health and Safety Act*.

***Workplace Safety and Insurance Act*:**

The Ontario *Workplace Safety and Insurance Act, 1997*, S.O. 1997, c. 16, Sched. A and its regulations.

3. Responsibilities

The Owner shall:

- Conduct a hazard assessment of the Site and provide a copy of the completed Pre-Work Hazard Assessment Form to all bidders.
- Conduct periodic Site Safety Audits and provide a copy of the completed Site Safety Audit Report to the General Contractor to ensure compliance with the *Occupational Health and Safety Act* and with the Contract.

Bidders shall:

- Review the Pre-Work Hazard Assessment Form completed by the Region prior to submitting any bid(s).

General Contractors shall:

- Comply with all of the terms of the Contract.
- Comply with all health and safety requirements under the *Occupational Health and Safety Act* and the *Workplace Safety and Insurance Act*, and ensure that all Workers, Subcontractors and Visitors conduct themselves in a safe manner.
- Acknowledge the appointment of Constructor as defined under the *Occupational Health and Safety Act*.
- Review this Health and Safety Guide for Construction Contractors.

- Ensure all required documentation has been submitted to the Project Manager prior to commencing any Work.
- Disclose any additional hazards located on the Site, apart from those identified on the Pre-Work Hazard Assessment Form, prior to and at any time during Construction activities to the Project Manager and individuals present at the Site.
- Obtain any necessary information regarding the hazards located at the Site and communicate that information to all individuals present at the Site.
- Allow the Contractor Safety Specialist to enter the Site to conduct periodic, unannounced Site Safety Audits to ensure the General Contractor is fulfilling its health and safety obligations under the Contract.
- Understand that the Region may take any action to remedy any contravention of the *Occupational Health and Safety Act*, including stopping unsafe Work or terminating the Contract.

4. Education and Prevention

General Contractors:

All General Contractors must ensure that their employees have completed training regarding all of the hazards associated with the Work, have valid trade certificates and/or licences, and follow established Work procedures.

General Contractors are responsible for ensuring Site safety, including Site access for all persons. Where Region employees require Site-specific training to enter the Site, the General Contractor is responsible for the provision of such training. This may be in the form of a Site induction and/or orientation.

5. Pre-Work Hazard Assessment Form

The intent of the Pre-Work Hazard Assessment Form is to promote hazard awareness and to inform all bidders of any actual hazards that exist or may pose a potential problem during Construction, such as overhead or underground power lines or the presence of asbestos, etc.

The Pre-Work Hazard Assessment Form assists bidders with making informed decisions about the hazards involved and enables them to budget the necessary time and resources to perform the Work safely. The Pre-Work Hazard Assessment Form is a communication tool only and is not intended to be a comprehensive account or analysis of all possible hazards present on the Site.

The Pre-Work Hazard Assessment Form identifies all known hazards existing on the Site at the time of the assessment, including but not limited to the following:

- Electrical/Equipment Hazards
- Physical Hazards
- Chemical Hazards

- Biological Hazards
- Hazardous Conditions
- Public Safety Hazards
- Designated Substances/Other materials

All bidders will be provided with a copy of the completed Pre-Work Hazard Assessment Form. All General Contractors must acknowledge the hazards identified at the time of the hazard assessment and agree, by signing the Pre-Work Hazard Assessment Form, to take every precaution reasonable in the circumstances to protect Workers from those hazards at all times.

6. General Health and Safety Requirements

Separation of Adjacent Construction Projects or Workplaces

The General Contractor is expected to fully cooperate with the Region and its Consultant(s) to ensure a safe separation between two or more Construction projects or Workplaces. To ensure the Owner does not assume the role of Constructor, the General Contractor shall separate the Construction project(s) by space (physical) and/or time (schedule) as per the requirements of the *Occupational Health and Safety Act*.

Public Safety

The Region prioritizes the safety of all persons and the General Contractor must ensure that Work activities do not put members of the public in danger. Ensuring public safety during Construction activities includes but is not limited to:

Site Access:

- Managing Site access with suitable fencing/barriers that physically prevent people from entering the Site and prevent objects or material from unintentionally escaping the Site.
- All materials and equipment shall be stored within the Site perimeter, preferably in secure compounds.
- Prior to leaving the Site at any time, all openings of surfaces, excavations and fall/impalement hazards must be secured/covered and identified.

Signage/Public Awareness:

- The General Contractor shall make the public aware of all hazards. All Sites must have clear signs displayed along the perimeter of the Site and, at any entrance to the Site which is visible to pedestrians, specify the particular hazard(s) and advise that Construction is in progress.

Sidewalks:

- In the event that a sidewalk is within the perimeter of or adjacent to the Site, the sidewalk shall be closed and identified as such well in advance of the closure, and an alternate route shall be provided, even if temporary.
- All sidewalks and paths must be clean and free from debris. Consideration should be given to those individuals with mobility impairments, e.g. those who use wheelchairs.
- Uniform surfaces and ramps shall be provided, as necessary, to comply with the *Accessibility for Ontarians with Disabilities Act*. It is important that the General Contractor ensure that pedestrians are inconvenienced by the Work as little as possible.

Transit Bus Stops:

- In the event that a bus stop is within the perimeter of or adjacent to the Site, it shall be relocated at the direction of York Region Transit.

Vehicles/Equipment:

- The General Contractor must take measures to ensure that vehicles entering and leaving the Site do not hit pedestrians.
- Work areas are to be clearly identified per Ontario Traffic Manual Book 7 and separated from public roadways or walkways, e.g. paths and sidewalks.
- In some situations, as per Ontario Traffic Manual Book 7, it will be necessary for the General Contractor to employ a traffic control person or retain a paid duty police officer(s) to direct traffic and maintain the safe flow of traffic per the *Occupational Health and Safety Act*.

Designated Substances

The Region shall ensure a current Designated Substance Survey (DSS) of the Site is conducted prior to procuring a General Contractor as per the requirements of the *Occupational Health and Safety Act*. The DSS will be a component of the Pre-Work Hazard Assessment and will be provided to all bidders if Designated Substances are present at the Site.

WHMIS and Controlled Materials

In addition to complying with WHMIS, the General Contractor shall inform the Region of the location of controlled substances and materials and shall ensure that these materials are not stored or used on the Site without the Region’s prior approval.

Site Supervisor

As per the *Occupational Health and Safety Act*, the General Contractor shall appoint a Competent Person as the Supervisor of the Site. In the event that the Site Supervisor must temporarily leave the Site for any time period, a designate Site Supervisor must be appointed and must also be a Competent Person.

Stopping Unsafe Work/Stop Work Order

- Region employees are not permitted to direct or instruct Workers on how to perform their regular duties. However, in the event that a dangerous circumstance (as per the *Occupational Health and Safety Act*, s. 44) is observed by the Contractor Safety Specialist or a Region representative, they may intervene and stop the unsafe act or condition from continuing.

- The Region and its Consultant(s) shall have the right to issue warnings and/or to stop Work if the General Contractor violates the *Occupational Health and Safety Act* or any health and safety requirement of the Contract.

- A written stop work order will be issued when imminent danger is identified or where significant damage to equipment or property or environmental degradation could occur if the unsafe act or condition continues.

- Stop work orders only involve those areas of the Site immediately concerned in the identified hazardous situation and are to be included in the order.

- Written warnings and/or stop work orders shall be provided to individuals representing the General Contractor and the Region.

- Work may not resume until the Region is satisfied that the imminent danger is eliminated. Notification to restart Work will be made to all parties advised of the original stop work order.

- The Region reserves the right to have a hazard eliminated at the expense of the General Contractor.

Reporting Incidents and Ministry of Labour Visits

The General Contractor shall:

- Immediately investigate all Incidents and immediately report the Incidents to the Project Manager and/or Ministry of Labour (if required). This includes all Critical Injuries, fatalities and those Incidents prescribed under Sections 11 and 12 of Regulation 213/91 of the *Occupational Health and Safety Act*.

- Provide proof of Incident investigation to the Project Manager for any Incidents that occurred on the Site.

- Notify the Region and its Consultant(s) of any report issued by the Ministry of Labour. All documentation, including investigation reports, Site visit reports and/or orders issued, shall immediately be forwarded to the Region and its Consultant(s).

7. Site Safety Audits

York Region Site Safety Audit Process

- The Contractor Safety Specialist may arrive at the Site unannounced and will report to the Site Supervisor.

- If available, the Site Supervisor or Site health and safety representative will accompany the Contractor Safety Specialist to perform a Site walkthrough to conduct a Site Safety Audit.

- If any deficiencies are noted or Workers are observed not to be performing their duties in a safe manner, the Site Supervisor will remedy any deficiencies and/or direct the Workers to perform their duties safely.

- In the event that the Site Supervisor or their designate is unavailable, the Contractor Safety Specialist will conduct the Site Safety Audit on their own.

- In the event that a dangerous circumstance is observed by the Contractor Safety Specialist, they will intervene and stop the unsafe act or condition from continuing and a written stop work order will be issued.

- The Contractor Safety Specialist will not direct Workers on how to perform their regular duties.

- All observations and recommendations will be documented in the Site Safety Audit Report (template shown at Appendix B).

- The Site Safety Audit Report will be sent by email to individuals representing both the General Contractor and the Region, including Consultants and Project Administrators.

- The General Contractor must review all concerns and comments, if any, made on the Site Safety Audit Report and take appropriate action(s) to immediately address and/or correct the concerns and comments.

- After corrective action is taken, the General Contractor must advise all parties who received the Site Safety Audit Report in writing of the specific actions that were taken to correct the deficiencies.

Consultant Site Safety Audit Process

- In addition to the Contractor Safety Specialist conducting Site Safety Audits, the Consultant may conduct periodic inspections of the Site to ensure health and safety compliance. Inspections may include visual inspections as well as testing and sampling, as required.

The General Contractor shall be responsible for any and all costs associated with delays as a result of the General Contractor's failure to comply with the health and safety requirements outlined in the Contract.

The General Contractor shall immediately address any non-compliance issues identified by the Consultant and shall provide the Consultant with a written report of action(s) taken to correct non-compliance of health and safety issues identified.

The Consultant may stop the Work if non-compliance of health and safety regulations is not corrected.

The Region and its Consultant shall have the right to document all health and safety concerns regarding the General Contractor's health and safety compliance.

8. Program Review

The Region will review this Guide and make amendments as required.

9. Non-Compliance

The Region does not tolerate or condone unsafe Work procedures. The failure of a General Contractor to comply with this Guide may result in the Region stopping the Work, terminating the Contract, and/or the General Contractor being subject to penalties, including but not limited to those set out in the *Occupational Health and Safety Act* and the *Workplace Safety and Insurance Act*.

10. Applicable Regulations and References

11. Appendices

A – Pre-Work Hazard Assessment Form
B – Site Safety Audit Report

Appendix A

Pre-Work Hazard Assessment Form

This Pre-Work Hazard Assessment Form is a field observation of the physical conditions existing at the proposed work location as at the time of the hazard assessment. The intent of this form is to promote hazard awareness and incident prevention, and to inform all bidders/General Contractors of any existing hazards that may pose a potential risk during work activities. This form is a communication tool only and is not intended to be a comprehensive account or analysis of all possible and potential hazards present at the work site.

Name of Project Manager:	Project Number:
Name, Title and Organization of person performing assessment:	
Proposed Work Location:	Assessment Date:
Description of Proposed Work:	Assessment Time:

Identify **all** known hazards existing at the time of the hazard assessment. Check off if applicable ☑

ELECTRICAL/EQUIPMENT		BIOLOGICAL	
Overhead wires/lines		Increased risk of mould proliferation	
Live systems or high voltage equipment		Bird or bat droppings	
Overhead crane (**must** be re-certified before use)		Rodent or insect infestation	
Moving equipment (e.g. drive shafts, belts, gears)		Wildlife	
PHYSICAL		Contaminated sharps, syringes, broken glass	
Fire/explosion risk		Sewage, sludge, biohazards	
Heat		HAZARDOUS CONDITIONS	
High noise levels		Working at heights	
Vibration		Water/drowning/flooding	
High pressure or compressed air systems		Slip/trip hazards and uneven footing	
Indoor air quality issues (e.g. fumes, mists, dusts)		Excavation/ditch/culvert	
Non-ionizing radiation (e.g. UV, IR, radio frequency or lasers)		Concealed/buried services in ground OR in structure walls/floors (e.g. conduit, pipe, hydro, gas, water)	
Sufficient lighting and visibility of all work areas		Confined Space (Provide Confined Space Assessment)	
CHEMICAL		Is PPE required to enter the work area?	
Existing products in use e.g. chemicals, lubricants, solvents, treatments (Provide Safety Data Sheets)		Are site specific rescue plans required for the area?	
		Traffic, railway and active roadway nearby	
Fuels (e.g. gasoline, diesel, natural gas, propane)		PUBLIC SAFETY	
Chemicals stored in approved cage/cabinet/room		Does the public have access to the work area?	
Explosion proof or grounded containers		Is the work area at/near a public transit stop?	
Compressed gas cylinders		Is there a history of violent/behavioural incidents?	
DESIGNATED SUBSTANCES/OTHER MATERIALS		OTHER	
Note: A Designated Substance Survey (DSS) **must** be completed when a designated substance is present in the work area		Are other contractors/services entering the work area (e.g. snow clearing, landscaping, deliveries, hauling)? If yes, contact Property Services Branch	
Asbestos (e.g. walls, tiles, pipe insulation, coatings)		Is a security system currently in use?	
Lead (e.g. paint)		List others/comments:	
Mercury (e.g. thermostats, switches, bulbs)			
Silica (e.g. concrete blocks, mortar, bricks, floors)			
PCB's (e.g. light ballasts, transformers, capacitors)			
Ozone depleting substances (e.g. coolants)			
Contaminated soil or water (e.g. oil, waste)			

All bidders/General Contractors shall release and hold harmless York Region, its consultants, the local municipalities and their respective directors, officers, agents and employees from and against any claims, demands, losses, costs, damages, actions, suits or proceedings (including by any government agency) arising as a result of any omissions, misrepresentation, inconsistencies, or errors in the information or content stated in this form.

All General Contractors must:

- Advise anyone who may be affected of any additional hazards located on site prior to and at any time during work activities
- Visit the proposed work location (if possible) to become familiar with the surroundings and any potential hazards that may be present
- Understand that in the event of any conflicts, the requirements of *Occupational Health and Safety Act* and its regulations take precedence over any requirements of the contract or any directions provided
- Ensure that training is provided to their employees and/or subcontracted employees to perform work based on the hazards identified in this form
- Comply with all requirements under the *Occupational Health and Safety Act* and its regulations
- Sign this form to acknowledge the hazards and conditions identified as existing at the time of this assessment, prior to the commencement of any work on site.

To be completed by General Contractor

By signing this form, I acknowledge, as the Authorized Representative of the General Contractor, the hazards outlined above in this Pre-Work Hazard Assessment Form and agree to take every precaution reasonable in the circumstances to protect employees, subcontractors, visitors and the public from those hazards at all times.

☐ Other hazards:	

☐ Site Supervisor informed verbally	Auditor Comments:
Site Representative (Contractor/Constructor):	Action is required for Comments/Observations (#) to (#). Please advise the Project Manager in writing when the required actions are taken.
Project Manager (Client/Owner):	

This Site Safety Audit Report represents a brief observation of the physical conditions of the project site. The intent of the report is to promote hazard awareness and/or alert the General Contractor to items that may result in injury or illness to workers, the general public, or other personnel and/or damage to property or equipment.

This Site Safety Audit Report is not intended to be a complete or comprehensive report of all occupational health and safety contraventions present on the site and is not intended to identify all occupational health and safety requirements that the General Contractor must comply with under the *Occupational Health and Safety Act* and its regulations. This Site Safety Audit Report does not, in any way, diminish or otherwise affect a General Contractor's duties and obligations as a Constructor pursuant to the *Occupational Health and Safety Act*.

T-24-33
APPENDIX C
FORM OF CONTRACT – SUPPLEMENTARY CONDITIONS
REVISED ADDENDUM 15

SC 1. WORKING HOURS

The Contractor will be able to work at the Site during the hours of 8:00 a.m. to 4:00 p.m., Monday through Friday (the "**Working Hours**"). Should the Contractor need to work at the Site outside of the Working Hours, including on weekends, they must notify and receive written approval from YRP's project manager (the "**YRP Project Manager**").

SC 2. PROVISION FOR TRAFFIC

Access shall be maintained at all times from the road to all driveways and parking lots not affected by the Work.

SC 3. OTHER CONTRACTORS

Other work may be in progress within, and/or adjacent to, the Site.

The Contractor shall keep itself informed of any current, or new, local development projects which may impact construction activities and services, and shall coordinate its activities with the developers.

The Contractor shall coordinate its work with the work of Other Contractors and shall not restrict access to the working areas or operations of the Other Contractors.

The Contractor shall maintain a separation of time and space from Other Contractors to ensure that the Board is not placed in the position of "Constructor" within the meaning prescribed in the *Occupational Health and Safety Act*, RSO 1990, c O.1 and shall comply with all other requirements stipulated in GC 10 – Other Contractors. No extension of Contract Time and/or an increase to the Contract Price will be granted for delays resulting from this construction coordination.

SC 4. PERMITS AND APPROVALS

The Contractor shall adhere to all requirements, conditions and restrictions as specified in the permits and approvals required for the completion of the Work.

Site plan application has been submitted to the Town of East Gwillimbury, Ontario.

SC 5. CRITICAL PATH SCHEDULE

Frequency of Schedule Submissions

The Contractor shall submit four colour paper copies and one electronic copy of its initial construction schedule to the Board within ten (10) Working Days of receipt of notification of acceptance of its Bid.

If the Contractor has revised its initial schedule prior to the first Site meeting, the revised schedule shall be submitted to the Board at least three (3) Days prior to the meeting.

After the first Site meeting, schedule updates shall be submitted as follows:

(a) Four colour paper copies and one electronic copy of the updated schedule shall be prepared and submitted to the Board:

  (i) not less than three (3) Days prior to all regularly scheduled Site meetings; and

  (ii) with each application for progress payment.

The release of payment may be withheld in the event that the schedule is not adequately maintained and submitted to the satisfaction of the Board.

All revisions to the original schedule shall be highlighted on the updated schedules. Updated schedules shall reflect the actual progress of the Work and any additions, deletions and revisions to the Work that have arisen since the previous update. At regularly scheduled Site meetings, the Contractor shall explain the basis for all revisions and any corresponding increase or decrease in resources required to complete the Work on time. Upon the Board's request, and at no additional cost to the Board, the Contractor shall submit an updated schedule within seven (7) Days of any major increase/decrease in quantities of materials, or major change in the staging or perceived change in the character of the Work.

All printed copies shall be legible and shall show the date that the schedule was prepared.

Schedule Format and Content

All schedules shall consist of a Gantt chart prepared in Microsoft Project (Microsoft Project Professional 2010 or newer version acceptable to the Board).

The critical path method shall be used to prepare and update the construction schedule. Activities on the critical path shall be identified, and those activities on the critical path that are subject to Working Day charges shall show the expected number of Working Days required for each activity. The activities on the critical path will assist in determining the controlling operation for the purpose of charging Working Days.

The schedule shall show:

- the sequence and interdependence of all activities required to complete the Work, including time for review of working drawing and mix design submissions;
- early start date;
- early finish date;
- float times;

- all network connections used to create a logical schedule and the corresponding durations.

The time scale of the schedule may be divided into days or weeks.

The schedule shall reflect operational constraints, interim completion dates, and other scheduling requirements specified in the Contract.

The Contractor shall select activities for inclusion in the schedule so that the Work is identifiable and the progress of each activity can be determined. The Board reserves the right to limit or increase the number of activities presented within the schedule.

Each activity in the schedule shall include a description of the operation and the number of Days allocated, or actually used, for it. When the duration of an activity is dependent on weather conditions, the number of Days allocated shall include an allowance for the normal frequency of inclement weather. When the activity has an associated item quantity, the approximate quantity shall also be shown.

A delay for an activity shall be deemed to have occurred when the activity is not complete on its late finish date as established in the construction schedule and/or when it exceeds the specified number of Working Days for the Contract.

The construction time shown on the initial schedule shall not exceed the Contract Time.

The Contractor will not be permitted to start the Work until a schedule, conforming to subparagraphs requirements above is received by the Board. If, for whatever reason, the Contractor cannot produce an acceptable schedule within 30 Working Days of its initial submission of the schedule, the Contractor may be deemed to be in default of the Contract.

SC 6. SUBSTANTIAL PERFORMANCE OF THE CONTRACT

The Work will not be deemed to be ready for use or being used for the purposes intended pursuant to section 2 of the Construction Act until the following conditions have been met at a minimum:

- each item of electrical equipment and other cabling installed under this Contract has been tested to demonstrate compliance with the performance requirements of this Contract;
- each electrical and other cabling system installed or modified under this Contract has been tested in accordance with the specified requirements;
- the Work has satisfactorily passed all required inspection and performance testing and can be used for the purposes intended;
- all test results have been submitted to the Board;

- all operating manuals, maintenance manuals, and "As-Built" drawings have been completed and submitted to the satisfaction of the Board;
- all training required under the Contract has been completed and instructions have been provided to the Board's staff to enable the Board to operate the facility;
- all spare parts and materials have been supplied; and
- all warranty certificates have been submitted.

No deviations from these requirements will be permitted.

SC 7. ON-SITE SOIL MANAGEMENT

General

The Contractor shall perform the Work in accordance with the requirements of Ontario Regulation 406/19 – On-Site and Excess Soil Management made under the *Environmental Protection Act*, RSO 1990, c E.19 ("**O. Reg. 406/19**") and the Rules for Soil Management and Excess Soil Quality Standards (the "**Soil Rules and Standards**").

The Contractor shall, as necessary, excavate, track, transport, stockpile, sample, test, process, reuse onsite and dispose of off Site and complete any other handling required for proper management reuse and/or disposal of soil.

On-Site Soil Management

Soil Storage

Unless otherwise indicated in the Contract Documents, the Contractor shall not store any soil at the Site without the prior written approval of the Board. The Contractor shall ensure soil management at the Site is carried out in accordance with O. Reg. 406/19, including section 24 as it pertains to any instruments applicable to soil management at the Site, the Soil Rules and Standards, applicable federal and provincial laws, and municipal by-law requirements, including but not limited to:

(a) soil and crushed rock shall be managed in such a way as to prevent any adverse effects associated with the receiving, processing, storage and movement of soil, including management of:

  (i) noise;

  (ii) dust;

  (iii) mud tracking;

  (iv) leaching;

  (v) run-off and erosion; and

(vi) potential outdoor air impact(s), including odour issue(s).

(b) dry soil and crushed rock must be segregated and stored in stockpiles.

(c) soil and crushed rock that has not been sampled and analyzed, and is required to complete sampling and analysis, must be kept segregated from other soil and crushed rock.

(d) the soil stored must not be stored at a location:

(i) within 30 metres of a water body; and

(ii) within 10 metres of the property line (boundary), unless any of the following apply:

(A) 500 cubic metres or less of excess soil will be stored at any one time on the Site;

(B) excess soil storage at the Site will be for a period of time of less than one week;

(C) the storage location has a physical barrier (e.g., concrete wall) between the excess soil and the property boundary; or

(D) the storage is taking place in a public road right-of-way.

(e) despite paragraph (d)(i), sediment that is dredged from a water body or any soil that is to be excavated from within 30 metres of a water body may be temporarily stored within 30 metres of that water body if the following criteria are satisfied:

(i) there are no visual or olfactory signs that the soil or sediment is affected by contamination;

(ii) the soil or sediment is stored no longer than 1 week from the day it is excavated, except the soil or sediment may be stored for the amount of time that is necessary to:

(A) reuse the soil at the Site as part of the project; or

(B) to dewater liquid soil before transportation or reuse; and

(iii) a sediment and erosion control plan has been prepared and is being implemented for the Site for the duration of the time that soil or sediment is temporarily managed, to prevent any impairment to the water body and any other adverse effects resulting from the storage of the sediment or soil near the water body (e.g., silt runoff, consideration for floodplains, natural hazards, etc.).

(f) soil shall be stored in a manner that prevents any contaminants from the soil from leaching into the groundwater.

Soil Processing

No soil processing at the Site is permitted without the Board's prior written consent. Only soil processing activities permitted under section 6 of O. Reg. 406/19 will be considered unless the Contractor has obtained the applicable Environmental Compliance Approval, as defined in the *Environmental Protection Act*, RSO 1990, c E.19 (the "**EPA**"). In the event the Board provides consent, all such processing shall be performed in accordance with O. Reg. 406/19, the Soil Rules and Standards, the EPA, the *Ontario Water Resources Act*, RSO 1990, c O.40, local instruments, and, if the soil is designated as waste under O. Reg. 406/19, the Environmental Compliance Approval.

The Contractor shall ensure all soil processing activities at the Site conform to the methods described in O. Reg. 406/19, and that such activities would not result in the excavated soil at the Site being designated as waste due to processing.

If a procedure is required by section 6 of O. Reg. 406/19 for the purposes of dewatering or solidifying soil by mixing with a substance that contains a natural or synthetic polymer, the Contractor shall ensure it provides the Consultant with any information that is relevant to the use of the substance to develop the written procedures and document as required under section 6, subsection (4) and (5) of O. Reg. 406/19 respectively. The Contractor, as operator of the Site, shall ensure a copy of the document is provided to the owner or operator of the reuse site. The required information shall be provided to the Consultant a minimum of twenty (20) Business Days prior to beginning any soil mixing at the Site.

The Contractor shall not remove any processed soils from the Site until written approval has been provided by the Board or the Consultant.

Receiving Excess Soil for Reuse at the Site

If the Contractor has determined at the time of bidding for the Work to use Excess Soil from a non-Board or non-Regional project to meet clean fill needs for the Work, the Contractor shall submit an imported Soil management plan for the import of Soil to the Board's Qualified Person and the Consultant, for review and approval within thirty (30) Business Days after award of the Contract. The imported Soil management plan shall include the following at a minimum:

(a) the location of the proposed source sites and confirmation (with appropriate supporting documentation) as to whether or not the proposed source sites have filed notices with the Registry in accordance with section 8 of O. Reg. 406/19;

(b) Soil sampling results, chain of custody, sampling plan and location maps for proposed soil that is to be imported;

(c) the quantity of proposed Soil to be imported from each location for placement at the Site;

(d) the applicable Excess Soil quality standards, as determined in accordance with the Soil Rules and Standards;

(e) the documents and reports prepared by the source sites for the proposed Soil to be imported as required by sections 11, 12 and 13 of O. Reg. 406/19, including assessments of past uses, sampling and analysis plans, soil characterization reports, and Excess Soil destination assessment reports;

(f) confirmation of the geotechnical suitability of the Soil to meet the requirements of the intended use;

(g) procedures for load management, on-site storage and inspection of incoming loads in accordance with section 19 of O. Reg. 406/19, chain of custody and record management and a process for the Board's acceptance of the loads of Excess Soil; and

(h) any other relevant information as requested by the Board's Qualified Person and/or the Consultant.

The Contractor acknowledges the Board must provide written consent in a form acceptable to the Board to the source site owners identified by the Contractor. The consent shall not be executed and no other commitments or agreements shall be made with the owner or operator of the source site of the Excess Soil without the Board's prior written approval. The Contractor shall not be entitled to any compensation on account of any delay or refusal in the Board providing written approval.

The Contractor shall ensure reliance is extended to the Board on reports, data and recommendations used to identify suitability of Excess Soil from a source site to be reused at the Site. Reliance under this section means reliance on terms acceptable to the Board.

Procedure for Observations of Soil Affected by Contaminant Discharge

Without limiting any of the Contractor's other obligations under the Contract Documents relating to toxic or hazardous substances or materials, if any person working at the Site makes an observation during soil excavation within the Site, including any visual or olfactory observation, that suggests that the soil being excavated may be affected by the discharge of a contaminant, the Contractor shall ensure the following actions are performed:

(a) The person shall immediately notify the Contractor of the observation of potential contamination.

(b) The Contractor shall immediately cease all soil excavations in the Site.

(c) The Contractor shall immediately notify the Board and the Consultant of the observation, verbally and in writing.

(d) The Contractor shall identify the area that may be impacted by the discharge of a contaminant and ensure that any excavated soils from that area are segregated from other excavated soil in the Site.

(e) The Contractor shall coordinate with the Consultant and perform the work for the determination and development of recommendations for the following:

(i) the portion of the Site that is affected by the discharge of a contaminant;

(ii) confirmation that all excavated soil that is affected by the discharge of a contaminant is identified and segregated from other excavated soil at the Site;

(iii) appropriate disposal options for any excess soil from that portion of the Site that was affected in accordance with O. Reg. 406/19 and other applicable regulations; and

(iv) requirement for any revisions to any documents required under O. Reg. 406/19.

(f) The Contractor shall consult with the Board and the Consultant to ensure the recommendations noted in (e) above have been satisfactorily executed prior to directing excavations be resumed.

SC 8. SECURITY CLEARANCES

The Contractor and any individuals who may be involved in the performance of the Work under the Contract will be subject to a security clearance by the YRP and the Contractor hereby consents to the security clearance.

The Contractor must submit to the Board a completed Confidential Personal History Form for each individual who will be performing the Work or may be required to enter a YRP facility. Each principal of a company, project manager and employee or person engaged by the Contractor must have an approved YRP security clearance prior to commencing Work under the Contract. The Contract may be terminated should any security clearance fail to be approved by YRP.

Approval of the Contractor's employees and Subcontractors will be at the sole discretion of the Board.

Maintenance of the security clearance is mandatory throughout the term of the Contract. The Contractor must notify the Board as soon as a new employee or Subcontractor is hired to work on the Contract and submit the completed form of such employee or Subcontractor for security clearance.

Security clearances are valid for a one-year period only and must be provided annually throughout the term of the Contract, if applicable.

The Confidential Personal History Form may be downloaded from yrp.bidsandtenders.ca.

SC 9. POST-AWARD MEETING

Within one week of receiving the Contract award notice, a post-award meeting will be held with the Contractor and members of YRP to review the Specifications, Drawings, and details. The YRP Project Manager will be introduced at the meeting.

The Contractor shall provide YRP a detailed timeline within two Days following the post-award meeting. Details shall include, but not be limited to, the delivery of materials and equipment to the Site and work to be performed on Site.

Additional meetings between the Contractor and the YRP Project Manager will take place to monitor the Contractor's performance. The interval of these meetings will be determined by the YRP Project Manager and/or the Contractor's performance.

SC 10. CONTRACTOR'S RESPONSIBILITIES

The Contractor shall be responsible for the supply and maintenance of any and all tools necessary to perform the Work. Any equipment, tools, supplies, etc. delivered to the Site by the Contractor or its Subcontractors in order to complete the Work will be the responsibility of the Contractor. The Contractor shall be entirely responsible for any loss or damage to their materials, supplies and equipment and to the personal property of any of their employees or Subcontractors while they are in or at a YRP facility.

The Contractor, including employees of the Contractor, and/or its Subcontractors shall promptly report to the YRP Project Manager:

- any hazardous conditions;
- any abnormal plumbing, electrical and mechanical conditions; and
- any damage caused to the building or grounds by the Contractor or others.

The Contractor shall abide by all security orders and is not permitted to provide any person access to the building and/or premises at any time.

Unauthorized use of YRP buildings, policing equipment or police related information (verbal, written or visual) is strictly prohibited. Violation of the requirements under this Supplementary Condition may result in termination of the Contract by the Board.

Reference to YRP in the Contractor's advertising without express written consent and approval is prohibited.

SC 11. CONTRACTOR'S EMPLOYEES AND SUBCONTRACTORS AND AODA

The Contractor shall employ sufficient skilled and experienced employees and Subcontractors to adequately perform the Work. The Contractor shall supervise all employees and Subcontractors and inform them of YRP's requirements.

The Contractor shall ensure that all employees and Subcontractors engaged in the performance of Contract are uniformed and identified as an employee or Subcontractor of the Contractor.

If YRP advises the Contractor in writing that an employee and/or Subcontractor under its supervision and performing work under the Contract is for any reason objectionable, unsatisfactory or undesirable, the Contractor must immediately remove the said person from the Contract.

The Contractor shall ensure that all employees and Subcontractors maintain an appropriate and respectful level of conduct in dealing with YRP staff and the general public while in performance of their duties under the Contract.

The Contractor shall ensure that all of its employees, agents, Subcontractors, and others engaged by the Contractor in the performance of the Work receive training in accordance with Sections 7 and 80.49 of Ontario Regulation 191/11 made under the Accessibility for Ontarians with Disabilities Act, 2005, SO 2005, c.11 (the "**AODA**"). Accordingly, the Contractor shall:

- comply with the requirements of the AODA; and
- complete and submit to the Board a copy of the AODA Training Certificate on or before the commencement of Work under the Contract or as periodically required by the Board.

A link to an AODA Training Video and the AODA Certificate can be found at https://www.yrp.ca/en/about/Bids-and-Tenders.asp.

SC 12. USE OF PREMISES

The Contractor's use of the Site is limited to the assigned work area in order to permit the continued use of existing facilities with the least amount of interference and disruption possible.

The Contractor shall take reasonable measures in the execution of the Contract to:

- place necessary barriers and warning signs around all work areas where operations may endanger individuals or create a dangerous situation;
- control noise during work on Site;
- maintaining all work areas in a neat, orderly and dust/debris free condition at all times; and
- comply with all restrictions relating to parking and entrances to the Site at all times.

The Contractor must accept full responsibility for assigned work areas from the time the Work commences to the time the Work is completed.

The Contractor shall be entirely responsible for any damage to YRP facilities or for any loss or damage to any property belonging to YRP or YRP staff when such loss or damage may be attributable to the Contractor's actions or negligence of the Contractor's staff. The Contractor shall be fully responsible for any and all costs incurred to correct any deficiencies to the satisfaction of YRP; these costs will not be borne by YRP.

The Contractor shall work in a safe manner. If in the opinion of the YRP Project Manager or the on-Site facility operator unsafe conditions, practices and procedures are present, work may be shut down by order of the YRP Project Manager until such conditions are corrected.

Upon completion of the Work, and prior to final inspection, the Contractor shall clean all areas affected by the Work and remove all waste and surplus materials from the Site. All waste materials resulting from service activities belong to the Contractor and shall be removed from the Site at the Contractor's expense.

The Contractor will be responsible for providing a portable washroom facility for their employees and Subcontractors on the Site.

SC 13. BOARD SUPPLIED SERVICES

YRP will, where possible, supply electricity (120 Volts), light, heat, power (designated outlets), and hot and cold water, as may be required to perform the Work. The YRP Project Manager or the on-Site facility operator will designate exactly which services and outlets are available to the Contractor. The Contractor is required to provide all other power and water sources required to complete the Work.

SC 14. ALTERNATIVE PRICES

The Contract contains alternative pricing options which are set out in the Schedule of Prices of the Bid Form. The Board shall have the right, at any point in time during the course of the Contract, in its sole and unfettered discretion, to exercise any of the alternative pricing options listed the Schedule of Prices of the Bid Form. Upon the Board providing written notice to the Contractor of its decision to exercise one or more of the alternative pricing options listed in the Bid Form, the Contract Price shall be immediately deemed adjusted to reflect the alternative pricing option(s) and such adjustment shall be promptly recorded by way of a Change Order which both parties shall execute. The Contractor shall, following receipt of the written notice from the Board advising of its election to use an alternative pricing option, promptly and duly perform the applicable Work in accordance with the particular alternative pricing option. The cost of any Work performed on account of alternative pricing shall be included in the Contractor's monthly applications for payment in accordance with the terms of the Contract.

SC 15. PROVISIONAL WORK

1 The Schedule of Prices on the Bidding Website includes certain Provisional Work should it be deemed necessary by the Board during the course of the Contract.

2 The purpose of inclusion of the Provisional Work in the Schedule of Prices is to cover the cost of work that is anticipated but may not be required due to operations requirements and/or budgetary restraints. The Contractor shall not perform any Provisional Work unless the Contractor has received prior written authorization from the Board. Some, none, or all the Provisional Work may be required to be completed at the sole discretion of the Board. The Contractor shall have no claim on any unused portion of the Provisional Work, including claims for loss of anticipated profits.

3 An all-inclusive price, including all profit, overhead and disbursements, for the Provisional Work shall be entered in the Schedule of Prices. The Provisional Work costs shall be included in the Contract Price.

4 Payment for the Provisional Work will only be made if it is completed with the prior written authorization of the Board and shall not include any mark-ups.

T-24-33
APPENDIX C
FORM OF CONTRACT

THE REGIONAL MUNICIPALITY OF YORK POLICE SERVICE BOARD

CONTRACT NO. T-24-33

AMENDMENTS TO CCDC 2 STIPULATED PRICE CONTRACT 2020

The Standard Construction Document for Stipulated Price Contract (CCDC 2 - 2020), English version, consisting of the Agreement Between Owner and Contractor, Definitions, and General Conditions of the Stipulated Price Contract, Parts 1 to 13 inclusive, governing same is hereby made part of these Contract Documents, with the following amendments, modifications, deletions and additions.

In the event that a paragraph is deleted, the numbering of the remaining paragraphs shall remain unchanged, and the numbering of the deleted paragraph will be retained, unused.

AGREEMENT BETWEEN OWNER AND CONTRACTOR

The Agreement Between Owner and Contractor of the Stipulated Price Contract, CCDC-2 2020 is hereby amended as follows:

ARTICLE A-1 THE WORK

Article 1.1

Add the word "diligently" to the beginning of Article 1.1.

Article 1.3

Delete Article 1.3 in its entirety and replace it with the following:

1.3 attain:

.1 *Substantial Performance of the Contract* within 165 Working Days;

.2 *Total Performance of the Contract* within175 Working Days

from the commencement date specified in the Owner's written notice to commence the Work, (the "***Commencement Date***") subject to potential adjustment pursuant to PART 6 – CHANGES IN THE WORK; and

New Article 1.4

Add new Article 1.4 as follows:

1.4 provide all labour, materials, *Construction Equipment*, machinery, Products and work including, without limitation, all *Commissioning* services required by the *Contract Documents* to fully complete and construct the Work in accordance with, and to the satisfaction of, all applicable federal, provincial, municipal and local laws, regulations, rules, bylaws, guidelines, standards, permits, statutes, ordinances, codes, approvals, directions, instructions, authorizations, applicable to the *Place of the Work* (collectively the *"**Laws and Regulations**"*) including, without limitation, those relating to occupational health and safety and any and all obligations, responsibilities and duties required by or set out in any site plan agreement or approval, attributable to the Place of the Work or the proposed development therein, and furnish efficient

business and construction administration and superintendence consistent with the interests of the Owner.

ARTICLE A-2 AGREEMENTS AND AMENDMENTS

Article 2.1

Delete Article 2.1 in its entirety and replace it with the following:

2.1 The *Contract* represents the entire agreement between the *Contractor* and the *Owner* and supersedes all prior negotiations, representations or agreements, either written or oral, relating in any manner to the *Work*, including the bid documents that are not expressly listed in Article A-3 of the Agreement – CONTRACT DOCUMENTS AND REFERENCE DOCUMENTS. There are no agreements, representations, warranties, terms, conditions or commitments regarding the subject matter of this agreement except as expressed in this *Contract*.

ARTICLE A-3 CONTRACT DOCUMENTS

Delete Article A-3 in its entirety and replace it with the following:

ARTICLE A-3 CONTRACT DOCUMENTS AND REFERENCE DOCUMENTS

3.1 The following is a list of the *Contract Documents* referred to in Article A-1 of the Agreement – THE WORK and as defined in the DEFINITIONS. This list is subject to subsequent amendments in accordance with the provisions of the *Contract*. Unless otherwise indicated, terms used in the *Contract Documents* which are defined in the DEFINITIONS shall have the meanings designated in the DEFINITIONS.

- *Bid*
- CCDC 2 STIPULATED PRICE CONTRACT – 2020
  - Agreement between the Owner and Contractor
  - Definitions
  - The General Conditions of the Stipulated Price Contract (CCDC2- 2020)
- Amendments to CCDC 2 STIPULATED PRICE CONTRACT – 2020
  - Amendments to Agreement Between Owner and Contractor
  - Amendments to Definitions
  - Amendments to the General Conditions of the Stipulated Price Contract
- Supplementary Conditions
- Forms
- Permits
- *Specifications*
- *Drawings*
- Appendices
  - Appendix D to RFT – Insurance Requirements

- Health and Safety Guide for Construction Contractors
- Addenda

3.2 The following documents are provided for information purposes only and do not form part of the *Contract Documents*:

- *Reports*
  - Geotechnical Investigation Proposed Helicopter Hangar, Project 44148, dated August 30, 2024, by Patriot Engineering Ltd.;
  - Partial Site Plan Showing the Approximate Borehole Locations, Project 44148, dated August 2024, by Patriot Engineering Ltd.; and
  - Phase One Environmental Site Assessment dated December 2013 prepared by Conestoga-Rovers and Associates.

ARTICLE A-4 CONTRACT PRICE

Add the following to the end of Article 4.1:

Notwithstanding the foregoing, the *Contractor* shall not be entitled to any increases in the *Contract Price*, or to the prices for any individual items, for any reason whatsoever including, but not limited to, increases in prices due to inflation or the escalation of labour or material costs.

ARTICLE A-5 PAYMENT

Delete Article A-5 in its entirety and replace it with the following:

ARTICLE A-5 PAYMENT

5.1 Provided the *Contractor* is not in default under the *Contract*, and subject to the provisions of the *Contract*, the *Owner* shall pay the *Contractor* the undisputed amounts payable under *Proper Invoices* given to the *Owner* in accordance with the *Contract*, on account of the *Contract Price*.

5.2 Payment shall be made in Canadian funds.

5.3 Subject to the provisions of the *Contract*, and in accordance with the *Construction Act* the *Owner* will:

.1 pay to the *Contractor* the undisputed amounts payable under the *Proper Invoices* given by the *Contractor* to the *Owner* in accordance with the *Contract*, subject to the 10% statutory holdback and a 3% maintenance security;

.2 pay the 10% basic holdback, together with such *Value Added Taxes* as may be applicable, to the *Contractor* in accordance with the *Construction Act*;

.3 pay the 10% holdback for finishing work, together with such *Value Added Taxes* as may be applicable, to the *Contractor* in accordance with the *Construction Act*; and

.4 subject to any deductions made by the *Owner* in accordance with GC 5.11 – MAINTENANCE SECURITY, pay the 3% maintenance security, together with such *Value Added Taxes* as may be applicable, to the *Contractor* upon the expiration of the *Warranty Period* and the correction of all deficiencies and warranty issues to the satisfaction of the *Consultant* (whether they have occurred during the *Warranty Period* or thereafter).

5.4 If the *Contractor* is a non-resident of Canada, the applicable provisions of the *Income Tax Act*, RSC 1985, c 1 shall apply.

5.5 As such payments become due, the *Contractor* shall, in accordance with the terms of its agreements with any *Subcontractors*, *Suppliers* and workers, pay all of its *Subcontractors*, *Suppliers* and workers in full on account of *work* properly performed or *Products* properly supplied, as applicable, less any holdback monies retained in compliance with the *Construction Act*. If requested, the *Contractor* shall promptly provide evidence of all such payments to the *Owner* and the *Consultant*.

5.6 In the event of loss or damage occurring where payment becomes due under the property and other required insurance policies, payments shall be made to the *Contractor*, the *Owner* or the *Region*, as the case may be, in accordance with the provisions of GC 11.2 - INSURANCE.

5.7 The *Contractor* agrees to substantiate to the *Owner* and the *Consultant*, if requested, the amounts of all accounts representing any portion of the *Contract Price*, including without limitation, providing back up documents evidencing accounts or payments due to employees, *Subcontractors* and *Suppliers*.

5.8 The *Contractor* shall not be entitled to claim, demand or receive any interest as a result of delays in approval or payment by the *Owner* except as expressly permitted under the *Construction Act*.

ARTICLE A-6 RECEIPT OF AND ADDRESSES FOR NOTICES IN WRITING

Article 6.2

Add the words “by email” after the words “by prepaid first class mail”.

Add the following to the end of Article 6.2:

Notices in Writing and instructions given to the *Contractor’s Project Manager* or the *Site Supervisor* shall be deemed to have been received by the *Contractor*.

Article 6.3

Add the words “prepaid first class” before the word “mail”.

Delete the words “Working Day” and replace them with “Business Day”.

Article 6.4

Delete the words “the end of normal business hours” and replace them with “4:30 p.m. (Eastern Time)”.

Delete the words “Working Day” and replace them with “Business Day”.

New Article 6.6

Add new Article 6.6 as follows:

6.6 Any notices required to be given under the *Construction Act*, including without limitation notices of non-payment, shall be given in accordance with the requirements for Notices in Writing prescribed by this Article A-6 of the Agreement – RECEIPT OF AND ADDRESSES FOR NOTICES IN WRITING. *Proper Invoices* shall be given in accordance with the requirements of GC 5.2 – APPLICATIONS FOR PAYMENT.

NEW ARTICLES

Add the following new Articles to the Agreement Between Owner and Contractor:

ARTICLE A-9 TIME OF THE ESSENCE

9.1 Time shall be of the essence in this Agreement.

ARTICLE A-10 CONFLICT OF INTEREST

10.1 The *Contractor*, all of the *Subcontractors*, and any of their respective advisors, partners, directors, officers, employees, agents, and volunteers shall not engage in any activity or provide any services where such activity or the provision of such services creates a conflict of interest (actually or potentially, in the sole opinion of the *Owner*) with the provision of the *Work* pursuant to the *Contract*.

10.2 The *Contractor* shall disclose to the *Owner*, in writing, without delay any actual or potential situation that may be reasonably interpreted as either a conflict of interest or a potential conflict of interest, including the retention of any *Subcontractor* or *Supplier* that is directly or indirectly affiliated with or related to the *Contractor*.

10.3 A breach of this Article by the *Contractor*, any of the *Subcontractors*, or any of their respective advisors, partners, directors, officers, employees, agents, and volunteers shall entitle the *Owner* to terminate the *Contract* in accordance with the provisions of GC 7.1 - OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT, in addition to any other rights and remedies that the *Owner* has in the *Contract*, in law, or in equity.

ARTICLE A-11 SEVERABILITY

11.1 Each provision of the *Contract* shall be valid and enforceable to the fullest extent permitted by law. If any provision of the *Contract* or the application thereof to any person or circumstance is determined to be invalid or unenforceable to any extent:

.1 the remainder of the *Contract* or the application of such provision to any other person or circumstance shall not be affected thereby; and

.2 the parties shall negotiate in good faith to amend the *Contract* to eliminate such invalidity, unenforceability and to restore this Agreement as near as possible to its original intent and effect.

ARTICLE A-12 LIQUIDATED DAMAGES

12.1 For the purposes of GC 5.9 – LIQUIDATED DAMAGES, liquidated damages will be assessed in accordance with the following:

.1 $1,500.00 for each Day that the *Contractor* fails to achieve *Substantial Performance of the Contract* beyond the 165 *Working Days* specified in Article A-1 of the Agreement – THE WORK, paragraph 1.3.1; and

.2 $1,500.00 for each Day that the *Contractor* fails to achieve *Total Performance of the Contract* beyond the 175 *Working Days* specified in Article A-1 of the Agreement – THE WORK, paragraph 1.3.2.

ARTICLE A-13 WARRANTY PERIOD

13.1 For the purpose of GC 12.3 - WARRANTY, the *Warranty Period* for *Work* completed under this *Contract* shall be as follows:

.1 24 months from the date of *Substantial Performance of the Contract* for all *Work* completed on, or before, the date of *Substantial Performance of the Contract*; and

.2 24 months from the date of *Total Performance of the Contract* for all *Work* completed after the date of *Substantial Performance of the Contract*.

13.2 In addition to the *Warranty Period* specified above, the *Work* may be subject to extended warranties pursuant to GC 12.3 – WARRANTY, paragraph 12.3.6.

ARTICLE A-14 COUNTERPARTS

14.1 This *Contract* may be executed in counterparts, each of which shall be deemed to be an original, and all of which such counterparts, together, shall constitute one and the same *Contract*. Counterparts may be executed in original or electronic form, and the parties shall accept any signatures received in electronic form as if they were original signatures of the parties.

DEFINITIONS

The Definitions of the Stipulated Price Contract CCDC – 2020 are hereby amended as follows:

Change Directive

Delete the words "within the general scope of the *Contract Documents*".

Consultant

Add the following sentence after the last sentence:

Wherever used in the *Contract Documents*, the words "Engineer", "Architect" and "*Consultant*" shall be regarded as synonymous.

Contract Documents

Delete in its entirety and replace with the following:

The *Contract Documents* consist of those documents listed in Article A-3 of the Agreement – CONTRACT DOCUMENTS AND REFERENCE DOCUMENTS and amendments agreed upon in writing between the parties.

Contract Time

Delete in its entirety and replace with the following:

The *Contract Time* is the timeframe stipulated in paragraph 1.3 of Article A-1 of the Agreement – THE WORK for completion of the *Work*.

Contractor

Add the following sentence after the last sentence:

Wherever used in the *Contract Documents*, the words "*Contractor*" and "*General Contractor*" shall be regarded as synonymous.

Drawings

Delete in its entirety and replace with the following:

Drawings means all plans, profiles, drawings, sketches or copies thereof, used or prepared for, or in connection with, the *Work* and are included in the *Contract Documents*. Wherever used in the *Contract Documents*, the words "*Drawings*" and "*Contract Drawings*" shall be regarded as synonymous.

Other Contractor

Delete in its entirety and replace with the following:

Other Contractor means a person, firm or corporation or entity, not employed by or having a contract with the *Contractor,* and who is performing work at or near the *Site* directly or

indirectly on behalf of the *Owner*, the *Municipalities* or any other governmental agencies, property owners, developers or utility companies and their respective contractors.

Owner

Add the words "or its authorized agent or representative as designated to the *Contractor* but does not include the *Consultant*" after the word "Agreement".

Payment Legislation

Delete in its entirety.

Place of the Work

Add the following sentence after the last sentence:

Wherever used in the *Contract Documents*, the terms "*Place of the Work*" and "*Site*" shall be regarded as synonymous.

Ready for Takeover

Delete in its entirety.

Shop Drawings

Delete "which the *Contractor* provides" and replace with "to be provided by the *Contractor*".

Subcontractor

Delete in its entirety and replace with the following:

Subcontractor means a person, firm or corporation not contracting with or employed directly by the *Owner*, but who performs a part or parts of the *Work* or supplies *Products* under an agreement with the *Contractor* or under an agreement with another subcontractor.

Substantial Performance of the Work

Delete in its entirety

Working Day

Delete in its entirety and replace with the following:

Working Day means any Day when the Contractor is allowed to perform Work as specified in the Contract Documents.

Add the following new definitions:

As-Built Drawings

As-Built Drawings means drawings prepared by the *Contractor* by marking on a copy of the *Drawings* the changes from the *Drawings* which occur during construction including, but not limited to, the exact location of major building components that were shown generally on the *Drawings*.

Authorities Having Jurisdiction

The phrase *Authorities Having Jurisdiction* or the term Authorities means those authorities having jurisdiction under law over the *Work* or parts thereof.

Bid

Bid means the *Contractor's* response to the Request for Tender for this *Contract*.

Business Day

Business Day means any Day except Saturdays, Sundays and statutory holidays in the Province of Ontario.

Cash Allowance Disbursement Authorization

A *Cash Allowance Disbursement Authorization* is an authorization to the Contractor to expend monies from cash allowances included in the Contract Price.

Changes in the Work

Changes in the Work means means additions, deletions, extensions, increases , decreases or other revisions to the work within the general scope of the Contract.

Commission

Commission means, and *Commissioning* refers to, the procedure which includes checking, testing, adjusting and measuring *Work* performed by the *Contractor* to demonstrate and verify the installation, operation and performance of all components and the entire system.

Construction Act

Construction Act means Ontario's *Construction Act*, RSO 1990, c. C.30 as amended or replaced from time to time.

Constructor

Constructor is as defined pursuant to the *Occupational Health and Safety Act*, RSO 1990, c O.1. as amended or replaced from time to time.

Contemplated Change Order

Contemplated Change Order or *CCO* means a document prepared by the *Owner* describing a proposed *Change in the Work* that is issued to the *Contractor*.

Contract Schedule

Contract Schedule means the schedule indicating the timing of major activities of the *Work* submitted by the *Contractor* and approved in writing by the *Owner* including attaining *Substantial Performance of the Contract* by the Substantial Performance of the Contract date.

Day

Day means a calendar day.

Equivalent

Equivalent means an alternative *Product*, material or manufacturer proposed by the *Contractor* during the course of the *Contract* and demonstrated to the *Owner's* and the *Consultant's* satisfaction as being equivalent to the particular *Product*, material or manufacturer prescribed by the *Contract Documents* taking into consideration factors which include suitability with operational requirements and compatibility, interchangeability or interoperability with existing equipment.

Install

Install means completion of the following activities, including the associated labour, services, plant, construction machinery and equipment required to:

.1 Remove *Products* from storage and locate for placement,

.2 Position and adjust *Products* for final placement,

.3 Affix and anchor *Products* in final placement, in accordance with manufacturers' instructions and *Contract Documents*,

.4 *Commission* and adjust *Products* for proper operation.

Interim Milestone

Interim Milestone means a scheduled event signifying the completion of a major deliverable or a set of related deliverables.

Make Good

Make Good means repairing, restoring, refurbishing, rehabilitating, or performing filling operation on any existing components disturbed due to Work of this *Contract*, to at least the condition existing at the commencement of the *Work*, in terms of construction integrity, finishes, alignment with existing adjoining surfaces, compatibility of materials, sound

attenuation criteria, exfiltration/infiltration requirements, air/vapour barrier and thermal continuity.

Municipalities

Municipalities means the lower-tier municipality or municipalities and upper-tier municipality or municipalities, as defined in the *Municipal Act, 2001*, SO 2001, c 25, in which the *Work* will be undertaken.

Payment Period

Payment Period means a one-month period during which work was performed. The start and end dates of the *Payment Period* will be determined by the *Owner* and the *Contractor* at the pre-construction meeting. In the event the *Owner* and the *Contractor* do not determine the start and end dates of the *Payment Period*, the start and end dates of the *Payment Period* are deemed to be the first Day of the month and the last Day of the month, respectively.

Pre-Invoice Submission Meeting

Pre-Invoice Submission Meeting shall have the meaning prescribed in GC 5.2 – APPLICATIONS FOR PAYMENT, paragraph 5.2.5.

Preliminary Estimate for Payment (PEP)

Preliminary Estimate for Payment (PEP) means the document that contains a description of the *Work* performed during a *Payment Period* (or such other period as may be expressly stipulated in the *Contract*) in the form attached as Form 1.

Professional Engineer

Professional Engineer means a person, firm or corporation legally qualified to practice professional engineering in the Province of Ontario.

Project Manager

Project Manager shall have the meaning prescribed in GC 3.5 – Contractor's Personnel Commitment, paragraph 3.5.2.

Proper Invoice

Proper Invoice shall have the meaning given to it in the *Construction Act*.

Proper Invoice Submission Date

Proper Invoice Submission Date shall have the meaning prescribed in GC 5.2 – APPLICATIONS FOR PAYMENT, paragraph 5.2.7.

Provide

Provide means to *Supply* and *Install*.

Region

Region means The Regional Municipality of York or its authorized agent or representative.

Reports

Reports means the *Reports* set out in Article A-3 of the Agreement – CONTRACT DOCUMENTS AND REFERENCE DOCUMENTS.

Site

Site shall have the same meaning as the *Place of the Work* as defined in the Definitions.

Site Supervisor

Site Supervisor shall have the meaning prescribed in GC 3.5 – Contractor's Personnel Commitment, paragraph 3.5.2.

Submittals

Submittals are documents or items required by the *Contract Documents* to be provided by the *Contractor*, such as:

1. *Shop Drawings*, samples, models, mock-ups to indicate details or characteristics, before the portion of the *Work* that they represent can be incorporated into the *Work*; and
2. *As-Built Drawings* and manuals that provide instructions for the operation and maintenance of the *Work*.

Substantial Performance of the Contract

Substantial Performance of the Contract means when the *Contract* is substantially performed pursuant to the *Construction Act*. The *Contract* may specify additional requirements which must be met in order to obtain *Substantial Performance of the Contract*.

Supply

Supply means completion of the following activities, including the associated labour, services, plant, construction machinery and equipment required to:

.1 Fabricate or purchase *Products*;

.2 Deliver Products to the Place of the Work;

.3 Unload *Products*; and

.4 Store *Products* in accordance with manufacturers' instructions.

Wherever used in the *Contract Documents*, the words "*Supply*" and "*Furnish*" shall be regarded as synonymous.

The Regional Municipality of York Police Service Board (the Board)

The Regional Municipality of York Police Service Board means the *Board* or its authorized agent or representative as designated in writing to the *Contractor* but does not include the *Consultant*.

Total Performance of the Contract

Total Performance of the Contract means when the *Contract* is deemed to be completed pursuant to the *Construction Act*. If such legislation is not in force or does not contain such definition, *Total Performance of the Contract* shall have been reached when the entire *Work*, except those items arising from the provisions of GC 12.3 - WARRANTY, has been performed to the requirements of the *Contract* as certified by the *Owner*. The *Contract* may specify additional requirements which must be met in order to obtain *Total Performance of the Contract*.

Warranty Period

The *Warranty Period* shall have the meaning prescribed in GC 12.4 – Warranty, paragraph 12.3.1.

Working Day

Working Day means any Day when the Contractor is allowed to perform Work as specified in the Contract Documents.

GENERAL CONDITIONS

The General Conditions of the Stipulated Price Contract CCDC 2 – 2020 are hereby amended as follows:

PART 1 GENERAL PROVISIONS

GC 1.1 CONTRACT DOCUMENTS

Paragraph 1.1.1

Delete in its entirety and replace it with the following:

1.1.1 The intent of the *Contract Documents* is to include the construction, labour, *Products*, *Construction Equipment* and other services necessary, complementary or ancillary, for the performance and completion of the *Work* by the *Contractor* in accordance with the *Contract Documents* or reasonably inferable from them.

Paragraph 1.1.4

Delete in its entirety.

Paragraph 1.1.5

Delete in its entirety and replace it with the following:

1.1.5 In the event of conflicts or inconsistencies between *Contract Documents*, the following shall apply:

.1 figured dimensions shown on a Drawing shall govern even though they may differ from dimensions scaled on the same Drawing;

.2 *Drawings* of larger scale shall govern over those of smaller scale of the same date;

.3 *Specifications* shall govern over *Drawings*;

.4 Division 1 of the *Specifications* shall govern over all other *Specifications*;

.5 the *Specifications* shall govern over the *Bid*;

.6 Definitions shall govern over the *Specifications*;

.7 General Conditions shall govern over Definitions;

.8 Supplementary Conditions shall govern over General Conditions;

.9 Permits shall govern over *Supplementary Conditions*;

.10 the Agreement between the *Owner* and the *Contractor* shall govern over all other documents;

.11 executed amendments to specific parts of the *Contract Documents* shall govern over the executed specific parts in *Contract Documents* affected by the amendments;

.12 later dated documents shall govern over earlier dated documents of the same type; and

.13 in case of discrepancies, noted materials and annotations shall take precedence over graphic indications in the *Contract Documents*.

Paragraph 1.1.9

Add the following after the word "Suppliers":

or in establishing the extent of the *Work* to be performed by a trade. The *Specifications* are divided into divisions and sections for convenience but shall be read as a whole and neither such division nor anything else contained in the *Contract Documents* will be construed to place responsibility on the *Consultant* to settle disputes among the *Subcontractors* and *Suppliers* or as between them and the *Contractor* with respect to such divisions.

Paragraph 1.1.10

Delete in its entirety and replace it with the following:

1.1.10 *Specifications*, *Drawings*, models, and copies thereof furnished by the *Consultant* are not the *Contractor*'s property, with the exception of the signed sets of the *Contract Documents*, which shall belong to each party to the *Contract*. All *Specifications*, *Drawings* and models furnished by the *Consultant* are to be used only with respect to the *Work* and are not to be used on other work. These *Specifications*, *Drawings* and models are not to be copied or altered in any manner without the written authorization of the *Consultant*

New Paragraphs

Add the following new paragraphs to GC 1.1:

1.1.12 All documents and data furnished by the *Owner* to the *Contractor* are and shall remain the property of the *Owner*, with the exception of the signed sets of the *Contract Documents* which shall belong to each party to the *Contract*. The *Contractor* may, at its cost, copy, use and communicate any such documents for the sole purposes of performing the Work. Such documents shall not, without the written authorization of the *Owner*, be used, copied or communicated to a third party by the *Contractor* except as necessary for the sole purposes of performing the Work.

1.1.13 All documents developed in connection with the *Work* by the *Contractor* shall become the sole property of the *Owner* with full and absolute title thereto. The *Contractor* shall execute and deliver and shall cause the *Subcontractors* and *Suppliers* to execute and deliver for no additional consideration all such transfers, assignments, deeds and other conveyances as the *Owner* may require to give effect to the foregoing. The *Owner* shall provide or cause to be provided without royalty, fee or other costs to the *Contractor* all licenses necessary to enable the *Contractor* to use such documents in connection with the Work, including the correction of defects and deficiencies during the *Warranty Period*.

1.1.14 The *Contractor* declares and represents that in entering into the *Contract* with the *Owner* for the performance of the *Work*, it has reviewed the *Contract Documents* including, without limitation, the *Reports* provided by the *Owner* and has satisfied itself of the character of the *Work* to be done and all local conditions including, without limitation, the position of all pole lines, conduits, watermains, sewers and other underground and overground utilities and structures identified in or reasonably inferable from the *Contract Documents*, and the *Contractor* has assumed and does hereby assume all risk of conditions now existing or arising in the course of the *Work* which are identified in, or reasonably inferred from, the *Contract Documents*, which might or could make the *Work*, or any items thereof more expensive in character, or more onerous to fulfill, than was contemplated or known when the *Contract* was signed.

1.1.15 Headings of all General Conditions of the Stipulated Price Contract and of all sections of the *Specifications* are inserted for reference convenience only and shall not affect the *Work*, nor the interpretation of the *Contract Documents*.

1.1.16 Syntax

.1 Where the words “accepted“, ”reviewed”, “designated” “directed”, “inspected“, “instructed”, “permitted”, “required”, and “selected” are used in standards or in the *Contract Documents*, they are deemed to be followed by the words “by the *Consultant* and the *Owner*”, unless the context provides otherwise.

.2 Where the words “acceptable”, “submit” and “satisfactory” are used in standards or in the *Contract Documents*, they are deemed to be followed by the words “to the *Consultant* and the *Owner*”, unless the context provides otherwise.

.3 Where the masculine is used in the *Contract Documents*, it shall be read and interpreted as if the feminine or neuter had been used when the context of the statement so requires, and the rest of the sentence, clause,

paragraph or item shall be interpreted as if all changes in grammar, gender or terminology thereby rendered necessary had been made.

.4 The words "include", "includes" or "including" mean "include without limitation", “includes without limitation" and "including without limitation", respectively, and the words following "include", "includes" or "including" shall not be considered to set forth an exhaustive list.

.5 Wherever words “indicated”, “shown”, “noted”, “listed”, “specified” or similar words are used in the *Contract Documents* they are understood, unless otherwise defined, to mean “indicated”, “shown”, “noted”, listed”, or “specified” on the *Contract Documents*, unless the context provides otherwise.

.6 Reference to the word “Section” or “Sections” in the *Contract Documents* shall mean a Section or Sections of the Divisions of the *Specifications*, if applicable.

1.1.17 Unless otherwise expressly provided herein, whenever in the *Contract* any matter is subject to the consent, approval, determination, authorization, consideration or authority of the *Owner* or is to be acceptable or to the satisfaction of the *Owner*, such consent, approval, determination, authorization, consideration, authority or determination of acceptability or satisfaction shall be in the sole discretion of the *Owner* acting reasonably.

1.1.18 No implied terms or obligations of any kind by or on behalf of the *Owner* shall arise from anything in the *Contract* and the express covenants and agreements therein contained and made by the *Owner* are the only covenants and agreements upon which any rights against the *Owner* are to be founded.

1.1.19 Any *Notice in Writing,* including requests, demands, instructions, consents, authorizations, approvals, certificates, determinations or other communications, with the exception of *Proper Invoices* under PART 5 - PAYMENT shall be in writing and shall be given in the manner set forth in Article A-6 of the Agreement – RECEIPT OF AND ADDRESSES FOR NOTICES IN WRITING, and unless a specific time period for the giving of such notice is specified in the *Contract Documents*, such notice shall not be unreasonably delayed.

1.1.20 The *Contract Documents* may contain references to requirements, practices, codes, regulations, manuals, standards, specifications and drawings of associations, societies, councils, boards, foundations and other government bodies, including Ontario Provincial Standards (“***OPS***”) specifications and drawings, which are incorporated into the *Contract* by reference, and have the same force and effect as if printed in full.

1.1.21 Where reference is made to a requirement, practice, code, regulation, manual, standard, specification or drawings of an association, society, council, board, foundation or other government body, including *OPS* specifications and drawings, it is understood that the latest revision shall apply, unless indicated otherwise in the *Contract Documents*.

1.1.22 Where applicable, *OPS* specifications and drawings shall be amended as follows:

"Engineer", "Ministry" and "Authority" shall mean the *Owner*.

1.1.23 Any reference in the *Contract Documents* to a statute shall be deemed to mean the statute which is, or becomes, in force during the performance of the Work, as amended or replaced from time to time, and also mean all regulations enacted under such statute.

1.1.24 It is the parties' mutual intention that the *Contract Documents* comply with section 4 of the Canada-European Union Comprehensive Economic and Trade Agreement and section 3 of the Canadian Free Trade Agreement. Any reference in the *Contract Documents* to a particular *Product*, material or manufacturer shall be deemed to include the words "or *Equivalent*" immediately following such reference (unless the words "or *Equivalent*" already follow the *Product*, material or manufacturer reference). Where the words "No *Equivalent*", "No *Equivalent*s" or "No Other *Equivalent*s" follow the *Product*, material or manufacturer reference, the *Owner* may deny or refuse to consider a proposal for an *Equivalent* for reasons which include suitability with operational requirements and compatibility, interchangeability or interoperability with existing equipment.

1.1.25 At the request of the *Contractor*, the *Owner* may provide printed copies of the *Contract Documents* at the *Contractor*'s expense.

GC 1.2 LAW OF THE CONTRACT

New Paragraph

Add new paragraph 1.2.2 as follows:

1.2.2 The Contractor covenants and agrees to abide by and comply with all *Laws and Regulations* applicable or related to this Agreement.

GC 1.3 RIGHTS AND REMEDIES

Paragraph 1.3.2

Delete the word "No" from the beginning of the first sentence and replace it with the words "Except with respect to the notice requirements set out in GC 6.4 – CONCEALED OR UNKNOWN CONDITIONS, paragraph 6.4.1, GC 6.5 – DELAYS, paragraph 6.5.4, and GC 6.6 – CLAIMS FOR A CHANGE IN CONTRACT PRICE, paragraph 6.6.1, no".

New Paragraph

Add the following new paragraph to GC 1.3:

1.3.3 Notwithstanding paragraph 1.3.1, the *Owner* shall not be liable, whether in contract, tort, or any other theory of law or statute, for any claim arising from any prior negotiation, representation, or agreement, whether written or oral, which is superseded by the *Contract* under Article A-2 of the Agreement - AGREEMENTS AND AMENDMENTS.

GC 1.4 ASSIGNMENT

Paragraph 1.4.1

Delete in its entirety and replace it with the following:

1.4.1 The *Contract*, or any part thereof, including, the *Work* to be performed thereunder or any monies payable thereunder shall not be transferred, assigned (including an assignment by way of security) or otherwise disposed of by the *Contractor* without the written consent of the *Owner*. It is further agreed that the said written consent shall not, under any circumstances, relieve the *Contractor* of its liabilities and obligations under the *Contract*.

New Paragraph

Add the following new paragraphs to GC 1.4:

1.4.2 If the *Owner* terminates the *Contractor's* right to continue with the *Work* or terminates the *Contract* pursuant to GC 7.1 - OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT*,* the *Owner* shall have the right to require the *Contractor* to provide an assignment or transfer forthwith of any contract between the *Contractor* and a *Subcontractor* or a *Supplier* for the performance of the *Work.*

1.4.3 The *Contractor* shall include in its contacts with *Subcontractors* and *Suppliers* a requirement to assign their contract with the *Contractor* to the *Owner* in instances where the *Owner* terminates the *Contract* in accordance with GC 7.1.7, if required by the *Owner*.

NEW GENERAL CONDITIONS

Add the following new General Conditions to PART 1 – GENERAL PROVISIONS

GC 1.5 CO-OPERATION, CONSULTATION AND CO-ORDINATION

1.5.1 The *Contractor* shall, at all times and as part of the *Work*, fully assist, co-operate, consult and co-ordinate with the *Consultant* and any other consultants or other entities retained or identified by the *Owner* which are related to the *Project* (collectively, the "***Other Entities***"). The objective of such assistance, co-operation,

consultation and co-ordination is to make certain the *Work* is properly coordinated with and integrated with the work and services of the *Other Entities*.

1.5.2 Without limiting the generality of any other provision in the *Contract*, the *Contractor* shall attend all design, construction, general co-ordination and progress meetings relating to the *Work* between the *Consultant*, the *Owner* and *Other Entities* and any other meeting relating to the *Project* as requested by the *Owner* to discuss and resolve all matters and issues relating to the *Project*. The *Contractor* shall, on a timely basis, prepare and distribute detailed minutes to the *Owner* of the construction and progress meetings which it attends, if requested by the *Owner*.

GC 1.6 NON-RESIDENT

1.6.1 If the *Contractor* is non-resident in Ontario or Canada it shall obtain a GST/HST Registration Number prior to commencement of the *Work*.

1.6.2 The *Contractor* shall ensure that all *Subcontractors* whom it proposes to use for carrying out any of the *Work* and who are non-resident in Ontario or Canada have obtained a GST/HST Registration Number before they commence any *Work* under the *Contract*.

GC 1.7 REVIEW BY OWNER AND REVIEW BY CONSULTANT

1.7.1 Neither the *Owner*'s or *Consultant*'s receipt, review or approval of any documents or the *Work* nor the failure of the *Owner* or *Consultant* to provide comment shall limit, waive or diminish the *Contractor's* obligations, responsibilities, duties or liabilities under the *Contract*. The review or approval by the *Owner* or *Consultant* is intended only to ascertain that the document or the performance of the *Contractor's* duties, liabilities, responsibilities or obligations under the *Contract* including, without limitation, the *Work* generally meets the intention of the *Contract* and is not an assurance or confirmation of the adequacy, quality, fitness, suitability or correctness of the *Contractor's* obligations, responsibilities, duties and liabilities under the *Contract* including, without limitation, the *Work*, for which the *Contractor* is solely responsible in accordance with the *Contract*.

GC 1.8 DOCUMENT REVIEW BY THE CONTRACTOR

1.8.1 The *Contractor* shall review the *Contract Documents* and shall report promptly to the *Consultant* any error, inconsistency, or omission the *Contractor* may discover. Such review by the *Contractor* shall be undertaken with the standard of care described in GC 3.9 – PERFORMANCE BY CONTRACTOR, paragraph 3.9.1. Except for its obligation to make such review and report the result, the *Contractor* does not assume any responsibility to the *Owner* or to the *Consultant* for the accuracy of the *Contract Documents*. The *Contractor* shall not be liable for damage or costs

resulting from such errors, inconsistencies, or omissions in the *Contract Documents*, which the *Contractor* could not reasonably have discovered through the exercise of the required standard of care.

1.8.2 If the *Contractor* does discover any error, inconsistency, or omission in the *Contract* Documents, the *Contractor* shall not proceed with the Work affected until the *Contractor* has received corrected or missing information from the *Consultant* or until the error, inconsistency or omission has been otherwise addressed. In dealing with such error, inconsistency or omission the *Contractor* shall co-operate with the *Owner* in good faith to resolve such errors, inconsistency or omission so as to avoid any increase in the *Contract Price* or delay in the progress of the *Work*.

1.8.3 The lack of reference on a Drawing or in a Specification to labour or *Products* that are required or normally recognized within the applicable trade practice as being necessary for the complete execution of the Work shall not constitute an error, inconsistency or omission.

1.8.4 The issuance of requests for information by the *Contractor* shall not entitle the *Contractor* to any increases to the *Contract Price* or *Contract Time*.

1.8.5 If, at any time, the *Contractor* finds errors, inconsistencies, or omissions in the *Contract Documents* or has any doubt as to the meaning or intent of any part thereof, the *Contractor* shall immediately notify the *Consultant*, and request *a Supplemental Instruction*, *Change Order*, or *Change Directive*, as the case may require. Neither the *Owner* nor the *Consultant* will be responsible for the consequences of any action of the *Contractor* based on oral instructions.

PART 2 ADMINISTRATION OF THE CONTRACT

GC 2.2 ROLE OF THE CONSULTANT

Paragraph 2.2.3

Add the following sentence after the last sentence:

The presence of such *Project* representatives at the *Place of the Work* will not abrogate any of the *Contractor's* responsibility to perform the Work as required by the *Contract Documents*.

Paragraph 2.2.4

Delete the words "and will issue certificates for payment as provided in Article A-5 of the Agreement – PAYMENT, GC 5.3 – PAYMENT and GC 5.5 – FINAL PAYMENT" and replace them with ", subject to the Owner's approval and the conditions of the Contract".

Paragraph 2.2.5

Add the words " to the Contractor" after the words "The *Consultant* will not be responsible" in both the first and second sentences.

Add the word "schedules" after the word "techniques" in the first sentence.

Paragraph 2.2.6

Delete the words "Except with respect to GC 5.1 – FINANCING INFOMRATION REQURIED OF THE OWNER, the" and replace them with "The".

Paragraph 2.2.12

Add the following after the last sentence:

If, in the opinion of the *Contractor*, performance of the *Supplemental Instruction* will result in an increase in the *Contract Price* or to the *Contract Time*, the *Contractor* shall, within 5 *Working Days* of receipt of the *Supplemental Instruction*, provide the *Consultant* with *Notice in Writing* of the cause and duration of the delay and of any increase in *Contract Price*. Failure to provide the *Notice in Writing* shall be a deemed acceptance of the *Supplemental Instruction* by the *Contractor* without adjustment in the *Contract Price* or *Contract Time*.

Paragraph 2.2.13

Delete in its entirety and replace with the following:

2.2.13 The *Consultant* will review and take appropriate action upon *Shop Drawings*, samples and other *Contractor's Submittals* which are provided, in accordance with the *Contract Documents*. The *Consultant's* review of the *Shop Drawings*, samples and *Submittals* and on-site observation of the construction work is to determine if the *Contractor's Submittals* and *Work* appear to be in general conformance with the design set forth in the *Contract Documents* prepared by the *Consultant*.

Paragraph 2.2.15

Delete the words "Work and verify that Ready for Takeover has been attained" and replace them with "Contract as provided in GC 5.4 – SUBSTANTIAL PERFORMANCE OF THE CONTRACT AND PAYMENT OF HOLDBACK".

Paragraph 2.2.16

Add the words "to the Contractor" after the words "does not guarantee".

Paragraph 2.2.18

Delete the words "against whom the Contractor makes no reasonable objection and".

New Paragraphs

Add the following new paragraphs to GC 2.2:

2.2.19 The *Consultant* will conduct reviews of the *Work* to determine the date of *Total Performance of the Contract* as provided in GC 5.6 – FINAL PAYMENT.

2.2.20 The *Consultant* shall not be required to decide on questions arising under agreements or *Contracts* between the *Contractor* and the *Contractor's Subcontractors* or *Suppliers*.

2.2.21 The *Consultant's* review under this GC 2.2 shall not be considered to be complete in every detail or exhaustive and shall also not relieve any *Contractor*, *Subcontractor*, *Supplier*, manufacturer, fabricator, or other third party of responsibility for any deficiency that may exist or for any departures or deviations from the requirements of the *Contract Documents* or of the responsibility to co-ordinate the *Work*, or portion of the *Work*, of one trade with another.

2.2.22 The *Consultant's* services will be performed solely for the benefit of the *Owner* and no *Contractor*, *Subcontractor*, manufacturer, *Supplier*, fabricator or other third party shall have any claim against the *Consultant* as a result of the contract between the *Consultant* and the *Owner* or the performance or non-performance of the *Consultant's* services. The *Contractor* shall bring this provision to the attention of the parties with whom it contracts and have them do the same with those with whom they contract.

GC 2.3 REVIEW AND INSPECTION OF THE WORK

Paragraph 2.3.1

Add the words "and Owner" after the words "the *Consultant*" in the second sentence.

Paragraph 2.3.2

Delete the words "Laws or ordinances" and replace them with "*Laws and Regulations*".

Paragraph 2.3.6

Delete in its entirety and replace with the following:

2.3.6 The *Contractor* shall pay the cost of making any test or inspection, including the cost of samples required for such test or inspection, if such test or inspection is required, by the *Contract Documents* or the *Consultant*, to be performed by the *Contractor*, or if such test or inspection is required by the *Laws and Regulations*. The cost of the testing required by the *Consultant* will be payable by the *Contractor* only if the test results show that the specification requirements have not been met because of the *Contractor's* negligence.

Paragraph 2.3.7

Delete the words “designated in” and replace them with “required by”.

New Paragraphs

Add the following new paragraphs to GC 2.3:

2.3.8 The *Contractor* shall immediately inform the *Owner* and the *Consultant* of any notices, warnings or asserted violations issued by the *Authorities Having Jurisdiction* relating to the *Work*.

2.3.9 The *Consultant's* or *Owner's* review shall not be considered to be complete in every detail or exhaustive and shall also not relieve any *Contractor*, *Subcontractor*, *Supplier*, manufacturer, fabricator, or other third party of responsibility for any deficiency that may exist or for any departures or deviations from the requirements of the *Contract Documents* or of the responsibility to co-ordinate the *Work*, or portion of the *Work*, of one trade with another.

2.3.10 Where standards of performance are specified in the Contract Documents and the Work does not comply with the performance specified, such deficiency shall be corrected as directed by the *Consultant*. Any testing of work identified as defective in accordance with GC 2.4 – DEFECTIVE WORK, including retesting required by the *Owner* to verify performance, shall be done at the *Contractor's* expense.

GC 2.4 DEFECTIVE WORK

Delete in its entirety and replace with the following:

GC 2.4 DEFECTIVE WORK

2.4.1 The *Contractor* shall promptly correct defective work that has been rejected by the *Consultant* or *Owner* as failing to conform to the *Contract Documents*, at the *Contractor's* expense, whether or not the defective work has been incorporated in the *Work* and whether or not the defect is the result of poor workmanship, use of defective *Products* or damage through carelessness or other act or omission of the *Contractor*.

2.4.2 The *Contractor* shall promptly correct, at its own expense, defects or deficiencies in the *Work* which appear prior to and during the *Warranty Period* specified in the *Contract Documents*. The *Contractor* shall rectify, at its own expense, in an acceptable manner all other defective work and like deficiencies throughout the *Work* whether or not they are specifically identified by the *Owner* or the *Consultant*.

2.4.3 The *Contractor* shall prioritize the correction of any defective work which, in the sole discretion of the *Owner* acting reasonably, adversely affects the day-to-day operation of the *Owner*.

2.4.4 The *Contractor* agrees to correct and pay for damage resulting from corrections made under the requirements of paragraphs 2.4.1 and 2.4.2.

2.4.5 The *Contractor* shall pay the *Owner* for costs incurred by the *Owner*, the *Owner's* own forces or the *Other Contractors*, for work destroyed or damaged or any alterations necessitated by the *Contractor's* removal, replacement or re-execution of defective work within 10 *Business Days* upon receipt of the Owner's *Notice in Writing*. The *Owner* may appoint the *Contractor* to rectify any such deficiencies at the *Contractor's* expense.

2.4.6 If in the opinion of the *Consultant* or *Owner* it is not expedient to correct defective work or work not performed as provided in the *Contract Documents*, the *Owner* may deduct from the amount otherwise due to the *Contractor* the value of such work as is necessary to correct any non-compliance with the *Contract Documents*, the amount of which will be determined by the *Owner* acting reasonably and in accordance with GC 5.12 - WITHHOLDING OF PAYMENT.

2.4.7 The *Contractor* shall prioritize the correction of any defective work which, in the sole discretion of the *Owner* acting reasonably, adversely affects the day-to-day operations of the *Owner*.

2.4.8 The *Consultant* shall not have any power to waive any obligations of the *Contractor* for the furnishing by the *Contractor* of good materials and of its performing good work as herein described and in full accordance with the *Contract Documents*. No failure or omission of the *Owner* or the *Consultant* to condemn any defective work or material shall release the *Contractor* from the obligation to at once tear out, remove and properly replace the same at any time upon the discovery of said defective work or material, at the *Contractor's* expense. In case the *Contractor* should refuse or neglect to remove any rejected work or material within 48 hours after written notice from the *Owner* or, if the removal would reasonably require more than 48 hours to complete, the *Contractor* has failed to commence the removal work within 48 hours, such work or material may be removed by order of the *Owner* at the *Contractor's* expense and the *Owner* may deduct the cost of same from any monies otherwise due or that may become due to the *Contractor*.

2.4.9 The carrying out of replacement *Work* and *Making Good* of defects shall be executed at times convenient to the *Owner* and may require work outside of normal working hours at the *Contractor's* expense.

2.4.10 The remedies of the *Owner* set forth above shall not deprive the *Owner* of any action, right or remedy otherwise available to it for breach of any provisions of the *Contract Documents*.

PART 3 EXECUTION OF THE WORK

GC 3.1 CONTROL OF THE WORK

New Paragraphs

Add the following new paragraphs to GC 3.1:

3.1.3 Prior to commencing the *Work* and individual procurement, fabrication and construction activities, the *Contractor* shall verify, at the *Place of the Work*, all relevant measurements and levels necessary for the proper fabrication, assembly, installation and completion of the *Work* and shall further carefully compare such field measurements and conditions with the requirements of the *Contract Documents*. Where dimensions are not included, or contradictions exist, or exact locations are not apparent in the *Contract Documents*, the *Contractor* shall immediately notify the *Consultant* in writing and obtain *Supplemental Instructions* from the *Consultant* before proceeding with any part of the affected *work*.

3.1.4 Without limiting the generality of the foregoing, the *Contractor* is responsible for the coordination of the various parts of the *Work* so that no part is left in an unfinished or incomplete condition.

3.1.5 The *Contractor* shall have the sole responsibility for the design, erection, operation, maintenance and removal of temporary structural and other temporary facilities and the design and execution of construction methods required in their use. The *Contractor* shall engage and pay for registered professional engineering personnel skilled in the appropriate disciplines to perform these functions where required by law or by the *Contract Documents* and in all cases where such temporary facilities and their method of construction are of such a nature that professional engineering skill is required to produce safe and satisfactory results.

3.1.6 The *Contractor* is solely responsible for the quality of the *Work* and shall undertake any quality control activities specified in the *Contract Documents*.

GC 3.2 CONSTRUCTION BY THE OWNER OR OTHER CONTRACTORS

Delete in its entirety and replace with the following:

GC 3.2 CONSTRUCTION BY THE OWNER OR OTHER CONTRACTORS

3.2.1 The *Owner* reserves the right, at any time during the *Contractor's* performance of the Work or the *Warranty Period*, to request that the *Contractor* grant, to the *Owner*, its agents or *Other Contractors*, access to the *Place of the Work* for the purpose of constructing or installing collateral work as the *Owner* may deem necessary.

3.2.2 The *Contractor* shall co-ordinate the *Work* with the work of *Other Contractors* and, where applicable, prepare all connections as specified or shown in the *Contract Documents*.

3.2.3 The *Contractor* agrees not to interfere with, or prevent, the performance of such collateral work by the agents or *Other Contractors* of the *Owner*. In the event that the *Contractor* is delayed in the performance of a critical path activity on the *Construction Schedule* by the construction or installation of such collateral works, this shall be considered a delay event pursuant to GC 6.5 – DELAYS, paragraph 6.5.1.

3.2.4 Entry by the *Owner*, its agents or *Other Contractors* to the *Place of the Work* does not constitute acceptance of the *Work* and does not relieve the *Contractor* of its responsibilities under the *Contract*.

3.2.5 The placement, installation and connection of collateral work by the *Owner*, its agents or *Other Contractors* on, and to, the *Contractor's Work* does not relieve the *Contractor* of its responsibilities under the *Contract* including any warranty obligations.

3.2.6 In the event that the *Work* coincides with the work of the *Owner*, the *Region*, *Other Contractors*, utility companies or *Municipalities*, the *Contractor* shall cooperate with the *Owner*, the *Region*, *Other Contractors*, utility companies and *Municipalities* in order to facilitate free access to their work at all times. The *Owner* reserves the right to alter the method of operations on this *Contract* to avoid interference with other work. The *Contractor* shall also provide separations in time or space (a minimum of 50 metres from the proposed work areas of the *Owner*, the *Region*, *Other Contractors*, utility companies or *Municipalities*) in order to avoid placing the *Owner* or the *Region* in the position of "constructor" within the meaning prescribed in the Occupational Health and Safety Act, RSO 1990, c O.1.

3.2.7 Where separations in time and/or space cannot be provided from the proposed work areas of the *Owner*, the *Region*, *Other Contractors*, utility companies and/or the *Municipalities*, the *Contractor* agrees to be the "Constructor" for and in respect of all work being performed at the *Site*.

3.2.8 The *Contractor* shall have right to remove representatives of *Other Contractors*, the *Consultant* and the *Owner* from the *Site* for failure to adhere to reasonable safety instructions.

GC 3.3 TEMPORARY WORK

Paragraph 3.3.3

Delete in its entirety.

GC 3.4 CONSTRUCTION SCHEDULE

Delete in its entirety and replace with the following:

GC 3.4 CONSTRUCTION SCHEDULE

3.4.1 The *Contractor* shall:

.1 prior to commencement of construction, prepare and submit to the *Owner* and the *Consultant* for their review and acceptance a construction schedule indicating the critical path for the *Project*, using "Microsoft Project" or *Equivalent*, demonstrating that the *Work* will be performed in conformity with the *Contract Time*, and shall conform to the phasing and sequencing requirements for the *Work* as set out in the *Contract Documents* or as otherwise required by the *Consultant* or the *Owner* including, without limitation, a *Products* delivery schedule with respect to the *Products* whose delivery is critical to the schedule of the *Work*. The *Contractor* shall provide the schedule information required by this paragraph 3.4.1.1 in both electronic format and hard copy. Once approved by the *Owner* and the *Consultant*, the construction schedule submitted by the *Contractor* under this paragraph 3.4.1.1, as updated by the *Contractor* and approved by the *Owner*, shall become the "***Construction Schedule***";

.2 monitor the progress of the *Work* on a weekly basis relative to the *Construction Schedule* and update and submit to the *Owner* and the *Consultant* the *Construction Schedule* on a monthly basis;

.3 perform the *Work* in accordance with the *Construction Schedule*;

.4 advise the *Consultant* of any revisions required to the *Construction Schedule* as a result of an extension of the *Contract Time* in accordance with PART 6 – CHANGES IN THE WORK; and

.5 identify potential variances between scheduling and scheduled completion dates and implement necessary adjustments in the *Construction Schedule* in order to meet the Substantial Performance of the Contract date.

3.4.2 On request of the *Consultant* the *Contractor* shall provide information regarding the progress of the *Work* or any part of it, or copies, schedules and orders covering materials, components and services. The *Contractor* shall cooperate fully with the *Consultant* and shall ensure that all *Subcontractors* and *Suppliers* and anyone for whom the *Subcontractors* and *Suppliers* may be responsible also cooperate and make available on request the same documents.

3.4.3 Without limiting the other obligations of the *Contractor* under GC 3.4 – CONSTRUCTION SCHEDULE, the *Contractor* shall not amend the *Construction Schedule* (including, without limitation, any changes to the critical path) without the prior written approval of the *Owner*. Without limiting the foregoing, any delivery of an updated Construction Schedule by the *Contractor* to the *Owner* from time to time shall not be deemed to amend the *Contract Time*. The *Contract Time* shall only be amended in strict accordance with the terms of the *Contract* .

3.4.4 If, at any time, the *Owner* or the *Consultant* advise the *Contractor* that it appears that the actual progress of the *Work* is behind the *Construction Schedule* or is likely to become behind the Construction Schedule, or if the *Contractor* has given notice of such to the *Owner* or the *Consultant*, the *Contractor* shall take appropriate steps to cause the actual progress of the *Work* to conform to the *Construction Schedule* or minimize the resulting delay and shall produce and present to the *Owner* and the *Consultant* a recovery plan demonstrating how the *Contractor* will achieve the recovery of the Construction Schedule. If the *Contractor* intends to apply for a change in the *Contract Price* or claim compensation for delay in relation to the *Construction Schedule* recovery plan, then the *Contractor* shall proceed in accordance with GC 6.5 – DELAYS.

GC 3.5 SUPERVISION

Delete in its entirety and replace with the following:

GC 3.5 CONTRACTOR'S PERSONNEL COMMITMENT

Delete in its entirety and replace with the following:

GC 3.5 CONTRACTOR'S PERSONNEL COMMITMENT

3.5.1 The *Contractor* shall furnish competent and adequate staff, who shall be in attendance at the *Place of the Work* at all times, as necessary, for the proper administration, co-ordination, supervision and superintendence of the *Work*; organize the procurement of all materials and equipment so that they will be available at the time they are needed for the *Work*; and keep an adequate force of skilled workers on the job to complete the *Work* in accordance with all requirements of the *Contract Documents*.

3.5.2 Prior to commencement of the Work, the *Contractor* shall select a competent and experienced full time project manager (the "***Project Manager***") who shall be engaged in the Work at all times, and a competent and experienced full time site supervisor (the "***Site Supervisor***") who shall be in attendance at the *Place of the Work* at all times. The *Project Manager* shall have full responsibility for the prosecution of the *Work*, with full authority to act in all matters as may be necessary for the proper co-ordination, supervision, direction and technical administration of the *Work*, who shall attend site meetings in order to render reports on the progress of the *Work* and who shall have authority to bind the *Contractor* in all matters related to this *Contract*. The *Project Manager* and the *Site Supervisor* shall be satisfactory to the *Owner* and shall not be changed except for good reason and with the prior written approval of the *Owner*.

3.5.3 The *Project Manager* and *Site Supervisor* shall represent the *Contractor* at the *Place of the Work.*

3.5.4 The *Contractor* may not change its *Project Manager* or its *Site Supervisor* without the *Owner's* prior written approval which shall not be unreasonably withheld. Further, the *Contractor* shall not employ or continue to employ on the *Work* anyone to whom the *Owner* may reasonably object.

3.5.5 The *Contractor* shall provide the *Owner* and the *Consultant* with the names, addresses and telephone numbers of the *Project Manager*, the *Site Supervisor* and other responsible field persons who may be contacted for emergency and other reasons during non-working hours.

GC 3.6 SUBCONTRACTORS AND SUPPLIERS

Paragraph 3.6.4

Delete in its entirety

New Paragraphs

Add the following new paragraphs to GC 3.6:

3.6.7 The *Contractor* acknowledges and agrees that it shall not retain the services of any *Subcontractors* not identified in the Schedule of *Subcontractors* in its *Bid* without the prior written authorization of the *Owner* or *Consultant* which consent shall not be unreasonably withheld. In no event will the *Contract Time* be extended, or the *Contract Price* be increased in the event of such a change.

3.6.8 In the event that the *Contractor* requires a change of, replacement to or addition of a named *Subcontractor* or *Supplier*, the *Contractor* shall advise the *Owner* in writing, giving reasons therefore, and shall obtain the prior written approval of the *Owner* to such change, replacement or addition. In no event will

the *Contract Price* be increased, or the *Contract Time* extended as a result of such change, replacement or addition.

3.6.9 Nothing contained in the *Contract Documents* shall create any contractual relationship between the *Owner*, a *Subcontractor*, a *Supplier* or their respective agents, employees or any other persons performing any part of the *Work*.

3.6.10 The *Contractor* shall, in the case of its *Subcontractors*, be responsible for ensuring that they obtain all necessary permits, fees, licences, certifications and all insurance in connection with the *Work* as may be required by *Laws and Regulations* and that they comply with all *Laws and Regulations* and the *Contract Documents*.

GC 3.7 LABOUR AND PRODUCTS

Paragraph 3.7.1

Delete in its entirety and replace with the following:

3.7.1 The *Contractor* shall maintain good order and discipline among its employees, agents, *Subcontractors* and *Suppliers* engaged on the *Work* and shall not employ on the *Work* anyone not skilled in the task assigned. The *Contractor* shall submit site rules for the review and approval of the *Owner*. Any such site rules prepared by the *Contractor* shall be consistent with the *Contractor's* duties and obligations under all applicable *Laws and Regulations* and shall also include provisions making consumption of alcohol or non-prescription drugs at the *Place of the Work* the subject of disciplinary proceedings or termination of employment at the *Work*. Whenever the *Owner* or the *Consultant* shall inform the *Contractor* in writing that any person performing the *Work*, in its opinion:

.1 is incompetent or disorderly;

.2 interferes with the ability of the *Contractor*, *Subcontractors* or *Suppliers* to perform the *Work*;

.3 carries on an unlawful activity;

.4 acts in a manner inconsistent with the timely completion of the *Work*;

.5 injures or attempts to injure any person or causes any damage to any property;

.6 is not using all reasonable efforts to work safely;

.7 has failed to comply with a direction from the *Owner*, the *Consultant* or the *Owner's* health and safety auditor, including a direction to stop Work; or

.8 acts in a manner that is abusive or offensive to representatives of the *Owner*, the *Consultant* or any member of the public

such person or persons shall be discharged from the *Work* and shall not again be employed on this *Contract* without the *Owner's* prior written consent.

Paragraph 3.7.3

Delete in its entirety and replace with the following:

3.7.3 Unless otherwise specified in the *Contract Documents*, *Products Provided* shall be new, free from defects, and as specified or *Equivalent*. The *Contractor* shall not *provide* substitutions for specified *Products* without the express written consent of the *Consultant* and the *Owner*. *Products* which are not specified should be of a quality best suited to the purpose required and their use shall be subject to the approval of the *Consultant* or *Owner*.

New Paragraphs

Add the following new paragraphs to GC 3.7:

3.7.4 Without limiting any other obligation of the *Contractor* under the *Contract Documents* or any rights of the *Owner*, including the rights set out in GC 5.3 - PAYMENT, the *Contractor* shall, within 10 Days of becoming aware of or receiving notice from the *Owner* or the *Consultant*, secure the discharge, release, vacating or withdrawal of any lien that has been registered or otherwise preserved or any written notice of lien that has been advanced, provided that the lien or notice of lien has been registered, preserved or given by a *Subcontractor*, *Supplier*, labourer, mechanic or any other lien claimant or person claiming under or through the *Contractor* or in respect of the *Work*.

3.7.5 If a lien action is commenced against the *Owner* or the *Region* and such action arises out of or relates to a lien that was registered or otherwise preserved by a *Subcontractor*, *Supplier*, labourer, mechanic or any other lien claimant or person claiming under or through the *Contractor* or in respect of the *Work*, the *Contractor* shall indemnify and hold the *Owner* and the *Region* harmless in such action and take all reasonable steps to remove the *Owner* and/or the *Region* from such action. Without limiting the foregoing, the *Owner* may, at its option, require the *Contractor* to defend the *Owner* and/or the *Region* in the action or the *Owner* may assume carriage and control of the action. Any costs the *Owner* and the *Region* incurs or suffers as a result of such action, including legal costs, may be deducted by the *Owner* from any monies otherwise due or that may become due to the *Contractor*.

3.7.6 If the *Owner* or the *Region* receives a written notice of a lien or claim for lien in respect of the *Work*, the *Contractor* shall pay to the *Owner* the amount of the lien plus an additional 25% of the lien amount, to be retained as a holdback until the *Owner* is satisfied that all accounts have been paid in full and any liens have been vacated, withdrawn or discharged, as applicable.

3.7.7 If the *Contractor* fails to secure the discharge, release, vacating or withdrawal of a lien or notice of lien in accordance with the requirements of paragraph 3.7.4, the *Owner* may at its option take such steps as it, in its absolute discretion, may deem necessary to release, vacate or discharge the lien or notice of lien and may, without limiting its other rights and remedies hereunder, deduct from the monies held pursuant to paragraph 3.7.6 (or from any other monies due or that may become due to the *Contractor*), the amount of such lien, together with all costs and expenses incurred by the *Owner* and the *Region* in connection therewith (including the amounts incurred by the *Owner* in taking any of the steps described above).

3.7.8 Unless otherwise specified, all materials existing at the *Place of the Work* at the time of execution of the *Contract* shall remain the property of the *Owner*. All *Work*, *Products* and materials delivered by the *Contractor* delivered to the *Place of the Work* shall be the property of the *Owner*. The *Contractor* shall remove all supplies or rejected materials as its property when notified in writing to do so by the *Consultant*. All materials, *Work* and *Products* delivered by the Contractor shall remain at the risk of the *Contractor* who shall be held responsible for the safe keeping of same.

3.7.9 The *Contractor* is responsible for the safe on-site storage of *Products* and their protection (including *Products* supplied by the *Owner* and *Other Contractors* to be installed under the *Contract*) in such ways as to avoid dangerous conditions or contamination to the *Products* or other persons or property and in locations at the *Place of the Work* to the satisfaction of the *Owner* and the *Consultant*. The *Owner* shall provide all relevant information on the *Products* to be supplied by the *Owner*.

3.7.10 The *Contractor* represents and warrants that the *Products* it *Supplied* in accordance with the *Contract* are not subject to any conditional sales contract and are not subject to any security rights obtained by any third party which may subject any of the *Products* to seizure or removal from the *Place of the Work*.

GC 3.8 SHOP DRAWINGS

Delete in its entirety and replace with the following:

GC 3.8 SHOP DRAWINGS AND OTHER SUBMITTALS

3.8.1 The *Contractor* shall provide *Shop Drawings* and *Submittals* as required in the *Contract* Documents or as the *Consultant* may reasonably request.

3.8.2 The *Contractor* shall provide *Shop Drawings* and *Submittals* to the *Consultant* in orderly sequence and sufficiently in advance so as to cause no delay in the *Work* or in the work of *Other Contractors* or the *Owner*.

3.8.3 Prior to the first application for payment, the *Contractor* and the *Consultant* shall jointly prepare a schedule of the dates for submission and return of *Shop Drawings* and *Submittals*.

3.8.4 The *Contractor* shall provide *Shop Drawings* and *Submittals* in the forms specified, or if not specified, as directed by the *Consultant*.

3.8.5 *Shop Drawings* and *Submittals* provided by the *Contractor* to the *Consultant* shall indicate by stamp, date and signature of the person responsible for the review that the *Contractor* has reviewed each one of them.

3.8.6 The *Consultant*'s review is for conformity to the design concept and for general arrangement only.

3.8.7 *Shop Drawings* and *Submittals* which require approval of any *Authority Having Jurisdiction* shall be provided to such *Authority* by the *Contractor* for approval.

3.8.8 The *Contractor* shall review all *Shop Drawings* and *Submittals* before providing them to the *Consultant*. The *Contractor* represents by this review that:

.1 the *Contractor* has determined and verified all applicable field measurements, field construction conditions, *Product* requirements, catalogue numbers and similar data, or will do so, and

.2 the *Contractor* has checked and coordinated each *Shop Drawing* and *Submittal* with the requirements of the *Work* and of the *Contract Documents*.

3.8.9 At the time of providing *Shop Drawings* and *Submittals*, the *Contractor* shall expressly advise the *Consultant* in writing of any deviations in a *Shop Drawing* and *Submittals* from the requirements of the *Contract Documents.* The *Consultant* shall indicate the acceptance or rejection of such deviation expressly in writing.

3.8.10 The *Consultant*'s review shall not relieve the *Contractor* of responsibility for errors or omissions in the *Shop Drawings* or *Submittals* or for meeting all requirements of the *Contract Documents*.

3.8.11 The *Contractor* shall provide revised *Shop Drawings* and *Submittals* to correct those which the *Consultant* rejects as inconsistent with the *Contract Documents*, unless otherwise directed by the *Consultant*. The *Contractor* shall notify the

Consultant in writing of any revisions to the *Shop Drawings* and *Submittals* other than those requested by the *Consultant*.

3.8.12 The *Consultant* will review and return *Shop Drawings* and *Submittals* in accordance with the schedule agreed upon in paragraph 3.8.3, or, in the absence of such schedule, within 10 *Business Days* or such longer period as may be reasonably required by the *Consultant*. If, for any reason, the *Consultant* cannot process them within the time periods specified therein, the *Consultant* shall notify the *Contractor* and they shall meet to review and arrive at an acceptable revised schedule for processing. The *Contractor* shall update the *Shop Drawings* and *Submittals* schedule to correspond to changes in the *Construction Schedule*. Changes in the *Contract Price* or *Contract Time* may be made only as otherwise provided in the *Contract*.

NEW GENERAL CONDITIONS

Add the following new General Conditions to PART 3 – EXECUTION OF THE WORK

GC 3.9 PERFORMANCE BY CONTRACTOR

3.9.1 In performing its services and obligations under the *Contract*, the *Contractor* shall exercise the standard of care, skill, and diligence that would normally be provided by an experienced and prudent contractor supplying similar services for similar projects. The *Contractor* acknowledges and agrees that throughout the *Contract*, the performance of the *Contractor's* obligations, duties, and responsibilities shall be judged against this standard. The *Contractor* shall exercise the same standard of care, skill, and diligence in respect of any *Products*, personnel, or procedures which it may recommend to the *Owner*.

3.9.2 The *Contractor* further represents, covenants and warrants to the *Owner* that:

.1 the personnel it assigns to the *Project* are appropriately experienced;

.2 it has a sufficient staff of qualified and competent personnel to replace any of its appointed representatives, subject to the *Owner's* approval, in the event of death, incapacity, removal or resignation; and

.3 there are no pending, threatened or anticipated claims that would have a material effect on the financial ability of the *Contractor* to perform the Work under the *Contract*.

GC 3.10 INTERFERENCE

3.10.1 If the Work, in whole or in part, involves the renovation of, or addition to, existing and occupied premises:

.1 the *Contractor* shall maintain normal business operations and traffic flow, with a minimum of inconvenience to the tenants and occupants of the *Place of the Work*;

.2 subject to the provisions of the *Contract Documents*, the *Contractor* shall ensure that no essential services such as electric power, water supply or other public utilities are interrupted; and

.3 in every case where an interruption to existing services or utilities is to occur during execution of the *Work*, the *Contractor* shall give the *Owner* 5 *Business Days'* prior *Notice in Writing*. The *Contractor* shall reschedule any such interruption, at no additional cost to the *Owner*, if requested to do so in writing by the *Owner*.

GC 3.11 OPERATIONAL RISKS

3.11.1 The position of all pole lines, conduits, water mains, sewers and other underground and overground utilities and structures is not necessarily shown on the *Drawings*, and, where shown, the accuracy of the position of such utilities and structures is not guaranteed. Before starting Work, the *Contractor* shall inform itself of the exact locations of such utilities and structures, and shall be liable for damages to any utilities identified or which reasonably should have been identified, as a result of any negligent act or omission of the *Contractor* or those for whom the *Contractor* is responsible. Unless otherwise specified, the *Contractor* shall temporarily support or relocate such utilities and structures, or temporarily remove them, and restore them, to the satisfaction of the owners of the utilities and structures. The *Contractor* waives any claim and releases the *Owner*, the *Region*, and their respective directors, officers, council members, board members, partners, agents and employees from all liability for damages suffered as a result of such *Drawings* or any operation required under this paragraph.

3.11.2 The *Consultant* will provide the *Contractor* in writing with bench marks and points of reference to be used by the *Contractor* in setting out the *Work*. From these bench marks and points of reference the *Contractor* will do its own setting out. The setting out by the *Contractor* shall include but shall not be limited to the preparation of grade sheets, the installation of centre lines stakes, grade stakes, offsets and site rails.

GC 3.12 DOCUMENTS AT THE SITE AND PROJECT RECORDS

3.12.1 The Contractor shall keep one copy of current Contract Documents, Supplemental Instructions, *Contemplated Change Orders*, *Change Orders*, *Change Directives*, *Cash Allowance Disbursement Authorizations*, reviewed Shop Drawings,

Submittals, reports, and records of meetings at the Place of the Work, in good order and available to the Owner and the *Consultant*.

3.12.2 The *Contractor* shall maintain and keep accurate *Project* records (which means all tangible records, daily reports, daily logs, documents, computer printouts, electronic information, books, plans, *Drawings*, *Specifications*, accounts or other information relating to the *Work*) in its office in Ontario in accordance with requirements of law, but in any event for not less than 6 years from the date of *Substantial Performance of the Contract* or until all claims have been settled, whichever time period is longer. The records shall include detailed records of all actions taken by the *Contractor* related to security and health and safety legislation in the *Place of the Work*. During this time, the *Contractor* shall allow the *Owner* access to the *Project* records during normal business hours upon the giving of reasonable notice. The *Contractor* shall ensure that equivalent provisions to those provided herein are made in each subcontract and shall require the *Subcontractors* and *Suppliers* to incorporate them into every level of contract thereunder for any part of the *Work*.

GC 3.13 CONTRACTOR'S USE OF PERMANENT EQUIPMENT OR SYSTEMS

3.13.1 With the prior written approval of the *Owner*, the *Contractor* may make use of elements of the mechanical and electrical systems or equipment comprising a permanent part of the *Work* for the purpose of providing heat or power to the *Site* during the final stages of construction. In such event, before making its written application for *Substantial Performance of the Contract*, and again, immediately prior to final takeover by the *Owner* of such systems and equipment, the *Contractor* shall clean and *Make Good*, to the satisfaction of the *Consultant*, such systems and equipment as it had been permitted to use. The *Contractor* shall pay any and all costs associated with such use, cleaning and *Making Good*.

GC 3.14 USE OF THE WORK

3.14.1 The *Contractor* shall confine *Construction Equipment*, *Temporary Work*, storage of *Products*, waste products and debris, and operations of employees and *Subcontractors* to limits indicated by laws, ordinances, permits, or the *Contract Documents* and shall not unreasonably encumber the *Place of the Work*.

3.14.2 The *Contractor* shall not load or permit to be loaded any part of the *Work* with a weight or force that will endanger the safety of the *Work*.

GC 3.15 CUTTING AND REMEDIAL WORK

3.15.1 The *Contractor* shall perform the cutting and remedial work required to make the affected parts of the *Work* come together properly.

3.15.2 The *Contractor* shall co-ordinate the *Work* to ensure that the cutting and remedial work is kept to a minimum.

3.15.3 Should the *Owner*, the *Consultant*, *Other Contractors* or anyone employed by them be responsible for ill-timed work necessitating cutting or remedial work to be performed, the cost of such cutting or remedial work shall be valued as provided in GC 6.1 –CHANGES IN THE WORK, GC 6.2 - CHANGE ORDER and GC 6.3 - CHANGE DIRECTIVE.

3.15.4 Cutting and remedial work shall be performed by specialists familiar with the *Products* affected and shall be performed in a manner to neither damage nor endanger the *Work*.

GC 3.16 CLEANUP

3.16.1 The *Contractor* shall maintain the *Work* in a safe and tidy condition and free from the accumulation of waste products and debris, other than that caused by the *Owner*, *Other Contractor*s or their employees.

3.16.2 Before applying for *Substantial Performance of the Contract* as provided in GC 5.4 – SUBSTANTIAL PERFORMANCE OF THE CONTRACT AND PAYMENT OF HOLDBACK, the *Contractor* shall remove waste products and debris, other than that resulting from the work of the *Owner*, Other Contractors or their employees, and shall leave the *Place of the Work* clean and suitable for use or occupancy by the *Owner*. The *Contractor* shall remove *Products*, tools, *Construction Equipment*, and *Temporary Work* not required for the performance of the remaining work.

3.16.3 Prior to application for the final payment, the *Contractor* shall remove any remaining *Products*, tools, *Construction Equipment*, *Temporary Work*, and waste products and debris, other than those resulting from the work of the *Owner*, *Other Contractors* or their employees.

3.16.4 The *Owner* shall have the right to back charge cleaning to the *Contractor* if it is not done within 2 *Business Days* of *Notice in Writing* to clean and the *Owner* shall have the right to back charge cost of damage to the *Place of the Work* caused by *Contractor's*, *Subcontractor's* or *Supplier's* transportation in and out of the *Place of the Work* if not repaired within 5 *Working Days* of *Notice in Writing* to repair or before final payment, whichever is earlier.

GC 3.17 RIGHT OF ENTRY

3.16.1 The *Owner* shall have the right to enter or occupy the *Place of the Work* in whole or in part for the purpose of placing materials, fittings and equipment or for other uses at any time before *Substantial Performance of the Contract*, if, in the reasonable opinion of the *Consultant*, such entry or occupation does not prevent

or substantially interfere with the *Contractor's* completion of the *Contract* or achieving *Substantial Performance of the Contract* within the timeframe specified in Article A-1 of the Agreement – THE WORK, paragraph 1.3.1. Such entry or occupation or use of equipment or systems shall not be considered as acceptance of the *Work* in whole or in part, or in any way relieve the *Contractor* from its responsibility as constructor under the *Occupational Health and Safety Act*, RSO 1990, c O.1 or to complete the *Contract*.

PART 4 ALLOWANCES

Delete the heading in its entirety and replace it with the following:

PART 4 ALLOWANCES AND PROVISIONAL ITEMS

GC 4.1 CASH ALLOWANCES

Paragraph 4.1.3

Delete in its entirety and replace with the following:

4.1.3 Expenditures under cash allowances must be authorized by the *Owner* in writing.

Paragraph 4.1.4

Delete the word "*Consultant's*" and replace it with "Owner's" in the first sentence.

Delete the words "as set out in the Contract Documents" from the end of the last sentence.

Paragraph 4.1.5

Add the following sentence at the beginning of the paragraph:

The *Contractor* shall have no claim on any unused portion of any cash allowance item.

Paragraph 4.1.6

Add the following to the end of the paragraph:

The *Contractor* shall submit, with its *Proper Invoice*, documentation showing the date of purchase, the vendor from which the purchase was made, the date of delivery of the *Product* or service, and the price, including delivery to the *Site* and all applicable taxes. Cash allowance payments will only be made with the written authorization of the *Owner*, and shall not include any mark-ups whatsoever, unless the *Contractor* is entitled to mark-up on excess cash allowance under paragraph 4.1.4.

Paragraph 4.1.7

Delete in its entirety and replace with the following:

4.1.7 The *Contractor* shall consult with the *Owner* or the *Consultant* in the selection of the *Products*, services and vendors required to carry out the work under the cash allowance, and shall obtain the *Owner's* approval for the selection of *Products*, services and/or vendor(s) in relation to the cash allowance.

New Paragraphs

Add the following new paragraphs to GC 4.1:

4.1.8 The *Contractor* shall obtain competitive bids from a minimum of three vendors for portions of the *Work* to be paid for out of cash allowances unless otherwise directed by the *Owner*. The *Contractor* shall submit the bids received to the *Owner* for approval.

4.1.9 At the commencement of the *Work*, the *Contractor* shall prepare for the review and acceptance of the *Owner* and the *Consultant*, a schedule indicating the times, within the *Construction Schedule* referred to in GC 3.4 – CONSTRUCTION SCHEDULE, that items called for under cash allowances and items that are specified to be *Owner* purchased and *Contractor* installed or hooked up are required at the *Site* to avoid delaying the progress of the *Work*.

GC 4.2 CONTINGENCY ALLOWANCE

Delete in its entirety and replace with the following:

GC 4.2 PROVISIONAL ITEMS

4.2.1 The purpose of provisional items in the *Bid* is to cover the cost of *Work* that is anticipated but may not be required. The *Contractor* shall not be entitled to use these prices unless the *Contractor* has received prior written approval from the *Owner*. Each provisional price item may be used at the sole discretion of the *Owner*.

4.2.2 If the *Owner* requests that a provisional item be completed by the *Contractor*, the *Contractor* shall consult with the *Consultant* about the selection of *Product*s, services, and *Subcontractors* required to carry out the *Work* under the provisional items, and shall obtain the *Consultant*'s approval for the selection of *Product*s, services and *Subcontractor(s)* in relation to the selected provisional items.

4.2.3 The *Contractor* shall submit, as part of its *Proper Invoice* submitted in accordance with GC 5.2 – APPLICATIONS FOR PAYMENT, an invoice for the provisional *Work* showing the date of purchase/service, the *Work* included in the service, and the price, including all applicable taxes.

4.2.4 Provisional item payments will only be made in accordance with the previous written authorization of the *Owner*, and shall not include any mark-ups. The

Contractor shall have no claim on any unused portion of any provisional items, including but not limited to any claims for loss of anticipated profits.

4.2.5 Provisional item payments will be made according to the service or *Work* invoiced and approved by the *Owner*.

4.2.6 The *Contractor* shall have no claim on any unused portion of any provisional item. The net amount of any unexpended provisional item shall be deducted from the *Contract Price* by *Change Order* without any adjustment for the *Contractor*'s overhead and profit on such amount.

PART 5 PAYMENT

Delete in its entirety and replace with the following:

PART 5 PAYMENT

GC 5.1 FINANCING INFORMATION REQUIRED

5.1.1 The *Contractor* shall provide the *Owner* with *Notice in Writing* of any material change in the *Contractor's* financial ability to fulfil its obligations under the *Contract* within 5 *Business Days* of such change.

GC 5.2 APPLICATIONS FOR PAYMENT

5.2.1 Applications for payment on account as provided in Article A-5 of the Agreement - PAYMENT may be made as the *Work* progresses by the submission of a *Proper Invoice*.

5.2.2 The amount claimed shall be for the value, proportionate to the amount of the *Contract*, of *Work* performed and *Products* delivered to the *Place of the Work* as of the last Day of the *Payment Period*.

5.2.3 The *Contractor* shall submit to the *Owner* and the *Consultant*, within 15 Days of receipt of the *Owner's* notice to commence the *Work* and prior to the first *Pre-Invoice Submission Meeting*, a schedule of values for the parts of the *Work*, aggregating the total amount of the *Contract Price*, so as to facilitate evaluation of applications for payment. The schedule of values shall be made out in such form and supported by such evidence as the *Consultant* may reasonably direct and when accepted by the *Consultant*, shall be used as the basis for applications for payment, unless it is found to be in error. The *Contractor* shall include a statement based on the schedule of values with each application for payment.

5.2.4 Applications for payment for *Products* delivered to the *Place of the Work* but not yet incorporated into the *Work* shall be supported by such evidence as the *Consultant* may reasonably require to establish the value and delivery of the *Products*. Any *Products* delivered to the *Place of the Work* but not yet

incorporated into the Work shall remain at the risk of the *Contractor* notwithstanding that title has passed to the *Owner* pursuant to GC 3.7 – LABOUR AND PRODUCTS, paragraph 3.7.8.

5.2.5 5 Days prior to the end of the *Payment Period*, or at such other time agreed to by the *Owner* and the *Contractor* in writing, the *Contractor*, *Owner* and *Consultant* shall attend a meeting to discuss and review the percentage of *Work* completed during the *Payment Period* for each item indicated in the schedule of values (the "***Pre-Invoice Submission Meeting***"). In the event that the scheduled date for the *Pre-Invoice Submission Meeting* is not a *Business Day*, the *Pre-Invoice Submission Meeting* shall occur on the next *Business Day*, or on another Day as may be agreed to by the *Contractor* and the *Owner* in writing.

5.2.6 The *Contractor* shall bring with it to the *Pre-Invoice Submission Meeting* the following:

.1 its *Preliminary Estimate for Payment* for the current *Payment Period*;

.2 any documents the *Contractor* is required to bring to the *Pre-Invoice Submission Meeting* as stipulated in the *Specifications*; and

.3 any other documents reasonably required by the *Consultant*.

5.2.7 The *Contractor* shall give a *Proper Invoice* to the *Owner* and *Consultant*, in accordance with paragraph 5.2.8, for work performed during a *Payment Period* on the 14th Day following the conclusion of the *Payment Period* to which the *Proper Invoice* relates (the "***Proper Invoice Submission Date***"), subject to the following:

.1 if the 14th Day following the conclusion of the *Payment Period* to which a *Proper Invoice* relates falls on a Day that is not a *Business Day*, the *Proper Invoice Submission Date* shall be deemed to fall on the next *Business Day*; and

.2 if the 14th Day following the conclusion of the *Payment Period* to which a *Proper Invoice* relates falls on a Day during the month of December, the *Proper Invoice Submission Date* shall be deemed to fall on the next *Business Day* in January of the following year.

5.2.8 *Proper Invoices* shall be given in accordance with the following:

.1 *Proper Invoices* shall be uploaded to https:constructioninvoices.york.ca (the "***PI Portal***");

.2 *Proper Invoices* shall be uploaded during the hours of 8:30 a.m. to 4:30 p.m. (ET) on the *Proper Invoice Submission Date*;

.3 If a *Proper Invoice* is uploaded after 4:30 p.m. on the applicable *Proper Invoice Submission Date*, the *Proper Invoice* will not be considered or reviewed by the *Owner* and *Consultant* until the next *Proper Invoice Submission Date*, at which point the *Proper Invoice* will be deemed to have been given to the *Owner* and the *Consultant*. Notwithstanding the immediately preceding sentence and paragraph 5.2.7, if a *Proper Invoice* is uploaded after 4:30 p.m. (ET) on the *Proper Invoice Submission Date*, the *Owner* reserves the right, in its sole discretion, to consider the *Proper Invoice* as being given in accordance with the *Construction Act* on the date and at such time as it was uploaded. The *Owner's* exercise of the right conferred to it in this paragraph shall not be construed as a waiver of any of its rights or waive or release the *Contractor's* obligations to strictly comply with the requirements prescribed in paragraphs 5.2.7 to 5.2.12 inclusive.

.4 If the *Proper Invoice* is uploaded before the *Proper Invoice Submission Date*, the *Proper Invoice* will not be considered or reviewed by the *Owner* and *Consultant* until the applicable *Proper Invoice Submission Date*, at which point the *Proper Invoice* will be deemed to have been given to the *Owner* and *Consultant*.

5.2.9 The parties hereby consent to the giving and receiving of *Proper Invoices* in accordance with the requirements of paragraph 5.2.8 and without limiting the generality of the foregoing, consent to the giving and receiving of *Proper Invoices* through the *PI Portal* and the giving and receiving of notices of non-payment by email.

5.2.10 The requirements of paragraph 5.2.8 are of the essence. In order for a *Proper Invoice* to be considered received by the *Owner* in accordance with the *Construction Act*, it must be given in accordance with the requirements of paragraph 5.2.8.

5.2.11 *Proper Invoices* shall be submitted substantially in the form attached as Form 2.

5.2.12 *Proper Invoices* must contain, in addition to the information prescribed by section 6.1 of the *Construction Act*, the following:

.1 *Proper Invoice* application number

.2 *Contract* number and brief description of the *Contract*

.3 purchase order number

.4 references to item number(s) and item description(s) when describing the services and materials supplied

.5 a breakdown of approved *Change Orders* or *Change Directives* and percentage completed of each

.6 a valid WSIB Certificate of Clearance

.7 a critical path schedule if requested by the *Owner*

.8 contemplation, and reflection in the amount payable, of all of the following to the extent they are applicable:

(1) statutory holdback

(2) statutory lien holdbacks

(3) maintenance security

(4) applicable taxes

.9 for all *Proper Invoices* except the first one, either:

(1) a declaration, in the form contained in the form of *Proper Invoice* attached as Form 2, that all accounts for labour, subcontracts, *Products*, construction machinery and equipment and other indebtedness which may have been incurred by the *Contractor* in performing the Work, and for which the *Owner* may in any way be held responsible, have been paid in full except for statutory holdback monies properly retained; or

(2) a declaration by the *Contractor* as to the distribution made of the amounts received using document CCDC 9A – Statutory Declaration of Progress Payment Distribution by Contractor

5.2.13 An invoice the *Contractor* submits which it purports to be a *Proper Invoice*, but which does not meet the requirements of paragraphs 5.2.11 and 5.2.12 shall not constitute a *Proper Invoice* and the *Owner* shall be under no obligation to consider or review such invoice. Invoices submitted by the *Contractor* will be considered to be a *Proper Invoice*, properly received by the *Owner* in accordance with the requirements of the *Contract* and the *Construction Act*, unless the *Owner* or the *Consultant* advises the *Contractor* otherwise.

5.2.14 The requirements of paragraphs 5.2.7 to 5.2.13 are of the essence.

5.2.15 The services or materials, including quantity(ies), supplied that are described in a *Proper Invoice* are not required to be made by strict measurement or with exactness, but may be approximate only.

5.2.16 The *Contractor* shall prepare current *As-Built Drawings* during the course of the Work, which shall be maintained by the *Contractor* and made available to the *Consultant* for review with each application for payment. If current *As-Built Drawings* are not available for the *Consultant's* review, the *Consultant* may retain

an amount reasonably determined by the *Consultant* to be the value of the *As-Built Drawings* not available for review from the progress draw.

5.2.17 Payment by the *Owner* pursuant to the *Contract* shall not preclude the *Owner* from thereafter disputing any of the items involved and shall not be construed as acceptance of any part of the *Work*.

GC 5.3 PAYMENT

5.3.1 The *Owner* and the *Consultant* shall review the *Contractor's* application for payment, including the *Proper Invoice*, and advise the *Contractor* of any disputed amounts in accordance with the *Construction Act*.

5.3.2 The *Owner* may retain amounts as determined by the *Consultant* to ensure correction of deficient work done or unacceptable *Products provided*.

5.3.3. Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act*, the *Owner* shall pay all undisputed amounts to the *Contractor* in accordance with the provisions of Article A-5 of the Agreement – PAYMENT and the *Construction Act*.

5.3.4 The *Owner* reserves the right, in its sole, absolute and unfettered discretion, to permit the *Contractor* to correct an error in an invoice that the *Contractor* purported to be a *Proper Invoice* and gave to the *Owner*. The *Owner* shall be under no obligation to exercise the right conferred to it under this paragraph 5.3.4.

5.3.5 Without limiting any other remedy available to the *Owner*, the *Owner* may withhold all, or any part, of any payment, or revise any previous payment certificate(s) made because of subsequently discovered evidence or the results of subsequent inspections or tests, but only to the extent that is necessary to protect the *Owner* from loss because:

.1 the *Work* does not conform to the requirements of the *Contract Documents* or completed *Work* has been damaged requiring correction or replacement; or

.2 the *Contract Price* has been reduced by *Change Order*; or

.3 the *Owner* has been required to correct non-conforming *Work* or complete *Work* in accordance with GC 2.4 – DEFECTIVE WORK, or

.4 the *Owner* has actual knowledge of the occurrence of any of the events enumerated in GC 7.1 – OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT, justifying suspension or termination; or

.5 claims have been made against the *Owner* or the *Region* on account of the *Contractor's* performance or furnishing of the Work; or

.6 written notice of a lien or a claim for lien under the *Construction Act* has been received by the *Owner* or the *Region* or a lien has been registered or filed, in either case, in connection with the *Work*, except where the *Contractor* has delivered a bond, acceptable to the *Owner*, to secure the satisfaction and discharge, vacation or withdrawal of such lien; or

.7 there are other items entitling the *Owner* to a set-off against the amount for which application is made in accordance with the provisions of the *Contract Documents*; or

.8 the *Contractor* has not delivered all of the documentation required with its application for payment.

GC 5.4 SUBSTANTIAL PERFORMANCE OF THE CONTRACT AND PAYMENT OF HOLDBACK

5.4.1 When the *Contractor* considers that the *Contract* to be substantially performed, and the *Contractor* has supplied all documentation required to be provided prior to the granting of Substantial Performance as specified in the *Contract Documents*, the *Contractor* shall submit an application for *Substantial Performance of the Contract* to the *Owner* and the *Consultant*. The application shall include the following:

.1 A comprehensive list of all items of work remaining to be completed or corrected. Failure to include an item on the list will not release the *Contractor* from its responsibility to complete all items of work in accordance with the terms of the *Contract*;

.2 A *Preliminary Estimate for Payment* covering all work performed up to the date of *Substantial Performance of the Contract* since the last *Proper Invoice* submission;

.3 All outstanding guarantees required pursuant to the *Specifications*;

.4 All outstanding manufacturers' guarantees covering rated output, efficiency and performance for all operating equipment forming part of the *Work*;

.5 All outstanding test results;

.6 Complete operating and maintenance instructions for equipment and apparatus furnished under the *Contract*, including maintenance manuals, training manuals, operating instructions, equipment calibration sheets, maintenance and operating tools, and replacement/spare parts and materials, if not already provided;

.7 All required *As-Built Drawings* and related data, if not already provided;

.8 All permits, licenses, approvals, certificates and authorizations required by any *Authorities Having Jurisdiction* over the *Work* or the *Place of the Work*;

.9 Any other documents specified in the Specifications; and

.10 Any other documents reasonably required by the *Consultant*.

5.4.2 Before submitting its application for *Substantial Performance of the Contract*, the *Contractor* shall remove waste products and debris, other than that resulting from the work of the *Owner*, *Other Contractors* or their employees, and shall leave the *Place of the Work* clean and suitable for use or occupancy by the *Owner*. The *Contractor* shall remove *Products*, tools, *Construction Equipment*, and *Temporary Work* not required for the performance of the remaining work.

5.4.3 After submitting its application for *Substantial Performance of the Contract*, the *Contractor* shall meet with the *Owner* and the *Consultant* to review and reconcile the value of work performed, deficient work and outstanding work.

5.4.4 Provided the *Contractor* meets the requirements for *Substantial Performance of the Contract*, the *Owner* shall issue a certificate of *Substantial Performance of the Contract* in the prescribed form (the "***Certificate of Substantial Performance***") to the *Contractor*, specifying the date upon which *Substantial Performance of the Contract* was attained.

5.4.5 The *Contractor* shall arrange, at its own expense, for the publication of the *Certificate of Substantial Performance* in the Daily Commercial News.

5.4.6 The publication of the *Certificate of Substantial Performance*, as arranged for by the *Contractor*, shall constitute a waiver by the *Contractor* of all claims whatsoever against the *Owner* and the *Region* under this *Contract* up to the date of *Substantial Performance of the Contract* whether for a change in the *Contract Price*, extension of *Contract Time*, or both, except those made in writing prior to the *Contractor's* application for *Substantial Performance of the Contract* and still unsettled.

5.4.7 No later than 15 Days after the issuance of the *Certificate of Substantial Performance*, the *Contractor* shall submit the following to the *Owner* and the *Consultant* in accordance with GC 5.2 – APPLICATIONS FOR PAYMENT, paragraph 5.2.8:

.1 a *Proper Invoice* that covers the unpaid work completed up to the date of *Substantial Performance of the Contract* and which complies with the requirements for a *Proper Invoice* as specified in GC 5.2 – APPLICATIONS FOR PAYMENT, paragraphs 5.2.11 and 5.2.12;

.2 proof of publication of the *Certificate of Substantial Performance*;

.3 a release, in the form attached as Form 4, releasing the *Owner* and the *Region* from all further claims relating to the *Contract* except for claims for work performed after the date of *Substantial Performance of the Contract* and claims pursuant to PART 8 – DISPUTE RESOLUTION made prior to *Substantial Performance of the Contract* and still unsettled; and

.4 a declaration by the *Contractor* as to the status of ongoing adjudications with respect to the *Contract* using the form of declaration attached as Form 3.

5.4.8 The requirements of paragraph 5.4.7 are of the essence.

5.4.9 Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act*, the *Owner* shall pay all undisputed amounts to the *Contractor* in accordance with the provisions of Article A-5 of the Agreement – PAYMENT and the *Construction Act*.

5.4.10 The *Owner* and the *Consultant* shall review the documents submitted by the *Contractor* pursuant to paragraph 5.4.7 and advise the *Contractor* of any amounts of the basic holdback that the *Owner* refuses to pay and shall, in accordance with the *Construction Act*, arrange for the publication of a notice of non-payment of holdback in the prescribed form in the Daily Commercial News.

5.4.11 Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act*, and provided the time period for preserving any claims for liens for materials or services supplied prior to *Substantial Performance of the Contract* have expired, the *Owner* will pay the undisputed amount of the basic holdback to the *Contractor* in accordance with the provisions of Article A-5 of the Agreement – PAYMENT and the *Construction Act*.

5.4.12 Release of the statutory holdback funds shall not relieve the *Contractor*, or its surety, from any obligations under this *Contract*.

GC 5.5 PROGRESSIVE RELEASE OF HOLDBACK

5.5.1 When the *Contractor* considers a subcontract (the "***Subcontract***") to be complete, and all required inspection and testing of the Work covered by the *Subcontract* have been finished, the Contractor may submit an application for certification of completion of the *Subcontract* to the *Owner* and the *Consultant*.

5.5.2 The application for certification of completion of the *Subcontract* shall include the following information and documentation with supporting particulars, at a minimum:

.1 the final *Subcontract* price;

.2 a Declaration of Last Supply under subsection 31(5) of the *Construction Act* from the *Subcontractor*;

.3 valid WSIB Certificates of Clearance from the *Contractor* and the *Subcontractor*;

.4 a statutory declaration from the *Subcontractor*, in a form attached as Form 6, that all accounts for labour, subcontracts, *Products,* construction machinery and equipment and other indebtedness which may have been incurred by the *Subcontractor* in performing the work under the *Subcontract*, and for which the Owner or the *Region* might in any way be held responsible, have been paid in full except for statutory holdback monies properly retained;

.5 a release from the *Contractor* and the *Subcontractor,* in the form attached as Form 7, releasing the Owner and the *Region* from all further claims relating to the *Subcontract*.

.6 a declaration by the *Contractor* as to the status of ongoing adjudications with respect to the *Contract* using the form of declaration attached as Form 3.

5.5.3 Upon receipt of the application for certification of completion of the *Subcontract*, the *Owner* and the *Consultant* may, at their sole discretion, review the application to determine whether the *Subcontract* is complete.

5.5.4 Provided the *Subcontract* is complete, the *Owner* may, at its sole discretion, issue a Certificate of Completion of *Subcontract*, in the prescribed form, to the Contractor specifying the completion date of the *Subcontract*.

5.5.5 No later than 15 Days following the issuance of the Certificate of Completion of *Subcontract*, the Contractor shall submit a Proper Invoice for the release of holdback with respect to the completed *Subcontract* (the "***Proper Invoice for Subcontract Holdback***") to the Owner and *Consultant* in accordance with GC 5.2 – APPLICATIONS FOR PAYMENT, paragraph 5.2.8. The *Proper Invoice for Subcontract Holdback* shall comply with the requirements of GC 5.2 – APPLICATIONS FOR PAYMENT, paragraphs 5.2.11 and 5.2.12.

5.5.6 The requirements of paragraph 5.5.5 are of the essence.

5.5.7 The *Owner* and the *Consultant* shall review the *Proper Invoice for Subcontract Holdback* and advise the Contractor of any disputed amounts.

5.5.8 Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act*, the Owner shall pay all undisputed

amounts under the *Proper Invoice for Subcontract Holdback* to the Contractor in accordance with the provisions of Article A-5 of the Agreement - PAYMENT.

5.5.9 Immediately upon receipt of the statutory holdback funds the *Contractor* shall give to the *Subcontractor* the payment due under the *Subcontract*.

5.5.10 Release of the statutory holdback funds shall not relieve the *Contractor,* or its surety, from any obligations under this *Contract*.

GC 5.6 FINAL PAYMENT

5.6.1 When the *Contractor* considers the *Contract* to be complete, the *Contractor* shall submit an application for *Total Performance of the Contract* to the *Owner* and the *Consultant*. The application shall include:

.1 a comprehensive list of all items of work remaining to be completed or corrected. Failure to include an item on the list shall not release the *Contractor* from its responsibility to complete all items of *Work* in accordance with the terms of the *Contract*;

.2 a *Preliminary Estimate for Payment* covering all *Work* performed up to the date of *Total Performance of the Contract* since the last *Proper Invoice* submission;

.3 all outstanding guarantees required pursuant to the *Specifications*;

.4 all outstanding manufacturers' guarantees covering rated output, efficiency and performance for all operating equipment forming part of the *Work*;

.5 complete operating and maintenance instructions for equipment and apparatus furnished under the *Contract* if not already provided;

.6 all *Contractor's As-Built Drawings*, records and related data;

.7 all permits, licenses, approvals, certificates and authorizations required by any *Authorities Having Jurisdiction* over the *Work* or the *Place of the Work*;

.8 any other documents specified in the *Specifications*; and

.9 any other documents reasonably required by the *Consultant*.

5.6.2 After submitting its application for *Total Performance of the Contract*, the *Contractor* shall meet with the *Owner* and the *Consultant* in order to review and reconcile the value of work performed, deficient work and outstanding work.

5.6.3 Provided the *Contract* meets the requirements for *Total Performance of the Contract*, the *Owner* shall issue a certificate of *Total Performance of the Contract* (the "***Certificate of Total Performance***") to the *Contractor*, specifying the date upon which *Total Performance of the Contract* was attained. Following the

issuance of the *Certificate of Total Performance*, the *Contractor* shall promptly execute the *Certificate of Total Performance*.

5.6.4 The *Contractor's* execution of the *Certificate of Total Performance* shall constitute a waiver by the *Contractor* of all claims whatsoever against the *Owner* and the *Region* under this *Contract* up to the date of *Total Performance of the Contract*, whether for a change in the *Contract Price*, an extension of the *Contract Time,* or both, except those made in writing prior to the *Contractor's* application for *Total Performance of the Contract* and still unsettled.

5.6.5 No later than 15 Days following the issuance of the *Certificate of Total Performance*, the *Contractor* shall submit the following to the *Consultant* and the *Owner* in accordance with GC 5.2 – APPLICATIONS FOR PAYMENT, paragraph 5.2.8:

.1 a *Proper Invoice* that covers the unpaid work completed up to the date of *Total Performance of the Contract* and which complies with the requirements for a *Proper Invoice* as specified in GC 5.2 – APPLICATIONS FOR PAYMENT, paragraphs 5.2.11 and 5.2.12;

.2 a signed copy of the *Certificate of Total Performance*;

.3 a release from the *Contractor*, in the form attached as Form 5, releasing the *Owner* and the *Region* from all further claims relating to the *Contract* except for claims for work performed after the date of *Total Performance of the Contract* and claims pursuant to PART 8 – DISPUTE RESOLUTION made prior to *Total Performance of the Contract* which remain unresolved; and

.4 a declaration by the *Contractor* as to the status of ongoing adjudications with respect to the *Contract* using the form of declaration attached as Form 3.

5.6.6 The requirements of paragraph 5.6.5 are of the essence.

5.6.7. The *Owner* and the *Consultant* shall review the *Proper Invoice* and advise the *Contractor* of any disputed amounts in accordance with the *Construction Act*.

5.6.8 Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act*, the *Owner* shall pay all undisputed amounts to the *Contractor* in accordance with the provisions of Article A-5 of the Agreement - PAYMENT and the *Construction Act*.

5.6.9 The *Owner* and the *Consultant* shall review the documents submitted by the *Contractor* pursuant to paragraph 5.6.5 and advise the *Contractor* of any amounts of the holdback for finishing work that the *Owner* refuses to pay and shall, in accordance with the *Construction Act*, arrange for the publication of a notice of non-payment of holdback in the prescribed form in the Daily Commercial News.

5.6.10 Provided the *Owner* and the *Region* have not received a claim for lien or written notice of a lien under the *Construction Act* and provided the time period for preserving any claims for liens for materials or services supplied prior to *Total Performance of the Contract* have expired, the *Owner* shall pay the undisputed amount of the holdback for finishing work to the *Contractor* in accordance with the provisions of Article A-5 of the Agreement - PAYMENT and the *Construction Act*.

5.6.11 Release of the statutory holdback funds shall not relieve the *Contractor*, or its surety, from any obligations under this *Contract*.

5.6.12 Upon receipt of final payment under the *Contract*, the *Contractor* shall be deemed to have expressly waived and released the *Owner* and the *Region* from all claims including, without limitation, those that might have arisen from the negligence or breach of contract by the *Owner*, except those made pursuant to PART 8 – DISPUTE RESOLUTION prior to the *Contractor's* submission of the final *Proper Invoice* which remain unresolved.

5.6.13 In the event of a conflict between the provisions of PART 5 - PAYMENT and GC 1.3 - RIGHTS AND REMEDIES, the provisions of PART 5 - PAYMENT shall govern.

GC 5.7 DEFERRED WORK

5.7.1 Subject to the *Construction Act*, if because of climatic or other conditions reasonably beyond the control of the *Contractor*, or if the *Owner* and the *Contractor* agree that, there are items of *Work* that must be deferred, payment in full for that portion of the *Work* which has been performed as certified by the *Consultant* shall not be withheld or delayed by the *Owner* on account thereof, but the *Owner* may withhold, until the remaining portion of the *Work* is finished, only such an amount that the *Consultant* determines is sufficient and reasonable to cover the cost of performing such deferred *Work*.

GC 5.8 NON-CONFORMING WORK

5.8.1 No payment by the *Owner* under the *Contract*, or partial or entire use or occupancy of the *Work* by the *Owner*, nor the fact that the *Owner* did not give a notice of non-payment pursuant to the *Construction Act* in respect of a *Proper Invoice*, shall constitute an acceptance of any portion of the *Work* or *Products* which are not in accordance with the requirements of the *Contract Documents*.

GC 5.9 LIQUIDATED DAMAGES

5.9.1 Without prejudice to any other remedy available to the *Owner*, if the *Contractor*:

.1 fails to complete the *Work* within the *Contract Time*, the *Contractor* shall pay to the *Owner* the amount per Day specified in Article A-12 of the Agreement - LIQUIDATED DAMAGES until the *Work* is complete; or

.2 fails to meet any of the *Interim Milestone(s)* stipulated in the *Contract Documents*, the *Contractor* shall pay to the *Owner* the amount(s) per Day specified in Article A-12 of the Agreement – LIQUIDATED DAMAGES until the *Interim Milestone(s)* has been met.

5.9.2 The amounts payable to the *Owner* pursuant to paragraph 5.9.1 shall be payable on demand. The *Owner's* failure to demand the amounts payable under paragraph 5.9.1 shall in no way waive the *Owner's* right to such payment and the *Owner* shall have the right to refuse to pay all or any portion of amounts payable under *Proper Invoices* on account of amounts that are payable to the *Owner* under paragraph 5.9.1.

5.9.3 The *Contractor* acknowledges and agrees that the liquidated damages amounts specified in Article A-12 of the Agreement - LIQUIDATED DAMAGES are a genuine estimate of the actual costs/damages that will be incurred by the *Owner* as a result of the failure of the *Contractor* to complete the *Work*, including any *Interim Milestone(s)*, within the allotted time and is not a penalty.

GC 5.10 SET-OFF

5.10.1 Subject to the *Construction Act*, and without limiting the specific rights of set-off in favour of the *Owner* provided for in this *Contract*, the *Owner* shall have the right to set-off against any and all monies due, or which may become due, to the *Contractor* under this *Contract*, any reasonable and substantiated amounts due or to become due from the *Contractor* to the *Owner* under the *Contract* and in the event of an insolvency of the *Contractor*, in relation to any other contracts between the *Contractor* and the *Owner*. Without limiting the generality of the foregoing, any rights conferred to the *Owner* under this *Contract* or at law to set-off against or deduct from monies otherwise owing to the *Contractor* shall also constitute grounds for the *Owner* to refuse to pay all or any portion of amounts payable under *Proper Invoices*.

GC 5.11 MAINTENANCE SECURITY

5.11.1 The *Owner* may deduct from the maintenance security any amounts owing to the *Owner* under this *Contract*, or in the event the *Contractor* becomes insolvent, any other contract between the *Owner* and the *Contractor*, whether the amounts relate to outstanding or deficient *Work*, or any other claims which the *Owner* may have including, but not limited to, outstanding claims under GC 13 –

INDEMNIFICATION, CLAIMS HANDLING AND WAIVER OF CLAIMS and GC 3.7 – LABOUR AND PRODUCTS.

5.11.2 The balance of the maintenance security, if any, shall be eligible for release to the *Contractor* upon the expiration of the Warranty Period and only after all deficiencies and all other warranty issues have been resolved to the satisfaction of the *Owner* (whether they have occurred during the Warranty Period or thereafter).

GC 5.12 WITHHOLDING OF PAYMENT

5.12.1 In the event that any portion of the *Work* is defective or is not performed in accordance with the *Contract Documents*, the *Owner* may retain an amount equal to twice the estimated cost which the *Owner* or the *Consultant* estimates will be incurred to correct the *Work* until the *Work* has been corrected to the satisfaction of the *Owner*. In the event that the *Contractor* fails to correct/complete the *Work* to the satisfaction of the *Owner* within 15 *Working Days* of receipt of written notice of the defective work, the *Owner* may proceed to correct/complete the *Work* and shall deduct its costs from the holdback provided for in this provision without further notice to the *Contractor*.

5.12.2 In the event that any insurance policy required to be maintained by the *Contractor* under the *Contract* has lapsed, or the *Owner* or the *Region* has received notice from the insurer of cancellation of coverage thereunder, the *Owner* may withhold payment until a current certificate of insurance has been provided in a form satisfactory to the *Owner* and the *Region*.

PART 6 CHANGES IN THE WORK

GC 6.1 OWNER'S RIGHT TO MAKE CHANGES

Delete in its entirety and replace it with the following:

GC 6.1 CHANGES IN THE WORK

6.1.1 The *Owner*, without invalidating the *Contract*, may make *Changes in the Work* by providing the *Contractor* with a *Change Order* or *Change Directive* ("***Changes in the Work***"). The *Contractor* shall provide an updated *Construction Schedule* in the event that the *Change Order* or *Change Directive* affects the progress of the *Work*.

6.1.2 The *Contractor* shall not proceed with any *Changes in the Work* until it has received a *Change Order* or *Change Directive*. No claims for any compensation on account of any actual or alleged Change in the *Work* or for any changes in the *Contract Price* or *Contract Time* shall be valid unless provided for by the *Owner* in a *Change Order* or a *Change Directive*.

6.1.3 The *Contractor* shall not be entitled to receive any additional compensation of any kind whatsoever arising out of or in respect of *Changes in the Work* other than the amounts to which it is entitled under GC 6.2 – CHANGE ORDER, or as provided in GC 6.3 – CHANGE DIRECTIVE. Without limiting the foregoing, in no event shall the *Contractor* be entitled to claims for loss of profit, loss of productivity, loss of opportunity or any other such losses based on the quantity, scope or cumulative value or impact of *Changes in the Work* whether resulting from one or more *Change Orders* or *Change Directives*.

6.1.4 If any *Change in the Work* is made which results in a reduction in the amount of Work to be done, including reductions in any or all of the quantities specified in *Contract Documents* or the deletion of any items in the *Bid*, or if all or any component of the *Work* is deleted from the scope of *Work*, the *Contractor's* compensation shall be limited to the direct costs that it can demonstrate to the *Owner's* satisfaction (by way of backup documentation) had already been incurred by the *Contractor*, acting reasonably, in connection with the reduced or deleted *Work*. Save and except for these direct costs, the *Contractor* shall not be entitled to any compensation of any kind whatsoever on account of any reduced or deleted *Work* including any amounts on account of loss of anticipated profits, loss of opportunity or any such losses. Any credits to be applied to the *Contract Price* shall be reflected in the *Change Order.*

6.1.5 The *Contractor* shall include the value of *Work* performed under a *Change Order* or *Change Directive* during a *Payment Period* in the *Proper Invoice* that the *Contractor* submits pursuant to GC 5.2 – APPLICATIONS FOR PAYMENT, inclusive, in respect of that *Payment Period*.

6.1.6 Any mark-ups payable under the *Contract* for *Changes in the Work* carried out by way of *Change Order* or *Change Directive* shall be in accordance with the following:

.1 on work performed by the *Contractor*, the *Contractor* may charge a maximum mark-up of 5% as a combined percentage fee applied to the total actual cost of the items listed in GC 6.3 – CHANGE DIRECTIVE, paragraph 6.3.5 performed by the *Contractor*; and

.2 on work performed by *Subcontractors*, the *Subcontractors* may charge a maximum mark-up of 5% as a combined percentage fee and the *Contractor* may charge a maximum mark-up of 5% as a combined percentage fee applied to the total actual cost of the items listed in GC 6.3 – CHANGE DIRECTIVE, paragraph 6.3.5 performed by all *Subcontractors* (but, for clarity, the *Contractor's* mark-up shall not be charged on the

Subcontractors' mark-up or on any *Contractor* mark-up charged pursuant to paragraph 6.1.6.1):

No further mark-ups will be paid regardless of the number of times the work has been assigned or sublet and no mark-up will be paid to any associate or affiliate as defined by the *Securities Act*, RSO 1990, c S.5, or in respect of any compensation for rented equipment.

Any mark-ups payable under this paragraph 6.1.6 shall be deemed to include the cost of, and be considered full compensation for all of the following: profit, general expenses, indirect costs and overhead costs incurred by the *Contractor* in relation to the change including but not limited to head office and head office personnel costs, estimating, supervision, coordination, administration, general clean-up, small tools, *As-Built Drawings*, job safety, warranty, and additional insurance and bonding costs.

6.1.7 The *Contractor* shall promptly submit, at the request of the *Owner*, any information and documentation the *Owner* considers necessary to assess any amounts being claimed on account of a *Change Order* or *Change Directive*.

6.1.8 If the *Owner* and the *Contractor* do not agree on the proposed adjustment to the *Contract Time* attributable to a change in the *Work*, or the method of determining it, the adjustment shall be deemed a "dispute" under PART 8 – Dispute Resolution.

6.1.9 The *Contractor* acknowledges that the total *Contract Time* includes a built in float of approximately 10% of the *Contract Time* to account for schedule delays resulting from *Changes in the Work* which would normally be expected to arise on projects of a similar scope, size and complexity and as contemplated by GC 6.1 – CHANGES IN THE WORK. As a result, subject to paragraphs 6.1.10 and 6.1.11, no extensions of the *Contract Time* or compensation for schedule delays, shall be granted by the *Owner* to the *Contractor* for any *Changes in the Work* reflected in *Change Orders* or *Change Directives* issued under GC 6.2 – CHANGE ORDER or GC 6.3 - CHANGE DIRECTIVE respectively, until the cumulative value of all *Change Orders* and *Change Directives* under the *Contract* exceeds 10% of the original *Contract Price*. If and only once the total cumulative value of all *Change Orders* and *Change Directives* exceeds 10% of the original *Contract Price* (excluding those related to "substantial changes" as defined in paragraph 6.1.10), shall the *Contractor* be entitled to any extensions of *Contract Time* or compensation for schedule delays, in relation to any subsequent change in the *Work*, as reflected as part of any *Change Orders* or *Change Directives* issued thereafter, and provided that such change in the *Work* adversely affects the critical path schedule.

6.1.10 Paragraph 6.1.9 shall not apply when an extension of the *Contract Time* is made necessary due to a "*Substantial Change*" in the *Work*. A *Substantial Change* means a *Change in the Work* under GC 6.1 – CHANGES IN THE WORK which results in either:

.1 actual direct additional costs to the *Contractor* equal to, or greater than, $500,000; or

.2 a delay to the critical path of the *Construction Schedule* for the *Project* of greater than 10 *Working Days*;

or both.

6.1.11 Should a *Substantial Change* arise, the *Contractor* shall be entitled to an extension of *Contract Time* in accordance with the *Contract*, and the value of any *Change Order* or *Change Directive* issued in relation to the *Substantial Change* shall be excluded from the 10% calculation referred to in paragraph 6.1.9.

GC 6.2 CHANGE ORDER

Delete in its entirety and replace it with the following:

GC 6.2 CHANGE ORDER

6.2.1 When a change in the *Work* is proposed or requested, the *Consultant* will prepare a *Contemplated Change Order* (*CCO)* describing the proposed change(s) and submit the *CCO* to the *Contractor* for consideration.

6.2.2 The *Contractor* shall submit, within 5 *Business Days* of receipt of the *CCO* or such other time agreed to between the *Contractor* and the *Owner*, a detailed and itemized quotation which includes its proposed method and amount of adjustment to the *Contract Price* (in accordance with paragraph 6.2.3), if any, and the proposed adjustment to the *Contract Time*, if any, for the work included in the *CCO*, together with any supporting documentation which may be required by the *Owner*. If the change in the *Work* will require an adjustment in the *Contract Time* or otherwise affect the critical path of the current *Construction Schedule*, the *Contractor* shall also include with its quotation an updated *Construction Schedule* for the *Owner's* review.

6.2.3 The adjustment to the *Contract Price* for a *Change in the Work* carried out pursuant to a *Change Order* shall be determined in accordance with the following:

.1 If the *Change in the Work* is the type of work for which unit prices were provided in the Schedule of Prices in the *Bid* or schedule of values, then the adjustment to the *Contract Price* shall be based on those unit prices, plus the applicable mark-ups in GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6.

.2 If the *Change in the Work* is the type of work for which unit prices were not provided in the Schedule of Prices in the *Bid* or schedule of values, then the adjustment in the *Contract Price* shall be based on the actual costs of the change in the *Work*, determined in accordance with GC 6.3 – CHANGE DIRECTIVE, paragraph 6.3.5, plus the applicable mark-ups in GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6.

The *Owner*, in consultation with the *Consultant*, will assess the merits of the proposed adjustments to the *Contract Price* or the *Contract Time* or both. If the *Owner* and the *Contractor* agree to the adjustments in the *Contract Price* or the *Contract Time*, or the method to be used to determine the adjustments, such agreement shall be effective immediately and shall be recorded in a *Change Order* which shall be issued by the *Owner* and signed by both parties.

GC 6.3 CHANGE DIRECTIVE

Delete in its entirety and replace it with the following:

GC 6.3 CHANGE DIRECTIVE

6.3.1 If the *Owner* requires the *Contractor* to proceed with a *Change in the Work* prior to the *Owner* and the *Contractor* agreeing upon the adjustments to the *Contract Price* or the *Contract Time* or both, the *Owner* or the *Consultant* shall issue a *Change Directive*. Upon receipt of the *Change Directive*, the *Contractor* shall promptly proceed to execute the *Work* described in the *Change Directive*.

6.3.2 The adjustment in the *Contract Price* for a change carried out by way of a *Change Directive* shall be determined on the basis of the actual costs of expenditures and savings, in accordance with paragraph 6.3.5 to perform the *Change in the Work*, plus mark-up as specified in GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6.

6.3.3 The *Contractor* shall, within five (5) *Business Days* of the issuance of the *Change Directive* or such other time agreed to by the *Contractor* and the *Owner*, present to the *Owner*, for approval, a detailed itemized estimate of the actual costs of the items listed in paragraph 6.3.5 of the *Contractor* and the involved *Subcontractors*, plus the applicable mark-ups pursuant to GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6. The mark-ups pursuant to GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6, including mark-ups related to each of the involved *Subcontractors*, shall all be shown separately. If the *Change in the Work* will require an adjustment in the *Contract Time* or otherwise affect the critical path of the current *Construction Schedule*, the *Contractor* shall also include with its detailed itemized estimate of costs an updated *Construction Schedule* for the *Owner's* review.

6.3.4 The *Contractor* shall keep and present, in such form as the *Owner* may require, an itemized accounting of the actual cost of expenditures and savings, together with supporting data, and any other pertinent documents related to the cost of performing a change in the *Work* attributable to a *Change Directive*. The cost of performing the work attributable to the *Change Directive* shall be limited to the actual cost of the items contained in paragraph 6.3.5.

6.3.5 The cost of performing a *Change in the Work* attributable to the *Change Directive*, and the costs of performing a *Change in the Work* under a *Change Order* pursuant to GC 6.2 – CHANGE ORDER, paragraph 6.2.3.2 shall be limited to the actual cost of the following:

.1 salaries, wages and benefits paid to personnel in the direct employ of the *Contractor* under a salary or wage schedule agreed upon by the *Owner* and the *Contractor*, or in the absence of such a schedule, actual salaries, wages and benefits paid under applicable bargaining agreement, and in the absence of a salary or wage schedule and bargaining agreement, actual salaries, wages and benefits paid by the *Contractor*, for personnel:

(1) carrying out the work, including necessary supervisory services;

(2) engaged in the preparation of *Shop Drawings*, fabrication *Drawings*, coordination *Drawings* and *As-Built Drawings*; or

(3) engaged in the processing of *Changes in the Work*.

.2 contributions, assessments or taxes incurred for such items as employment insurance, provincial or territorial health insurance, workers' compensation, and Canada or Quebec Pension Plan, insofar as such cost is based on wages, salaries or other remuneration paid to employees of the *Contractor* and included in the cost of the *Work* as provided in paragraph 6.3.5.1;

.3 travel and subsistence expenses of the *Contractor's* personnel described in paragraph 6.3.5.1;

.4 all *Products* including cost of transportation thereof;

.5 materials, supplies, *Construction Equipment*, *Temporary Work*, and hand tools not owned by the workers, including transportation and maintenance thereof, which are consumed in the performance of the *Work*; and cost less salvage value on such items used but not consumed, which remain the property of the *Contractor*;

.6 all tools and *Construction Equipment*, exclusive of hand tools used in the performance of the *Work*, whether rented from or provided by the

Contractor or others, including installation, minor repairs and replacements, dismantling, removal, transportation, and delivery cost thereof;

.7 all equipment and services required for the *Contractor's* field office;

.8 the amounts of all subcontracts;

.9 quality assurance such as independent inspection and testing services;

.10 charges levied by *Authorities Having Jurisdiction* at the *Place of the Work*;

.11 royalties, patent licence fees and damages for infringement of patents and cost of defending suits therefor subject always to the *Contractor's* obligations to indemnify the *Owner* and the *Region* as provided in GC 10.3 - PATENT FEES;

.12 any adjustment in premiums for all bonds and insurance which the *Contractor* is required, by the *Contract Documents*, to purchase and maintain;

.13 any adjustment in taxes, other than Harmonized Sales Taxes, and duties for which the *Contractor* is liable;

.14 charges for long distance telephone and facsimile communications, courier services, expressage, and petty cash items incurred in relation to the performance of the *Work*;

.15 removal and disposal of waste products and debris; and

.16 any additional safety measures and requirements.

6.3.6 The cost of any item referred to in paragraph 6.3.5 shall not include any costs or liabilities attributable to any failure on the part of the *Contractor* to exercise reasonable care and diligence in the *Contractor's* attention to the *Work*. Any such costs shall be borne by the *Contractor*.

6.3.7 Pending determination of the final amount of a *Change Directive*, the *Contractor* shall include the undisputed value of the work performed under a *Change Directive* during a *Payment Period* in the *Proper Invoice* that the *Contractor* submits pursuant to GC 5.2 – APPLICATIONS FOR PAYMENT in respect of that *Payment Period*, plus the applicable mark-ups described in GC 6.1 – CHANGES IN THE WORK, paragraph 6.1.6.

6.3.8 If the *Owner* includes in a *Change Directive* that it issues to the *Contractor* a reference to an estimated or budgeted amount for the *Change Directive* work (the "***Estimate***"), the Contractor shall notify the Owner in writing when 75% of the *Estimate* has been expended. The *Contractor* shall immediately halt performance of the *Change Directive* work once the accumulated cost of performing such work

is equivalent to the *Estimate*, advise the *Owner* in writing that the *Estimate* has been reached, and not proceed with the balance of the *Change Directive* work until it receives instructions to do so from the *Owner* or *Consultant*. Failure to comply with the foregoing shall constitute a waiver of the *Contractor's* entitlement to any compensation on account of the *Change Directive* work in excess of the *Estimate*.

GC 6.4 CONCEALED OR UNKNOWN CONDITIONS

Paragraph 6.4.1

Subparagraph .1

Add the words "or the Reports" after the words "Contract Documents".

Subparagraph .2

Add the words "or the *Reports"* after the words "*Contract Documents*".

Paragraph 6.4.2

Delete in its entirety and replace with the following:

6.4.2 Having regard to and subject to the liabilities and responsibilities assumed by the *Contractor* pursuant to GC 3.11 – OPERATIONAL RISKS, the *Consultant* will promptly investigate such conditions and make a finding. Having regard to and subject to the liabilities and responsibilities assumed by the *Contractor* pursuant to GC 3.11 – OPERATIONAL RISKS, if the finding is that the conditions differ materially and this would cause an increase or decrease in the *Contractor's* cost or time to perform the *Work*, the *Consultant*, with the *Owner's* approval, will issue appropriate instructions for a *Change in the Work* as provided in GC 6.2 – CHANGE ORDER or GC 6.3 - CHANGE DIRECTIVE.

New Paragraphs

Add the following new paragraphs to GC 6.4:

6.4.5 The *Contractor* confirms that it carefully reviewed the *Contract Documents*, as well as the *Reports* and that it has satisfied itself as to the nature and extent of the *Work*, the *Contract Documents* and the *Contract* and as to the facilities and difficulties in attending and completing the execution of the *Work*. The *Contractor* confirms that it has applied to its review the degree of care and skill required by GC 3.9 – PERFORMANCE BY CONTRACTOR, paragraph 3.9.1. In those circumstances, notwithstanding the provisions of paragraph 6.4.2, the *Contractor* is not entitled to an adjustment to the *Contract Price* or to an extension of the *Contract Time* for conditions which could reasonably have been ascertained by the *Contractor* by such careful review, or which could have

been reasonably inferred from the material provided with the *Contract Documents* or *Reports*. In those circumstances, should a claim arise, the *Contractor* will have the burden of establishing that it could not have discovered the materially different conditions from a careful review of the *Contract Documents* or the *Reports*.

6.4.6 To the extent the *Contractor* has not reviewed the *Contract Documents* or *Reports* as referenced in paragraph 6.4.5, the *Contractor* willingly assumes responsibility for all losses, damages, costs, expenses (including all legal costs on a full indemnity basis), liabilities, claims, actions, and demands, whether arising under statute, contract or at common law, which such review might have avoided or reduced and shall indemnify, save harmless and defend the *Owner* and the *Region* from all risk which might make it more onerous and more expensive to fulfill or perform the *Work* than was contemplated or known when the *Contract* was signed, and for any and all liability, responsibility and obligations which the *Owner* or the *Region* may have to any third parties resulting from any failure to review.

6.4.7 If the finding made pursuant to paragraph 6.4.2 is that the subsurface or otherwise concealed physical conditions differ materially and this would cause an increase or decrease in the *Contractor's* cost or time to perform the *Work*, and if the said conditions were otherwise discoverable by the *Contractor* in the proper performance of its duties and obligations under the *Contract*, all costs and expenses resulting from any delay (excluding, for clarity, the direct cost of remediating the said conditions) in the completion of the *Work* that is caused, or contributed to, as a result of the said conditions, will be borne by the *Contractor*.

6.4.8 Without limiting the generality of any other provision in the *Contract Documents*, during the performance of the *Work*, the *Contractor* shall, as a part of the *Contract Price* and *Work*, perform any additional geotechnical and subsurface and other investigations, tests and studies beyond those being provided by the *Owner*, which a reasonable and prudent contractor would conduct to ascertain the nature and extent of subsurface or otherwise concealed physical conditions at the *Place of the Work*.

GC 6.5 DELAYS

Delete in its entirety and replace with the following:

GC 6.5 DELAYS

6.5.1 If the *Contractor* is delayed in the performance of a critical path activity on the *Construction Schedule* by an act or omission of the *Owner*, *Consultant* or anyone

employed or engaged by them directly or indirectly, contrary to the provisions of the *Contract Documents*, then the *Contract Time* shall be extended for such reasonable time as the *Consultant* may recommend in consultation with the *Contractor*. The *Contractor* shall also be reimbursed by the *Owner* for only the actual additional costs incurred as a result of the delay, excluding any mark-ups or payments to staff not employed full time at the *Site*.

6.5.2 If the *Contractor* is delayed in the performance of a critical path activity on the *Construction Schedule* by a stop work order issued by a court or other public authority and provided that such order was not issued as a result of an act or fault of the *Contractor* or any person employed or engaged by the *Contractor* directly or indirectly and provided that such order was issued as a result of an act or omission of the *Owner* contrary to the *Contract Documents* , resulting in the failure of the *Contractor* to attain *Substantial Performance of the Contract* or *Total Performance of the Contract* by the dates stipulated in Article A-1 of the Agreement – THE WORK, then the *Contract Time* shall be extended for such reasonable time as the *Consultant* may recommend. The *Contractor* shall also be reimbursed by the *Owner* for only the actual additional costs incurred as a result of the delay, excluding any mark-ups or payments to staff not employed full time at the *Site*.

6.5.3 If the *Contractor* is delayed in the performance of a critical path activity on the *Construction Schedule* by:

.1 any labour disputes, strikes or lock-outs affecting the *Work* or the *Project*,

.2 fire or unusual delay by common carriers,

.3 abnormally adverse weather conditions, or

.4 any other cause which could not be reasonably anticipated to occur during the course of a construction project, which the *Owner* deems to be beyond the *Contractor's* (including any *Subcontractor's*) reasonable control (other than financial incapacity) other than one resulting from a default or breach of *Contract* by the *Contractor*. For the purpose of this provision, delays in the *Supply* or delivery of materials, *Products* and/or equipment, or arising from the breakdown of equipment, do not constitute causes which are beyond the *Contractor's* control.

then the *Contract Time* shall be extended for such reasonable time as the *Consultant* may recommend in consultation with the *Contractor*. The extension of time shall not be less than the time lost as the result of the event causing the delay, unless the *Contractor* agrees to a shorter extension. The *Contractor* shall not be entitled to payment for costs incurred by such delays, unless such delays result from the actions of the *Owner*, *Consultant* or anyone employed or engaged

by them directly. Notwithstanding the foregoing, the *Contractor* shall use its best efforts to minimize the impact of such event upon the performance of the *Work* and *Contract Time*.

For the purposes of this GC 6.5 - DELAYS, a delay caused by abnormal inclement weather occurs when, in the *Owner's* sole opinion, the *Contractor* is prevented by inclement weather or other related conditions, for a period of at least six hours in a *Working Day*, from proceeding with at least 60% of the normal labour and equipment force engaged on any component of the *Work* which, if delayed, will delay the completion of the *Work*.

6.5.4 No compensation for delay shall be paid to the *Contractor*, and no extension shall be made for delay unless *Notice in Writing* of the cause of delay is given to the *Consultant* and *Owner* not later than 5 *Working Days* after the commencement of the delay. In the case of a continuing cause of delay only one *Notice in Writing* shall be necessary. Without limiting the generality of the foregoing, the following shall also apply to the event of delay dealt with by paragraphs 6.5.1, 6.5.2 or 6.5.3:

.1 the notice provided by the *Contractor* as set out in this paragraph 6.5.4 shall include, without limitation, sufficient and adequate information and documentation to allow the *Consultant* and *Owner* to properly consider the claim of the *Contractor*.

.2 the *Contractor* shall take all reasonable steps to minimize the impact of the delay event upon the performance of the *Work*, the *Contract Time* and the *Contract Price*, resume performance of all its obligations under the *Contract* affected by the delay as soon as practicable and use all reasonable endeavours to remedy any failure to perform.

Failure to adhere strictly to these notice provisions shall constitute a waiver and release of any obligation of the *Owner* to extend the *Contract Time* as a result of such delay and of any claim by the *Contractor* for costs as a result of such delay.

6.5.5 If no schedule is made under paragraph 2.2.12 of GC 2.2 – ROLE OF THE CONSULTANT, then no request for extension shall be made because of failure of the *Consultant* to furnish instructions until 10 *Working Days* after demand for such instructions has been made.

6.5.6 If the *Contractor* is delayed in the performance of the *Work* by an act or omission of the *Contractor*, any *Subcontractor* or *Supplier*, or anyone employed or engaged by them, directly or indirectly, or by any cause within the *Contractor's* control, the *Contractor* shall devote such additional resources and take all steps necessary, all at the *Contractor's* own cost and expense, to ensure that the dates for attaining *Substantial Performance of the Contract* and *Total Performance of the Contract*

under the *Contract* as may have been amended in accordance with the provisions of PART 6 – CHANGES IN THE WORK, are met. If the *Contractor* fails to attain *Substantial Performance of the Contract* or *Total Performance of the Contract* as aforesaid, the *Owner* shall be entitled to assess liquidated damages in accordance with Article A-12 of the Agreement – LIQUIDATED DAMAGES.

6.5.7 The parties acknowledge that in March 2020 the World Health Organization declared a global pandemic of the virus leading to COVID-19. The Government of Canada, the Province of Ontario, the *Region* and other municipal authorities responded to the pandemic with legislative amendments, controls, orders, requests of the public, and requests and requirements to the parties to change their activities in various ways (collectively, the "***Governmental Response***"). It is uncertain how long the pandemic, and the related *Governmental Response*, will continue, and it is unknown whether there may be a resurgence of the virus leading to COVID-19 or any mutation thereof (collectively, the "***Virus***") and resulting or supplementary renewed Government Response. Notwithstanding any other provision in the *Contract Documents*, if the *Contractor* is delayed in the performance of the *Work* by the continued spread of the *Virus* or the continuation of or a new *Governmental Response* to control the spread of the *Virus* (which was not reasonably foreseeable at the time of entering into the *Contract*), the parties agree it shall constitute a delay pursuant to paragraph 6.5.3. The *Contractor* shall not be entitled to any payment for costs incurred by such delays, save and except as provided for in paragraph 6.5.8. Nothing in this paragraph 6.5.7 shall excuse the *Contractor* from complying with any notification requirements in the *Contract* including, without limitation, those contained in paragraph 6.5.4.

6.5.8 In the event of a delay to the *Contractor's* performance of the *Work* pursuant to paragraph 6.5.7, the *Contractor* shall be entitled to payment of the direct costs it reasonably incurs, without any mark-up, as a result of having to comply with new legislative amendments, controls, and orders that are implemented by the Government of Canada, the Province of Ontario, the *Region* or other municipal authority after the bid submission deadline in response to the *Virus* associated with the following:

.1 the *Contractor* being required to use additional tools or equipment, including PPE equipment, in its performance of the *Work*;

.2 the *Contractor* being required to purchase, use or *Provide* additional safety-related supplies in connection with its performance of the *Work*; or

.3 the *Contractor* being required to *Install* temporary facilities or structures, including hand washing stations.

6.5.9 Notwithstanding any other provision in the *Contract*, the *Owner* and the *Region* shall not be liable or deemed to be in breach of the *Contract* for any failure or delay in performance of its obligations under the *Contract* arising out of:

.1 the *Virus*;

.2 *Governmental Response*; or

.3 any impacts to the *Owner's* operations and performance of its obligations that are beyond its reasonable control and are caused by, relate to or arise out of the *Virus* or the *Governmental Response* (including, without limitation, any delays in obtaining possession or access to the *Place of the Work*, or in obtaining permits from permitting offices or approvals from *Authorities Having Jurisdiction*).

GC 6.6 CLAIMS FOR A CHANGE IN CONTRACT PRICE

Paragraph 6.6.1

Delete the word "timely".

Add the words "within *5 Working Days* upon commencement of the event(s) giving rise to a claim*"* after the word *"Consultant"*.

Paragraph 6.6.3

Delete the words "within a reasonable time".

Add the words "no later than 20 *Working Days* after completion of the work which is the subject of the claim" after the words "the claim is based".

NEW GENERAL CONDITION

Add the following new General Condition to PART 6 – CHANGES IN THE WORK

GC 6.7 NO CLAIMS FOR CHANGE IN SCOPE OF WORK

6.7.1 If any change, deviation or omission from the *Work* is made by which the amount of *Work* to be done is decreased, including any of the quantities specified in *Contract Documents*, or if the whole or any portion of the *Work* is deleted from the scope of *Work* or otherwise dispensed with, no compensation shall be claimed by the *Contractor* (other than demonstrable direct costs already incurred by the *Contractor* in accordance with GC 6.1.4) or any *Subcontractors* for any such changes including any claims for loss of anticipated profits.

PART 7 DEFAULT NOTICE

GC 7.1 OWNER'S RIGHT TO PERFORM THE WORK, TERMINATE THE CONTRACTOR'S RIGHT TO CONTINUE WITH THE WORK OR TERMINATE THE CONTRACT

Delete in its entirety and replace with the following:

GC 7.1 OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT

7.1.1 If circumstances arise such that the *Owner* considers it necessary or advisable, the *Owner* may suspend the *Contract* and the performance of the *Work*. In the event the *Owner* exercises its right of suspension pursuant to this paragraph 7.1.1, the *Contractor* shall, subject to the directions in the notice of suspension:

.1 take all necessary steps to ensure the *Place of the Work* and all *Work* in place is left in a safe and clean state and is protected from the elements for the duration of the suspension; and

.2 take all necessary steps to ensure the *Work* is appropriately preserved and cared for in accordance with good industry practice and any occupational, use or safety requirements or standards of the *Authorities Having Jurisdiction* or stipulated in the *Contract Documents* for the duration of the suspension.

7.1.2 If the *Contract* and the performance of the *Work* is suspended pursuant to paragraph 7.1.1, the *Contract Time* shall be extended by the length of the suspension and the *Owner* shall pay the *Contractor* the direct costs the *Contractor* reasonably incurs that are a direct result of any demobilization, remobilization and *Site* security and preservation that is required as a result of the suspension. All such costs shall be substantiated with sufficient and appropriate supporting documentation.

7.1.3 If:

.1 the *Contractor* should become bankrupt or insolvent or make a general assignment for the benefit of creditors because of its insolvency; or

.2 a receiver is appointed because of its insolvency; or

.3 the *Contractor* commits a criminal act; or

.4 the *Contractor* transfers, assigns or otherwise disposes of its interest in the *Contract* or any part thereof without the written authority of the *Owner*; or

.5 the *Contractor* ceases the *Work* for a period of 30 Days or more (other than for delays for which an extension of *Contract Time* is granted by the *Owner* pursuant to GC 6.5 -DELAYS); or

.6 the *Owner* deems, in its sole discretion, acting reasonably, that the progress of the *Work* has fallen behind schedule to such an extent that the *Contractor* will not be able to meet one or more of the *Interim Milestone* dates specified in the *Contract* or complete the *Work* within the *Contract Time*, provided that the *Contractor* has first been given the opportunity to rectify this breach pursuant to the process outlined in paragraphs 7.1.4 and 7.1.5; or

.7 the *Contractor* fails to maintain adequate insurance as stipulated in GC 11.2 – INSURANCE; or

.8 the *Contractor* fails to comply immediately with a direction of the *Owner* under the *Contract* including, but not limited to, any directions under GC 9.4 – CONSTRUCTION SAFETY; or

.9 the *Contractor* fails to comply immediately with a stop work order issued by the *Owner* or the *Consultant* under the *Contract*; or

.10 the *Contractor* fails to comply with a written direction from the *Owner* under PART 8 – DISPUTE RESOLUTION; or

.11 the *Contractor* breaches the Supplier Code of Conduct included as Schedule 2 to the *Region's* Procurement Bylaw No. 2021-103; or

.12 the *Contractor* fails to comply with the *Owner's* and the *Region's* policies, protocols and procedures as required in GC 9.4 – CONSTRUCTION SAFETY, paragraph 9.4.10; or

.13 the *Contractor* fails to maintain its COR™ certification or COR™ equivalency, or have a valid Letter of Reciprocity issued by the Infrastructure Health and Safety Association (IHSA) indicating that they are in the process of obtaining COR™ equivalency, as stipulated in GC 9.8 - CERTIFICATE OF RECOGNITION (COR™) SAFETY PROGRAM; or

.14 the *Contractor* breaches Article A-10 of the Agreement – CONFLICT OF INTEREST; or

.15 the *Contractor* commits any other breach of *Contract* which the *Owner* deems material;

the *Owner*, without prejudice to any other right or remedy it may have, may by giving the *Contractor* or receiver or trustee in bankruptcy written notice to:

(a) terminate the *Contract*; or

(b) take all or any part of the *Work* out of the *Contractor's* hands and may employ such means as it may see fit to complete the *Work* and may deduct the costs thereof from any payment due to the *Contractor* and, in the event

the costs thereof exceed the sum payable to the *Contractor* had the *Contractor* completed that part of the *Work*, the *Contractor* shall pay such excess amount to the *Owner* forthwith upon notice from the *Owner*; or

(c) issue a stop work order on the *Contract*.

7.1.4 If the *Contractor* should neglect to perform the *Work* in compliance with the requirements of the *Contract Documents*, of which the *Owner* shall be the sole judge, the *Owner* may notify the *Contractor* in writing that it is in default of its contractual obligations and instruct it to correct the default in the 5 *Working Days* immediately following the receipt of such notice or, where immediate action is required, in such lesser time as specified in the notice.

7.1.5 If the correction of the default cannot be completed in the 5 *Working Days* specified, or the lesser time specified where immediate action is required, the *Contractor* shall be in compliance with the *Owner's* instructions if it:

.1 commences the correction of the default within the specified time; and

.2 provides the *Owner* with a schedule acceptable to the *Owner* for such correction; and

.3 completes the correction in accordance with such schedule.

7.1.6 If the *Contractor* fails to correct the default within the time specified, the *Owner* may, without prejudice to any other right or remedy it may have:

.1 correct such default and charge the cost thereof to the *Contractor*; or

.2 terminate the *Contractor's* right to continue with the *Work* in whole or in part; or

.3 terminate the *Contract*.

7.1.7 If the *Owner* terminates the *Contractor's* right to continue with the *Work* or terminates the *Contract* pursuant to paragraph 7.1.3 or paragraph 7.1.6, the *Owner* shall be entitled to:

.1 take possession of the premises and *Products*, utilize the construction machinery and equipment and finish the *Work* by whatever method it may see fit; and

.2 receive an assignment or transfer forthwith from the *Contractor* of any permit or approval obtained by the *Contractor* for the performance of the *Work*; and

.3 receive an assignment or transfer forthwith from the *Contractor* of any contract between the *Contractor* and a *Subcontractor* or a *Supplier* for the performance of the *Work* if required by the *Owner*; and

.4 withhold further payments to the *Contractor* until the *Work* is finished; and

.5 deduct the following costs from the unpaid balance of the *Contract Price*:

(1) the full cost of finishing the *Work*, as certified by the *Consultant*; and

(2) any additional compensation payable to the *Consultant* for additional services; and

(3) a reasonable allowance, as determined by the *Consultant*, to cover the cost of corrections to work performed by the Contractor as may be required under GC 12.3 – WARRANTY; and

.6 upon expiry of the *Warranty Period*, charge the *Contractor* the amount by which the cost of corrections to its work under GC 12.3 - WARRANTY exceeds the allowance provided for such corrections.

If the costs referred to in paragraphs 7.1.7.5 and 7.1.7.6 are less than the unpaid balance of the *Contract Price*, the *Owner* shall pay the *Contractor* the difference.

7.1.8 The *Contractor* acknowledges that the performance of the *Work* may require the following:

.1 approval of the local conservation authority or other applicable government agencies in respect of watercourses, wetlands, floodplain, and hazard lands;

.2 approval of the Ministry of Natural Resources and Forestry, the Department of Fisheries and Oceans or the local conservation authority in respect of its authority under the Fisheries Act, RSC 1985, c F-14;

.3 approval of the Ministry of the Environment, Conservation and Parks, the local conservation authority or other applicable government agencies in respect of any water taking;

.4 approval of the Ministry of the Environment, Conservation and Parks in respect of any discharge, emission, waste, waste disposal site, waste management system, water works, sewage works, storm water works or drinking water systems;

.5 approval of the Ministry of Natural Resources and Forestry, the Department of Fisheries and Oceans or Environment Canada in respect of the protection of any species at risk or the respective habitat of any species at risk;

.6 approval of Transport Canada in respect of navigable waterbodies;

.7 approval of the Ministry of Labour and Ministry of the Environment, Conservation and Parks, as applicable, in respect of any new equipment specified by the *Owner*;

.8 approval of the *Board,* Regional Committee/Council or other governmental or municipal authorities or utilities; and

.9 land acquisitions, easements or utility relocations.

If at any time any one or more of these requirements have not been satisfied, the *Owner* may terminate the *Contract* by providing a *Notice in Writing* to the *Contractor* to such effect and the *Contractor* shall be entitled to be paid for the *Work* performed up to and including the date of service of the notice terminating the *Contract*, as determined by the *Consultant* and the *Owner*. In no event will the *Contractor* be entitled to claim any amount for profit or loss sustained or any other damages as a result of the termination of the *Contract*.

7.1.9 If at any time during the course of the *Contract*, the *Owner* exhausts or exceeds the allocated budget for the *Contract*, or if the allocated budget for the *Contract* is withdrawn, reduced or cancelled by the *Board* or Regional Council for any reason whatsoever, the *Owner* may terminate the *Contract* by providing a Notice in Writing to the *Contractor* to such effect and the *Contractor* shall be entitled to be paid for the *Work* performed up to and including the date of service of the notice terminating the *Contract*, as determined by the *Consultant*. In no event will the *Contractor* be entitled to claim any amount for profit or loss sustained or any other damages as a result of the termination of the *Contract*.

7.1.10 The *Contractor's* obligation under the *Contract* as to quality, correction and warranty of the *Work* performed by it up to the time of termination shall continue in force after such termination.

7.1.11 If the *Work* is suspended or otherwise delayed for a period of 60 consecutive *Working Days* or more under an order of a court or other public authority and providing that the issuance of such order was not the direct result of an act or omission of the *Owner* or *Consultant* contrary to the provisions of the *Contract Documents*, the *Owner* may, at its sole option and discretion and without penalty, terminate the *Contract* for convenience upon providing seven (7) Days' Notice in Writing to the *Contractor*. Upon receiving the notice of termination in accordance with this paragraph 7.1.11, the *Contractor* shall cease or cause the cessation of all operations except for the following:

.1 The *Contractor* shall take all steps necessary to:

(1) ensure and preserve the safety of personnel (including, without limitation, construction personnel, building guests and building staff); and

(2) ensure the *Work* is appropriately preserved and cared for in accordance with good industry practice and any occupational, use or safety

requirements or standards of *Authorities Having Jurisdiction* or those stipulated in the *Contract Documents*.

.2 Subject to any directions in the notice of termination, the *Contractor* shall:

(1) take all necessary steps to ensure the *Place of the Work* and all *Work* in place is left in a safe and clean state and is protected from the elements; and

(2) discontinue or cause to be discontinued the ordering of *Products*, material, equipment and supplies and shall make reasonable efforts to cancel existing orders on the best terms available.

If the *Contract* is terminated for convenience pursuant to this paragraph 7.1.11, the *Contractor* shall not be entitled to any costs, expenses, damages, losses or reimbursement of any kind whatsoever (and the *Contractor* waives any claim against the *Owner* related to or arising from the termination), save and except for the amounts expressly contemplated in paragraph 7.1.12.

7.1.12 If the *Contract* is terminated pursuant to paragraph 7.1.11, the *Owner* shall pay the *Contractor* the cost of the *Work* incurred to the effective termination date and the reasonable costs the *Contractor* incurs in complying with its obligations under paragraph 7.1.11.

7.1.13 Notwithstanding any other provision in the *Contract*, the *Owner* shall not be liable to the *Contractor* for any actual or alleged damages of any kind whatsoever (including without limitation indirect, incidental, special, consequential or other damages, including loss of profits) on account of the publication of a notice of termination pursuant to the *Construction Act* and the *Contractor* waives any and all claims against the *Owner* related to or arising from the publication. This paragraph 7.1.13 shall survive termination of the *Contract*.

GC 7.2 CONTRACTOR'S RIGHT TO SUSPEND THE WORK OR TERMINATE THE CONTRACT

Paragraph 7.2.2

Delete the words "20 Working Days" and replace them with "60 consecutive Working Days".

Delete the words "engaged by the Contractor, the Contractor may" and replace them with "engaged by the Contractor, and provided that such order was issued as a result of an act or omission of the Owner contrary to the Contract Documents, the Contractor may".

Paragraph 7.2.3

Delete in its entirety and replace with the following:

7.2.3 The *Contractor* may give *Notice in Writing* to the *Owner*, with a copy to the *Consultant*, that the *Owner* is in default of the *Owner*'s contractual obligations and instruct the *Owner* to correct the default in the 20 *Working Days* immediately following the receipt of such notice if the *Owner* fails to comply with the requirements of the *Contract* to a substantial degree and the *Consultant* gives a written statement to the *Owner* and the *Contractor* that provides detail of such failure to comply with the requirements of the *Contract* to a substantial degree.

Paragraph 7.2.4

Delete in its entirety and replace with the following:

7.2.4 If the default cannot be corrected in the 20 *Working Days* specified, the *Owner* shall be in compliance with the *Contractor's* instructions if the *Owner*:

.1 commences the correction of the default within the specified time; and

.2 provides the *Contractor* with an acceptable schedule for such correction; and

.3 corrects the default in accordance with such schedule.

Paragraph 7.2.5

Delete in its entirety and replace with the following:

7.2.5 If the *Owner* fails to correct the default in the time specified or subsequently agreed upon, without prejudice to any other right or remedy the *Contractor* may have, the *Contractor* may suspend the *Work* until the default has been corrected or terminate the *Contract*.

New Paragraphs

Add the following new paragraphs to GC 7.2:

7.2.6 If the *Contractor* terminates the *Contract* under the conditions set out above, the *Contractor* shall be entitled to be paid for all work performed to the date of termination. The *Contractor* shall also be entitled to recover the direct costs associated with termination, including the costs of demobilization, and losses sustained on *Products* and *Construction Equipment*. The *Contractor* shall not be entitled to any additional reimbursement on account of any such termination including, without limitation, indirect, incidental, special, consequential or other damages, including loss of profits, notwithstanding any other provision of the *Contract Documents*.

7.2.7 The *Owner's* withholding of a progress payment, holdback payment or final payment due to the *Contractor's* failure to pay a *Subcontractor* or *Supplier*, to

protect the *Owner's* and the *Region's* interest in the event of the preservation of a lien or receipt of notice of lien, or otherwise pursuant to the terms of the *Contract*, shall not constitute a default under paragraph 7.2.3 which would permit the *Contractor* to stop the *Work* or terminate the *Contract*. In such circumstances, the *Contractor* shall continue with the *Work*.

7.2.8 If the *Contractor* stops the *Work* or terminates the *Contract* as provided in this GC 7.2 – CONTRACTOR'S RIGHT TO SUSPEND THE WORK OR TERMINATE THE CONTRACT, it shall ensure that the *Place of the Work* is left in a secure and safe condition as required by all *Authorities Having Jurisdiction* and the *Contract Documents*.

PART 8 DISPUTE RESOLUTION

GC 8.1 AUTHORITY OF THE CONSULTANT

Delete in its entirety and replace with the following:

GC 8.1 DISPUTES

8.1.1 Subject to GC 8.2 – ADJUDICATION, differences between the parties to the *Contract* as to the interpretation, application or administration of the *Contract* or any failure to agree where agreement between the parties is called for, other than a failure to agree on the method of valuation, measurement and change of the *Contract Price*, herein collectively called disputes, which are not resolved in the first instance by interpretation and the findings of the *Consultant* as provided in GC 2.2 - ROLE OF THE CONSULTANT, shall be settled in accordance with the requirements of PART 8 - DISPUTE RESOLUTION.

8.1.2 The *Contractor* shall give oral notice of any dispute to the *Owner* immediately becoming aware of the situation giving rise to such dispute.

8.1.3 The *Contractor* shall provide *Notice in Writing* of any dispute within 5 *Business Days* after the commencement of the work giving rise to the dispute to the *Owner*. Such *Notice in Writing* shall include particulars of the matter in dispute, the extent and value of the claim and the relevant provisions of the *Contract Documents*.

8.1.4 If the matter in dispute is not resolved promptly, the *Consultant* will give such instructions as, in its opinion, are necessary for the proper performance of the *Work* and to minimize delays pending settlement of the dispute. The parties shall act immediately according to such instructions, it being understood that by so doing neither party will jeopardize any claim it may have.

8.1.5 As time is of the essence, if so directed by the *Owner*, the *Contractor* shall continue to perform the *Work* in accordance with the instructions of the *Owner*,

notwithstanding any such dispute. Accordingly, in the event of a dispute, any work stoppage by the *Contractor* will constitute a breach of the *Contract* entitling the *Owner* to claim damages on account of any delay affecting the as-planned schedule of the *Work*.

8.1.6 The *Contractor* shall submit to the *Owner* a detailed statement of its claims not later than 20 *Business Days* after completion of the *Work* which is the subject of the dispute, identifying the item or items in respect of which the dispute has arisen, the grounds upon which a claim is made and all records substantiating such claim.

8.1.7 The *Contractor* shall promptly submit, at the request of the *Owner*, such further and other information and documentation as the *Owner* or the *Consultant* considers necessary to assess the claim.

8.1.8 If the *Contractor* fails to comply with the provisions for notices and claims within the times stipulated in respect of any dispute, the *Contractor* will not be entitled to proceed with any claim in respect of such dispute and this provision shall act as a bar to any such claims.

8.1.9 If the *Contractor* has complied with all of the provisions of this General Condition and the *Owner* and the *Contractor* cannot resolve the dispute, and if both parties do not agree to settle the dispute in accordance with GC 8.3 - NEGOTIATION, MEDIATION AND ARBITRATION, then either party may refer the dispute to a court of competent jurisdiction.

8.1.10 If a dispute arises under the *Contract* in respect of a matter in which the *Consultant* has no authority under the *Contract* to make a finding, the procedures set out in paragraphs 8.1.4, 8.1.5 and 8.3.3 to 8.3.11 shall apply to that dispute with the necessary changes to detail as may be required.

GC 8.2 ADJUDICATION

Delete in its entirety and replace with the following:

GC 8.2 ADJUDICATION

8.2.1 Notwithstanding anything else in PART 8 – DISPUTE RESOLUTION, the *Owner* and the *Contractor* shall engage in adjudication as required by, and in accordance with, the *Construction Act*.

8.2.2 If the *Contractor* fails to comply with the time limits set out in PART 8 – DISPUTE RESOLUTION in respect of any claim or dispute, the *Contractor* shall have no entitlement whatsoever (including to an increase in the *Contract* Price, or an extension of *Contract Time*) in the context of an adjudication under the *Construction Act*, and waives the right to make any such claims or disputes in an

adjudication. This paragraph 8.2.2 shall operate conclusively as an estoppel and bar in the event such claims or disputes are brought in an adjudication and the *Owner* may rely on this paragraph 8.2.2 as a complete defence to any such claims or disputes.

8.2.3 The following procedures shall apply to any adjudication the *Owner* and the *Contractor* engage in under the *Construction Act*:

.1 any hearings shall be held at a venue within the jurisdiction of the *Place of the Work* or such other venue as the *Owner* and the *Contractor* may agree and which is acceptable to the adjudicator;

.2 the adjudication shall be conducted in English;

.3 the *Owner* and the *Contractor* may be represented by counsel throughout an adjudication;

.4 there shall not be any oral communications with respect to issues in dispute that are the subject of an adjudication between a party and the adjudicator unless it is made in the presence of both parties or their legal representatives; and

.5 a copy of all written communication between the adjudicator and a party shall be given to the other party at the same time.

8.2.4 Any documents or information disclosed by the parties during an adjudication are confidential and the parties shall not use such documents or information for any purpose other than the adjudication in which they are disclosed and shall not disclose such documents and information to any third party, unless otherwise required by law, save and except for the adjudicator.

8.2.5 Notwithstanding any adjudication between the parties, there shall be no interruption of the *Work* pending settlement or resolution of such dispute or disagreement.

8.2.6 The parties agree that any dispute with respect to or that arises after termination or abandonment of the *Contract* shall not be referred to or resolved by adjudication.

GC 8.3 NEGOTIATION, MEDIATION AND ARBITRATION

Paragraph 8.3.1

Add the words "(the "***Rules***"), subject to amendments, if any, required by virtue of the applicability of the *Municipal Arbitrations Act*, RSO 1990, c M.48," after the words "CCDC 40".

Subparagraph .2

Delete the words “either party by Notice in Writing requests” and replace with “both parties agree”.

Paragraph 8.3.4

Delete the words “CCDC 40” and replace them with “the *Rules* subject to any amendments to the *Rules* made as described in paragraph 8.3.1”.

Paragraph 8.3.6

Delete in its entirety and replace with the following:

8.3.6 By giving *Notice in Writing* to the other party, not later than 20 *Working Days* after the date of termination of the mediated negotiations under paragraph 8.3.5, either party may refer the dispute to be finally resolved by arbitration under the latest edition of the *Rules*, subject to any amendments to the *Rules* made as described in paragraph 8.3.1 (the “***Notice of Arbitration***”). The arbitration shall be conducted pursuant to the *Municipal Arbitrations Act*, RSO 1990, c M.48, as amended. Unless either party gives the notice contemplated by this paragraph 8.3.6, there shall be no arbitration of any such dispute.

Paragraph 8.3.7

Delete the words “10 Working Days” and replace them with “20 Working Days”.

Paragraph 8.3.8

Subparagraph .1(1)

Delete the words “Ready for Takeover” and replace them with “Substantial Performance of the Contract”.

Subparagraph .2

Delete the words “paragraph 8.3.6” and replace them with “paragraph 8.3.1”.

New Paragraphs

Add the following new paragraphs to GC 8.3:

8.3.9 For purposes of the Rules for Mediation and Arbitration of Construction Disputes CCDC 40, the term “neutral appointing authority”, as used in the Rules for Mediation and Arbitration of Construction Disputes shall mean the head of the construction section of the ADR Institute of Ontario, Inc. presiding at the time notice of the dispute is given pursuant to the *Contract*.

8.3.10 Notwithstanding any other provision of this *Contract*, the provisions set out in paragraphs 8.3.1 and 8.3.3 to 8.3.9 shall only apply if the parties agree in

writing to submit a dispute to all, or any part of, those alternate dispute resolution procedures. If the parties do not agree as aforesaid, the Courts shall have exclusive jurisdiction to determine any dispute relating to the *Work* or to the *Contract*.

8.3.11 The *Contractor* agrees that the *Owner* may require the *Contractor* to join into an arbitration involving a dispute between the *Owner* and a third party in which the *Owner* wishes the *Contractor* to be bound by the results of the arbitration, and the *Contractor* hereby consents to such joinder. The *Contractor* agrees that should the *Owner* wish to join a third party into an arbitration involving a dispute between the *Owner* and the *Contractor*, the *Contractor* shall and does hereby consent to such joinder.

GC 8.4 RETENTION OF RIGHTS

Delete in its entirety.

PART 9 PROTECTION OF PERSONS AND PROPERTY

GC 9.1 PROTECTION OF WORK AND PROPERTY

Delete in its entirety and replace with the following:

GC 9.1 PROTECTION OF WORK AND PROPERTY

9.1.1 The *Contractor* shall protect the *Work* and the *Owner's* property and property adjacent to, in the vicinity of, or proximate to, the *Place of the Work* from damage and shall be responsible for damage which may arise as the result of its performance or failure to perform under the *Contract*.

9.1.2 Should the performance or non-performance by the *Contractor* under the *Contract* result in damage to the *Work*, the *Owner's* property or property adjacent to, in the vicinity of, or proximate to, the *Place of the Work*, the *Contractor* shall be responsible for the *Making Good* of such damage at its expense.

9.1.3 Before commencing any *Work*, the *Contractor* shall determine the location of all underground utilities and structures indicated in or reasonably inferable from the *Contract Documents* and the *Reports* by a contractor exercising the degree of care and skill described in GC 3.9 – PERFORMANCE BY CONTRACTOR, paragraph 3.9.1.

9.1.4 Should damage occur to the *Work* or *Owner's* property for which the *Contractor* is not responsible, as provided in paragraph 9.1.1, the *Contractor* shall *Make Good* such damage to the *Work* and, if the *Owner* so directs, to the *Owner's* property. The *Contract Price* and *Contract Time* shall be adjusted as provided in GC 6.1 – CHANGES IN THE WORK, GC 6.2 - CHANGE ORDER and GC 6.3 - CHANGE DIRECTIVE.

9.1.5 With respect to any damage to which paragraph 9.1.4 applies, the *Contractor* shall neither undertake to repair or replace any damage whatsoever to the work of Other Contractors, or to adjoining property, nor acknowledge that the same was caused or occasioned by the *Contractor*, without first consulting the *Owner* and receiving written instructions as to the course of action to be followed from either the *Owner* or the *Consultant*.

9.1.6 The *Contractor* shall be responsible for securing the *Place of the Work* at all times and shall take all reasonable precautions necessary to protect the *Place of the Work*, its contents, materials (including *Owner*-supplied materials) and the public from loss or damage during and after working hours.

GC 9.2 TOXIC AND HAZARDOUS SUBSTANCES

Paragraph 9.2.4

Delete in its entirety and replace with the following:

9.2.4 Unless the *Contract Documents* expressly provide otherwise, the *Contractor* shall be responsible for taking all necessary steps in accordance with legal requirements and the *Contract Documents* to dispose of, store or otherwise render harmless, toxic or hazardous substances or materials encountered at the *Place of the Work* in the course of the execution of the Work.

Paragraph 9.2.5

Delete the words "or which were disclosed but have not been dealt with as required under paragraph 9.2.4".

New Subparagraph

Add the following new subparagraph to paragraph 9.2.5:

.5 take all reasonable steps to mitigate the impact on *Contract Time* and *Contract Price* and any further steps it deems necessary to mitigate or stabilize any conditions resulting from encountering toxic or hazardous substances or materials.

Paragraph 9.2.7

Delete the words "the Owner shall promptly" and replace them with "the Owner will promptly".

Subparagraph .1

Delete in its entirety and replace with the following:

.1 take all necessary steps in accordance with legal requirements and the *Contract Documents* to dispose of, store or otherwise render harmless, toxic or hazardous

substances or materials encountered at the *Place of the Work* in the course of the execution of the *Work* ;

Subparagraph .2

Add the word "and" at the end of the subparagraph.

Subparagraph .4

Delete in its entirety.

Paragraph 9.2.8

Subparagraph .2

Delete the words "property adjacent to" and replace them with "property adjacent, in the vicinity of, or proximate to,"

Delete the words "paragraph 9.1.3" and replace with "paragraph 9.1.2".

Subparagraph .3

Add the words "and as a result of the delay" after the words "paragraph 9.2.6".

Subparagraph .4

Delete the words "GC 13.1 – INDEMNIFICATION" and replace them with "GC 13.1 – INDEMNIFICATION, CLAIMS HANDLING AND WAIVER OF CLAIMS".

New Paragraphs

Add the following new paragraphs to GC 9.2:

9.2.10 If the *Contractor* causes or permits

.1 any toxic or hazardous substances or materials to be brought by the *Contractor*, its *Subcontractors*, *Suppliers* or anyone else for whom the *Contractor* is responsible at law, to the *Place of the Work*, or

.2 any toxic or hazardous substances or materials which were already at the *Place of the Work* (but which were then harmless or stored, contained or otherwise dealt with in accordance with legal and regulatory requirements), to be dealt with in a manner which does not comply with legal and regulatory requirements or which threatens human health and safety or the environment or causes material damage to the property of the *Owner* or others,

the *Contractor* shall

.3 take all reasonable steps, including stopping the Work, to ensure that no person suffers injury, sickness or death and that no property is injured or

destroyed as a result of exposure to or the presence of the substances or materials, and

.4 immediately report the circumstances to the *Consultant* and the *Owner* by telephone, confirmed in writing.

9.2.11 In the case of any circumstances contemplated in paragraph 9.2.10, the *Contractor* shall be responsible, at the *Contractor's* sole expense, for cleaning up, removing, containing, storing, or otherwise dealing with the toxic or hazardous substances or materials and any damage caused thereby in a manner which the *Authorities Having Jurisdiction* determine will:

.1 meet all applicable legal and regulatory requirements and ensure compliance with any applicable permits or other authorizations,

.2 remove any threat to human health and safety or the environment, and

.3 rectify all material damage to the property of the *Owner* and others.

9.2.12 For the purposes of this GC 9.2 – TOXIC AND HAZARDOUS SUBSTANCES, the term "toxic and hazardous substances" shall be taken to mean, and shall be limited to, substances as currently defined by applicable statutory and regulatory requirements.

GC 9.4 CONSTRUCTION SAFETY

Delete in its entirety and replace with the following:

GC 9.4 CONSTRUCTION SAFETY

9.4.1 The *Contractor* acknowledges that it is aware of the provisions of the *Occupational Health and Safety Act*, RSO 1990, c O.1 (the "***OHSA***") and the regulations, policies and guidelines thereunder. The *Contractor* agrees to comply with, and cause to be complied with, the provisions thereof as such statutes, regulations, policies and guidelines may be amended or replaced from time to time including, without limiting the generality of the foregoing, all of the obligations of the *Constructor* and employer under the *OHSA* and regulations, as applicable, in respect of the Work.

9.4.2 The *Contractor* shall execute all required documents under the *Region's* Health and Safety Guide for Construction Contractors at the pre-construction meeting.

9.4.3 The *Contractor* shall do, cause to be done, or refrain from doing any act or thing as directed by the *Owner* or the *Consultant*, including stopping the Work if, at any time, the *Owner* or the *Consultant* considers that any situation or condition is unsafe or contrary to the provisions of the *OHSA*, or any other applicable *Laws*

and Regulations. If the *Contractor* fails to comply with such direction, the *Owner* may:

.1 take action to remedy the situation or condition and the cost thereof shall be payable by the *Contractor* on demand and, failing payment thereof, the *Owner* may deduct the costs from monies which are due or may become due to the *Contractor*; or

.2 terminate the *Contract* pursuant to GC 7.1 – OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT, paragraph 7.1.3.

9.4.4 Notwithstanding the foregoing, any act or failure to act by the *Owner* shall not in any way derogate from the responsibility of the *Contractor* under the *Contract* including its obligations under GC 9.4 – CONSTRUCTION SAFETY.

9.4.5 The *Contractor* shall indemnify, hold harmless and defend the *Owner*, the *Region*, the *Consultant*, the *Municipalities*, and their respective directors, officers, council members, board members, partners, agents and employees from and against all claims, demands, losses, costs including legal costs, damages, actions, suits and proceedings (including by any government agency) arising as a result of any violation or alleged violation of the *OHSA* or the regulations, policies and guidelines thereunder, as such statutes, regulations, policies and guidelines may be amended or replaced from time to time.

9.4.6 The *Contractor* acknowledges that the *Owner* may employ the services of an occupational health and safety auditor for the purpose of conducting inspections of the *Place of the Work*. The *Contractor* shall grant the auditor full and unimpeded access to the *Site*, at all times, and shall immediately comply with any direction issued by the auditor to stop work. The parties acknowledge that the authority of the auditor to stop work is limited to circumstances where there is an immediate threat to the health and safety of the *Owner's* staff or to members of the public.

9.4.7 This *Contract* is deemed to be an individual project for the purposes of the *OHSA* and the regulations made thereunder and the *Contractor* acknowledges that it is the "*Constructor*" as defined in the *OHSA* on this *Project* and that it shall carry out all of the obligations, and shall bear all of the responsibilities, of the *Constructor* as set out in the *OHSA* and regulations including, but not limited to, the following:

.1 ensuring that the measures and procedures prescribed by the *OHSA* are carried out;

.2 ensuring that every employer and every worker performing work on the *Project* complies with the said *OHSA* and regulations; and

.3 ensuring that the health and safety of workers on the *Project* is protected.

9.4.8 If the *Owner* or the *Region* is designated as the "*Constructor*" as a result of the *Contractor's* actions, all of the increases in costs to the *Owner* to carry out the duties and obligations of the "*Constructor*" shall be borne by the *Contractor*.

9.4.9 All *OHSA* Regulations for construction projects shall be strictly adhered to.

9.4.10 Without limiting the other provisions of GC 9.4 – CONSTRUCTION SAFETY or the *Contractor's* obligations for occupational health and safety, the *Contractor* shall, at no additional cost to the *Owner*, comply with, and cause its *Subcontractors* and any other persons present at the *Place of the Work* to comply with:

.1 all legislative amendments, controls, regulations, requirements and orders that were or are issued by the Government of Canada, the Province of Ontario, the *Region* or other municipal authority in response to the *Virus*, and

.2 the *Owner's* and the *Region's* policies, protocols and procedures implemented for the protection of the health of its staff, its residents and the community. Where they are subject to change, the *Contractor* must comply with the *Owner's* and the *Region's* new requirements.

GC 9.5 MOULD

Paragraph 9.5.2

Subparagraph .2

Delete the words "property adjacent to the Place of the Work" and replace them with "property adjacent to, in the vicinity of, or proximate to, the *Place of the Work".*

Delete the words "paragraph 9.1.3" and replace them with "paragraph 9.1.2".

Subparagraph .3

Add the words "and as a result of the delay" after the words "paragraph 9.5.1.3".

Subparagraph .4

Delete the words "GC 13.1 – INDEMNIFICATION" and replace them with "GC 13.1 – INDEMNIFICATION AND CLAIMS HANDLING".

Paragraph 9.5.3

Subparagraph .2

Add the word "and" at the end of the paragraph.

Subparagraph .4

Delete in its entirety.

NEW GENERAL CONDITIONS

Add the following new General Conditions to PART 9 – PROTECTION OF PERSONS AND PROPERTY

GC 9.6 COMPLIANCE WITH ENVIRONMENTAL LEGISLATION

9.6.1 The *Contractor* acknowledges that it is aware of the provisions of federal and provincial legislation applicable to the Work and the environment including, but not limited to:

- the *Canadian Navigable Waters Act*, R.S.C., 1985, c N-22
- the *Clean Water Act, 2006*, S.O. 2006, c 22;
- the *Conservation Authorities Act*, R.S.O. 1990, c C.27;
- the *Dangerous Goods Transportation Act*, R.S.O. 1990, c D.1;
- the *Endangered Species Act, 2007*, S.O. 2007, c 6;
- the *Environmental Protection Act*, R.S.O. 1990, c E.19;
- the *Fisheries Act*, R.S.C., 1985, c F-14;
- the *Ontario Water Resources Act*, R.S.O. 1990, c O.40;
- the *Safe Drinking Water Act, 2002*, S.O. 2002, c 32;
- the *Species at Risk Act*, S.C. 2002, c 29;
- the *Technical Standards and Safety Act, 2000*, S.O. 2000, c 16; and
- the *Transportation of Dangerous Goods Act, 1992*, S.C. 1992, c 34

and the regulations, permits, approvals, orders, directions, policies and guidelines issued thereunder. The *Contractor* agrees to comply with, and cause to be complied with, the provisions thereof as such statutes, regulations, permits, approvals, orders, directions, policies and guidelines may be amended or replaced from time to time including, without limiting the generality of the foregoing, any obligation to obtain, and any terms and conditions of, any approval, permit or other instrument required under the applicable acts, regulations, policies and guidelines thereunder in respect of the *Work* and further agrees to discharge, release, handle, transport, manage, store and dispose of all materials in accordance with such legislation.

9.6.2 The *Contractor* shall do, cause to be done, or refrain from doing any act or thing as directed by the *Owner* or the *Consultant*, including stopping the Work if, at any time, the *Owner* or the *Consultant* considers that any situation or condition is unsafe, damaging to the environment or contrary to the provisions of the applicable acts, regulations, policies or guidelines thereunder, or any term or condition of a permit, approval order, directive or other instrument issued thereunder. If the *Contractor* fails to comply with such direction, the *Owner* may:

.1 take action to remedy the situation or condition and the cost thereof shall be payable by the *Contractor* on demand and, failing payment thereof, the *Owner* may deduct the costs from monies which are due or may become due to the *Contractor*; or

.2 terminate the *Contract* pursuant to GC 7.1 – OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMIANTE THE CONTRACT.

9.6.3 Notwithstanding the foregoing, any act or failure to act by the *Owner* shall not in any way derogate from the responsibility of the *Contractor* under the *Contract* including its obligations under paragraph 9.6.1.

9.6.4 The *Contractor* shall indemnify, hold harmless and defend the *Owner*, the *Region*, the *Consultant*, the *Municipalities*, and their respective directors, officers, council members, board members, partners, agents, employees and authorized representatives from and against all claims, demands, losses, expenses, costs including legal and professional costs, damages, actions, suits or proceedings (including by any government agency) arising as a result of the *Contractor's* violation of any applicable *Laws and Regulations* and the common law relating to the environment issued thereunder as such may be amended, replaced or superseded from time to time as it relates to the *Contractor's* performance of the *Work*.

9.6.5 The *Contractor* acknowledges that the *Owner* may employ the services of an environmental inspector for the purpose of conducting inspections of the *Place of the Work*. The *Contractor* shall grant the environmental inspector full and unimpeded access to the *Site*, at all times, and shall immediately comply with any direction issued by the Environmental Inspector, the *Consultant*, or the *Owner*, including any direction to stop Work.

GC 9.7 SPILLS REPORTING

9.7.1 Prior to commencing construction, the *Contractor* shall:

.1 submit to the *Owner* and The Ministry of the Environment, Conservation and Parks - Spill Action Plan in a form acceptable to the *Owner*, which outlines procedures for the reporting, interception, rapid clean-up, restoration of the

affected area, treatment and disposal of the pollutant or substance spilled or discharged and impacted materials including without limitation, soil, groundwater and vegetation; and

.2 post at the *Place of the Work*, in a clearly visible and accessible location, a notice containing the following information:

(1) the names and the telephone numbers of the representatives of the *Owner* and *Municipalities* to be notified in the event of a spill or discharge;

(2) the telephone number of the Spills Action Centre 1-800-268-6060;

(3) the names and the telephone numbers of the representatives of the fire, police and health and public works departments of the *Municipalities* to be notified in the event of a spill or discharge;

(4) the names and the telephone numbers of companies experienced in the control and clean-up of hazardous and non-hazardous materials and substances that would be called upon by the *Contractor* in the event of a spill or discharge; and

(5) the name and the telephone number of the *Contractor's* representative responsible for preparing, implementing, directing and supervising the clean-up of a spill or discharge.

9.7.2 In the event of a spill or discharge into the natural environment, the *Contractor* must comply, at all times, with the requirements of the Classification and Exemption of Spills and Reporting of Discharges, O. Reg. 675/98, under the *Environmental Protection Act*.

9.7.3 In the event of a spill or other discharge of a pollutant into the natural environment, every person responsible for the emission, or who causes or permits it, must forthwith notify all relevant parties of the spill or discharge. Information reported to the Ministry of the Environment, Conservation and Parks Spills Action Centre must comply with the reporting requirements stated within Classification and Exemption of Spills and Reporting of Discharges, O. Reg. 675/98, and may include the nature of the spill or discharge, the circumstances surrounding the spill or discharge, and the action taken or intended to be taken with respect to the spill or discharge.

Relevant parties to be notified in the event of a spill or discharge may include, but are not limited to:

- the Ministry of the Environment, Conservation and Parks Spills Action Centre – tel: 1-800-268-6060;

- the *Region*;
- the *Municipalities*;
- the owner of the pollutant or substance, if known;
- the person having control of the pollutant or substance, if known;
- the *Owner*; and
- the *Consultant*

GC 9.8 CERTIFICATE OF RECOGNITION (COR™) SAFETY PROGRAM

9.8.1 The Certificate of Recognition (COR™) safety program, endorsed by IHSA, has been implemented by the *Owner* as a requirement for this *Contract*.

9.8.2 The *Contractor* shall:

.1 maintain its COR™ certification;

.2 maintain its COR™ equivalency, in the form of a Letter of COR™ Equivalency issued by the IHSA; or

.3 have a valid Letter of Reciprocity issued by the IHSA, indicating that they are in the process of obtaining COR™ equivalency

for the duration of the *Contract*.

9.8.3 If, at any time during the *Contract*, the *Contractor's* COR™ certification, Letter of COR™ Equivalency or Letter of Reciprocity expires, the *Owner* may terminate the *Contract* pursuant to GC 7.1 – OWNER'S RIGHT TO PERFORM THE WORK OR STOP THE WORK OR TERMINATE THE CONTRACT, paragraph 7.1.3.

9.8.4 At any time during the term of the *Contract*, when requested by the *Owner*, the *Contractor* shall provide such evidence of compliance with the COR™ certification requirements set out in paragraph 9.8.2.

PART 10 GOVERNING REGULATIONS

GC 10.1 TAXES AND DUTIES

New Paragraphs

Add the following new paragraphs to GC 10.1:

10.1.3 Where the *Owner* is entitled to an exemption or a recovery of sales taxes, customs duties, excise taxes or *Value Added Taxes* applicable to the *Contract*, the *Contractor* shall, at the request of the *Owner*, assist with application for any exemption, recovery or refund of all such taxes and duties and all amounts recovered or exemptions obtained shall be for the sole benefit of the *Owner*. The *Contractor* agrees to endorse over to the *Owner* any cheques received from

the federal or provincial governments, or any other taxing authority, as may be required to give effect to this paragraph.

10.1.4 The *Contractor* shall maintain accurate records tabulating equipment, material and component costs reflecting the taxes, customs duties, excise taxes and *Value Added Taxes* paid.

10.1.5 Any refund of taxes, including without limitation, any government sales tax, customs duty, excise tax or *Value Added Tax*, whether or not paid, which is found to be inapplicable or for which exemption may be obtained, is the sole and exclusive property of the *Owner*.

10.1.6 The *Contractor* agrees to cooperate with the *Owner* and to obtain from all *Subcontractors* and *Suppliers* cooperation with the *Owner* in the application for any rebates, incentives or refund or exemption of any taxes, which cooperation shall include, but not be limited to, making or concurring in the making of an application for any such rebates, incentives, refund or exemption and providing to the *Owner* copies, or where required, originals of records, invoices, purchase orders and other documentation necessary to support such applications. All such rebates, incentives or refunds shall either be paid to the *Owner*, or shall be a credit to the *Owner* against the *Contract Price*, in the *Owner's* discretion.

10.1.7 Customs duties, penalties, or any other penalty, fine or assessment levied against the *Contractor* shall not be treated as a tax or customs duty for purposes of this GC 10.1 – TAXES AND DUTIES.

GC 10.2 LAWS, NOTICES, PERMITS, AND FEES

Paragraph 10.2.2

Delete in its entirety and replace with the following:

10.2.2. The *Owner* shall obtain and pay for development approvals, building permit, site plan approval and environmental approvals. Without limiting the generality of any other provision in the *Contract*, the *Contractor* shall obtain and pay for, at its sole expense and cost, all other permits, approvals, licences, certificates, charges and refundable deposits, including, without limitation, water and sanitary sewer permits, water and sewer connection charges, site alteration permits, curb cut and road cut permits, sign permits, hydro approvals, and occupancy permit necessary for the performance of the *Work* and the use and occupation of the *Work* by the *Owner* in accordance with the *Contract Documents*, the cost of which shall all be included in the *Contract Price*.

Paragraph 10.2.3

Delete in its entirety and replace with the following:

10.2.3 The *Contractor* shall comply, and shall require its employees, agents, *Subcontractors*, *Suppliers* and anyone for whom they are responsible to comply, with all *Laws and Regulations* and all of the *Owner's* policies and procedures which are or become in force and are applicable to the performance of the *Work* including, without limitation, all those relating to the preservation of the public health, occupational health and safety and to construction safety.

Paragraph 10.2.4

Delete in its entirety and replace with the following:

10.2.4 The *Contractor* shall give the required notices and comply with the *Laws and Regulations*, and industry best practices and guidelines which are or become in force during the performance of the *Work* and which relate to the *Work*, to the environment, to the preservation of public health and to construction safety. The *Contractor* shall provide the *Owner* with copies of all such required notices and related health and safety documents. The *Contractor* shall notify the Chief Building Official or the registered code agency, where applicable, of the readiness, substantial completion, and completion of the stages of construction set out in the *Ontario Building Code Act*, 1992, S.O. 1992, c.23. The *Contractor* shall be present at each *Site* inspection by an inspector or registered code agency. If any laws, ordinances, rules, regulations, or codes conflict, the more stringent shall govern.

Paragraph 10.2.5

Delete in its entirety and replace with the following:

10.2.5 Subject to GC 1.8 – DOCUMENT REVIEW BY THE CONTRACTOR, paragraph 1.8.1, the *Contractor* shall not be responsible for verifying that the *Contract Documents* are in compliance with the applicable *Laws and Regulations* relating to the Work. If the *Contract Documents* are at variance therewith, or if, subsequent to the time of bid closing, changes are made to the applicable *Laws and Regulations* which require modification to the *Contract Documents*, the *Contractor* shall advise the *Consultant* in writing requesting direction immediately upon such variance or change becoming known and no further work on the affected components of the *Contract* shall proceed until these changes to the *Contract Documents* have been obtained by the *Contractor* from the *Consultant*. The *Consultant* will make the changes required to the *Contract Documents* as provided in GC 6.1 – CHANGES IN THE WORK, GC 6.2 - CHANGE ORDER and GC 6.3 - CHANGE DIRECTIVE.

Paragraph 10.2.6

Delete in its entirety and replace with the following:

10.2.6 If the *Contractor* fails to provide the *Owner* and the *Consultant* with a *Notice in Writing*, fails to obtain direction as required in paragraph 10.2.5, or performs work that it knows or ought to have known that contravenes any *Laws and Regulations*, the *Contractor* shall be responsible for and shall correct the violations thereof, and shall bear the costs, expenses, and damages attributable to the failure to comply with the provisions of such *Laws and Regulations*

Paragraph 10.2.7

Delete in its entirety and replace with the following:

10.2.7 If, subsequent to the time of bid submission deadline, changes are made to applicable *Laws and Regulations* of *Authorities Having Jurisdiction* which were not anticipated at the time of bid closing and which affect the cost of the *Work*, either party may submit a claim in accordance with the requirements of GC 6.6 – CLAIMS FOR A CHANGE IN CONTRACT PRICE.

New Paragraphs

Add the following new paragraphs to GC 10.2:

10.2.8 Without limiting the generality of any other provision in the Contract Documents, the Contractor shall cause all certificates to be furnished that are required or given by the appropriate governmental or quasi-governmental Authorities as evidence that the Work as installed conforms with the *Laws and Regulations* of *Authorities Having Jurisdiction*, including, without limitation, certificates of compliance for the Owner's occupancy or partial occupancy. The certificates are to be final certificates giving complete clearance of the Work, in the event that such governmental or quasi-governmental Authorities furnish such certificates.

GC 10.3 PATENT FEES

Paragraph 10.3.1

Delete the words "The Contractor shall hold the Owner harmless" and replace them with "The Contractor shall indemnify, hold harmless and defend the Owner".

Delete the words "suits, or proceedings" and replace them with "suits and proceedings".

Paragraph 10.3.2

Delete the words "The Owner shall" and replace them with "The Owner will".

Delete the words “supplied to the Contractor as part of the Contract” and replace them with “supplied to the Contractor by the Owner as part of the Contract”.

GC 10.4 WORKERS’ COMPENSATION

Paragraph 10.4.1

Delete in its entirety and replace with the following:

10.4.1 Upon execution and delivery of the *Contract*, prior to commencing the *Work*, with each application for payment, at *Substantial Performance of the Contract*, and at the issuance of the final certificate for payment, the *Contractor* shall provide evidence of compliance with workers’ compensation legislation at the *Place of the Work*, including payments due thereunder.

New Paragraphs

Add the following new paragraphs to GC 10.4:

10.4.2 The *Contractor* shall ensure that each *Subcontractor* complies with the workers' compensation legislation at the *Place of the Work*. At any time during the term of the *Contract*, when requested by the *Owner*, the *Contractor* shall provide such evidence of compliance by the *Contractor* and *Subcontractors*.

10.4.3 Where a *Subcontractor* is not required to participate in the insurance plan provided for under the workers’ compensation legislation, the *Contractor* shall require the *Subcontractor* to provide a sworn declaration of its exemption as a condition of the *Subcontractor’s* admission to the *Place of Work*. When requested by the *Owner*, the *Contractor* shall require the *Subcontractor* to provide a letter of exemption under the workers’ compensation legislation.

10.4.4 If the *Contractor* at any time fails to pay any assessment or compensation required to be paid with respect to workplace safety and insurance, the *Owner* may pay such assessment or compensation and deduct the cost thereof from monies due or that may become due to the *Contractor*.

PART 11 INSURANCE

Delete in its entirety and replace with the following:

PART 11 INSURANCE AND CONTRACT SECURITY

GC 11.1 BONDS

11.1.1 On or before the execution and delivery of the *Contract*, the *Contractor* shall provide to the *Owner*:

.1 a performance bond in the amount of 100% of the *Contract Price* and conforming to Form 32 – Performance Bond under Section 85.1 of the *Construction Act*; and

.2 a labour and material payment bond in the amount of 50% of the *Contract Price* and conforming to Form 31 – Labour and Material Payment Bond under section 85.1 of the *Construction Act.*

11.1.2 Such bonds shall be issued by a surety company licensed under the *Insurance Act*, RSO 1990, c. I.8, as amended, and approved by the *Owner*, and shall be maintained in good standing until the fulfillment of the *Contract*.

GC 11.2 INSURANCE

11.2.1 Without restricting the generality of GC 13.1 – INDEMNIFICATION AND CLAIMS HANDLING, the *Contractor* shall obtain, maintain, pay the premium(s) and any deductibles for, and provide evidence of, insurance coverage as listed in Appendix D to the Request for Tender. The insurance shall be taken out with insurance companies licensed to transact business in the Province of Ontario and who are not otherwise excluded by the *Region's* Risk Manager.

11.2.2 The forms of the insurance policies shall in all respects be satisfactory to the Owner and the *Region's* Risk Manager and shall be maintained continuously from the commencement of the *Work* until the *Work* has been completed to the satisfaction of the *Owner*.

11.2.3 The policies shall be endorsed to provide the *Owner* and the *Region* with not less than 30 Days' *Notice in Writing* in advance of any cancellation, change or amendment which restricts coverage such that the *Contract* requirements are no longer met.

11.2.4 The *Contractor* shall provide the *Owner* and the *Region* with proof of insurance, by submitting an original Certificate of Insurance on the *Region's* standard "Certificate of Insurance" form, upon execution and delivery of the *Contract*, prior to commencement of the *Work* and thereafter upon request by the *Owner* or the *Region*. In lieu of an original Certificate of Insurance, the *Owner* and the *Region* may accept an electronic copy provided it is e-mailed or faxed by the *Contractor's* insurance broker directly to the *Owner* and the *Region*.

11.2.5 If the *Contractor* fails to provide or maintain insurance as required in this General Condition or elsewhere in the *Contract*, then the *Owner* and the *Region* shall have the right to provide and maintain such insurance and give evidence thereof to the *Contractor*, the *Consultant* and the *Municipalities*, as applicable, and all such costs, including administration costs, shall be payable by the *Contractor* to the *Owner* and the *Region* on demand.

PART 12 OWNER TAKEOVER

GC 12.1 READY-FOR-TAKEOVER

Delete in its entirety.

GC 12.2 EARLY OCCUPANCY BY THE OWNER

Delete in its entirety and replace with the following:

GC 12.2 EARLY OCCUPANCY BY THE OWNER

12.2.1 Upon the *Owner's* request, the *Owner* shall, at any time or times, have the right of occupying or using any part or parts of the *Work* (including, without limitation, for the purposes of installing and testing fittings and equipment), whether partially performed or entirely complete, whether completed on schedule or not, before *Substantial Performance of the Contract* has been attained, or before the completion of the *Work*.

12.2.2 In the event the *Owner* desires to exercise the privilege of occupancy or use of the *Work* as provided above, the *Contractor* shall co-operate with the *Owner* throughout in making available for the *Owner's* use such building services as heating, ventilation, cooling, water, lighting and telephone for the space or spaces to be occupied or used, and if the equipment required to furnish such services is not entirely completed at the time the *Owner* desires to occupy or use the aforesaid space or spaces, the *Contractor* shall make every reasonable effort to complete same as soon as possible to the extent that the necessary equipment can be put into operation and use and any extra cost beyond that originally required to complete the *Work* arising from such early occupancy or use shall be borne by the *Owner*.

12.2.3 In the event that the *Owner* exercises the privilege of occupancy or use of the *Work* as provided above, it agrees to do so, so as not to materially interfere with the respective work of the *Contractor*, *Subcontractors* or *Suppliers* and under the understanding that the *Owner* will be occupying premises within a construction site which will require compliance with all normal construction site requirements including, without limitation, health and safety requirements.

12.2.4 It shall be understood, however, that the *Owner's* occupancy or use of such space or spaces of the *Work* shall not constitute the *Owner's* acceptance of any *Work*, materials or equipment which are not in accordance with the requirements of the *Contract Documents*, nor affect the *Warranty Period* under the *Contract*, nor relieve the *Contractor* from its obligations, duties, responsibilities, and liabilities to complete the *Work*, nor for responsibility for loss or damage due to or arising out of defects in, or malfunctioning of, any

Work, material or equipment, nor from any other unfulfilled duties, liabilities, obligations or responsibilities under the *Contract* nor from any other duty, liability, obligation or responsibility under the *Contract* including, without limitation, the *Contractor's* warranty obligations. If, however, damage results from any act by the *Owner*, the *Owner* shall assume its share of the responsibility for such damage.

GC 12.3 WARRANTY

Paragraph 12.3.1

Delete in its entirety and replace with the following:

12.3.1 The *Contractor* agrees to remedy, at its costs, any defects in materials and workmanship which are identified by the *Owner* within the warranty period specified in Article A-13 of the Agreement – WARRANTY PERIOD, or such longer periods as may be specified for certain *Products* or *Work* or as agreed to by the *Owner* and the *Contractor* (the *"**Warranty Period***"). This warranty shall cover labour and material, including, without limitation, the costs of removal and replacement of covering materials. This warranty shall not limit extended warranties on any items of equipment or material called for elsewhere in the *Specifications* or otherwise provided by any manufacturer of such equipment or material.

Paragraph 12.3.2

Delete the word "The" at the beginning of the sentence and replace it with "Subject to GC 1.8 – DOCUMENT REVIEW BY THE CONTRACTOR, paragraph 1.8.1, the".

Paragraph 12.3.3

Delete the words "one year Warranty Period" and replace them with "*Warranty Period*".

Paragraph 12.3.4

Delete the words "one year Warranty Period" and replace them with "*Warranty Period*".

Paragraph 12.3.6

Delete the words "one year Warranty Period" and replace them with "*Warranty Period*".

New Paragraphs

Add the following new paragraphs to GC 12.3:

12.3.7 The *Contractor* shall commence to correct any deficiency within 5 *Working Days* after receiving a *Notice in Writing* from the *Owner* or the *Consultant*, and shall complete the correction as expeditiously as possible, except that in case the deficiency would prevent maintaining security or keeping basic systems

essential to the ongoing business of the *Owner* or the *Owner's* tenants, operational as designed, all necessary corrections or installation of temporary replacements shall be carried out immediately as an emergency service. Should the *Contractor* fail to attend to the service request on *Site* within four (4) hours and provide this emergency service within 24 hours of a request made in writing during the normal business hours of the *Contractor*, the *Owner* is authorized to carry out all necessary repairs or replacements at the *Contractor's* expense.

12.3.8 The carrying out of replacement work and *Making Good* of defects shall be executed at times convenient to the *Owner* and this may require work outside of normal working hours at the *Contractor's* expense.

12.3.9 Any material or equipment requiring excessive servicing during the *Warranty Period* (or free maintenance period, if applicable) shall be considered defective and the warranty (or free maintenance period) shall be deemed to take effect from the time that the defect has been corrected so as to cause excessive servicing to terminate.

12.3.10 The *Contractor* shall assign to the *Owner* all warranties, guarantees or other obligations for work, services or materials performed or supplied by any *Subcontractor*, *Supplier* or other person in or about the *Work*, with the consent of the other party thereto where required by law or by the terms of the *Contract* or engagement. Such assignment shall be in addition to, and without detracting from, the warranty rights of the *Owner* under the provisions of the *Contract Documents* for the duration of the *Warranty Period*, with the exception of any extended warranties beyond the periods specified in Article A-13 of the Agreement – WARRANTY PERIOD which are subject to paragraph 12.3.6.

12.3.11 Any specified *Warranty Period* shall not be construed as limiting the provisions of GC 13.1 - INDEMNIFICATION AND CLAIMS HANDLING.

12.3.12 The remedies of the *Owner* set forth above shall not deprive the *Owner* of any action, right or remedy otherwise available to it for breach of any provisions of the *Contract Documents* and the periods referred to above, or such longer time as may be specified elsewhere, shall not be construed as a limitation on the time in which the *Owner* may pursue such other action or remedy.

PART 13 INDEMNIFICATION AND WAIVER

Delete in its entirety and replace with the following:

PART 13 INDEMNIFICATION AND WAIVER

GC 13.1 INDEMNIFICATION, CLAIMS HANDLING AND WAIVER OF CLAIMS

13.1.1 The *Contractor* shall indemnify, hold harmless and defend the *Owner*, the *Region*, the *Consultant*, the *Municipalities*, and their respective directors, officers, council members, board members, partners, agents and employees from and against all claims, demands, losses, costs (including all legal costs), damages, actions, suits and proceedings that arise directly or indirectly out of, or are attributable to, the *Contractor's* performance of, or failure to perform, the *Work* or out of the condition of the *Work*, the *Place of the Work*, adjoining lands or highways used in connection with the performance of the *Work*, including any act or omission of the *Contractor* or its agents, any *Subcontractors*, employees, workers or other persons for whom the *Contractor* is in law responsible provided that such claims are caused by the negligent acts or omissions of the *Contractor* or its agents, any *Subcontractors*, employees, workers or other persons for whom the *Contractor* is in law responsible. This indemnification shall include any legal costs incurred by the *Owner* or the *Region* on a substantial indemnity basis, including those incurred to defend any criminal or quasi-criminal prosecutions against the *Owner* or the *Region* resulting from the actions of the *Contractor* or other persons for whom the *Contractor* is in law responsible.

13.1.2 The indemnification obligations in GC 13.1 – INDEMNIFICATION, CLAIMS HANDLING AND WAIVER OF CLAIMS shall apply provided that such claims are made by *Notice in Writing* within a period of two years from the date of *Total Performance of the Contract*, or within such longer period of time as may be prescribed by any limitation statute of the province or territory of the *Place of the Work*.

13.1.3 The *Contractor* shall respond to, and deal with, all third-party claims in a prompt, courteous and efficient manner. The *Contractor* shall contact all third-party claimants and acknowledge receipt of all third-party claims within 1 *Business Day* and in writing within 3 *Business Days* upon being notified in writing of the third-party claim. The *Contractor* shall immediately, upon receipt of any third-party claim, provide the *Region's* Controllership Office with notice of the third-party claim. The *Contractor* shall also provide the *Region's* Controllership Office with copies of all correspondence between the *Contractor* or its agents and the third-party claimant.

13.1.4 The *Contractor* shall not advise the third-party claimant that the *Owner* or the *Region* is responsible for their claim.

13.1.5 If, in the sole discretion of the *Region's* Controllership Office, acting reasonably, a claim is not being dealt with in a manner consistent with the provisions of this *Contract*, which includes, without limiting the generality of the foregoing:

.1 failure of the *Contractor* to acknowledge receipt of the third-party claim in the manner set out in paragraph 13.1.3; and

.2 failure to resolve the third-party claim to the satisfaction of *Region's* Controllership Office within 90 Days of the receipt of the third-party claim;

the *Region's* Controllership Office may appoint an insurance adjuster or other person to settle any third-party claims arising from this *Contract*. Any money paid by the *Owner* or the *Region* in satisfaction of any third-party claim determined to be the *Contractor's* responsibility, plus all associated costs incurred by the *Owner* or the *Region*, shall be deducted from monies owing to the *Contractor* by the *Owner*.

13.1.6 Notwithstanding paragraph 13.1.5 the *Owner* may withhold funds in the amount of any third-party claim received plus the greater of $1,000.00 or 25% of the amount claimed, from monies owing to the *Contractor* by the *Owner* under this *Contract* or, in the event the *Contractor* becomes insolvent, any other contract between the *Owner* and the *Contractor*.

GC 13.2 WAIVER OF CLAIMS

13.2.1 Subject to any rights or remedies provided by the *Construction Act*, as of the date of the final certificate for payment, the *Contractor* expressly waives and releases the *Owner* and the *Region* from all claims against the *Owner* and the *Region* including, without limitation, those that might arise from the negligence or breach of contract by the *Owner* except:

.1 those made in writing in compliance with the *Contract Documents* prior to the *Contractor's* application for final payment and still unsettled; and

.2 those arising from the provisions of GC 9.2 – TOXIC AND HAZARDOUS SUBSTANCES or GC 10.3 PATENT FEES.

GC 13.3 DAMAGES AND MUTUAL RESPONSIBILITY

13.3.1 If the *Owner* suffers damage in any manner because of any wrongful act or negligent act or omission of the *Contractor* or of anyone for whom the Contractor is responsible in law, then the *Owner* shall be reimbursed by the *Contractor* for such damage.

13.3.2 Claims for damage under paragraph 13.3.1 shall be made by the *Owner* by providing a Notice in Writing within reasonable time after the first observance of

such damage and if undisputed shall be confirmed by *Change Order*. Disputed claims shall be resolved as set out in PART 8 – DISPUTE RESOLUTION.

13.3.3 If the *Contractor* has caused damage to the work of an *Other Contractor* on the *Project*, the *Contractor* agrees upon receipt of a *Notice in Writing* to settle with the *Other Contractor* by negotiation or arbitration. If the *Other Contractor* makes a claim against the *Owner* or the *Region* on account of damage alleged to have been so sustained, the *Owner* shall notify the *Contractor* and may require the *Contractor* to defend the action at the *Contractor's* expense. The *Contractor* shall satisfy a final order or judgement against the *Owner* or the *Region* and pay the costs incurred by the *Owner* and the *Region* arising from such action.

NEW PARTS

Add the following new Parts to the General Conditions:

PART 14 AUDIT

GC 14.1 AUDIT

14.1.1 The *Owner*, the *Region* and the Ministry of Labour shall have the right to audit all books and records (in whatever form they may be kept, whether written, electronic or other) relating or pertaining to any work performed under the *Contract* (including any and all documents and other materials, in whatever form they may be kept, which support or underlie those books and records), kept by or under the control of the *Contractor*, including, but not limited to those kept by the *Contractor*, its employees, agents, assigns, successors and *Subcontractors*. The *Contractor* shall maintain and preserve all original books and records, together with such supporting or underlying documents and materials, for the duration of this *Contract* and for at least 2 years following the completion of this *Contract*, including any and all renewals thereof. The books and records, together with the supporting or underlying documents and materials shall be made available, upon request, to the *Owner* and the *Region*, through its employees, agents, representatives, contractors or other designees, during normal business hours at the *Contractor's* office or place of business, and the *Contractor* shall supply certified copies of payrolls and any other records required by the *Owner* or the *Region* as and when called for. In the event that no such location is available, then the books and records, together with the supporting or underlying documents and records, shall be made available for audit at a time and location in the Region of York, Ontario, which is convenient for the *Owner* and the *Region*.

14.1.2 Paragraph 14.1.1 shall not be construed to limit, revoke, or abridge any other rights, powers, or obligations relating to audit which the *Owner* and the *Region* may have by

Federal, Provincial, or Municipal statute, ordinance, regulation, or agreement, whether those rights, powers, or obligations are express or implied.

PART 15 SOFTWARE

GC 15.1 SOFTWARE

15.1.1 Without limiting the generality of any other provision in the *Contract*, the *Contractor*, as a part of the *Work*, shall *Supply* and *Install* all software required by the *Contract Documents* or included with any systems required by the *Contract Documents* ("***Software***"). The *Contractor* shall grant or obtain a perpetual, irrevocable non-exclusive royalty-free license to use the Software sufficient for the *Owner's* purposes.

FORMS

Form 1 Preliminary Estimate for Payment

Form 2 Proper Invoice

Form 3 Declaration to be provided in connection with GC 5.4.7.4, GC 5.5.2.6 and GC 5.6.5.4

RELEASE

IN THE MATTER OF a contract for ....., known as Contract No. ....., entered into between The Regional Municipality of York Police Service Board (the "**Board**") and ..... (the "**Contractor**").

KNOW ALL MEN BY THESE PRESENTS THAT the Contractor, on its own behalf and on behalf of its Subcontractors, and their respective heirs, executors, administrators, successors and assigns, as the case may be (the "**Releasor**"), for and in consideration of the payment or promise to pay the statutory holdback under the above-mentioned contract, and for other good and valuable consideration, hereby remises, releases and forever discharges the Board, The Regional Municipality of York, and their directors, officers, council members, board members, partners, employees, agents, assigns and successors (the "**Releasees**"), of and from all manner of actions, causes of action, suits, debts, dues, sums of money, claims and demands whatsoever at law or in equity which the Releasor ever had, now has, or may have by reason of the above-mentioned contract, save and except any claim which the Releasor has arising out of:

1. Claims pursuant to PART 8 – DISPUTE RESOLUTION made prior to Substantial Performance of the Contract and still unsettled, as listed in the attached "Schedule of Outstanding Claims"
2. The retention by the Board of the maintenance security, if applicable
3. Pending/Unresolved Change Orders as listed in the attached "Schedule of Pending/Unresolved Change Orders"
4. Quantities which have not been finalized

With respect to item 1 above, the Contractor acknowledges and agrees that none of the claims listed in the attached "Schedule of Outstanding Claims" have been admitted, acknowledged or accepted by the Board as valid claims. The Contractor further acknowledges that nothing in this Release prevents or estops the Board from disputing the validity, timeliness and quantum of the claims listed therein.

T-24-33
APPENDIX D
INSURANCE REQUIREMENTS

Contractor's Insurance

The Contractor shall obtain, maintain, pay the premium(s) and any deductibles for, and provide evidence of the following insurance coverage, taken out with insurance companies licensed to transact business in the Province of Ontario and who are not otherwise excluded by the Region's Insurance and Risk Manager.

Commercial General Liability Insurance

Commercial General Liability ("**CGL**") insurance with limits of not less than $5,000,000.00 inclusive per occurrence for bodily and personal injury, death, and damage to property including loss of use thereof. The CGL insurance shall include Cross Liability and Severability of Interest clauses, Products and Completed Operations coverage (minimum 24 months), Owner's and Contractor's Protective and a Standard Non-Owned Automobile endorsement including standard contractual liability coverage.

The following parties shall be included as Additional Insured parties on the CGL policy:

- the Owner
- YRP
- the Region
- the Consultant
- the Municipalities

Automobile Liability Insurance

Automobile liability insurance in respect of licensed vehicles shall have limits of not less than $5,000,000.00 inclusive per occurrence for bodily injury, death, and damage to property. Coverage shall be in the form of a standard owner's form automobile policy providing third party liability and accident benefits insurance and covering licensed vehicles owned and/or leased or operated by or on behalf of the Contractor.

Contractors' Equipment Insurance

All Risks Contractors' Equipment coverage, insuring the full amount of the Contractor's equipment, including all owned, non-owned and mobile equipment.

Property and Boiler & Machinery Insurance

(i) All Risks Builder's Risk insurance insuring not less than the sum of the amount of the Estimated Contract Price and the full value of Products that are specified to be provided by the Owner, YRP or the Region for incorporation into the Work. The Contractor, the Owner, YRP and the Region shall be Named Insureds on the policy. This policy shall be maintained from the commencement of the Work until Substantial Performance of the Contract has been attained, as set out in the Certificate of Substantial Performance.

(ii) Standard Comprehensive Boiler & Machinery insurance insuring the interests of the Contractor, the Owner, YRP and the Region for not less than the replacement value of boiler and pressure vessels forming part of the Work. Should testing be required as part of the Contract, the policy shall be extended to cover such testing. If production machinery is involved in the

performance of the Work, the policy shall be extended to cover such machinery. The policy shall contain a Joint Loss Agreement clause and shall be maintained from the commencement of the Work until Substantial Performance of the Contract has been attained, as set out in the Certificate of Substantial Performance.

The policies shall provide that, in the event of a loss or damage, payment shall be made to the Owner, YRP, the Region and the Contractor as their respective interests may appear. The Contractor shall act on behalf of the Owner, YRP, the Region and itself for the purpose of adjusting the amount of such loss or damage payment with the insurers. When the extent of the loss or damage is determined, the Contractor shall proceed to restore the Work. Loss or damage shall not affect the rights and obligations of either party under the Contract except that the Contractor shall be entitled to such reasonable extension of Contract Time relative to the extent of the loss or damage as the Owner may decide in accordance with the General Conditions of the Contract.

The Contractor shall be entitled to receive from the Owner, in addition to the amount due under the Contract in respect of Work performed prior to the date of the occurrence of the loss or damage, the amount at which the Owner's interest in restoration of the Work has been appraised to the extent paid by the insurer, such amount to be paid as the restoration of the Work proceeds and in accordance with the requirements of the General Conditions of the Contract.

Contractor's Pollution Liability Insurance

Contractor's Pollution Liability insurance is required with limits of not less than $2,000,000.00 with the Owner, YRP and the Region added as Additional Insureds. This policy shall be maintained from the commencement of the Work until Substantial Performance of the Contract has been attained, as set out in the Certificate of Substantial Performance.

The form of Contractor's Pollution Liability may be an occurrence or claims-made form. Should the policy be on a claims-made form, the Contractor must provide a two-year extended reporting period.

The Owner will accept in place of the above-mentioned insurance coverage, a combination of primary liability limits and umbrella insurance or excess liability limits which meet the CGL, General Aggregate and Automobile Liability limits noted above.

APPENDIX E
BID BOND

BID BOND

BOND NO. _____ 10% of the Bid Price

KNOW THEREFORE ALL MEN BY THESE PRESENTS that _____ (hereinafter called the "Principal") and _____ a corporation created and existing under the laws of _____ and duly authorized to transact the business of Suretyship in _____, (hereinafter called the "Surety") are held and firmly bound unto The Regional Municipality of York Police Service Board (hereinafter called the "Obligee"), in the amount of 10% of the Bid Price, lawful money of Canada, for the payment of which sum, well and truly to be made, the Principal and the Surety bind themselves and their respective heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS the Principal has submitted a written tender or proposal to the Obligee for Contract No. T-24-33 for the construction of a helicopter hangar and related interior and exterior spaces in the Town of East Gwillimbury, Ontario.

NOW THEREFORE, the condition of the foregoing obligation is such that, if the Principal shall have the tender or proposal accepted within the period of irrevocability of the tender, as may be amended by addenda issued by the Obligee, the said Principal will, within the time required, enter into a formal contract with the Obligee in a form satisfactory to the Obligee, (hereinafter called the "Contract"), and give the specified security to secure the performance of the terms and conditions of the Contract, then this obligation shall be void; otherwise the Principal and the Surety will pay unto the Obligee the difference in money between the amount of the bid of the said Principal and the amount for which the Obligee legally contracts with another party to perform the work if the latter amount be in excess of the former.

The Surety shall not be liable for a greater sum than the specified penalty of this Bond. Any suit under this Bond must be instituted before the expiration of six months from the date of this Bond.

IN WITNESS WHEREOF, the Principal and the Surety have hereunto affixed their corporate seals and caused their presents to be signed by their duly authorized officers.

UNDERTAKING TO BOND

UNDERTAKING TO BOND

CONTRACT NO. T-24-33

TO: THE REGIONAL MUNICIPALITY OF YORK POLICE SERVICE BOARD (the "Board")

AND TO: _____ (the "Contractor")

We, the undersigned, hereby undertake and agree to become bound as Surety for the Contractor in:

(a) a Performance Bond in an amount equal to 100% of the Bid Price and conforming to Form 32 - Performance Bond under Section 85.1 of the *Construction Act*; and

(b) a Labour and Material Payment Bond in an amount equal to 50% of the Bid Price and conforming to Form 31 - Labour and Material Payment Bond under Section 85.1 of the *Construction Act*,

if the bid for the construction of a helicopter hangar and related interior and exterior spaces in the Town of East Gwillimbury, Ontario is accepted by the Board.

If the above-mentioned bid is accepted, the undersigned will execute the bonds within 8 business days of notification of acceptance of the bid.

AODA TRAINING FORM

AODA TRAINING CERTIFICATE

TO: THE REGIONAL MUNICIPALITY OF YORK POLICE SERVICE BOARD (the "Board")

RE: Agreement dated_____ between [CONTRACTOR NAME] and the Board (the "Agreement")

Pursuant to Section 7 and Section 80.49 of *Ontario Regulation 191/11, Integrated Accessibility Standards* (the "**Regulations**"), made under the AODA, the Vendor shall ensure that all of its employees, agents, volunteers, or others engaged by the Vendor in the delivery of goods, services and/or facilities under this Contract receive training in connection with the provision of these goods, services and/or facilities to persons with disabilities. Such training shall be provided in accordance with the Regulations and shall include, without limitation, a review of the purposes of the AODA, the requirements of the Regulations and the *Human Rights Code* as it pertains to persons with disabilities.

The Vendor represents and certifies to the Board that:

1. the AODA training provided by the Vendor includes the following:
    a. A review of the purposes of the AODA, the requirements of the Regulations and the *Human Rights Code*;
    b. How to interact and communicate with persons with various types of disability including persons with disabilities who use assistive devices or require the assistance of a guide animal, or a support person.
    c. How to use equipment or devices that are available on the premises that may assist in the provision of goods and services to a person with a disability.
    d. What to do if a person with a particular type of disability is having difficulty accessing the Vendor's goods or services.
2. the Vendor, its employees, agents, volunteers, and other persons engaged by the Vendor in the provision of goods, services and/or facilities under this Contract have received the required AODA training;
3. the required AODA training is delivered on an ongoing basis, including new employees, agents, volunteers and other persons engaged by the Vendor;
4. the Vendor keeps a record of the training provided and the number of individuals who have received AODA training;
5. under this Contract the AODA training is required by the following number of individuals: _____; and
6. the following number of individuals have received AODA training as of the date of this Certificate: _____

The source of the AODA training provided by the Vendor is:

- ☐ York Region Accessible Customer Service Training
- ☐ Integrated Accessibility Standards Training
- ☐ Alternate training program that meets the requirements listed above

THE REGIONAL MUNICIPALITY OF YORK

POLICE SERVICE BOARD

REQUEST FOR TENDER

T-24-33

GENERAL CONTRACTOR FOR THE CONSTRUCTION OF A HELICOPTER HANGAR AND RELATED INTERIOR AND EXTERIOR SPACES IN THE TOWN OF EAST GWILLIMBURY, ONTARIO

CLOSING TIME: ELECTRONIC BID SUBMISSIONS must be received by the Bidding System, prior to: 2:00:00 p.m. (14:00:00 Hours) local time, on Tuesday, October 1, 2024.

Bidders who, due to a disability, require an accommodation in order to participate in the procurement process should contact the Procurement Analyst as specified on the Bidding System.

York Regional Police, Purchasing Unit, 47 Don Hillock Drive, Aurora, ON, L4G 0S7.
yrp.bidsandtenders.ca

Table of Contents

PART 1 INVITATION AND SUBMISSION INSTRUCTIONS

1.1 Invitation to Bidders

This Request for Tenders (the "**RFT**") is an invitation by The Regional Municipality of York Police Service Board (the "**Board**") to prospective bidders to submit bids for the construction of a helicopter hangar and related interior and exterior spaces in the Town of East Gwillimbury, Ontario, as further described in Section A of the RFT Particulars (Appendix A) (the "**Deliverables**").

The following is a list of prequalified bidders that have been approved to submit bids in response to this RFT under Request for Prequalification No. PQ-24-07:

- Area Construction Inc.
- BLT Construction Services
- Buttcon Limited
- Corebuild Construction Ltd.
- DNN Contracting Inc.
- Ledcor Construction Limited
- M.J. Dixon Construction Limited
- Matheson Constructors Limited
- Maystar General Contractors Inc.
- Walsh Canada

Any bids received from bidders not listed above shall be rejected from further consideration.

1.2 Communications with the Board, the Region and YRP

To contact the Board in relation to this RFT, bidders must register for this bid opportunity in the Board's bidding system at https://yrp.bidsandtenders.ca (the "**Bidding System**") and initiate communication electronically using the 'Submit a Question' function. The Board will not accept communications from bidders by any other means except as specifically stated in the RFT.

Bidders and their representatives are not permitted to contact any employees, officers, agents, consultants, elected or appointed officials or other representatives of the Board, the Regional Municipality of York (the "Region") or York Regional Police ("YRP") in connection with this RFT, other than the Board's Procurement Analyst identified in the Bidding System. Bidders should only contact the Procurement Analyst where specifically

instructed to in this RFT. Failure to adhere to this rule may result in the disqualification of the bidder and the rejection of their bid.

1.3 RFT Timetable

Refer to the Bidding System for a list of key dates in this RFT process. The dates may be changed by the Board at any time, in its sole discretion.

1.4 Mandatory Bidders' Meeting

Bidders are required to attend a mandatory Bidders' meeting to be held on the date, time on the Bidding System. The meeting will be held online through Microsoft Teams. No other meeting will be scheduled. It is the responsibility of Bidders to understand all aspects of this RFT prior to submitting their Bid.

Bidders have been contacted through email by YRP's Procurement Analyst. As Bidders' respond back to YRP's Procurement Analyst, they are emailed a meeting invite which includes the Microsoft Teams link for the meeting.

Bidders are encouraged to submit any questions to the Board using the 'Submit a Question' feature on the Bidding System a minimum of 24 hours before the site visit / information meeting.

During the mandatory meeting, YRP's Procurement Analyst will take attendance of all Bidders' that are on the video conference. Bids will be accepted only from Bidders who have been documented as attending the mandatory meeting. Where a Bidder has not attended the mandatory meeting, that Bidder's Bid will be rejected.

Bidders are prohibited from the use of any technology, including without limitation artificial intelligence, to record the content of any site visit / information meeting without prior written authorization from the Procurement Analyst. Failure to adhere to this rule may result in the disqualification of the bidder and the rejection of their bid.

1.5 Electronic Submissions

Bids must be submitted electronically through the Bidding System. Any bids not received through the Bidding System will not be accepted by the Board and will be returned to the bidder unopened.

Bidders must have a bidding system vendor account and be registered as a plan taker for this procurement, which will enable them to download the RFT documents and addenda, receive notifications, and submit their bids electronically through the Bidding System.

1.6 Closing Time

Bids must be submitted, and received by the Board, on or before the bid closing date and time indicated on the Bidding System (the "**Closing Time**"), which will be determined by the Bidding System clock. Bidders are cautioned that the timing of their submission is based on when the bid is received in the Bidding System, not when it is submitted by the bidder.

As transmission can be delayed due to internet traffic, file transfer size, transmission speed or other technical factors, the Board recommends that bidders allow sufficient time to upload their bid and to resolve any issues that may arise.

Bidders will receive a confirmation email from the Bidding System once they have successfully submitted their bid. Bidders should not consider their bid to have been submitted until they have received the confirmation email.

The Board accepts no responsibility if the bidder is unable to submit its bid before the Closing Time, for any reason whatsoever, including computer system failures of either the bidder or the Board's service provider. The bidder agrees that the Board shall have no liability for delays caused by internet/network traffic, degraded operation or failure of any computer system element including, but not limited to, any computer system, power supply, telephone or data connection or system or software or browser of any type whatsoever.

1.7 Amendment of Bid

Bidders may amend their bids prior to the Closing Time.

To amend a bid after it has been submitted, the bidder must withdraw its bid from the Bidding System, make the necessary revisions, and resubmit its bid before the Closing Time.

The bidder is solely responsible for ensuring that the amended bid is received in the Bidding System by the Closing Time.

1.8 Withdrawal of Bid

Bidders may withdraw their bid at any time prior to the Closing Time.

To withdraw a bid prior to the Closing Time, the bidder must withdraw their bid through the Bidding System.

Bidders are not permitted to withdraw bids after the Closing Time.

1.9 Irrevocability Period

Bids shall be irrevocable for a period of sixty (60) days after the Closing Time.

1.10 Contact for Technical Issues

Bidders that encounter technical issues with the Bidding System should contact technical support at bids&tenders™ via email at support@bidsandtenders.ca and copy the Procurement Analyst.

[End of Part 1]

PART 2 EVALUATION AND SELECTION

The Board will conduct the evaluation of bids in the following stages:

2.1 Stage I – Mandatory Submission Requirements

Stage I will consist of a review to determine which bids comply with all of the mandatory submission requirements as set out in Section C of the RFT Particulars (Appendix A).

Other than inserting the information requested on the mandatory submission forms set out in the RFT, a bidder may not make any changes to any of the forms. Any bid containing any such changes, whether on the face of the form or elsewhere in the bid, may be disqualified at the Board's sole discretion.

2.2 Stage II – Evaluation

Stage II will consist of the following sub-stages:

2.2.1 Mandatory Technical Requirements

The Board will review the bids to determine whether the mandatory technical requirements as set out in Section D of the RFT Particulars (Appendix A) have been met. Questions or queries on the part of the Board as to whether a bid has met the mandatory technical requirements will be subject to the verification and clarification process set out in subsection 2.2.2.

Bids that do not meet all of the mandatory technical requirements will be rejected.

2.2.2 Verify, Clarify, and Supplement

The Board may, in its sole discretion, request further information from the bidder or third parties in order to verify, clarify, or supplement the information provided in the bid.

2.3 Stage III – Pricing

Stage III will consist of evaluating the submitted prices for each compliant bid in accordance with the evaluation method set out in Appendix B - Pricing. The evaluation of pricing will be undertaken after the evaluation of mandatory requirements has been completed.

2.4 Stage IV – Selection of Lowest Compliant Bidder

2.4.1 Selection of Lowest Compliant Bidder

Subject to the reserved rights of the Board, the compliant bidder with the lowest price will be selected to enter into a contract with the Board for the provision of the Deliverables. In the event of a tie the selected bidder will be determined in accordance with the Board's Tied Bid Procedure.

2.4.2 Notice of Selection

The Board will notify the selected bidder, in writing, that its bid has been accepted.

The selected bidder shall satisfy all of the pre-conditions of award specified in Section E of the RFT Particulars (Appendix A), within 10 business days of the Board's request. This provision is solely for the benefit of the Board and may be waived by the Board.

2.4.3 Failure to Satisfy Pre-Conditions of Award

If the selected bidder fails to satisfy any of the pre-conditions of award listed in Section E of the RFT Particulars (Appendix A) within 10 business days of the Board's request, the Board may, without incurring any liability, proceed with the selection of another bidder and pursue all other remedies available to the Board.

[End of Part 2]

PART 3 TERMS AND CONDITIONS OF THE RFT PROCESS

3.1 General Information and Instructions

3.1.1 RFT Incorporated into Bid

All provisions of the RFT are deemed to be accepted by the bidder and incorporated into its bid. A bidder who submits conditions, options, variations or contingent statements inconsistent with the terms set out in the RFT, including the terms of the contract attached as Appendix C, either as part of its bid or after receiving notice of selection, may be disqualified. If a bidder is not disqualified despite such changes or qualifications, the provisions of the RFT, including the contract attached as Appendix C, will prevail over any such changes or qualifications in the bid.

3.1.2 Bidders to Follow Instructions

Bidders should structure their bids in accordance with the instructions in the RFT. Where information is requested in the RFT, bids should reference the applicable section numbers of the RFT.

3.1.3 Bids in English

Bids shall be in English only.

3.1.4 No Incorporation by Reference

The entire content of a bid should be submitted in a fixed format, and the content of websites or other external documents referred to in a bid but not attached will not be considered to form part of the bid.

3.1.5 Past Performance

In the selection process, the Board may consider the bidder's past performance or conduct on previous contracts with the Board.

3.1.6 Information an Estimate

Any quantities shown or data contained in the RFT are estimates only, and are for the sole purpose of indicating the general scale and scope of the Deliverables. It is the bidder's responsibility to obtain all information necessary to prepare a bid in response to this RFT.

3.1.7 Errors and Omissions

The Board shall not be held liable for any errors or omissions in the RFT. While the Board has used reasonable efforts to ensure an accurate representation of information in the RFT, the information contained in the RFT is supplied solely as a guideline for bidders. The Board does not guarantee or warrant that the information is accurate, comprehensive or exhaustive. Nothing in the RFT is intended to relieve bidders from forming their own opinions and conclusions with respect to the matters addressed in the RFT.

3.1.8 Bidders to Bear Their Own Costs

Bidders shall bear all costs associated with or incurred in preparing and presenting their bid including, if applicable, costs incurred for interviews or demonstrations.

3.1.9 Bid to be Retained by the Board

The Board will not return the bid or any accompanying documentation submitted by a bidder.

3.1.10 No Guarantee of Volume of Work or Exclusivity of Contract

The Board makes no guarantee of the value or volume of Deliverables that may be required. Any contract entered into as a result of this RFT will not be an exclusive contract for the provision of the described Deliverables. The Board may contract with others for goods and services the same as or similar to the Deliverables or may obtain such goods and services internally.

3.1.11 Procurement Bylaws

Bids will be called, received, evaluated, accepted and processed in accordance with the Board's Purchasing Bylaw (the "Bylaw"). By submitting a bid, the bidder agrees to be bound by the terms and conditions of the Bylaw and any amendments from time to time, as fully as if they were incorporated herein. To view a copy of the Board's Purchasing Bylaw: https://www.yrp.ca/en/services/resources/Purchasing_Bylaw_10-17_-_Signed.pdf.

3.1.12 Suspended Suppliers

The Board may not open bids received from bidders that are suspended pursuant to the Board's supplier suspension protocol.

3.2 Blackout Period

Bidders shall not initiate communication with any Board, Region or YRP officials, consultants or employees with respect to this RFT from the Closing Time up to, and including, the date that the contract has been awarded (the "**Blackout Period**") or the RFT has been cancelled. Any communication initiated by a bidder during the Blackout Period to any Board, Region or YRP official, consultant or employee other than the Procurement Analyst may be grounds for disqualifying the offending bidder from consideration for the award of this or any future Board procurements.

3.3 Questions and Clarifications

If a bidder finds discrepancies or omissions in the RFT, or is in doubt as to its meaning, the bidder shall direct its questions, or seek additional information, in writing using the 'Submit a Question' function on the Bidding System on or before the question deadline indicated on the Bidding System (the "**Question Deadline**"). It is the responsibility of the bidder to seek clarification on any matter it considers to be unclear. The Board is not responsible for any misunderstanding on the part of the bidder concerning this RFT or its process.

The Board shall make reasonable efforts to provide bidders with written responses to questions that are submitted during the RFT process, subject to the provisions of this section.

Questions and answers will be distributed in the form of an addendum. The Board may, in its sole discretion:

- edit question(s) for clarity;
- exclude questions that are either unclear, irrelevant or inappropriate;
- answer similar questions from various bidders only once; and
- not answer questions received after the Question Deadline.

3.4 All New Information by Way of Addenda

All amendments, new information, and clarifications to the RFT will be posted to the Bidding System in the form of an addendum.

No employee or agent of the Board is authorized to amend or waive the requirements of this RFT in any way unless the amendment or waiver is issued in an addendum. Under no circumstances shall bidders rely upon any information or instructions from the Board, the Region or YRP, their employees, or their agents, unless the information or instructions are provided in writing in the form of an addendum.

The Board will notify bidders of the issuance of addenda via email. The onus remains with bidders to ensure that they have downloaded all addenda prior to submitting their bid. The Board will not be liable for misdirected notices of addenda resulting from a bidder's failure to update its contact information in the Bidding System or check for addenda prior to submitting its bid, or for any other reason.

Bidders shall acknowledge receipt of all addenda in the Bidding System prior to submitting their bid. Bids that do not contain evidence of receipt of all addenda will be deemed to be "incomplete" and will not be accepted in the Bidding System.

In the event that an addendum is issued after a bidder has submitted its bid, the Bidding System will change the status of their submission to "incomplete" and the bidder will be required to acknowledge the addendum and resubmit its bid prior to the Closing Time. The Board recommends that after submitting its bid, the bidder regularly checks for addenda up until the Closing Time.

3.5 Notification and Debriefing

3.5.1 Notification to Other Bidders

Once the selected bidder has satisfied all of the pre-conditions of award listed in Section E of the RFT Particulars (Appendix A) the other bidders will be notified by public posting of the outcome of the procurement process on the Bidding System.

3.5.2 Procurement Debriefing

Bidders may request a debriefing by contacting the Procurement Analyst.

3.5.3 Procurement Dispute Process

If a bidder wishes to challenge the procurement process, it should provide written notice to the Procurement Analyst.

3.6 Conflict of Interest and Prohibited Conduct

3.6.1 Conflict of Interest

For the purposes of this RFT, the term "**Conflict of Interest**" includes, but is not limited to, any situation or circumstance where:

(a) in relation to the procurement process, the bidder has an unfair advantage or engages in conduct, directly or indirectly, that may give it an unfair advantage, including but not limited to:

    (i) having, or having access to, confidential information of the Board or YRP that is not available to other bidders;

(ii) having been involved in the development of the RFT, including having provided advice or assistance in the development of the RFT;

(iii) receiving advice or assistance in the preparation of its bid from any individual or entity that was involved in the development of the RFT;

(iv) communicating with any person with a view to influencing preferred treatment in the procurement process (including but not limited to the lobbying of decision makers involved in the procurement process); or

(v) engaging in conduct that compromises, or could be seen to compromise, the integrity of the open and competitive procurement process or render that process non-competitive or unfair; or

(b) in relation to the performance of its contractual obligations under a contract for the Deliverables, the bidder's other commitments, relationships, or financial interests could, or could be seen to:

(i) exercise an improper influence over the objective, unbiased, and impartial exercise of its independent judgement; or

(ii) compromise, impair or be incompatible with the effective performance of its contractual obligations.

Bidders shall declare in their bid all Conflicts of Interest or any situation that may reasonably be perceived as a Conflict of Interest.

3.6.2 Disqualification for Conflict of Interest

The Board may disqualify a bidder for:

(a) any conduct, situation or circumstances determined by the Board, in its sole discretion, to constitute a Conflict of Interest or perceived Conflict of Interest; or

(b) failure to disclose a Conflict of Interest in its bid.

3.6.3 Bidders Not to Communicate with Media

Bidders must not at any time directly or indirectly communicate with the media in relation to this RFT or any contract entered into pursuant to this RFT without first obtaining the written permission of the Procurement Analyst.

3.6.4 No Lobbying

Bidders, including their subcontractors, consultants, agents, officials and employees, shall not engage in any form of political or other lobbying whatsoever with respect to influencing the outcome of this procurement process. This anti-lobbying clause extends to all members of the Board, YRP, Regional Council, and municipal councillors within the

Region, their respective staff members and their appointees, and members of the Board's consulting and RFT evaluation teams.

This anti-lobbying clause extends from the release date of this RFT until the date and time when a contract for the Deliverables has been awarded or alternatively, when the procurement process has been terminated.

This section shall not be construed as prohibiting any activity which is duly authorized as part of the procurement process, including meetings, interviews, tours of facilities or presentations, which activities may include the participation of the Board, YRP, Council members from the Region or its local area municipalities.

3.6.5 Illegal or Unethical Conduct

Bidders must not engage in any illegal business practices including, but not limited to, activities such as bid-rigging, price-fixing, bribery, fraud, coercion, or collusion. Bidders must not engage in any unethical conduct, including lobbying (as described above) or other inappropriate communications; offering gifts to any employees, officers, agents, elected or appointed officials, or other representatives of the Board, the Region or YRP; deceitfulness; submitting bids containing misrepresentations or other misleading or inaccurate information; or any other conduct that compromises or may be seen to compromise the competitive procurement process.

3.6.6 Past Performance or Past Conduct

The Board may prohibit a bidder from participating in this procurement process based on past performance or based on inappropriate conduct in a prior procurement process including, but not limited to, the following:

(a) illegal or unethical conduct as described above;

(b) its refusal to honour its submitted pricing or other commitments; or

(c) any conduct, situation or circumstance determined by the Board, in its sole discretion, to have constituted an undisclosed Conflict of Interest.

3.6.7 Misleading Information

Any bids which contain information which the Board deems, in its sole discretion, to be inaccurate or misleading, shall be rejected, whether or not the bidder intended to include the inaccurate or misleading information. This stipulation shall survive the termination of the procurement process and, should the Board determine, at a later date, that any information contained in a bid which is or was inaccurate or misleading, the Board reserves the right to disqualify any bidder from the process at any time, including at any time prior to award of the contract and in the event that a contract was awarded, may terminate the contract for cause. Such bidder shall not have any claims

against the Board for any disqualifications or terminations of contracts made pursuant to this provision.

3.6.8 Disqualification for Prohibited Conduct

The Board may disqualify a bidder, rescind a notice of selection, or terminate a contract subsequently entered into if the Board determines that the bidder has engaged in any conduct prohibited by this RFT.

3.7 Confidential Information

3.7.1 Confidential Information of the Board and YRP

All information provided by, or obtained from, the Board or YRP in any form in connection with this RFT, either before or after the issuance of this RFT:

(a) is the sole property of the Board or YRP or both and must be treated as confidential;

(b) must not be used for any purpose other than replying to this RFT and the performance of any subsequent contract for the Deliverables;

(c) must not be disclosed without prior written authorization from the Procurement Analyst; and

(d) must be returned by the bidder to the Board immediately upon the request of the Board.

3.7.2 Confidential Information of Bidder

Bids shall be submitted by the bidder on the understanding that the bid will become the property of the Board and may be made public by the Board with notice to the bidder involved.

A bidder should identify any information in its bid or any accompanying documentation which has been supplied in confidence for which confidentiality is to be maintained by the Board. The confidentiality of such information will be maintained by the Board, except as otherwise required by law or by order of a court or tribunal.

Bidders are advised that their bids will, as necessary, be disclosed, on a confidential basis, to advisers retained by the Board to advise or assist with the RFT process, including the evaluation of bids.

Bidders shall submit any questions about the collection and use of personal information pursuant to this RFT to the Procurement Analyst.

3.8 Reserved Rights and Limitation of Liability

3.8.1 The Board's Rights Under this RFT

The Board may, at any time during the procurement process:

(a) elect not to proceed with the RFT;

(b) alter the timetable, the procurement process or any other aspect of this RFT;

(c) elect not to proceed with the Deliverables in their entirety;

(d) decline to evaluate any bid that, in the Board's opinion, is incomplete, obscure or does not contain sufficient information to carry out a reasonable evaluation;

(e) retain for consideration any bid which fails to comply with this RFT in any manner, either in respect of the content of the bid submitted or the manner of its submission, and may select as the selected bidder a bidder submitting such a non-compliant bid;

(f) reject a bid that:

  (i) fails to comply, in a material way, with the technical requirements of the RFT, as identified in the RFT Particulars (Appendix A);

  (ii) is incomplete, conditional, or restricted or altered in a way that is not acceptable to the Board; or

  (iii) includes pricing which the Board deems, in its sole discretion, to be unbalanced;

(g) reject any or all of the bids, including without limitation, the bid with the lowest cost;

(h) accept any bid that the Board, in its sole discretion, deems appropriate; and/or

(i) if only one bid is received, elect to accept or reject it.

For the purposes of clause (f)(iii) of this subsection 3.8.1, "unbalanced" means the price submitted, whether it be the total price or a price for an item, part, section or division, does not reflect reasonable, anticipated costs for the required labour, equipment and materials, plus a reasonable proportionate share of the bidder's anticipated overhead and profit, or the bid creates a reasonable doubt that its acceptance will result in the lowest actual cost to the Board.

If the Board does not receive any bid satisfactory to the Board, in its sole discretion, the Board reserves the right to proceed in any manner it deems appropriate, including negotiating with any one or more persons whatsoever, including one or more of the bidders.

3.8.2 Limitation of Liability

By submitting a bid, the bidder:

(a) agrees that neither the Board nor any of its employees, officers, agents, elected or appointed officials, advisors, or representatives will be liable, under any circumstances, for any claim arising out of this RFT process including, but not limited to, the bidder's costs incurred in preparing its bid, loss of profits, loss of opportunity, or for any other claim; and

(b) waives any claim for compensation of any kind whatsoever, including claims for the bidder's costs incurred in preparing its bid, loss of profit or loss of opportunity by reason of the Board's decision to not accept a bid, to enter into an agreement with any other bidder, or to cancel this RFT process, and the bidder shall be deemed to have agreed to waive such right or claim.

3.9 Trade Agreements

Procurements falling within the scope of the Canada-European Union Comprehensive Economic and Trade Agreement, the Canada-UK Trade Continuity Agreement, the Canadian Free Trade Agreement or the Trade and Cooperation Agreement between Quebec and Ontario are subject to such agreements.

3.10 Governing Law and Interpretation

The terms and conditions of the RFT process:

(a) are intended to be interpreted broadly and independently (with no particular provision intended to limit the scope of any other provision);

(b) are non-exhaustive and shall not be construed as intending to limit the pre-existing rights of the Board; and

(c) are to be governed by and construed in accordance with the laws of the province of Ontario and the federal laws of Canada applicable therein.

Principal

Updated Geotechnical Investigation
Proposed Helicopter Hangar
350 Garfield Wright Boulevard
East Gwillimbury, Ontario

1.0 INTRODUCTION

It is our understanding that the proposed development at the above site will consist of constructing a helicopter hangar and an attached one storey building without a basement. An above grade helicopter pad, an apron pad and a parking lot will also be constructed.

In light of this, Patriot Engineering Ltd., has carried out a geotechnical investigation to determine the subsurface soil and groundwater conditions in order to provide geotechnical recommendations for type of foundations, safe soil bearing pressures, earthquake design parameters, earth pressure coefficients, excavation and backfill procedures, slab-on-grade floor construction, plus pavement thicknesses. Authorization to proceed with this overall investigation was provided by Mr. Lind Nyman, from Parkin Architects Limited, on behalf of the Owner.

The site is located approximately 400m north and 840m west from the intersection of Warden Avenue and Davis Drive, in East Gwillimbury, Ontario. It is vacant and unoccupied. The terrain is relatively flat. The site is generally covered with vegetation consisting of grass, shrubs and a few trees.

2.0 BACKGROUND

Previously, we had carried out a goetechnical investigation at the above site for a helicopter hangar and an attached one storey building without a basement that included an above grade helicopter pad, an apron pad and a parking lot. Our geotechnical findings and recommendation were presented in our Report No. 44148, dated August 30, 2024.

On August 31, 2024, we were informed by our client Mr. Lind Nyman from Parkin Architects Limited that the proposed building location and footprint, plus the helicopter pad, the apron pad and a parking lot the parking layout have changed to a different configuration. However, the proposed building will still consist of having one storey and without a basement. For reference purposes, the footprints of the original development along with that of the new development are provided on Figure A1, in Appendix A.

In general, given the above mentioned alterations, to some extent, this will now affect the borehole layout and alter the intended purpose of some of the boreholes, as it relates to the transition from the original development to the new development. For example, some boreholes that were intended for the previous building will now fall at or very close the proposed apron pad (BH3 and BH6). Also, some boreholes will now fall outside of the footprint of their intended purposes (BH1, BH11 and BH12).

A considerable portion of the new building footprint is now situated at areas that has not been explored for the building recommendations. Therefore, it is our opinion, that the new building footprint would require proper borehole representation that is conducive to its layout. It was recommended that three (3) additional boreholes would be required to provide a suitable transition from the original building to the new building. In light of this, a supplementary geotechnical investigation was carried out on September 23, 2024, consisting of these three (3) boreholes (BH19, BH20 and BH21) to 8.1m each. In this regard, we have then provided an *updated final report* that combines the findings from our original investigation plus the findings from the supplementary investigation and have designated it as Report No. 44148A, dated October 17, 2024.

3.0 FIELDWORK

The fieldwork for this overall investigation took place in two phases, thus resulting in a combined total of twenty-one (21) boreholes. The first or initial phase was carried out on July 25, 26 and 29, 2024, and consisted of drilling a total of eighteen (18) boreholes (BH1 to BH18). The second phase was carried out on September 23, 2024, and consisted of drilling a total of three (3) boreholes (BH19, BH20 and BH21). All boreholes were drilled using solid stem augers. A summary of the boreholes, their designations and their depths for this investigation is shown below:

(a) <u>For the Helicopter Hangar and Attached One Storey Building</u>
Six (6) boreholes (BH3, BH4, BH5, BH19, BH20 and BH21) to a depth of 8.1m each

Although Borehole BH3 fell within the footprint of the apron pad, in our opinion, it is situated sufficiently close to the footprint of the building and may also be applicable to both the building and the apron pad.

(b) <u>For the Helicopter Pad and Apron Pad</u>
Seven (7) boreholes (BH2, BH3, BH6, BH7, BH8, BH9 and BH10) to depths ranging from 5.0m to 8.1m

As mentioned above, Borehole BH3 was used for both the apron pad and for the building.

Borehole BH8 in our opinion, is situated sufficiently close to the footprint of the apron pad and is considered suitable for use for the apron pad.

(c) For the Parking Lot and Driveways
Six (6) boreholes (BH13 to BH18) to a depth of 2.0m each

Boreholes BH13, BH15 and BH16 in our opinion, are situated sufficiently close to the footprint of the parking lot and driveway areas and are considered suitable for use for the parking lot and driveway areas.

Boreholes BH1, BH11 and BH12 fell a fair distance away from the footprint of their intended purposes. Although they were not used for the above mentioned specific footprints, these boreholes generally assisted in establishing consistency and uniformity of the subsurface conditions at the overall subject site, as well as providing increased assurance contributing towards developing our geotechnical recommendations.

All boreholes were backfilled in accordance with Regulation 903.

The approximate borehole locations along with their surface elevations at the time of our first face and second phase of our drilling activities are shown on the Partial Site Plan, Figure 1.

The boreholes were drilled by using continuous flight solid stem augurs by a specialist drilling contractor under the supervision of Patriot Engineering Ltd. field engineering staff. Samples were obtained at regular depth intervals using a 50mm diameter split spoon sampler that was driven into the soil with a 63.5 kg drop hammer falling 760mm, in accordance with Standard Penetration Test (SPT) procedures (ASTM D1586). During the fieldwork, our staff member also inspected the samples and logged them. The samples were then brought to our laboratory for detailed inspections and laboratory testing. Samples were generally tested for moisture contents and selected samples were tested for gradation analysis / hydrometers.

Groundwater level readings were obtained during our drilling activities. They were obtained upon the completion of drilling of each individual borehole.

Surveying of the ground surface elevations at the borehole locations were determined by our field engineering personnel and referenced at the following datum:

Top of manhole on Garfield Wright Boulevard, near the southeast corner of the property. The location of this manhole is also shown on Figure 1.

The elevation at this point is understood to be at Elev. 272.32m.

The scope of work for the geotechnical investigation for this project is as it is presented in this report, which is being provided on the assumption that the applicable codes and standards will be met. If there are any changes in the design features relevant to the geotechnical analysis, or if there are any apparent deviations of the report from relevant codes and standards, our office should be contacted to review the design.

4.0 SUBSURFACE CONDITIONS

The detailed subsurface stratigraphy encountered in the boreholes is presented on the Borehole Logs, Drawings 2 to 22.

In general, all boreholes were drilled from above grass covered regions at the site and initially advanced through a topsoil layer that ranged in thickness from approximately 50mm to 75mm.

Below the topsoil layer, earth fill material was encountered in all boreholes and consisted of brown, slightly moist to saturated, silt. This silt fill layer also contained traces to some sand, some clay, plus traces of gravel, topsoil, rootlets, wood pieces, brick fragments and plastic pieces. The "N" values (blows/foot) that were recorded within this fill material ranged from 6 to 55, revealing relative densities that were loose to very dense. The moisture contents varied from 4% to 21%. Some degree of dilation was noted in a few samples that were extracted from this layer. Figures 23 and 24 show the grain size distribution test results that were performed on two samples extracted from this silt fill layer. Local variations of the composition of the material can occur at the sampling locations. It is our understanding that the location of the proposed development was part of a large construction site in the past where the subgrade was raised. Our boreholes indicate that this material was used to raise the subgrade.

The depth of the fill layer inside the boreholes which were drilled for the proposed building ranged from approximately 1.4m to 4.1m below existing grade. The depth of the fill layer inside the boreholes which were drilled for the helicopter pad and adjacent apron slab varied from 1.4m to 3.4m below existing grade. Similarly, the depth of the fill layer inside the boreholes which were drilled for the parking lot / driveway areas varied from approximately 0.7m to 1.0m below existing grade.

Below the earth fill material, all boreholes next encountered native soil that was composed of brown and/or grey, slightly moist to saturated, silt. This material also contained traces to some sand, traces to some clay, plus traces of gravel and cobbles. The "N" values that were recorded within this layer ranged from 10 to well over 50, demonstrating relative densities that were compact to very dense. The moisture contents varied from 5% to 27%. Dilation was noted in several samples that were obtained from this layer. The results from our grain size distribution tests performed on three samples obtained from this native, silt layer are shown on Figures 25, 26 and 27. All boreholes with the exception of Boreholes BH1, BH4, BH19, BH20 and BH21 were terminated within this silt layer.

In Boreholes BH1, BH4, BH19, BH20 and BH21, beneath the silt layer, the soil that was encountered next consisted of grey, moist, sandy silt. Traces to some clay, plus traces of gravel were also present within this material. The "N" values that were obtained from this layer were well over 50, displaying relative densities that were very dense. The moisture contents varied from 8% to 12%.These boreholes were terminated in this sandy silt material.

Groundwater level readings were obtained upon the completion of drilling from each borehole. These short term groundwater levels that were recorded in each borehole are indicated below on Table 1.

All groundwater level readings are also shown on the individual borehole logs.

Some seasonal fluctuations and higher water levels should be anticipated.

The soil and groundwater conditions presented in this report have been deducted from soil sampling that was noncontinuous and therefore, should not be taken to represent exact planes of geological change. Furthermore, the geotechnical recommendations and comments provided in this report have been based on boreholes that were widely spaced. Therefore, the soil and groundwater conditions between the boreholes could vary significantly. The interpretation between boreholes and the recommendations in this report must therefore be checked through field inspections, provided by our office during the construction stages, to validate the information for use.

Table 1
Measured Short Term Groundwater Level Readings Obtained Upon Completion of Drilling of Each Borehole

Borehole No.	Depth of Borehole (m)	Borehole Surface Elevation (m)	Approximate Depth of Groundwater Level Below Existing Ground (m)	Approximate Groundwater Elevation (m)
BH1	8.1	273.5	5.0	268.5
BH2	8.1	273.5	5.3	268.2
BH3	8.1	273.4	5.3	268.1
BH4	8.1	273.6	4.3	269.3
BH5	8.1	273.8	5.3	268.5
BH6	8.1	273.8	4.7	269.1
BH7	5	273.9	DRY	-
BH8	5	273.9	DRY	-
BH9	5	273.7	DRY	-
BH10	5	273.8	DRY	-
BH11	2	273.7	DRY	-
BH12	2	273.5	DRY	-
BH13	2	273.9	DRY	-
BH14	2	274	DRY	-
BH15	2	272.9	DRY	-
BH16	2	273.2	DRY	-
BH17	2	273.7	DRY	-
BH18	2	273.3	DRY	-
BH19	8.1	273.8	5.0	268.8
BH20	8.1	274.2	5.4	268.8
BH21	8.1	273.9	5.4	268.5

5.0 GEOTECHNICAL RECOMMENDATIONS

The comments provided in this report are intended only for the guidance of design engineers. The amount of boreholes required to determine the localized underground conditions between boreholes that would affect construction costs, sequencing, equipment, scheduling construction techniques, and the like, would be much greater than that carried out for design purposes. Contractors and/or subcontractors bidding on or undertaking the work should, in this light, decide on their own interpretations of the factual borehole results, so that they may draw their own conclusions as to how the subsurface conditions may affect them and their scope of work.

5.1 Foundations: Conventional Spread Footings

It is our understanding that the elevation of the top surface of the ground floor slab has been established at Elev. 273.8m. The anticipated footings are expected to be founded approximately 1.5m below the ground floor slab, corresponding approximately to Elev. 272.3m.

As previously mentioned, we had been informed by Parkin Architects Limited that the location of the proposed development was part of a large construction site in the past where material was used to backfill the site and raise the subgrade. At the footprint of the building, the depth that the fill material that was used ranged from approximately 1.4m to 4.1m below existing grade. We have also been provided with documentation that is available that indicates that compaction testing was carried out on the material that was used to raise the subgrade and the results showed that specified compaction was achieved.

Our review of the soil samples show that the fill material appeared to be uniform in structure. The recorded "N" values (blow/foot) that were obtained within the fill layer, especially at or near the proposed footing founding elevation, demonstrated that the existing fill layer had undergone through compaction procedures and is generally yielding densities that are in the compact to very dense state. The available records indicate that the fill material was installed approximately 9 years ago. It is expected that it has self consolidated during the course of this time duration, and therefore, it should not induce above normal settlement. Therefore, it is our opinion that the existing fill layer is considered suitable for sustaining conventional spread footings.

Based on the subsurface information recorded at the borehole locations, conventional spread footings may be used for the proposed building and shall be founded below all topsoil, wet, deleterious materials and loosened soil, on the compact to very dense, silt fill material as indicated in Boreholes BH3, BH4, BH19, BH20 and BH21, and on the native, undisturbed, compact to very dense, silt as indicated in Borehole BH5. The following soil bearing pressures and specified founding depths as shown below on Table 2 are recommended:

Table 2
Soil Bearing Pressures for Spread Footings

Borehole No.	Serviceability Limit State (SLS) (kPa)	Factored Bearing Capacity at Ultimate Limit State (ULS) (kPa)	Approximate Founding Depth Below Existing Ground (m)	Approximate Founding Elevation (m)
BH3	75	115	Below 0.8	Below 272.6
BH4	75	115	Below 0.8	Below 272.8
BH5	75	115	Below 0.8	Below 273.0
BH19	75	115	Below 0.8	Below 273.0
BH20	75	115	Below 0.8	Below 273.4
BH21	75	115	Below 0.8	Below 273.1

Foundations designed using the soil pressures pertaining to the Serviceability Limit State (SLS) condition shown above, should not exceed the total and differential settlements of 25mm (1 inch) and 20mm (3/4 inch), respectively, provided that the foundation bases are not disturbed by excavation, surface water inflow, or freezing and thawing action.

Nominal reinforcement will be required in footings and foundation walls placed on the fill material. This is a precautionary measure to ensure that soft subgrade areas, if any, are adequately bridged with the reinforcement of foundations.

In general, fills are more susceptible to the effects of weather than are natural soils. Therefore, they must be protected from excessive wetting, drying and erosion.

Foundations exposed to freezing ground conditions must be protected against frost action with a minimum of 1.2m (4 ft.) of soil cover or equivalent.

Any footings constructed at different founding levels must be stepped along a line of 7 vertical to 10 drawn from the bottom of the lower footing.

All foundation bases should be inspected by a geotechnical engineer from our office prior to placing concrete to verify the bearing pressures, plus the consistency of the founding conditions that is suggested in this report.

It is recommended that the foundation drawings be reviewed by our office for general conformance with our geotechnical recommendations.

Higher bearing capacities are also available at deeper zones of our boreholes on native soils, if required. See Section 4.2 below.

5.2 Alternate Foundation Method Using Helical Pier Foundations

If higher bearing capacities are required, then an alternate foundation method for the soil conditions encountered at the site is deep foundations consisting of helical piers in combination with grade beams to support the building loads. The helical piers should be supplied by Chance, or equivalent.

The installation of the helical pier foundations will transfer the building loads beyond the fill layers plus beyond the relatively weak native soils and into much deeper zones towards the bottom of our boreholes, where the soil conditions appear to be more favourable for bearing purposes.

Helical piers may be founded below all topsoil, fill, soft, loosened and deleterious soils into the native, undisturbed, very dense, silt, and/or native undisturbed, very dense, sandy silt.

The design load sustained by the individual helical piers should be provided by the Structural Engineer.

Besides the soil conditions encountered, the capacity of a helical pier also depends on the type and size selected, plus the number of helices. Therefore, the specialist contractor/supplier will finalize the selection of the pier size which will achieve this design capacity that is specified by the structural engineer. The general specifications for the installation and testing will also be provided by the specialist contractor/supplier.

A compression load test is recommended to be carried out on a minimum of one helical pier, to verify its capacity.

All helical pier installation work should be inspected on a full-time basis by a geotechnical engineer from our office to ensure that they have been installed into the specified native layers at adequate depths and have achieved the designated torque requirements.

Excavations for any new grade beams and foundations must be stepped along a line of 7 vertical to 10 horizontal where founding grades are variable and must not interfere with adjacent foundation systems, underground services and the like.

Foundations / grade beams exposed to freezing ground conditions must be protected against frost action with a minimum of 1.2m (4 ft.) of soil cover or equivalent.

Provisions should be made by the contractor when advancing through the upper fill zones which could have obstacles, oversized concrete chunks, construction rubble, caving and the like, plus in the native soils as cobbles and boulders may be present.

It is recommended that the foundation drawings be reviewed by our office for general conformance with our geotechnical recommendations.

5.3 Earthquake Design Parameters

In accordance to the Ontario Building Code, the site's classification for Seismic Response would be Class C.

5.4 Earth Pressure Coefficients

For this site, the following parameters may be used to assess the earth pressure:

Soil	γ (kN/m^3)	ϕ degrees	K_a	K_o	K_p
Onsite Compacted Fill or Compacted Granular Fill - OPSS Granular B	21	32	0.31	0.47	3.25
Native Subsoil	21.5	33	0.3	0.46	3.39

Where γ = bulk unit weight of soil, kN/m^3

ϕ = internal angle of friction, degrees

K_a = coefficient of active earth pressure

K_o = coefficient of earth pressure at rest

K_p = coefficient of passive earth pressure

Also,

μ = Coefficient of Static Friction Between footings and Underlying Soil use 0.4

5.5 Excavation and Backfill

In general, based on the groundwater levels presented on Table 1, no significant groundwater issues are expected with excavations on this site. Any flow from surface water and any minor seepage from perched water levels should be controlled with properly filtered sumps with pumps. However, given the fluctuation of the groundwater, if excavations are to be carried out to depths close to or below the groundwater level, then high capacity pumps should then be installed inside the sumps to sufficiently draw down the groundwater. Depending on the season of construction, groundwater levels can increase significantly. If so, then a well point dewatering system may be required to be installed to control and effectively reduce the groundwater levels. It is recommended that a specialist dewatering contractor be contacted to provide their recommendations during the construction stages, if excavations encounter groundwater.

Provisions should be made by the contractor during the excavations for handling possible oversized concrete chunks, construction rubble and obstructions in the fill materials, plus cobbles and boulders in the underlying native soils.

All temporary shallow excavations may be cut at 1 vertical to 1 horizontal. If some sloughing occurs at the upper fill zones, or if wet conditions are encountered, then shallower slopes may be required in localized areas. All excavations must be made to conform to regulations set out in the Occupational Health and Safety Act. Using the classification system described in the Occupational Health and Safety Act, the fill soils on site can be classified as Type 3. The native soils can also be considered as Type 3. Any wet and saturated soils, or soils located below the groundwater level are classified as Type 4.

Excavations shall not be cut below an imaginary line drawn downward from existing foundations and/or underground services at 7 vertical to 10 horizontal. If this cannot be achieved then adequate temporary shoring and/or underpinning will be required.

The on site materials are not free draining and highly susceptible to frost. They should not be used for exterior foundation backfilling as this could potentially result to damage of the foundation walls from frost adhesion. Therefore, the exterior foundations should be backfilled with approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 95% Standard Proctor maximum dry density. The upper 1.2m (4 ft.) zone of backfill material should be compacted to a minimum of 98% Standard Proctor maximum dry density.

The underslab interior excavations should be backfilled with approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density.

Backfilling of service trenches under proposed pavement areas may be carried out using approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 95% Standard Proctor maximum dry density. The upper 1.2m (4 ft.) zone of backfill material should be compacted to a minimum of 98% Standard Proctor maximum dry density.

The silt materials onsite have the capacity to retain water, they are not free draining and may be too wet to be used for backfilling. In some cases, drying the material, if space restriction permit this, will assist in salvaging some portion of this material for reuse. In other cases, they may be found to be too wet and rendered unusable. In this regard, the suitability for reuse of the onsite material as backfill should be inspected and evaluated during the initial stages of construction. Materials that have been approved for reuse should be maintained within 2% of their optimum moisture content. Tarps may be required to cover and protect the approved material.

5.6 Slab-On-Grade Floor

From our boreholes that were drilled for the building, it is noted that fill material was present consisting of silt. The fill material extends to depths varying from approximately 1.4m to 4.1m below existing grade. This indicates that the exposed subgrade surface at the envelope of the proposed building is expected to be constructed within this fill layer. The fill material appeared to be uniform in structure. It is our opinion that the fill layer is considered suitable to remain as a subgrade. Therefore, the concrete floor may be constructed by conventional slab-on-grade techniques on an adequately prepared subgrade consisting of compact to very dense, silt fill, provided that the following items are complied with:

1. The exposed subgrade must be stripped of any topsoil, vegetation, loose, wet and deleterious materials.

2. Any weak spots encountered on the exposed subgrade must be excavated and removed.

3. The amount of organics appeared minor in the samples, however, during construction, if it becomes greater then localized areas of the fill containing excessive organics must be excavated and removed.

4. The exposed surface of the subgrade within the footprint of the proposed building must be heavily proofrolled under geotechnical supervision and compacted to a minimum of 98% Standard Proctor maximum dry density. It must be inspected and approved by a geotechnical engineer.

5. The grade must then be raised to the design subgrade level to fill any such voids as indicated on Items 2 and 3 above, and/or to fill any areas with relatively lower surface elevations with approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density.

A basecourse / moisture barrier consisting of at least 200mm (8 inch) thick of 20mm (3/4 inch) of OPSS Granular A crusher run limestone must be provided under the proposed floor slab. It shall be compacted to at least 98% Standard Proctor maximum dry density.

The proposed concrete floor may then be constructed by conventional slab-on-grade techniques directly above the Granular A crusher run limestone basecourse.

A Modulus of Subgrade Reaction (k_S) of 30,000 kN/m^3 is suggested for designing the proposed floor slab.

The general requirements for the perimeter drainage, underfloor fill and backfill are provided on Figure 28.

6.0 GEOTECHNICAL RECOMMENDATIONS FOR PROPOSED HELICOPTER CONCRETE PAD AND APRON CONCRETE PAD

The on site silt materials retain water, they are not free draining and are highly susceptible to frost and heave action. They have the potential to cause the development of cracks on the overlying concrete pad surfaces from the oscillations and floating movement during the freezing and thawing cycles. Taking this into consideration, for the soil and groundwater conditions encountered at their respective locations, two options may be used to construct the above concrete pads. The first option involves constructing the pads with excavations extending to 1.2m below existing grade which is discussed in Section 5.1. While the second option involves constructing the pads on a basecourse layer in combination with insulation and this is discussed in Section 5.2. The selection between these two pad options will depend on factors, such as, economics, duration of activity, availability and scheduling.

6.1 Concrete Pads: Option 1 - Concrete Pads Constructed with Excavations Extending to 1.2m Below Existing Grade

Given the frost susceptible soil conditions that are present at the site, it is recommended that the following geotechnical recommendations be complied with for developing the proposed concrete pads for both the helicopter pad and apron pad:

1. It is recommended that excavations for the floating concrete pads to extend to a depth of 1.2m (4 ft.) below their proposed final grade. It is expected that the exposed subgrade to consist of compact to very dense, silt fill material. The exposed subgrade must be inspected and approved by a geotechnical engineer. Any weak spots, deleterious materials and organic materials detected at the exposed surface must be sub-excavated and removed. The exposed subgrade surface must be proofrolled and compacted to a minimum of 98% Standard Proctor maximum dry density.

2. It is recommended that excavations extend laterally outward for a minimum of 1.2m (4 ft.) from the edge of the pads at sides.

3. It is recommended that weeping tiles to be placed in parallel rows of 6m centres one way, above the excavated subgrade (at 1.2m depth) leading to a positive outlet, such as manholes or catch basins. The tiles should consist of a 100mm diameter PVC perforated weeping tile surrounded with a layer of 150mm thick of 20mm Clear Stone at the top and sides of the pipe and 50mm of stone at the base. The stone should be then be wrapped with an approved geotextile cloth, type Terrafix 270R, or equivalent. The subgrade should be shaped and crowned to allow drainage into these pipes.

4. The subgrade shall then be raised to the desired level using approved OPSS Granular B (Sand and Gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 100% Standard Proctor maximum dry density.

5. A provision shall be made to allow for a basecourse / moisture barrier, consisting of at least 300mm (12 inches) of 20mm (3/4 inch) approved OPSS Granular A crusher run limestone to be placed under the concrete slabs. The Granular A material must be compacted to at least 100% Standard Proctor maximum dry density. The proposed concrete slabs may then be constructed by conventional slab-on-grade techniques directly above the compacted Granular A basecourse.

A Modulus of Subgrade Reaction (k_s) of 30,000 kN/m^3 is suggested for designing the proposed concrete pads.

It is recommended that the concrete pad drawings be reviewed by our office for general conformance with our geotechnical recommendations.

6.2 Concrete Pads: Option 2 - Concrete Pads Constructed on Basecourse Layer in Combination with Insulation

Based on the frost susceptible soil conditions encountered at the borehole locations, the following procedure is recommended for constructing the concrete pads for both the helicopter pad and apron pad:

1. Figure 29 shows the general geotechnical guidelines for constructing the concrete pads. It is expected that the exposed subgrade to consist of compact to very dense, silt fill material. The exposed subgrade surface must be proofrolled and compacted to a minimum of 98% Standard Proctor maximum dry density. The exposed subgrade must be inspected and approved by a geotechnical engineer. Any weak spots, deleterious materials and organic materials detected at the exposed surface must be sub-excavated and removed. The grade can then be raised to the design subgrade level to fill any such voids using approved OPSS Granular B Type I (sand and gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 100% Standard Proctor maximum dry density.

2. It is recommended that excavations extend laterally outward for a minimum of 1.2m (4 ft.) from the edge of the pads at sides.

3. In order to minimize the amount of oscillations and floating movement during the freezing and thawing cycles, a layer of polystyrene board insulation (SM Blue), or equivalent, consisting of a minimum thickness of 50mm be placed below the entire area of the proposed pad and extend 1.2m laterally outwards. It should be placed above the approved subgrade. Insulation requirements should be in general conformance as shown in Figure 29 and the manufacturer's specifications.

4. A basecourse / moisture barrier, consisting of at least 300mm (12 inchs) of 20mm (3/4 inch) clear stone should be provided under the concrete pads. It should be compacted and vibrated for interlocking purposes.

5. The pads may then be constructed above the basecourse layer.

A Modulus of Subgrade Reaction (k_S) of 30,000 kN/m^3 is suggested for designing the proposed concrete pads.

It is recommended that the concrete pad drawings be reviewed by our office for general conformance with our geotechnical recommendations.

7.0 PAVEMENT STRUCTURES

It is our understanding that the proposed development will require the construction of flexible pavement areas with light duty and heavy duty applications.

The pavement areas may be constructed on an adequately prepared subgrade, inspected and approved by a geotechnical engineer. The subgrade may consist of compact, silt fill and/or compact to dense, native, silt. The exposed subgrade must be stripped of all topsoil, vegetation, loose, wet and deleterious materials. The exposed fill portion of the subgrade surface must be proofrolled and compacted to a minimum of 98% Standard Proctor maximum dry density. While the exposed native portion of the subgrade surface must be heavily proofrolled under geotechnical supervision. If any weak or soft areas are encountered at the exposed subgrade surface they must be further sub-excavated and removed. The grade must then be raised to the design subgrade level using approved onsite materials, and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density. Stringent construction control procedures must be maintained to ensure uniform subgrade moisture and density conditions are achieved.

Based on the subgrade conditions encountered and normal anticipated traffic loading, the pavement structures indicated below in Table 3 are recommended:

Table 3
Recommended Pavement Structures and Thicknesses

Material	Light Duty	Heavy Duty
HL 3 Surface Asphalt	40mm	40mm
HL 8 Binder Asphalt	40mm	100mm
Granular Basecourse OPSS Granular "A" Consisting of 20mm Crusher Run Limestone	150mm	150mm
Granular Subbase OPSS Granular "B" Type II 50mm Crusher Run Limestone	300mm	500mm
Total Combined Thickness	530mm	790mm
Granular Base Equivalents (GBE)	510mm	770mm

Grading of the final subgrade should be shaped and crowned to allow drainage to adequately spaced catch basins installed with subdrains leading to a positive outlet. Figure 30, shows a typical subdrain detail. We emphasize the need for adequate drainage. Catch basins must contain subdrains for drainage infiltration from the granular basecourse leading into these drainage structures. Subdrains may also be installed along the driveway areas plus be installed to extend between catch basins.

It is recommended that all granular components to be placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum 98% Standard Proctor maximum dry density. The asphalt components to be placed and compacted to be within the acceptable compaction requirements of 92.0% to 96.5% Maximum Relative Density.

The completed pavement surface must not contain any depressions and must be adequately sloped to provide effective surface drainage toward the catch basins. Additionally, surface water shall not be allowed to accumulate adjacent to the outside edges of the pavement areas. Subdrains shall be installed to collect the excess subsurface moisture and prevent the subgrade from softening.

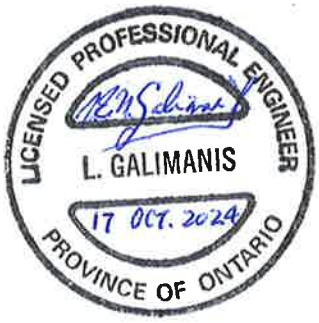
In order to minimize the adverse affects of settlement, it is recommended that the surface asphalt course be delayed for approximately one year after the binder asphalt course is placed, where practical.

Frost action can often result in differential movement taking place between the pavement and catch basins and/or manholes. As a result, it is recommended that these structures be backfilled with granular materials which are not as susceptible to frost, such as, approved OPSS Granular B Type I (sand and gravel), placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density. Hand controlled light compaction equipment shall be used when backfilling these structures to avoid damaging them.

The quality, performance and life expectancy of the finished product is highly dependent upon adequate subgrade preparation work, the quality and proper placement of the pavement components and the compaction level achieved. Therefore, it is important that geotechnical inspections be carried out during the construction period to ensure construction practice is in conformance with design requirements.

We trust that the information contained in this report will assist you with your proposed development. Should you have any questions, please do not hesitate to contact our office.

Yours truly,
PATRIOT ENGINEERING LTD.



Larry Galimanis, P.Eng.

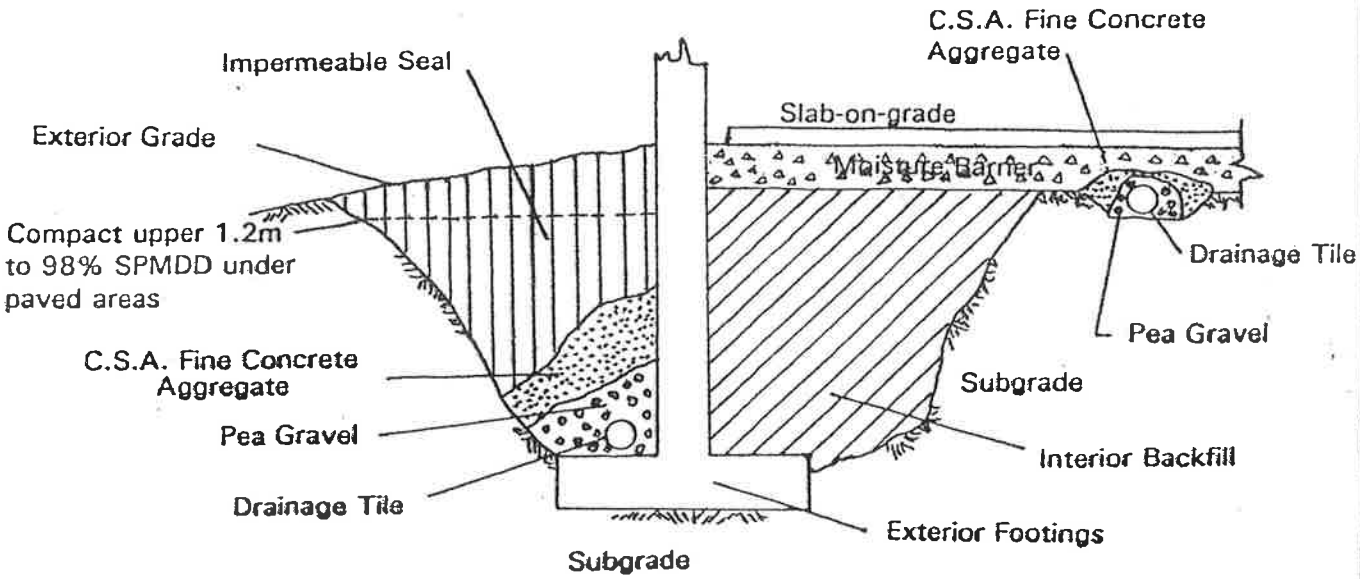
Figure 27



NOTES:

1. Drainage tile to consist of 10cm (4") diameter weeping tile or equivalent perforated pipe leading to a positive sump or outlet. Invert to be minimum of 15cm (6") below underside of floor slab.
2. Pea gravel 15cm (6") top and sides of drain. If drain is not on footing, place 10cm (4") of pea gravel below drain. 20mm (3/4") stone is an alternative, provided it is covered by an approved geotextile.
3. C.S.A. fine concrete aggregate to act as filter material. Minimum 30cm (12") top and side of tile drain. This may be replaced by an approved porous plastic membrane as indicated in 2.
4. Impermeable backfill seal-compacted clay, clay silt or equivalent. If original soil is free-draining, seal may be omitted.
5. The interior fill may be any clean, non organic soil which may be compacted to at least 98% Standard Proctor density in this confined space.
6. Do not use heavy compaction equipment within 0.5m (18") of the wall. Do not fill or compact within 1.8m (6') of wall unless the fill is placed on both sides simultaneously.
7. Moisture barrier to be at least 20cm (8") of compacted Granular "A" fill or equivalent free-draining material to be approved by our geotechnical staff.
8. The moisture barrier is to be compacted to 98% Standard Proctor maximum dry density.
9. Slab-on-grade should not be structurally connected to the wall or the footing.
10. Exterior grade to slope away from wall.
11. Underfloor drain invert to be at least 300mm (1') below the underside of floor slab. Tile placed in parallel rows 6-8m (20'- 25') centres one way.
12. Do not connect the underfloor drains to perimeter drains.
13. If the 20mm (3/4") stone requires surface blinding, use 6mm (1/4") stone chips.

SCHEMATIC DETAIL FOR EXTERIOR CONCRETE PAD

1. A minimum of 0.3m (1ft) of exterior soil cover is required.
2. Good site grading is to be provided to prevent ponded water at pad base, otherwise adequately filtered perimeter drainage will be required.
3. Insulation should have at least two overlapping layers, have tight splices, glue should be used on any vertical surfaces and spot glue on the horizontal surfaces.
4. Provide a continuous Styrofoam HI insulation pad beneath the entire footprint of the pad, plus it must extend outward a minimum of 1.2m from the edge of the pad at the sides, as shown in the diagram below.
5. Basecourse to be at least 300mm thick consisting of 20mm (3/4 inch) clear stone compacted and vibrated for interlocking purposes.
6. The drawings must be reviewed with accompanying text.
7. Diagram provided below is for guidance only. In all cases, manufacturers' specifications must be followed for installing insulation.

EXPLANATION OF TERMS

1. SAMPLING PROCEDURES

AS	Auger Sample	GS	Grab Sample
SS	Split Spoon	ST	Shelby Tube

2. PENETRATION RESISTANCE

Standard Penetration Resistance 'N'

The number of blows that are required to advance a standard split spoon sampler 0.3 m into the subsurface soil, that is driven by means of a 63.5 kg hammer falling freely for a distance of 0.76 m.

Dynamic Penetration Resistance:

The number of blows that are required to advance a 51 mm diameter, 60 degree cone, fitted to the end of drill rods, 0.3m into subsurface soil. The driving energy is 475 J per blow.

3. DESCRIPTION OF SOIL

The description of the soil is based on visual examination of the samples obtained and laboratory testing. Each layer is described according to the following classification and terminology:

Classification*	Particle Size
Clay	less than 0.002 mm
Silt	from 0.002 to 0.075 mm
Sand	from 0.075 to 4.75 mm
Gravel	from 4.75 to 75 mm
Cobbles	from 75 to 200 mm
Boulders	larger than 200 mm

* Unified Soil Classification System (ASTM D2487-75).

Terminology	Proportion
Trace, or occasional	Less than 10%
Some	10 to 20%
Adjective (e.g. silty or sandy)	20 to 35%
And (e.g. sand and gravel)	35 to 50%

The relative density of the cohesionless soils and the consistency of cohesive soils are defined below:

Cohesionless Soils		Cohesive Soils		
Relative Density	Penetration Resistance "N" Blows/0.3 m or Blows/foot	Consistency	Underdrained Shear Strength**	
			kPa	psf
Very loose	0 to 4	Very soft	0 to 12	0 to 250
Loose	4 to 10	Soft	12 to 25	250 to 500
Compact	10 to 30	Firm	25 to 50	500 to 1000
Dense	30 to 50	Stiff	50 to 100	1000 to 2000
Very dense	over 50	Very Stiff	100 to 200	2000 to 4000
		Hard	over 200	over 4000

** The compressive strength obtained from the quick (Q) triaxial test is equal to twice the shear strength of the clay tested.

Principal

Geotechnical Investigation
Proposed Helicopter Hangar
350 Garfield Wright Boulevard
East Gwillimbury, Ontario

1.0 INTRODUCTION

It is our understanding that the proposed development at the above site will consist of constructing a helicopter hangar and an attached one storey building without a basement. An above grade Helicopter pad, an apron pad and a parking lot will also be constructed.

In light of this, Patriot Engineering Ltd., has carried out a geotechnical investigation to determine the subsurface soil and groundwater conditions in order to provide geotechnical recommendations for type of foundations, safe soil bearing pressures, earthquake design parameters, earth pressure coefficients, excavation and backfill procedures, slab-on-grade floor construction, plus pavement thicknesses. Authorization to proceed with this investigation was provided by Mr. Lind Nyman, from Parkin Architects Limited, on June 19, 2024, on behalf of the Owner.

The site is located approximately 400m north and 840m west from the intersection of Warden Avenue and Davis Drive, in East Gwillimbury, Ontario. It is vacant and unoccupied. The terrain is relatively flat. The site is generally covered with vegetation consisting of grass, shrubs and a few trees.

2.0 FIELDWORK

The fieldwork for this investigation took place on July 25, 26 and 29, 2024, and consisted of drilling a total of eighteen (18) boreholes using solid stem augers. A summary of the boreholes, their designations and their depths for this investigation is shown below:

(a) For the Helicopter Hangar and Attached One Storey Building
Six (6) boreholes (BH1 to BH6) to a depth of 8.1m each

(b) For the Helicopter Pad
Four (4) boreholes (BH7 to BH10) to a depth of 5.0m each

(c) For the Apron Concrete Pad Adjacent to Helicopter Concrete Pad
One (1) borehole (BH11) to a depth of 2.0m

(d) For the Parking Lot and Driveways
Seven (7) boreholes (BH12 to BH18) to a depth of 2.0m each

All boreholes were backfilled in accordance with Regulation 903.

The approximate borehole locations along with their surface elevations at the time of our drilling activity are shown on the Partial Site Plan, Figure 1.

The boreholes were drilled by using continuous flight solid stem augurs by a specialist drilling contractor under the supervision of Patriot Engineering Ltd. field engineering staff. Samples were obtained at regular depth intervals using a 50mm diameter split spoon sampler that was driven into the soil with a 63.5 kg drop hammer falling 760mm, in accordance with Standard Penetration Test (SPT) procedures (ASTM D1586). During the fieldwork, our staff member also inspected the samples and logged them. The samples were then brought to our laboratory for detailed inspections and laboratory testing. Samples were generally tested for moisture contents and selected samples were tested for gradation analysis / hydrometers.

Groundwater level readings were obtained during our drilling activity.

Surveying of the ground surface elevations at the borehole locations were determined by our field engineering personnel and referenced at the following datum:

> Top of manhole on Garfield Wright Boulevard, near the southeast corner of the property. The location of this manhole is also shown on Figure 1.

The elevation at this point is understood to be at Elev. 272.32m.

The scope of work for the geotechnical investigation for this project is as it is presented in this report, which is being provided on the assumption that the applicable codes and standards will be met. If there are any changes in the design features relevant to the geotechnical analysis, or if there are any apparent deviations of the report from relevant codes and standards, our office should be contacted to review the design.

3.0 SUBSURFACE CONDITIONS

The detailed subsurface stratigraphy encountered in the boreholes is presented on the Borehole Logs, Drawings 2 to 19.

In general, all boreholes were drilled from above grass covered regions at the site and initially advanced through a topsoil layer that ranged in thickness from approximately 50mm to 75mm.

Below the topsoil layer, earth fill material was encountered in all boreholes and consisted of brown, slightly moist to saturated, silt. This silt fill layer also contained some sand, plus traces of clay, gravel, topsoil, rootlets, wood pieces, brick fragments and plastic pieces. The "N" values (blows/foot) that were recorded within this fill material ranged from 6 to 55, revealing relative densities that were loose to very dense. The moisture contents varied from 4% to 21%. Some degree of dilation was noted in a few samples that were extracted from this layer. Figure 20 shows the grain size distribution test results that was performed on a sample extracted from this silt fill layer. Local variations of the composition of the material can occur at the sampling locations. It is our understanding that the location of the proposed development was part of a large construction site in the past where the subgrade was raised. Our boreholes indicate that this material was used to raise the subgrade.

The depth of the fill layers inside the boreholes which were drilled for the proposed building ranged from approximately 1.4m to 3.4m below existing grade. The depth of the fill layers inside the boreholes which were drilled for the helicopter pad and adjacent apron slab varied from 0.7m to 2.2m below existing slab. Similarly, The depth of the fill layers inside the boreholes which were drilled for the parking lot / driveway areas varied from approximately 0.7m to 1.6m below existing grade.

Below the earth fill material, all boreholes next encountered native soil that was composed of brown and/or grey, slightly moist to saturated, silt. This material also contained some sand, traces to some clay, plus traces of gravel and cobbles. The "N" values that were recorded within this layer ranged from 12 to well over 50, demonstrating relative densities that were compact to very dense. The moisture contents varied from 5% to 27%. Dilation was noted in several samples that were obtained from this layer. The results from our grain size distribution tests performed on three samples obtained from this native, silt layer are shown on Figures 21, 22 and 23. All boreholes with the exception of Boreholes BH1 and BH4, were terminated within this silt layer.

In Boreholes BH1 and BH4 only, beneath the silt layer, the soil that was encountered next consisted of grey, moist, sandy silt. The "N" values that were obtained from this layer were well over 50, displaying relative densities that were very dense. The moisture contents were 10% and 12%. Both Boreholes BH1 and BH4 were terminated in this sandy silt material.

Groundwater level readings were obtained upon the completion of drilling from each borehole. These short term groundwater levels that were recorded in each borehole are indicated below on Table 1.

Table 1
Measured Short Term Groundwater Level Readings Obtained Upon Completion of Drilling of Each Borehole

Borehole No.	Depth of Borehole (m)	Borehole Surface Elevation (m)	Approximate Depth of Groundwater Level Below Existing Ground (m)	Approximate Groundwater Elevation (m)
BH1	8.1	273.5	5.0	268.5
BH2	8.1	273.5	5.3	268.2
BH3	8.1	273.4	5.3	268.1
BH4	8.1	273.6	4.3	230.6
BH5	8.1	273.8	5.3	268.5
BH6	8.1	273.8	4.7	269.1
BH7	5.0	273.9	DRY	-
BH8	5.0	273.9	DRY	-
BH9	5.0	273.7	DRY	-
BH10	5.0	273.8	DRY	-
BH11	2.0	273.7	DRY	-
BH12	2.0	273.5	DRY	-
BH13	2.0	273.9	DRY	-
BH14	2.0	274.0	DRY	-
BH15	2.0	272.9	DRY	-
BH16	2.0	273.2	DRY	-
BH17	2.0	273.7	DRY	-
BH18	2.0	273.3	DRY	-

All groundwater level readings are also shown on the individual borehole logs.

Some seasonal fluctuations and higher water levels should be anticipated.

The soil and groundwater conditions presented in this report have been deducted from soil sampling that was noncontinuous and therefore, should not be taken to represent exact planes of geological change. Furthermore, the geotechnical recommendations and comments provided in this report have been based on boreholes that were widely spaced. Therefore, the soil and groundwater conditions between the boreholes could vary significantly. The interpretation between boreholes and the recommendations in this report must therefore be checked through field inspections, provided by our office during the construction stages, to validate the information for use.

4.0 GEOTECHNICAL RECOMMENDATIONS

The comments provided in this report are intended only for the guidance of design engineers. The amount of boreholes required to determine the localized underground conditions between boreholes that would affect construction costs, sequencing, equipment, scheduling construction techniques, and the like, would be much greater than that carried out for design purposes. Contractors and/or subcontractors bidding on or undertaking the work should, in this light, decide on their own interpretations of the factual borehole results, so that they may draw their own conclusions as to how the subsurface conditions may affect them and their scope of work.

4.1 Foundations: Conventional Spread Footings

It is our understanding that the elevation of the top surface of the ground floor slab has been established at Elev. 273.8m. The anticipated footings are expected to be founded approximately 1.5m below the ground floor slab, corresponding approximately to Elev. 272.3m.

As previously mentioned, we had been informed by Parkin Architects Limited that the location of the proposed development was part of a large construction site in the past where material was used to backfill the site and raise the subgrade. At the footprint of the building, the depth that the fill material that was used ranged from approximately 1.4m to 3.4m below existing grade. We have also been provided with documentation that is available that indicates that compaction testing was carried out on the material that was used to raise the subgrade and the results showed that specified compaction was achieved.

Our review of the soil samples show that the fill materials appeared to be uniform in structure. The recorded "N" values (blow/foot) that were obtained within the fill layer, especially at or near the proposed footing founding elevation, demonstrated that the existing fill layer had undergone through compaction procedures and is generally yielding densities that are in a compact to very dense state. The available records indicate that the fill material was installed approximately 9 years ago. It is expected that it has self consolidated during the course of this time duration, and therefore, it should not induce above normal settlement. Therefore, it is our opinion that the existing fill layer is considered suitable for sustaining conventional spread footings.

Based on the subsurface information recorded at the borehole locations, conventional spread footings may be used for the proposed building and shall be founded below all topsoil, wet, deleterious materials and loosened soil, on the compact to very dense silt fill material as indicated in Boreholes BH1, BH2, BH3, BH4 and BH6, and on the native, undisturbed, compact to very dense, silt as indicated in Borehole BH5. The following soil bearing pressures and specified founding depths as shown below on Table 2 are recommended:

Table 2
Soil Bearing Pressures for Spread Footings

Borehole No.	Serviceability Limit State (SLS) (kPa)	Factored Bearing Capacity at Ultimate Limit State (ULS) (kPa)	Approximate Founding Depth Below Existing Ground (m)	Approximate Founding Elevation (m)
BH1	75	115	Below 0.8	Below 272.7
BH2	75	115	Below 0.8	Below 272.7
BH3	75	115	Below 0.8	Below 272.6
BH4	75	115	Below 0.8	Below 272.8
BH5	75	115	Below 0.8	Below 273.0
BH6	75	115	Below 1.0	Below 272.8

Foundations designed using the soil pressures pertaining to the Serviceability Limit State (SLS) condition shown above, should not exceed the total and differential settlements of 25mm (1 inch) and 20mm (3/4 inch), respectively, provided that the foundation bases are not disturbed by excavation, surface water inflow, or freezing and thawing action.

Nominal reinforcement will be required in footings and foundation walls placed on the fill material. This is a precautionary measure to ensure that soft subgrade areas, if any, are adequately bridged with the reinforcement of foundations.

In general, fills are more susceptible to the effects of weather than are natural soils. Therefore, they must be protected from excessive wetting, drying and erosion.

Foundations exposed to freezing ground conditions must be protected against frost action with a minimum of 1.2m (4 ft.) of soil cover or equivalent.

Any footings constructed at different founding levels must be stepped along a line of 7 vertical to 10 drawn from the bottom of the lower footing.

All foundation bases should be inspected by a geotechnical engineer from our office prior to placing concrete to verify the bearing pressures, plus the consistency of the founding conditions that is suggested in this report.

It is recommended that the foundation drawings be reviewed by our office for general conformance with our geotechnical recommendations.

Higher bearing capacities are also available at deep zones of our boreholes on native soils, if required. See Section 4.2 below.

4.2 Alternate Foundation Method Using Helical Pier Foundations

If higher bearing capacities are required, then an alternate foundation method for the soil conditions encountered at the site is deep foundations consisting of helical piers in combination with grade beams to support the building loads. The helical piers should be supplied by Chance, or equivalent.

The installation of the helical pier foundations will transfer the building loads beyond the fill layers plus beyond the relatively weak native soils and into much deeper zones towards the bottom of our boreholes, where the soil conditions appear to be more favourable for bearing purposes.

Helical piers may be founded below all topsoil, fill, soft, loosened and deleterious soils into the native, undisturbed, very dense, silt, and/or native undisturbed, very dense, sandy silt.

The design load sustained by the individual helical piers should be provided by the Structural Engineer.

Besides the soil conditions encountered, the capacity of a helical pier also depends on the type and size selected, plus the number of helices. Therefore, the specialist contractor/supplier will finalize the selection of the pier size which will achieve this design capacity that is specified by the structural engineer. The general specifications for the installation and testing will also be provided by the specialist contractor/supplier.

A compression load test is recommended to be carried out on a minimum of one helical pier, to verify its capacity.

All helical pier installation work should be inspected on a full-time basis by a geotechnical engineer from our office to ensure that they have been installed into the specified native layers at adequate depths and have achieved the designated torque requirements.

Excavations for any new grade beams and foundations must be stepped along a line of 7 vertical to 10 horizontal where founding grades are variable and must not interfere with adjacent foundation systems, underground services and the like.

Foundations / grade beams exposed to freezing ground conditions must be protected against frost action with a minimum of 1.2m (4 ft.) of soil cover or equivalent.

Provisions should be made by the contractor when advancing through the upper fill zones which could have obstacles, oversized concrete chunks, construction rubble, caving and the like, plus in the native soils as cobbles and boulders may be present.

It is recommended that the foundation drawings be reviewed by our office for general conformance with our geotechnical recommendations.

4.3 Earthquake Design Parameters

In accordance to the Ontario Building Code, the site's classification for Seismic Response would be Class C.

4.4 Earth Pressure Coefficients

For this site, the following parameters may be used to assess the earth pressure:

Soil	γ (kN/m^3)	ϕ degrees	K_a	K_o	K_p
Onsite Compacted Fill or Compacted Granular Fill - OPSS Granular B	21	32	0.31	0.47	3.25
Native Subsoil	21.5	33	0.3	0.46	3.39

Where γ = bulk unit weight of soil, kN/m^3

ϕ = internal angle of friction, degrees

K_a = coefficient of active earth pressure

K_o = coefficient of earth pressure at rest

K_p = coefficient of passive earth pressure

Also,

μ = Coefficient of Static Friction
Between footings and Underlying Soil
use 0.4

4.5 Excavation and Backfill

In general, based on the groundwater levels presented on Table 1, no significant groundwater issues are expected with excavations on this site. Any flow from surface water and any minor seepage from perched water levels should be controlled with properly filtered sumps with pumps. However, given the fluctuation of the groundwater, if excavations are to be carried out to depths close to or below the groundwater level, then high capacity pumps should then be installed inside the sumps to sufficiently draw down the groundwater. Depending on the season of construction, groundwater levels can increase significantly. If so, then a well point dewatering system may be required to be installed to control and effectively reduce the groundwater levels. It is recommended that a specialist dewatering contractor be contacted to provide their recommendations during the construction stages, if excavations encounter groundwater.

Provisions should be made by the contractor during the excavations for handling possible oversized concrete chunks, construction rubble and obstructions in the fill materials, plus cobbles and boulders in the underlying native soils.

All temporary shallow excavations may be cut at 1 vertical to 1 horizontal. If some sloughing occurs at the upper fill zones, or if wet conditions are encountered, then shallower slopes may be required in localized areas. All excavations must be made to conform to regulations set out in the Occupational Health and Safety Act. Using the classification system described in the Occupational Health and Safety Act, the fill soils on site can be classified as Type 3. The native soils can also be considered as Type 3. Any wet and saturated soils, or soils located below the groundwater level are classified as Type 4.

Excavations shall not be cut below an imaginary line drawn downward from existing foundations and/or underground services at 7 vertical to 10 horizontal. If this cannot be achieved then adequate temporary shoring and/or underpinning will be required.

The on site materials are not free draining and highly susceptible to frost. They should not be used for exterior foundation backfilling as this could potentially result to damage of the foundation walls from frost adhesion. Therefore, the exterior foundations should be backfilled with approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 95% Standard Proctor maximum dry density. The upper 1.2m (4 ft.) zone of backfill material should be compacted to a minimum of 98% Standard Proctor maximum dry density.

The underslab interior excavations should be backfilled with approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density.

Backfilling of service trenches under proposed pavement areas may be carried out using approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 95% Standard Proctor maximum dry density. The upper 1.2m (4 ft.) zone of backfill material should be compacted to a minimum of 98% Standard Proctor maximum dry density.

The silt materials onsite have the capacity to retain water, they are not free draining and may be too wet to be used for backfilling. In some cases, drying the material, if space restriction permit this, will assist in salvaging some portion of this material for reuse. In other cases they may be found to be too wet and rendered unusable. In this regard, the suitability for reuse of the onsite material as backfill should be inspected and evaluated during the initial stages of construction. Materials that have been approved for reuse should be maintained within 2% of their optimum moisture content. Tarps may be required to cover and protect the approved material.

4.6 Slab-On-Grade Floor

From our borehole investigation, it is noted that the site contains fill material consisting of silt. The fill material extends to depths varying from approximately 1.4m to 3.4m below existing grade. This indicates that the exposed subgrade surface at the envelope of the proposed building is expected to be constructed within this fill layer. The fill material appeared to be uniform in structure. It is our opinion that the fill layer is considered suitable to remain as a subgrade. Therefore, the concrete floor may be constructed by conventional slab-on-grade techniques on an adequately prepared subgrade consisting of compact to very dense silt fill, provided that the following items are complied with:

1. The exposed subgrade must be stripped of any topsoil, vegetation, loose, wet and deleterious materials.

2. Any weak spots encountered on the exposed subgrade must be excavated and removed.

3. The amount of organics appeared minor in the samples, however, during construction, if it becomes greater then localized areas of the fill containing excessive organics must be excavated and removed.

4. The exposed surface of the subgrade within the footprint of the proposed building must be heavily proofrolled under geotechnical supervision and compacted to a minimum of 98% Standard Proctor maximum dry density. It must be inspected and approved by a geotechnical engineer.

5. The grade must then be raised to the design subgrade level to fill any such voids as indicated on Items 2 and 3 above, and/or to fill any areas with relatively lower surface elevations with approved onsite soils and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density.

A basecourse / moisture barrier consisting of at least 200mm (8 inch) thick of 20mm (3/4 inch) of OPSS Granular A crusher run limestone must be provided under the proposed floor slab. It shall be compacted to at least 98% Standard Proctor maximum dry density.

The proposed concrete floor may then be constructed by conventional slab-on-grade techniques directly above the Granular A crusher run limestone basecourse.

A Modulus of Subgrade Reaction (k_S) of 30,000 kN/m^3 is suggested for designing the proposed floor slab.

The general requirements for the perimeter drainage, underfloor fill and backfill are provided on Figure 24.

5.0 GEOTECHNICAL RECOMMENDATIONS FOR PROPOSED HELICOPTER CONCRETE PAD AND APRON CONCRETE PAD

The on site silt materials retain water, they are not free draining and are highly susceptible to frost and heave action. They have the potential to cause the development of cracks on the overlying concrete pad surfaces from the oscillations and floating movement during the freezing and thawing cycles. Taking this into consideration, for the soil and groundwater conditions encountered at their respective locations, two options may be used to construct the above concrete pads. The first option involves constructing the pads with excavations extending to 1.2m below existing grade which is discussed in Section 5.1. While the second option involves constructing the pads on a basecourse layer in combination with insulation and this is discussed in Section 5.2. The selection between these two pad options will depend on factors, such as, economics, duration of activity, availability and scheduling.

5.1 Concrete Pads: Option 1 - Concrete Pads Constructed with Excavations Extending to 1.2m Below Existing Grade

Given the frost susceptible soil conditions that are present at the site, it is recommended that the following geotechnical recommendations be complied with for developing the proposed concrete pads for both the helicopter pad and apron pad:

1. It is recommended that excavations for the floating concrete pads to extend to a depth of 1.2m (4 ft.) below their proposed final grade. It is expected that the exposed subgrade to consist of compact to very dense, silt fill material (Boreholes BH7 to BH10) and/or dense to very dense native silt (Borehole BH11). The exposed subgrade must be inspected and approved by a geotechnical engineer. Any weak spots, deleterious materials and organic materials detected at the exposed surface must be sub-excavated and removed. The exposed fill portion of the subgrade surface must be compacted to a minimum of 98% Standard Proctor maximum dry density. While the exposed native portion of the subgrade surface must be heavily proofrolled under geotechnical supervision.

2. It is recommended that excavations extend laterally outward for a minimum of 1.2m (4 ft.) from the edge of the pad at sides.

3. It is recommended that weeping tiles to be placed in parallel rows of 6m centres one way, above the excavated subgrade (at 1.2m depth) leading to a positive outlet, such as manholes or catch basins. The tiles should consist of a 100mm diameter PVC perforated weeping tile surrounded with a layer of 150mm thick of 20mm Clear Stone at the top and sides of the pipe and 50mm of stone at the base. The stone should be then be wrapped with an approved geotextile cloth, type Terrafix 270R, or equivalent. The subgrade should be shaped and crowned to allow drainage into these pipes.

4. The subgrade shall then be raised to the desired level using approved OPSS Granular B (Sand and Gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 100% Standard Proctor maximum dry density.

5. A provision shall be made to allow for a basecourse / moisture barrier, consisting of at least 300mm (12 inches) of 20mm (3/4 inch) approved OPSS Granular A crusher run limestone to be placed under the concrete slabs. The Granular A material must be compacted to at least 100% Standard Proctor maximum dry density. The proposed concrete slabs may then be constructed by conventional slab-on-grade techniques directly above the compacted Granular A basecourse.

A Modulus of Subgrade Reaction (k_S) of 30,000 kN/m^3 is suggested for designing the proposed concrete pads.

It is recommended that the concrete pad drawings be reviewed by our office for general conformance with our geotechnical recommendations.

5.2 Concrete Pads: Option 2 - Concrete Pads Constructed on Basecourse Layer in Combination with Insulation

Based on the frost susceptible soil conditions encountered at the borehole locations, the following procedure is recommended for constructing the concrete pads for both the helicopter pad and apron pad:

1. Figure 25 shows the general geotechnical guidelines for constructing the concrete pad. It is expected that the exposed subgrade to consist of compact to very dense, silt fill material (Boreholes BH7 to BH10) and/or dense to very dense native silt (Borehole BH11). The exposed fill portion of the subgrade surface must be compacted to a minimum of 98% Standard Proctor maximum dry density. While the exposed native portion of the subgrade surface must be heavily proofrolled under geotechnical supervision. The exposed subgrade must be inspected and approved by a geotechnical engineer. Any weak spots, deleterious materials and organic materials detected at the exposed surface must be sub-excavated and removed. The grade can then be raised to the design subgrade level to fill any such voids using approved OPSS Granular B Type I (sand and gravel) material placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 100% Standard Proctor maximum dry density.

2. It is recommended that excavations extend laterally outward for a minimum of 1.2m (4 ft.) from the edge of the pad at sides.

3. In order to minimize the amount of oscillations and floating movement during the freezing and thawing cycles, a layer of polystyrene board insulation (SM Blue), or equivalent, consisting of a minimum thickness of 50mm be placed below the entire area of the proposed pad and extend 1.2m laterally outwards. It should be placed above the approved subgrade. Insulation requirements should be in general conformance as shown in Figure 25 and the manufacturer's specifications.

4. A basecourse / moisture barrier, consisting of at least 300mm (12 inchs) of 20mm (3/4 inch) clear stone should be provided under the concrete pad. It should be compacted and vibrated for interlocking purposes.

5. The pad may then be constructed above the basecourse layer.

A Modulus of Subgrade Reaction (k_s) of 30,000 kN/m^3 is suggested for designing the proposed concrete pads.

It is recommended that the concrete pad drawings be reviewed by our office for general conformance with our geotechnical recommendations.

6.0 PAVEMENT STRUCTURES

It is our understanding that the proposed development will require the construction of flexible pavement areas with light duty and heavy duty applications.

The pavement areas may be constructed on an adequately prepared subgrade, inspected and approved by a geotechnical engineer. The subgrade may consist of compact, silt fill and/or compact to dense, native, silt. The exposed subgrade must be stripped of all topsoil, vegetation, loose, wet and deleterious materials. The exposed fill portion of the subgrade surface must be compacted to a minimum of 98% Standard Proctor maximum dry density. While the exposed native portion of the subgrade surface must be heavily proofrolled under geotechnical supervision. If any weak or soft areas are encountered at the exposed subgrade surface they must be further sub-excavated and removed. The grade must then be raised to the design subgrade level using approved onsite materials, and/or approved OPSS Granular B Type I (sand and gravel) material, placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density. Stringent construction control procedures must be maintained to ensure uniform subgrade moisture and density conditions are achieved.

Based on the subgrade conditions encountered and normal anticipated traffic loading, the pavement structures indicated below in Table 3 are recommended:

Table 3
Recommended Pavement Structures and Thicknesses

Material	Light Duty	Heavy Duty
HL 3 Surface Asphalt	40mm	40mm
HL 8 Binder Asphalt	40mm	100mm
Granular Basecourse OPSS Granular "A" Consisting of 20mm Crusher Run Limestone	150mm	150mm
Granular Subbase OPSS Granular "B" Type II 50mm Crusher Run Limestone	300mm	500mm
Total Combined Thickness	530mm	790mm
Granular Base Equivalents (GBE)	510mm	770mm

Grading of the final subgrade should be shaped and crowned to allow drainage to adequately spaced catch basins installed with subdrains leading to a positive outlet. Figure 26, shows a typical subdrain detail. We emphasize the need for adequate drainage. Catch basins must contain subdrains for drainage infiltration from the granular basecourse leading into these drainage structures. Subdrains may also be installed along the driveway areas plus be installed to extend between catch basins.

It is recommended that all granular components to be placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum 98% Standard Proctor maximum dry density. The asphalt components to be placed and compacted to be within the acceptable compaction requirements of 92.0% to 96.5% Maximum Relative Density.

The completed pavement surface must not contain any depressions and must be adequately sloped to provide effective surface drainage toward the catch basins. Additionally, surface water shall not be allowed to accumulate adjacent to the outside edges of the pavement areas. Subdrains shall be installed to collect the excess subsurface moisture and prevent the subgrade from softening.

In order to minimize the adverse affects of settlement, it is recommended that the surface asphalt course be delayed for approximately one year after the binder asphalt course is placed, where practical.

Frost action can often result in differential movement taking place between the pavement and catch basins and/or manholes. As a result, it is recommended that these structures be backfilled with granular materials which are not as susceptible to frost, such as, approved OPSS Granular B Type I (sand and gravel), placed in loose lifts with a maximum thickness of 300mm and compacted to a minimum of 98% Standard Proctor maximum dry density. Hand controlled light compaction equipment shall be used when backfilling these structures to avoid damaging them.

The quality, performance and life expectancy of the finished product is highly dependent upon adequate subgrade preparation work, the quality and proper placement of the pavement components and the compaction level achieved. Therefore, it is important that geotechnical inspections be carried out during the construction period to ensure construction practice is in conformance with design requirements.

We trust that the information contained in this report will assist you with your proposed development. Should you have any questions, please do not hesitate to contact our office.

Yours truly,
PATRIOT ENGINEERING LTD.

Larry Galimanis, P.Eng.

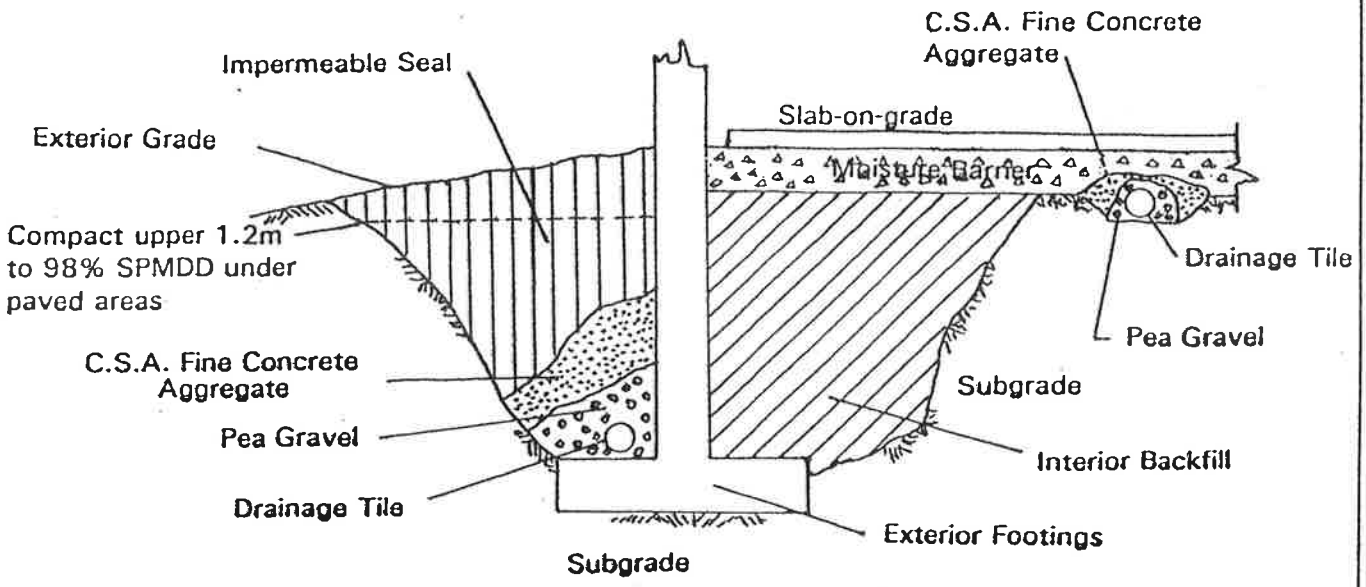
Figure 23



NOTES:

1. Drainage tile to consist of 10cm (4") diameter weeping tile or equivalent perforated pipe leading to a positive sump or outlet. Invert to be minimum of 15cm (6") below underside of floor slab.
2. Pea gravel 15cm (6") top and sides of drain. If drain is not on footing, place 10cm (4") of pea gravel below drain. 20mm (3/4") stone is an alternative, provided it is covered by an approved geotextile.
3. C.S.A. fine concrete aggregate to act as filter material. Minimum 30cm (12") top and side of tile drain. This may be replaced by an approved porous plastic membrane as indicated in 2.
4. Impermeable backfill seal-compacted clay, clay silt or equivalent. If original soil is free-draining, seal may be omitted.
5. The interior fill may be any clean, non organic soil which may be compacted to at least 98% Standard Proctor density in this confined space.
6. Do not use heavy compaction equipment within 0.5m (18") of the wall. Do not fill or compact within 1.8m (6') of wall unless the fill is placed on both sides simultaneously.
7. Moisture barrier to be at least 20cm (8") of compacted Granular "A" fill or equivalent free-draining material to be approved by our geotechnical staff.
8. The moisture barrier is to be compacted to 98% Standard Proctor maximum dry density.
9. Slab-on-grade should not be structurally connected to the wall or the footing.
10. Exterior grade to slope away from wall.
11. Underfloor drain invert to be at least 300mm (1') below the underside of floor slab. Tile placed in parallel rows 6-8m (20'- 25') centres one way.
12. Do not connect the underfloor drains to perimeter drains.
13. If the 20mm (3/4") stone requires surface blinding, use 6mm (1/4") stone chips.

Figure: 24

SCHEMATIC DETAIL FOR EXTERIOR CONCRETE PAD

1. A minimum of 0.3m (1ft) of exterior soil cover is required.
2. Good site grading is to be provided to prevent ponded water at pad base, otherwise adequately filtered perimeter drainage will be required.
3. Insulation should have at least two overlapping layers, have tight splices, glue should be used on any vertical surfaces and spot glue on the horizontal surfaces.
4. Provide a continuous Styrofoam HI insulation pad beneath the entire footprint of the pad, plus it must extend outward a minimum of 1.2m from the edge of the pad at the sides, as shown in the diagram below.
5. Basecourse to be at least 300mm thick consisting of 20mm (3/4 inch) clear stone compacted and vibrated for interlocking purposes.
6. The drawings must be reviewed with accompanying text.
7. Diagram provided below is for guidance only. In all cases, manufacturers' specifications must be followed for installing insulation.

EXPLANATION OF TERMS

1. SAMPLING PROCEDURES

AS	Auger Sample	GS	Grab Sample
SS	Split Spoon	ST	Shelby Tube

2. PENETRATION RESISTANCE

Standard Penetration Resistance 'N'

The number of blows that are required to advance a standard split spoon sampler 0.3 m into the subsurface soil, that is driven by means of a 63.5 kg hammer falling freely for a distance of 0.76 m.

Dynamic Penetration Resistance:

The number of blows that are required to advance a 51 mm diameter, 60 degree cone, fitted to the end of drill rods, 0.3m into subsurface soil. The driving energy is 475 J per blow.

3. DESCRIPTION OF SOIL

The description of the soil is based on visual examination of the samples obtained and laboratory testing. Each layer is described according to the following classification and terminology:

Classification*	Particle Size
Clay	less than 0.002 mm
Silt	from 0.002 to 0.075 mm
Sand	from 0.075 to 4.75 mm
Gravel	from 4.75 to 75 mm
Cobbles	from 75 to 200 mm
Boulders	larger than 200 mm

* Unified Soil Classification System (ASTM D2487-75).

Terminology	Proportion
Trace, or occasional	Less than 10%
Some	10 to 20%
Adjective (e.g. silty or sandy)	20 to 35%
And (e.g. sand and gravel)	35 to 50%

The relative density of the cohesionless soils and the consistency of cohesive soils are defined below:

Cohesionless Soils		Cohesive Soils		
Relative Density	Penetration Resistance "N" Blows/0.3 m or Blows/foot	Consistency	Underdrained Shear Strength**	
			kPa	psf
Very loose	0 to 4	Very soft	0 to 12	0 to 250
Loose	4 to 10	Soft	12 to 25	250 to 500
Compact	10 to 30	Firm	25 to 50	500 to 1000
Dense	30 to 50	Stiff	50 to 100	1000 to 2000
Very dense	over 50	Very Stiff	100 to 200	2000 to 4000
		Hard	over 200	over 4000

** The compressive strength obtained from the quick (Q) triaxial test is equal to twice the shear strength of the clay tested.

Project: 44148 | Figure: 1

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 WORK COVERED BY CONTRACT DOCUMENTS

.1 **The Work consists of following:**

.1 The Work of this Contract includes furnishing labour, materials, equipment, services and other related expenses necessary to execute the complete construction of the facility specified in the Contract Documents and the Supply of Products in ample time to be installed into the Work together with templates, measurements and other information required for placement.

.2 Without limiting the generality of the foregoing, the Contractor is responsible for coordination of the various parts of the Work so that no part is left in an unfinished or incomplete condition.

1.4 SPECIFICATIONS FORMATS AND CONVENTIONS

.1 Specifications are addressed to the Contractor. Specifications are not intended to be a detailed description of installation methods but serve to indicate particular requirements in completing the Work.

.2 Where Contract Documents do not provide sufficient information for the complete installation of an item, then the Contractor shall comply with any applicable or relevant manufacturer's written instructions for quality of Work.

1.5 DISCREPANCIES/CONFLICTS/OMISSIONS

.1 Drawings, Specifications and other Contract Documents are intended to be in compliance with federal, provincial and municipal laws, by-laws, regulations and other requirements of Authorities Having Jurisdiction at the Place of the Work, although the Owner and Consultant make no guarantee or representation that there is such compliance. The Contractor shall perform the Work in conformity with such requirements. If, at any time, the Contractor finds errors, inconsistencies, or omissions in the Contract Documents or has any doubt as to the meaning or intent of any part thereof, the Contractor shall immediately notify the Consultant, and request a Supplemental Instruction, Change Order, or Change Directive, as the case may require.

.2 If discrepancies or conflicts in, or omissions from Drawings, Specifications or other Contract Documents are suspected, or if there is doubt as to meaning or intent thereof, notify the Consultant at once. To the extent multiple standards, requirements or levels of performance are

prescribed by the Contract Documents, the most stringent of such standards, requirements or levels of performance (as determined by the Consultant) shall apply to the Work and prevail over the others.

.3 Comply with the Consultant's written instructions or explanations.

.4 Promptly, and not later than within 10 Working Days of becoming aware of circumstances which may require a change in the Work or other directions, give written notice to the Consultant outlining such circumstances and request written directions. The Contractor shall not work in the affected area without the Consultant's prior written approval in order to ensure that the Consultant is capable of properly assessing the situation or evaluating the change (if applicable). The Consultant's interpretations and findings will be given in writing to the parties within a reasonable time.

1.6 WORK RESTRICTIONS

.1 Site Access

.1 Coordinate with the Owner regarding access to the Site.

.2 Assume responsibility for care, custody and control of property which is assigned for performance of the Work. Protect the Work and the Owner's property and property adjacent to, or in the vicinity of, or proximate to, the Place of the Work from damage and be responsible for damage which may arise as the result of the Contractor's performance or failure to perform under the Contract.

.3 Temporary vehicular access and parking shall be in accordance with requirements of Section 01 50 00 – Temporary Facilities and Controls.

.4 All work on municipal property shall be carried out in accordance with the regulations of the respective municipality and any other Authorities Having Jurisdiction (which shall include, without limitation, being responsible for any associated fees, permits, insurance or bonding that is required by such regulations).

.2 Signs, Advertising and Publications

.1 Do not erect or display devices, signs or advertisements of labour, materials or services provided to the Work. Signs related to fire, danger and safety are exempted from this requirement.

.2 Do not consent to advertising of the Work, of any kind, without the Owner's and Consultant's written approval. Do not consent to mention of the Work in any advertising or articles in any publication relating to the Work without approval and written permission from the Owner and Consultant.

.3 Security Clearance of Employees.

.1 Workers on Site may be subject to security checks and may be required to obtain security clearance to the satisfaction of the Owner at its sole discretion before commencing any Work on Site.

.2 All workers and Subcontractors employed in the Work shall complete a Confidential Personal History Form - YRP 419 (sample attached as a supplement to this Section). Those forms shall be provided to Owner, who shall provide security clearances.

.3 Only persons with security clearances will be permitted to access or perform Work at Site. Any persons who fail to obtain a security clearance, or who decline to consent to a security clearance, will not be permitted access to the Site.

.4 During the course of the Work, any new workers shall also require a security clearance prior to being permitted access to Site. Such clearances shall follow the procedure outlined above.

.5 The Owner may, in its sole and unfettered discretion, refuse to issue a security clearance to any person, and may revoke a security clearance previously issued, without prior notice to any person or to the Contractor. Upon revocation of the security clearance of a person, that person shall not be permitted access to Site. It is understood that the Owner may conduct checks of any person at any time during the Work for the purpose of determining whether a security clearance should be granted, maintained, altered or revoked.

.6 Workers employed on Site shall sign the “Daily Register” provided, showing “IN” and ”OUT” times and the number of hours worked on each shift

.4 **Existing Site Services**

.1 Before commencing the Work, determine the location of all underground utilities and structures indicated in or reasonably inferable from the Contract Documents and notify the Consultant of findings.

.2 Consult public and service companies' records and become fully informed of locations and extent of buried and overhead services and utilities.

.3 If interruption to existing services or utilities is to occur during execution of the Work and is necessary, give the Owner 5 Working Days’ prior written notice. Provide temporary services and obtain prior acceptance from the Consultant and Owner with regard to timing and methods for providing temporary services.

.4 Submit a schedule to and obtain approval from the Consultant for each proposed shut-down of active service or facility. Adhere to the approved schedule and provide notice to the affected parties. Disconnect and relocate public utilities encountered in connection with the Work with minimum disturbance to occupants, their activities, pedestrian and vehicular traffic, and public and private property. To the extent necessary to ensure the proper performance of the Work in accordance with the Contract, issue notices and arrange for or provide services (including temporary services if necessary) involving the following utilities or conditions that may exist at the Site:

.1 gas mains.
.2 water pipes.
.3 sanitary and storm sewers.
.4 telephone conduits and cables.
.5 electrical conduits and cables.
.6 fire hydrants.
.7 lampposts.
.8 sign posts.
.9 other similar items.

.5 Should any piping, sewers, cables, or similar services be encountered during the Work of this Contract that are not known from Owner's and utility companies' records, notify the Consultant and do not proceed with removal or cutting until directed. In the case of such encounters, the Contractor shall proceed in accordance with the applicable terms of the Contract, including GC 6.4 CONCEALED OR UNKNOWN CONDITIONS of the General Conditions of the Contract.

1.7 SITE WORK

.1 Restore existing paving, sidewalks, curbs and landscaping damaged during construction. Provide paving, walks, curbs and landscaping to match existing conditions unless otherwise shown on the Contract Drawings.

.2 Provide sod to replace damaged grass and maintain it until it has rooted properly.

1.8 SUPPLEMENTS

.1 The document listed below, which are attached following “End of Section”, forms part of this Section:

.1 YORK REGIONAL POLICE – CONTRACTOR/SERVICE PROVIDERS & VOLUNTEERS SECURITY CLEARANCE FORM - INSTRUCTIONS

END OF SECTION

Updated through ADD#8

PART 1 - GENERAL

Inspection & testing amount updated through cost saving

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 CASH ALLOWANCES

.1 Disbursements from cash allowances are intended for Work not shown or described in the Contract Documents and shall be authorized by the Owner, through the Consultant, in writing, as applicable.

.2 Extend to the Owner refunds and trade and quantity discounts which may be received from purchasing under cash allowances, except cash discounts for prompt payment.

.3 In submitting final adjustments of cash allowances, include duplicate, summary statements and copies of receipted invoices substantiating purchases under cash allowances.

.4 Provide cash allowances as noted on the Bid Form.

1.4 LIST OF CASH ALLOWANCES

.1 Provide the cash allowances as follows:

No.	Description	Amount
1.	Inspection and Testing: For inspection and testing services provided by independent inspection and testing companies and consultants.	$ 150,000.00
2.	Commissioning of mechanical and electrical work by independent commissioning consultant in compliance with specified requirements. Normal commissioning by mechanical and electrical trades shall be included in Total Bid Price and excluded from this cash allowance item.	$ 100,000.00
3.	Electrical Municipal Utilities connection charges. All Work shown on the Drawings shall be included as part of Total Bid Price and excluded from this cash allowance.	$ 50,000.00
4.	Supply and installation of security system and equipment (excluding empty conduit which shall be included in Total Bid Price).	$ 75,000.00
5.	Supply and installation of Fuel Tank including the fuel tank equipment and its components, layout, testing, and engineering fees. The empty conduit shall be included in Total Bid Price and excluded from this cash allowance.	$ 150,000.00
	Total Of Cash Allowances	$ 525,000.00

.4

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 REFERENCES

.1 Definitions: For the purposes of this paragraph, the term “overhead” means the following:

.1 Project-related operating expenses associated with the following:

.1 salaries, wages, benefits for personnel including but not limited to:

.1 staff, general managers, warehouse personnel, maintenance workers, timekeepers, accountants and clerks, estimators, shop stewards, draft-persons/CAD operators, and other employees engaged in daily operations of the business;

.2 general office expenses including but not limited to:

.1 rent, leases, mortgages, financing costs (including holdback), bonding and insurance;
.2 utilities, phone, fax, printing, courier charges and/or office equipment rentals;

.3 lodging and travel;
.4 leased or rented equipment, furniture and facilities not used on the Project site;
.5 permits and/or licences required by Authorities Having Jurisdiction;
.6 shipping, haulage and hoisting; and
.7 disposal charges and related services;

.2 Project-related site expenses associated with the following:

.1 salaries, wages, benefits for personnel directly employed on the Work including but not limited to:

.1 Project managers, superintendents, mechanical and electrical coordinators, foremen, engineers, timekeepers, accountants, clerks, watch persons and other personnel directly employed on the Project;

.2 non-productive labour such as breaks (washroom, lunch or otherwise);
.3 site/trailer/temporary office, sheds or other general temporary site support facilities (including without limitation Project signage, site cleaning, temporary sanitary facilities and the like)
.4 temporary utilities and associated temporary facilities including but not limited to: water, power, heat, telephone, and data;
.5 snow removal and similar activities;
.6 equipment rentals and small tools;

.7 activities, personnel and equipment associated with Project safety including but not limited to:

.1 site security and fire prevention, hoarding, temporary protection of areas adjacent to the Work, signage and bump lines;

.8 activities associated with coordination with other contractors and trades (including without limitation related to surveying, interferences and site measurements), and coordination with the Owner (including with respect to service disruptions, move-in notifications, and the like);

.9 close-out submittals including but not limited to: As-Built Drawings (electronic and/or hardcopies), operation and maintenance (O&M) manuals and similar documentation.

1.4 CASH FLOW SCHEDULE

.1 Prior to commencement of the Work, submit a detailed cash flow projection schedule indicating anticipated billings on a month-by-month basis for duration of the Work, including timing of holdback release.

.2 Update cash flow schedule monthly, recording cumulative as well as monthly totals.

1.5 PROGRESS BILLING BREAKDOWN

.1 Prior to commencement of the Work, submit a detailed progress billing breakdown and obtain approval of the Consultant.

.2 Progress billing breakdown shall include itemized values (each excluding the Harmonized Sales Tax (HST)), applied against each of following:

.1 mobilization and start-up;

.2 general site expenses;

.3 each cash allowance;

.4 each Section of the Specifications (Divisions 2-49 inclusive);

.5 as-built and record Drawings broken down by architectural, structural, mechanical and electrical disciplines;

.6 Project closeout documentation, comprising of separate sums for:

.1 manuals;
.2 maintenance materials; and
.3 commissioning and training/demonstration for Owner's staff.

1.6 UNIT PRICES

.1 Unit prices (when requested in the Bid) shall include all labour, materials, Products, equipment, services, and respective overhead, profit, taxes (excluding HST), disbursements, and related charges.

.2 Unit prices are amounts stipulated by bidders for Owner-solicited unit prices which can be stated as additions for extra work, deductions for deleted work or no change to the Contract Price. Without limiting its rights under the Request for Tenders, the Owner reserves the right to accept or reject any or all of the unit prices. Unit prices do not include HST, but include all other eligible taxes. These amounts shall be irrevocable for the period of the Contract.

1.7 PROVISIONAL ITEMS

.1 The price for provisional items (when requested in the Bid Form) shall include all labour, materials, Products, equipment, services and respective overhead, profit, taxes (excluding HST), disbursements and related charges required for substituting, deleting or changing of materials, Products and/or construction from those shown or specified in the Contract and shall represent the total amounts which will be deducted from the Contract Price (as noted for each item).

1.8 LUMP SUM PRICES

.1 Lump sum prices (when requested in the Bid) shall be included in the Contract Price.

.2 Lump sum prices shall include all labour, materials, Products, equipment, services, and respective overhead, profit, taxes (excluding HST), disbursements and related charges required to provide these items and represent total amounts in the Contract Price.

1.9 CHANGES IN THE WORK DUE TO A SUPPLEMENTAL INSTRUCTION

.1 Supplemental Instructions issued by the Consultant do not normally include any change in Contract Price or in Contract Time.

.2 If, in the opinion of the Contractor, performance of the Supplemental Instruction will result in an increase or decrease to the Contract Price or to the Contract Time, the Contractor shall, within 10 Working Days of receipt of the Supplemental Instruction, provide the Consultant with Notice in Writing of the cause and duration of the delay and of any increase in Contract Price. Failure to provide the Notice in Writing shall be deemed acceptance of the Supplemental Instruction by the Contractor without adjustment in the Contract Price or Contract Time.

1.10 CONTRACT MODIFICATION PROCEDURES

.1 Conform to Part 6 CHANGES IN THE WORK of the General Conditions.

.2 Further to PART 6 CHANGE SIN THE WORK of the General Conditions, promptly and no later than 10 Working Days after becoming aware of circumstances which may require a change in Work or other directions, give written notice to the Consultant outlining such circumstances and requesting proposed change. Do not perform any Work in the affected area that would prevent the Consultant from properly evaluating circumstances and proposed change, without obtaining written approval of the Consultant. The Consultant will act promptly to give the Contractor directions so the Work is not unreasonably delayed.

.3 The Contractor shall review the Contract Documents and shall report promptly to the Owner and the Consultant any error, inconsistency, or omission the Contractor may discover. If the Contractor does discover any error, inconsistency, or omission in the Contract Documents, the Contractor shall not proceed with the Work affected until the error, inconsistency or omission has been addressed and in dealing with such error, inconsistency or omission the Contractor shall co-operate with the Owner in good faith to resolve such errors, inconsistency or omission so as to avoid any increase in the Contract Price or delay in the progress of the Work

1.11 CONTEMPLATED CHANGE ORDER, CHANGE DIRECTIVE AND CHANGE ORDER

.1 Conform to Part 6 CHANGES IN THE WORK of the General Conditions.

.2 Any variation in the Contract involving a change in total amount of Contract Price or in Contract Time shall be initiated through the Consultant in the form of a Contemplated Change Order (CCO) describing the Work proposed under variation and requesting a quotation from Contractor. When a Change in the Work is proposed, the Owner or the Consultant shall prepare a Contemplated Change Order (CCO) describing the proposed change(s) and submit the CCO

to the Contractor for consideration. The Contractor shall propose, with the appropriate supporting documentation, its proposed method of adjustment and the amount of adjustment to the Contract Price, if any, and the proposed adjustment in the Contract Time, for the work included in the CCO. The Owner and/or the Consultant will assess the merits of the proposed adjustments to the Contract Price and/or the Contract Time in accordance with the process outlined in GC 6.2 – CHANGE ORDER. If the Owner and the Contractor agree to the adjustments in the Contract Price and/or Contract Time or the method to be used to determine the adjustments, such agreement shall be effective immediately and shall be recorded in a Change Order.

.3 The value of a change shall be determined in one or more of the methods described in paragraph 6.2.4 of GC 6.2 – CHANGE ORDER, as directed by the Consultant or the Owner.

.4 When providing copies of CCOs or Change Directives (CDs) to the Contractor, the Consultant shall provide three (3) copies of such CCOs or CDs, including associated Drawings and Schedules.

.5 Immediately inform all relevant Subcontractors and Suppliers of the proposed Change in the Work.

.6 The Contractor shall not proceed with any changes in the Work until it has received a copy of the Change Order or Change Directive. No claims for changes in the Contract Price or Contract Time shall be valid unless provided for by the Owner in the Change Order.

.7 Upon receipt of a CD, begin the work described therein without delay and prepare a quotation for the Work. If the Owner requires the Contractor to proceed with a Change in the Work prior to the Owner and the Contractor agreeing upon the adjustments to the Contract Price and/or the Contract Time, the Owner or the Consultant shall issue a Change Directive. Upon receipt of the Change Directive, the Contractor shall promptly proceed to execute the Work described in the Change Directive. The adjustment in the Contract Price for a change carried out by way of a Change Directive shall be determined in one of the methods described in paragraph 6.3.2 of GC 6.3 – CHANGE DIRECTIVES.

.8 Submit a quotation within 20 Working Days of receipt of the CCO or CD issuance and return one copy of the original CCO or CD with the quotation for the Work.

.9 Include all work described in the CCO and all other work caused, however incidental it may be, by the proposed change. Once the CO is issued by Owner, no further claims for extra costs or time extensions will be accepted.

.10 If the quotation received is unacceptable, the Consultant will reject the quotation and request a revised quotation from the Contractor.

.11 When the Consultant deems a quotation as acceptable, it will prepare a CO.

.12 The value of changes in Work shall be determined and processed in accordance with the General Conditions of the Contract.

1.12 APPLICATION FOR PROGRESS PAYMENTS AND PROGRESS PAYMENTS

.1 Conform to the requirements of Article A-5 – PAYMENT of the Agreement Between Owner and Contractor and GC 5.2 APPLICATIONS FOR PROGRESS PAYMENT of the General Conditions.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 PROJECT COORDINATION

.1 Refer to Section 01 29 00 – Payment Procedures regarding Contract modification procedures.

.2 Conform to the requirements of PART 3 – EXECUTION OF THE WORK of the General Conditions of the Contract,

.3 Study the Contract Documents to determine the extent of the Work. Coordinate the scope and extent of work to be performed by each trade. Neither organization of Specifications into divisions and CSC/CSI 3-part Section format nor arrangements of Drawings, schedules and standard Drawings shall affect in any way the Contractor's control in, or diminish its responsibility for, dividing the Work or establishing each trade's scope of work. Claims against the Owner for additional compensation arising from disputes between trades due to lack of coordination by the Contractor will not be accepted or considered.

.4 Coordinate the work of each Section of the Specifications as required for satisfactory and expeditious completion of the Work. Take field dimensions required. Take into account existing installations to assure best arrangements of components in available space. Consult with the related Subcontractors before commencing any Work in critical locations. Fabricate and erect the Work to suit field dimensions and field conditions.

.5 Pay the cost of extra work caused by, and make up time lost resulting from, the Contractor’s failure to comply with the requirements of this Section.

.6 Coordinate the work of all trades including construction sequence, schedule and interfacing of all Work. Coordinate the Work as required to incorporate metric modular components. Coordinate the work of each trade as required for satisfactory and expeditious completion of the Work. Ensure components to be built in or recessed are supplied promptly with setting Drawings and other related information pertinent to the installation of such components.

.7 Cooperate and coordinate with the Consultant for moving the Owner's equipment into the building when the Work or a substantial part thereof is ready for use for the purpose intended.

1.4 DOCUMENTS ON SITE

.1 Maintain at the Site, one copy of each of the following documents: a

.1 Contract Drawings.

.2 Specifications.

.3 Addenda.

.4 Reviewed shop drawings.

.5 List of outstanding Shop Drawings.

.6 Contemplated Change Orders.

.7 Change Orders.

.8 Change Directives.

.9 Site instructions.

.10 Other modifications to the Contract.

.11 Field test reports.

.12 Copy of approved work schedule and progress schedules.

.13 Health and safety plan and other safety related documents.

.14 Manufacturer's installation and application instructions.

.15 Progress photographs.

.16 As-built drawings.

.17 Minutes of Site meetings.

.18 Other documents as specified in the Contract Documents.

1.5 START-UP MEETING

.1 A start-up meeting shall be held and presided over by the Consultant after award of the Contract.

.2 Attendees of the start-up meeting shall include:

.1 Consultant(s)

.2 Contractor

.3 Contractor's superintendent

.4 Subcontractors (mechanical, electrical)

.5 Others as appropriate.

.3 The agenda of the start-up meeting shall include, at a minimum, the following:

.1 list of major Subcontractors and Suppliers;

.2 tentative construction progress schedules;

.3 start date, submission of schedules and long term delivery items;

.4 insurance certificates, cash flow schedule, construction schedule, Shop Drawing submission schedule, bonds excluding Harmonized Sales Tax (HST), trade breakdown including value for close-out, workplace and safety and insurance board clearance certificate and project sign;

.5 critical work sequencing;

.6 major equipment and Product deliveries and priorities;

.7 designation of responsible personnel;

.8 building permit status;

.9 procedures for maintaining Record Documents;

.10 use of premises including office, keys, work areas, storage areas, Owner's requirements (e.g., storage delivery, path of construction activities by vehicle and by foot, carts, exterior and interior washrooms, bin location), construction facilities, controls, temporary hoarding,

dust partitions, parking, hours, noisy work, smoking, cell phone usage and construction aids;

.11 construction scheduling (particularly drying time for concrete slabs);

.12 temporary utilities;

.13 safety and first-aid procedures;

.14 security procedures;

.15 housekeeping procedures; and

.16 interference drawings submission and review

1.6 SITE COORDINATION AND PROGRESS MEETINGS

.1 Conduct Site meetings at regular intervals (every 2 weeks). The Owner, through the Consultant, also reserves the right to call additional special emergency Site meetings on short notice without any additional cost to the Owner.

.2 Attendees of the Site coordination and progress meetings shall include:

.1 Contractor's project manager and Site superintendent;

.2 mechanical and electrical Subcontractors;

.3 Subcontractors invited by the Contractor; and

.4 Owner and/or Consultant(s).

.3 Meetings shall be chaired by the Contractor.

.4 The Contractor shall prepare an agenda for meetings.

.5 Distribute written notice of each meeting a minimum 7 Days in advance of the meeting date, stating the time and place, to all persons whose presence is required.

.6 Make physical arrangements for meetings.

.7 Record minutes and attendees (include significant proceedings and decisions in the minutes).

.8 Reproduce and distribute copies of minutes within 3 Working Days after each meeting to anyone who attended the meeting, to anyone affected by decisions made at meeting, and to the Consultant.

.9 Ensure representatives of the Contractor, Contractor's consultants, Subcontractors and Suppliers attending meetings are qualified and authorized to act on behalf of each entity they represent.

.10 Ensure relevant information is available to allow meetings to be conducted efficiently.

.11 The agenda of the Site coordination and progress meetings shall include, at a minimum, the following:

.1 Review construction schedule to ensure rapid and efficient completion of the Work in accordance with Contract requirements. Keep Consultant informed of progress, of delays, and of potential delays during all stages of the Work.

.2 Review, approve and correct minutes of the previous meeting.

.3 Review Work progress since previous meeting.

.4 Review field observations, problems and conflicts.

.5 Review issues which may impede construction progress schedule.

.6 Review of off-Site fabrication and delivery schedules.

.7 Review submittals schedules.

.8 Review mock-up and sample installation requirements and schedules.

.9 Review corrective measures and procedures to maintain the Work schedule.

.10 Review quality standards.

.11 Review pending changes and substitutions.

.12 Review any other relevant business.

1.7 WORK SCHEDULE

.1 Conform to the requirements of GC 3.5 – CONSTRUCTION SCHEDULE of the General Conditions of the Contract.

.2 Prior to commencement of the Work, submit to the Owner and Consultant a detailed construction schedule indicating the critical path for the Project, using “Microsoft Project” or equivalent, demonstrating that the Work will be performed in conformity with the Contract Time, and shall conform to the phasing and sequencing requirements for the Work as set out in the Contract Documents or as otherwise required by the Consultant or the Owner, including, without limitation, a Products delivery schedule with respect to the Products whose delivery is critical to the schedule of the Work. The construction schedule shall have activities itemized to enable Contractor and Consultant to monitor progress of the Work.

.3 The Construction Schedule shall indicate at a minimum, without limitations, dates for the following items:

.1 erection and dismantling of temporary facilities,

.2 submission of Shop Drawings for the various divisions of the Work,

.3 submission of samples and installation dates for mock-ups and sample installations,

.4 commencement and completion of each major division of Work (including work to be done by Subcontractors),

.5 critical work sequencing,

.6 drying time for concrete slabs to allow for placement of moisture sensitive floor coverings,

.7 major equipment deliveries and priorities, and

.8 Substantial Performance of the Work and Total Performance of the Work dates.

.4 Update and resubmit the Construction Schedule to the Consultant on a monthly basis.

1.8 CONTRACTOR'S PERSONNEL AND SUBCONTRACTORS

.1 Conform to GC 3.6 – CONTRACTOR’S PERSONNEL COMMITMENT of the General Conditions of the Contract.

.2 Submit to the Consultant a complete list of the Contractor's Subcontractors with addresses, telephone numbers and personnel. along with Contractor's list of personnel and emergency contact information. The Contractor shall provide the Owner and the Consultant with the names, addresses and telephone numbers of the Project Manager, the Site Supervisor and other responsible field persons who may be contacted for emergency and other reasons during non-working hours.

.3 Ensure compatibility within the team of Subcontractors. The Owner takes no responsibility for the compatibility or incompatibility (labour and otherwise) of Subcontractors and Suppliers employed by the Contractor.

.4 Personnel Appointment

.1 Provide full time qualified, skilful and efficient Site superintendent staff, with a minimum of 5 years of experience in projects of comparable type and complexity, continuously during execution of the Work. Prior to commencement of the Work, the Contractor shall select a competent and experienced full time Project Manager who shall be engaged in the Work at all times, and a competent and experienced full time Site Supervisor who shall be in attendance at the Place of the Work at all times. Both the Project Manager and the Site Supervisor shall be Gold Seal Certified or equivalent. The Project Manager shall have full responsibility for the prosecution of the Work, with full authority to act in all matters as may be necessary for the proper coordination, supervision, direction and technical administration of the Work, who shall attend site meetings in order to render reports on the progress of the Work and who shall have authority to bind the contractor in all matters related to the Contract. The Project Manager and Site Supervisor shall be satisfactory to the Owner and shall not be changed except for good reason and with the prior written approval of the Owner.

.2 The Contractor may not change the Project Manager or its Site Supervisor without the Owner's prior written approval which shall not be unreasonably withheld. Further, the Contractor shall not employ or continue to employ on the Work anyone to whom the Owner may reasonably object.

.3 The Project Manager and Site Supervisor shall represent the Contractor at the Place of the Work and notices and instructions given to the Project Manager and/or the Site Supervisor shall be held to have been received by the Contractor.

1.9 GENERAL REVIEW

.1 The Consultant shall perform general review of the Work for general conformance with Contract Documents, Ontario Building Code and Authorities Having Jurisdiction. Review includes review of Shop Drawings, review of field work and review of reports produced by various inspection and testing agencies.

.2 Record each review as well as inspection and testing reports in a manner suitable for inclusion in closeout documentation and submission at completion of the Contract Work.

1.10 PRODUCT SUBSTITUTION PROPOSALS

.1 After award of the Contract, Product substitution proposals will not be reviewed except in cases where written proof from Product manufacturer/distributor has been submitted to verify that:

.1 specified Products are unavailable (providing reasons why); and

.2 specified Products were ordered in advance and in accordance with manufacturer's recommendations for lead time but timely delivery of specified Products is not possible in order to maintain the Construction Schedule.

.2 Submit the following for each Product substitution proposal:

.1 Shop Drawings (including full details);

.2 samples; and

.3 difference in price, if any, in form of certified quotations of both selected and proposed substitutions.

.3 Submit the Contractor's written acceptance of use of substituted Products and certification that substituted Products:

.1 will not exceed space requirements allocated for originally specified Products or, if they do, Contractor is including with substitution submission, design drawings to accommodate the substituted Product;

.2 are compatible with and inert to adjacent materials;

.3 will not affect the Construction Schedule due to delays in delivery and Installation.

.4 have been priced to include design adjustments required to accommodate substituted Products.

.4 Proposed substitutions require the Consultant's review and the Owner's and Consultant's acceptance.

1.11 CERTIFICATES AND TRANSCRIPTS

.1 Immediately after receiving notification of award of Contract, submit Workplace Safety and Insurance Certificate status, transcription of insurances and other certificates and transcripts required by Contract Documents or Consultant.

1.12 SUBMITTAL PROCEDURES

.1 Submit the manufacturer's literature and data sheets for each type of material provided under this Section. Data sheets shall provide all required information. Submit three (3) copies of detailed instructions for maintaining, preserving and keeping materials in clean and safe conditions and give adequate warning of maintenance practices or materials that are detrimental to the specified materials. Submit the manufacturer's installation instructions.

.2 Submit to the Consultant, and to Authorities Having Jurisdiction as required, documents listed in the Contract Documents to be submitted for review. Submit with reasonable promptness and in an orderly sequence so as not to cause any delay in the Work. Failure to submit documents with ample time for review is not considered sufficient reason for an extension of Contract Time or extra costs and no claim for an extension of Contract Time or increase to Contract Price by reason of such default shall be allowed. Final approval of Authorities Having Jurisdiction, where required, shall be obtained prior to submitting Shop Drawings or other documentation to the Consultant.

.3 Prior to submission to the Consultant, the Contractor shall review all Submittals. Submittals that are not stamped, signed, dated and identified as to the specific Contract will be returned without being examined and shall be considered rejected. Verify field measurements and ensure that the affected adjacent work is coordinated. Confirm and correlate information pertaining to fabrication processes, quantities, techniques of construction and installation and similar information.

1.13 SHOP DRAWINGS

.1 Conform to GC 3.10 SHOP DRAWINGS AND OTHER SUBMITTALS of the General Conditions of the Contract. Conform to any other Shop Drawing submission requirements described in the Specifications, including those related to the Mechanical Divisions as described in Section 20 05 05.

.2 Fabrication: Do not fabricate until Shop Drawings are indicated as "REVIEWED FOR GENERAL DESIGN" or "REVIEWED AS NOTED".

.3 Consultant's Shop Drawings Review:

.1 The Consultant's review of Shop Drawings is for ascertaining conformance with the general design concept and general arrangement only. The Consultant's and does not constitute the approval of items which remain the Contractor's responsibility.

.2 Without limitation, among other things, the Contractor remains responsible for:

.1 detail design inherent in Shop Drawings;.

.2 errors and omissions in Shop Drawings;
.3 meeting the requirements of the Contract Documents.
.4 confirmed and correlated Site dimensions;
.5 information that pertains solely to fabrication processes, techniques of construction and installation including without limitations securement, fastening and anchoring requirements; and
.6 co-ordination of the work of all trades.

.4 **Shop Drawing Requirements:**

.1 Indicate the following minimum requirements, as applicable:

.1 plans, sections and details;
.2 verified Site dimensions;
.3 materials thicknesses and finishes;
.4 methods of setting and sealing;
.5 methods of securing, fastening and anchoring including field connections.

.2 Do not make Product substitutions or alterations on Shop Drawings without the Consultant's written acceptance in accordance with Product substitution proposal process. Replace unaccepted Product substitutions and complete the Work in accordance with Contract Documents.

.3 Determine which Shop Drawings the building department of the City of Newmarket will require for their approval and submit two (2) final copies of each Shop Drawing to the building department. Obtain approval and pay the associated charges and fees.

.5 **Shop Drawing Procedures:**

.1 Execute the following, prior to submitting the Shop Drawings to the Consultant:

.1 review, check and mark-up shop drawings with comments and revisions;
.2 stamp each Shop Drawing;
.3 insert applicable Specification Section reference (for example "10 28 00" for Section 10 28 00, Accessories);
.4 insert next consecutive Shop Drawing number within that Section (for example, "002" for second drawing within Section 10 28 00); and
.5 insert Contractor's review date and signature of Contractor's reviewer.

.2 At the Consultant’s discretion, an electronic Shop Drawings review process may be instituted for some or all documents. In this case, no hard copies will be returned to the Contractor. An electronic Shop Drawings procedure does not release the Contractor from providing hard copies of As-Built Drawings and maintenance and operations manuals as specified in the Contract Documents.

.3 Re-productions of the Consultant’s Contract Documents are not acceptable as Shop Drawings.

.4 Shop Drawings not conforming to above criteria will be automatically returned to the Contractor without review. Any resulting delays will be the Contractor's responsibility.

.5 Shop Drawings submitted without specified professional engineer design and stamp will be automatically returned to the Contractor without review. Any resulting delays will be the Contractor's responsibility.

.6 Do not resubmit Shop Drawings indicated as "REVIEWED FOR GENERAL DESIGN" and "REVIEWED AS NOTED".

.7 Resubmit Shop Drawings indicated as "REVISE AND RESUBMIT" with required changes and comments addressed. Insert the letter "R" after shop drawing number on resubmitted

shop drawings, re-date and re-sign. Identify revisions from earlier submissions graphically and other additions or revisions on revised shop drawings;

.8 Provide all Shop Drawings required by the Contract Documents.

1.14 ACCESS PANELS AND ACCESS DOORS

.1 Before commencing mechanical or electrical work, prepare a set of ceiling plan drawings indicating the exact locations and sizes of access panels and doors.

.2 Submit drawings to Consultant for review. Allow the Consultant to revise layout or quantity of access doors and panels, by relocating related building services a maximum of 2000 mm (6' - 7"), at no extra cost to the Owner.

.3 Finish access panels and doors to match adjacent wall and/or ceiling finish unless otherwise specified or indicated in the Contract Documents.

1.15 INTERFERENCE DRAWINGS

.1 Installation shall proceed in accordance with final approved interference drawings. Any work carried out without final approved interference drawings and which does not meet design requirements and specified ceiling heights shall be removed, re-coordinated and re-installed at no cost to the Owner.

.2 Prepare drawings indicating the relationship between new and existing and/or unforeseen conditions at all areas in new construction prior to the commencement of any work in the area.

.3 For all locations, before commencing installation, prepare drawings showing relationship of, but not limited to: structure, electrical, cable trays, communication system, duct work, conduit, piping, sprinklers, ceiling supports and framing.

.4 Indicate locations of visible items such as air handling outlets, light fixtures, smoke detectors, sprinkler heads, communication grilles and access panels occurring at these locations. Do not proceed with work until interferences in the area are resolved. Do not lower ceiling heights in area without the Consultant’s review and approval.

.5 Ensure interference drawings are initialed by a responsible person of each Subcontractor involved and by the Contractor. Submit the drawings to the Consultant for review and record purposes.

.6 Be responsible for the preparation and coordination of interference drawings. Obtain input from all Subcontractors involved.

1.16 COLOURS

.1 The Consultant will select colours and gloss values. Obtain direction on colours and gloss values in advance. If requested, submit samples for colour and gloss selection. Follow the colour schedule to be provided by the Consultant and use the colours and glosses designated.

1.17 SAMPLES

.1 Prior to fabrication or the supply of Products, submit samples to the Consultant for review. Remove and discard Products of which samples have not been reviewed and accepted by Consultant.

.2 Provide samples required by the Contract Documents.

1.18 WORKPLACE HAZARDOUS MATERIALS INFORMATION SYSTEM (WHIMIS) REQUIRMENTS

.1 Comply with Workplace Hazardous Materials Information System (WHMIS) in accordance with the *Occupational Health and Safety Act* (Ontario) (OHSA) requirements.

.2 Provide, before commencement of the Work and maintain for the duration of the Contract, a list with current Material Safety Data Sheets (MSDSs) of all hazardous materials proposed for use on the Contract Work.

.3 Provide detailed procedures for safe handling storage and use of hazardous materials. List special precautions and safe clean up and disposal procedures. Conform to the requirements of the *Environmental Protection Act* (Ontario) and other requirements of Authorities Having Jurisdiction for disposal and clean up requirements.

.4 Obtain from Owner, where applicable, a list and MSDSs of hazardous materials that may be handled, stored or used by the Owner's employees and/or Other Contractors retained by the Owner at the Place of the Work.

.5 Ensure those who handle or are likely to handle or be exposed to hazardous materials are fully instructed and trained in accordance with WHMIS requirements.

1.19 RECORD DRAWINGS AND SPECIFICATIONS

.1 Keep one set of printed Drawings and Specifications on Site for use in maintaining record information. Ensure these Drawings and Specifications are kept on Site at all times and available for review by Owner and/or Consultant at any given time.

.2 Accurately and neatly record deviations from Contract Documents, including addenda, Supplemental Instructions and Change Orders, caused by Site conditions.

.3 Record information concurrently with construction progress. Do not conceal actual work until the required information is recorded.

.4 Legibly indicate each item to record the actual construction, including field changes of dimensions and details, and details or information not on the original Drawings.

.5 Catalogue field review reports and cross reference to the relevant trade, building area and component. Submit inspection and testing reports in accordance with the requirements of the Specifications. Unsatisfactory inspection and testing results shall be highlighted and Supplemental Instructions shall be issued by the Consultant.

.6 Identify Drawings as "Project Record Copy", maintained and available for inspection on Site by the Consultant.

.7 Prior to applying for the Certificate of Substantial Performance, submit record drawings and Specifications to the Consultant in paper and electronic format.

1.20 AS-BUILT DRAWINGS AND SPECIFICATIONS

.1 Refer to Section 01 77 00 - Closeout Procedures for specified requirements.

1.21 OPERATION AND MAINTENANCE DATA

.1 Refer to Section 01 77 00 - Closeout Procedures for specified requirements.

END OF SECTION

Part 1 General

1.1 RELATED REQUIREMENTS

.1 Section 01 78 00 — Closeout Submittals

1.2 REFERENCE STANDARDS

.1 Not Used

1.3 ADMINISTRATIVE

.1 Submit to Consultant submittals listed for review. Submit promptly and in an orderly sequence to not cause delay in Work. Failure to submit in ample time is not considered sufficient reason for the extension of Contract Time and no claim for extension by reason of such default will be allowed.

.2 Do not proceed with Work affected by submittal until review is complete.

.3 Present shop drawings, product data, samples and mock-ups in SI Metric units.

.4 Where items or information is not produced in SI Metric units converted values are acceptable.

.5 Review submittals prior to submission to the Consultant. This review represents that necessary requirements have been determined and verified, or will be, and that each submittal has been checked and co-ordinated with requirements of Work and Contract Documents. Submittals not stamped, signed, dated and identified as to specific project will be returned without being examined and considered rejected.

.6 Notify Consultant, in writing at the time of submission, identifying deviations from requirements of Contract Documents stating reasons for deviations.

.7 Verify field measurements and affected adjacent Work are coordinated.

.8 The contractor's responsibility for errors and omissions in submission is not relieved by the Consultant’s review of submittals.

.9 The contractor's responsibility for deviations in submission from requirements of Contract Documents is not relieved by the Consultant review.

.10 Keep one reviewed copy of each submission on site.

1.4 SHOP DRAWINGS AND PRODUCT DATA

.1 The term "shop drawings" means drawings, diagrams, illustrations, schedules, performance charts, brochures and other data which are to be provided by the Contractor to illustrate details of a portion of Work.

.2 Submit drawings stamped and signed by a professional engineer registered or licensed in the Province of Ontario, Canada.

.3 Indicate materials, methods of construction and attachment or anchorage, erection diagrams, connections, explanatory notes and other information necessary for the completion of Work. Where articles or equipment attach or connect to other articles or equipment, indicate that such items have been coordinated, regardless of the Section under which adjacent items will be supplied and installed. Indicate cross references to design drawings and specifications.

.4 Allow 3 days for the Consultant's review of each submission.

.5 Adjustments made on shop drawings by the Consultant are not intended to change the Contract Price. If adjustments affect the value of Work, state such in writing to the Consultant prior to proceeding with Work.

.6 Make changes in shop drawings as the Consultant may require, consistent with Contract Documents. When resubmitting, notify the Consultant in writing of revisions other than those requested.

.7 Accompany submissions with transmittal letter containing:

- .1 Date.
- .2 Project title and number.
- .3 Contractor's name and address.
- .4 Identification and quantity of each shop drawing, product data and sample.

.8 Submissions include:

- .1 Date and revision dates.
- .2 Project title and number.
- .3 Name and address of:
  - .1 Subcontractor.
  - .2 Supplier.
  - .3 Manufacturer.
- .4 Contractor's stamp, signed by the Contractor's authorized representative certifying the approval of submissions, verification of field measurements and compliance with Contract Documents.
- .5 Details of appropriate portions of Work as applicable:
  - .1 Fabrication.
  - .2 Layout, showing dimensions, including identified field dimensions, and clearances.
  - .3 Setting or erection details.
  - .4 Capacities.
  - .5 Performance characteristics.
  - .6 Standards.
  - .7 Operating weight.
  - .8 Wiring diagrams.

.9 Single line and schematic diagrams.

.10 Relationship to adjacent work.

.9 After the Consultant's review, distribute copies.

.10 Submit an electronic copy of shop drawings for each requirement requested in specification Sections and as the Consultant reasonably requests.

.11 Submit electronic copies of product data sheets or brochures for requirements requested in specification Sections and as requested by the Consultant where shop drawings will not be prepared due to the standardized manufacture of the product.

.12 Submit electronic copies of test reports for requirements requested in specification Sections and as requested by the Consultant.

.1 Report signed by an authorized official of the testing laboratory that material, product or system identical to material, product or system to be provided has been tested in accord with specified requirements.

.2 Testing must have been within 3 years of the date of contract award for the project.

.13 Submit electronic copies of certificates for requirements requested in specification Sections and as requested by the Consultant.

.1 Statements printed on the manufacturer's letterhead and signed by responsible officials of the manufacturer of product, system or material attesting that product, system or material meets specification requirements.

.2 Certificates must be dated after the award of the project contract complete with the project name.

.14 Submit electronic copies of the manufacturer's instructions for requirements requested in specification Sections and as requested by the Consultant.

.1 Pre-printed material describing the installation of product, system or material, including special notices and Safety Data Sheets concerning impedances, hazards and safety precautions.

.15 Submit electronic copies of the Manufacturer's Field Reports for requirements requested in specification Sections and as requested by the Consultant.

.16 Documentation of the testing and verification actions taken by the manufacturer's representative to confirm compliance with the manufacturer's standards or instructions.

.17 Submit electronic copies of Operation and Maintenance Data for requirements requested in specification Sections and as requested by the Consultant.

.18 Delete information not applicable to the project.

.19 Supplement standard information to provide details applicable to the project.

.20 If upon review by the Consultant, no errors or omissions are discovered or if only minor corrections are made, copies will be returned and fabrication and

installation of Work may proceed. If shop drawings are rejected, a noted copy will be returned and resubmission of corrected shop drawings, through the same procedure indicated above, must be performed before fabrication and installation of Work may proceed.

.21 The review of shop drawings by the Consultant is for the sole purpose of ascertaining conformance with the general concept.

.1 This review shall not mean that the Consultant approves detailed design inherent in shop drawings, responsibility for which shall remain with the Contractor submitting same, and such review shall not relieve Contractor of responsibility for errors or omissions in shop drawings or of responsibility for meeting requirements of construction and Contract Documents.

.2 Without restricting the generality of the foregoing, the Contractor is responsible for dimensions to be confirmed and correlated at the job site, for information that pertains solely to fabrication processes or techniques of construction and installation and for co-ordination of Work of sub-trades.

1.5 PHOTOGRAPHIC DOCUMENTATION

.1 Submit an electronic copy in the colour of jpg format and fine as directed by the Consultant.

.2 Project identification: name and number of project and date of exposure indicated.

.3 Number of viewpoints: Not Applicable

.1 Viewpoints and their location as determined by the Consultant.

.4 Frequency of photographic documentation: as directed by the Consultant.

.1 Not Used

1.6 CERTIFICATES AND TRANSCRIPTS

.1 Immediately after the award of the Contract, submit the Workers' Compensation Board status.

.2 Submit transcription of insurance immediately after the award of the Contract.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 ENVIRONMENTAL PRACTICES

.1 Implement environmentally sound practices by incorporating Products that lessen the burden on environment in production, use and final disposition. Support the implementation of reduction, reuse and recycling strategies and use of environmentally sound Products. Promote the use of environmentally responsible packaging practices by reducing and/or eliminating Products with excessive packaging in this Project.

.2 Employ environmentally sound Products which are made, used and disposed of in a manner that significantly reduces harm to environment. Product selection criteria shall be based on the requirements of CSA Z760 and CSA Z762. Use Products which improve energy efficiency in its production and use, reduces hazardous by-products, uses recycled material, and/or the Product itself can be recycled or reused and/or is in some way environmentally benign.

1.4 PROTECTION OF NATURAL ENVIRONMENT

.1 Submit to the Consultant an environmental plan including a sketch showing areas proposed to be used for construction storage, hoarding locations and types, silt fence locations and types, tree protection and areas for implementation of site separation of construction waste, and dimensions of such areas and location and size of trees within and adjacent to these areas.

1.5 SITE REVIEW

.1 The Ministry of the Environment and other Authorities Having Jurisdiction may visit the Site periodically during construction. Where the Work does not comply with environmental protection requirements, said authorities have the power to issue a stop work order. The Consultant's acceptance of the Work may be withheld until the Ministry of the Environment or other Authorities Having Jurisdiction have issued their approval of the Work.

1.6 SURFACE DRAINAGE AND WATERCOURSES

.1 Maintain surface water drainage of the Site and external properties during construction. The Contractor shall be responsible for any damage to Site or external properties due to negligence.

.2 Incorporate appropriate retention, detention and settling ponds, or similar methods reviewed by the Consultant, to control surface water run-off to adjacent ditches or other watercourses and to prevent oil, sediment or de-icing materials being carried into such ditches and/or watercourses. The tested quality of water discharged to ditches and/or watercourses shall not be of worse quality than that present in ditches and/or watercourses prior to any discharge of Site surface

water. Monitor and test discharge water at least weekly and provide copies of the test results to the Consultant.

.3 Locate and protect stockpiles of semi-permanent nature to satisfaction of Authorities Having Jurisdiction to ensure minimum environmental interference.

1.7 NOISE CONTROL

.1 Comply with municipal noise by-laws, verify with local Authorities Having Jurisdiction and in addition, to hours restricted for noisy work to avoid the disruption of normal activities.

.2 Noise levels shall not exceed following values:

.1 Pneumatic jackhammers: 90 dB.

.2 Machinery and compressors: 70 dB.

.3 Trucks, cranes, bulldozers: 70 dB.

.4 Other noise sources: 70 dB.

.3 Equip vehicles and equipment with efficient noise attenuation devices (mufflers), sound deflectors as required to minimize and maintain noise levels in vicinity of the Site below the preceding limits measured 3 m (10') from the source.

.4 Where necessary, place noise attenuation devices (barriers) around stationery pumps and compressors.

1.8 SITE DUST CONTROL

.1 Undertake control measures to prevent nuisances due to dust in any phase of construction. Execute the Work using methods that minimize the raising of dust from construction operations.

.2 Provide positive means to prevent airborne dust from dispersing into the atmosphere. Use water misting for dust and particulate control.

.3 Prevent dust from spreading to adjacent property sites.

.4 If Contractor’s dust and particulate control measures are not sufficient to the Authorities Having Jurisdiction for controlling dust particulate into atmosphere, shut down the Work activities at no expense to Owner and only continue the Work after resolving inadequacies with procedures acceptable to Authorities Having Jurisdiction. Make the necessary changes to operations prior to resuming any excavation, handling, processing or any other related Work that may cause the release of dust or particulates.

.5 Keep the application of calcium chloride to a minimum. Frequent applications of water are the preferred method when in close proximity to watercourses. The use of chemicals for dust control will not be permitted.

1.9 WASTE MANAGEMENT PRACTICES

.1 Prepare and submit to the Consultant, prior to commencing the Work, a Waste Audit Report and Waste Reduction Plan in accordance with the Ministry of Environment and O. Reg. 102/94 Waste Audits and Waste Reduction Work Plans and O. Reg. 103/94 Industrial, Commercial and Institutional Source Separation Programs made under the *Environmental Protection Act* (Ontario).

.2 Apply waste management activities of reduction, reuse and recycling of waste materials during the Work.

.3 Ensure that source separation is executed in accordance with O. Reg. 103/94, for purposes of recycling the following materials:

.1 corrugated cardboard;

.2 wood waste (i.e. non-treated dimensional lumber, manufactured wood);

.3 non-painted gypsum board;

.4 ferrous metals;

.5 concrete; and

.6 brick.

1.10 WASTE DISPOSAL

.1 Do not burn rubbish on Site. Obtain approval from the Consultant and use the following off-Site disposal alternatives, depending upon materials involved: burying, composting, recycling, municipal collection, or local dump or sanitary landfill site.

.2 Handle hazardous materials in accordance with the requirements of the Authorities Having Jurisdiction.

.1 Designate areas for storage of chemicals and hazardous wastes with security of access.

.2 Plan and provide for the prevention and containment of spills from entering drains.

1.11 EQUIPMENT FUELLING, MAINTENANCE AND STORAGE

.1 Obtain acceptance of the refueling areas from the Authorities Having Jurisdiction.

.2 Submit procedures to the Consultant for interception, rapid clean-up and disposal of fuel spillages for review prior to starting the Work.

.3 Ensure materials required for clean-up of fuel spillages are readily accessible on Site at all times.

.4 Carry out the refueling of equipment at refueling areas acceptable to the Consultant and the Authorities Having Jurisdiction.

.5 Ensure water used for cleaning of equipment does not drain into streams, lakes or watercourses. Do not empty fuel, lubricants and/or pesticides into any watercourse, or on ground.

.6 Clean construction equipment prior to entering public roadways to prevent littering. Debris from cleaning equipment shall not be permitted into storm sewers or watercourses.

.7 Store equipment and materials in and orderly manner and in location acceptable to the Owner.

1.12 SPILL REPORTING

.1 In event of spill or other emission of pollutant into natural environment, notify:

.1 The local office of the Ministry of the Environment and Spill Action Centre (SAC);

.2 The Local Municipality within the boundaries of which the spill occurred;

.3 The person having control of pollutant, if known, of spill, of circumstances surrounding the spill and of any action taken or intended to be taken; and

.4 The Owner’s representative.

.2 Comply with the requirements set out in GC 9.7 – Spills Reporting of the General Conditions of the Contract.

1.13 CONTINGENCY PLAN FOR CONTROL AND CLEAN-UP OF SPILL

.1 Prior to commencing the Work, prepare and submit a contingency plan to the Consultant for control and clean-up of spills. Include, at a minimum, the following in the contingency plan:

- .1 names and telephone numbers of persons in local municipalities and Ministry of the Environment to be notified forthwith of spill;
- .2 names and telephone numbers of representatives of fire, police and health departments of local municipalities who are responsible to respond to emergency situation;
- .3 names and telephone numbers of companies experienced in control and clean-up of hazardous materials that would be called upon in emergency involving spill;
- .4 provisions for spills of hazardous or unknown materials (for example, puncturing an unmarked drain during excavation); and
- .5 proposal for immediate containment and control of spill, clean up procedures to be initiated immediately and any other action to be taken to mitigate the potential environmental damage while awaiting additional assistance.

.2 Be responsible for preparing, implementing, directing and supervising the contingency plan.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Quality Requirements shall include, but not be limited to the following:

.1 Regulations requirements;

.2 Quality assurance:

.1 Professional Engineer's service;
.2 Ontario land surveyor's service;
.3 welder's qualifications;
.4 building science requirements;

.3 Design integrity and architectural requirements:

.1 air/vapour barrier integrity;
.2 continuity of fire separations;
.3 acoustic partitions /ceilings/steel doors;

.4 Quality Control:

.1 quality control system protocol;
.2 testing and inspection services;
.3 source quality control;
.4 field quality control;
.5 project mockups.

1.4 REGULATIONS REQUIREMENTS

.1 Where the Contract Documents do not cover a particular requirement which is covered by the Ontario Building Code (the "OBC" or "Code"), comply with the OBC and by-laws of other Authorities Having Jurisdiction, including latest amendments thereto. Where the OBC or the Contract Documents do not cover a particular requirement which is covered by the National Building Code, 2015 (hereinafter referred to as "NBC"), as amended, conform to the requirements of NBC including its related supplements. Where the requirements of the Contract Documents exceed Code requirements, satisfy such additional requirements in the Contract Documents.

.2 Conform to NFPA 101, Life Safety Code for exit requirements as applicable.

.3 Conform to the Ontario Fire Code - Ontario Regulation 213/07 (Fire Protection and Prevention Act, 1997 (Ontario) enacted under The Ministry of Community, Safety and Correctional Services, Office of the Fire Marshal's, including latest amendments.

.4 Where material is designated in the Contract Documents for certain application, unless otherwise specified in the Contract Documents, that material shall conform to the standards designated in the OBC and in absence of more restrictive requirements, comply with "Housing and Small Buildings Part 9" of the OBC. Similarly, unless otherwise specified in the Contract Documents and the OBC, installation methods and standards of workmanship shall conform to the standards of Part 9 of the OBC. Where specific requirements for a material are not specified for certain use in the Contract Documents, select from the choice offered in Part 9 of the OBC.

.5 Unless otherwise indicated in the Contract Documents, obtain and pay for all other permits, licences and certificates of inspection. Ensure permits, licenses and certificates included under specific Sections are provided as specified in the Contract Documents. Forward copies of all permits to the Consultant and Owner before commencing the Work that is related to such permits.

.6 Conform to the hours of Work, rates of wages paid, terms of employment and working conditions in accordance with Ontario Fair Wage Program - Labour Conditions for Industrial, Commercial and Institutional Sector Construction Contract. Comply with all requirements of the *Workplace Safety and Insurance Act, 1997* (Ontario), including payments due thereunder.

.7 Apply the *Trades Qualification and Apprenticeship Act, 1997* (Ontario) including latest amendments and regulations, to the performance of this Contract.

1.5 QUALITY ASSURANCE

.1 Study and be aware of principles discussed in above documents in order to understand their significance to the Contract Documents.

.2 **Professional Engineer's Service**:

.1 Generally, Drawings give information on specific shape and dimensions required and in certain cases with load imposed. Provide steel supports and anchorage for the general design indicated, sized to suit specific requirements. Provide bracing as may be required to counter lateral loads and dynamic stresses where the vibration of support equipment may occur.

.2 Comply with the *Building Code Act,* (Ontario), as amended, the OBC, as amended and regulations and by-laws of other Authorities Having Jurisdiction, for the design of all stressed members.

.3 Obtain full time engineering service from a professional engineer licensed to practice in Province of Ontario in the applicable discipline carrying a minimum of $2,000,000.00 professional liability insurance. Employ a structural Professional Engineer to design components with structural elements.

.4 Be responsible for determining sizes, joint spacing to allow thermal movement and loading of components, maximum deflection of individual members.

.5 The responsibilities of the Professional Engineer include, but are not limited to, the following:

.1 production and review of Shop Drawings;
.2 inspection of work during fabrication and erection;
.3 checking that welding conforms to design requirements;
.4 checking fabricated and erected members against specified member shapes;
.5 visual inspection of welded connections including sample checking of joint preparation and fit-up;
.6 sample checking of screwed and bolted joints; sample checking of connections to building structures;
.7 sample checking of stiffeners and bridging;

.8 sample checking that tolerances are not exceeded;
.9 additional inspection and testing of welded connections as required by CSA W59;
.10 general inspection of field cutting and alterations required by other trades;
.11 submission of reports to the Consultant, Contractor and Authorities Having Jurisdiction covering work inspected with details of deficiencies discovered;
.12 stamping and signing of each Shop Drawing; and
.13 Field reviews and contract administration of the specific portion of the Work designed by the Professional Engineer during construction.

.6 The Professional Engineer shall also submit field review reports, in accordance with the requirements of the OBC, for systems designed by a professional engineer retained by the Contractor within three (3) Days of any Site visit. At commencement of the Work, submit "Confirmation of Commitment" forms for the respective discipline satisfactory to the local Authority Having Jurisdiction. The Owner will provide all necessary authorizations for submittal of such forms to local Authority Having Jurisdiction.

.3 **Ontario Land Surveyor's Service**

.1 Engage a registered Ontario land surveyor to lay out the building, to determine unconfirmed dimensions and elevations, to perform other construction work and to provide an as-built survey identifying permanent bench marks. Establish on Site grades, lines, levels, dimensions, and location of existing roads, sidewalks, buried utilities and other similar features on Site. Carefully preserve bench marks, reference points and other reference marks. Submit to the Consultant three (3) certified copies of the as-built survey showing work performed and recorded data.

.4 **Welder's Qualifications**

.1 The Contractor shall execute welding and employ welding firm(s) certified in accordance with CSA W47.1 Division 1 or 2.1 and submit copies of certificates to Consultant prior to start of the Work. The Contractor shall:

.1 Ensure welding operators employed on the Work are qualified in accordance with CSA W47.1 for work as required by Contract and submit copies of certificates to the Consultant prior to the commencement of the Work.
.2 Ensure the inspection/testing company and welding inspector and supervisors meet qualifications in accordance with CSA W178.1 and CSA W178.2 and are certified by the Canadian Welding Bureau in Category (a), Buildings.
.3 Have welding undertaken by companies and welders fully approved under CSA W47.1, Certification of Companies for Fusion Welding of Steel Structures and CSA W59-M, Welded Steel Construction (Metal-Arc Welding) and carry proof of certification while on Site.
.4 Operators shall be qualified "Class O" in accordance with CSA W47.1.

.5 **Building Science Requirements**

.1 Procedures, Sequences and Coordination of Construction:

.1 Employ procedures, sequences and coordination of construction to install the Work in accordance with principles of building science and the requirements listed below.
.2 Provide a continuous, unbroken and non-perforated air and vapour seal to totally enclose the building envelope and to separate the interior and exterior environments. Give particular attention to exterior wall systems, roofing system, junctions of walls and roofs and seals at openings such as doors and windows.
.3 Comply with additional building science requirements as identified in other Specification Sections.
.4 Apply special care at sealed junctions of different Products which make up an airseal system to ensure lasting continuity.

.5 Verify the compatibility of fasteners and adhesives with surfaces to which they are applied.
.6 Fasten and adhere Products making up the airseal system to withstand wind loads required of the exterior cladding system.
.7 Provide airseals and firestopping at miscellaneous penetrations, including mechanical and electrical service penetrations. Accommodate for vibration and thermal movement.
.8 Provide exterior rainscreen assemblies in accordance with building science principles and in accordance with OBC requirements. Compartmentalize rainscreens to reduce air pressure differentials across assemblies.
.9 Provide thermal insulation to the exterior of the vapour barrier. Note that an air/vapour barrier is the same as an airseal system. Eliminate air pockets, channels and other discontinuities.
.10 Minimize thermal bridges.
.11 Apply building science principles to building interior spaces with differing environments, e.g. differing temperature and humidity conditions.
.12 Perform work in a neat and careful manner to retain components plumb, square and straight.
.13 Ensure work is properly related to form close joints and appropriately aligned junctions, edges and surfaces and is free of warp, twist, wind, wave or other irregularities.
.14 Have the manufacturer, supplier or accredited agent inspect the work which incorporates their Products.
.15 Do not permit materials to come in contact with other materials whether in presence of moisture, or otherwise, if conditions will result in corrosion, stain or discolouration or deterioration of the completed work. Provide compatible, durable separators where such contact is unavoidable.

.6 **Air/Vapour Barrier Integrity:**

.1 This Contract incorporates design principles of positive air and vapour leakage control at the building enclosure line. Drawing details illustrate continuity of the air/vapour barrier at penetrating elements such as door, window and louver frames. The barrier system is designed to allow air permeance to leak from the interior of the building to the exterior or to pressure-equalized cavity as specified herein. The Contractor shall:

.1 Provide a continuous, unbroken and non-perforated air and vapour seal to totally enclose building envelope and to separate interior and exterior environments. Provide particular attention to following areas:

.1 Exterior wall systems.
.2 Roofing systems.
.3 Junctions of walls and roofs.
.4 Seals at openings such as doors, windows.

.2 Air/vapour membrane shall have an air permeance of less than 0.02 L/s/m² (0.06 cfm/sq ft) under a pressure differential of 75 Pa (1.56 psf).
.3 Air/vapour membrane shall be able to withstand 2 kPa (42 psf) air pressure from either direction, with no increase in ELA (Equivalent Leakage Air).
.4 Barrier extends nominally from foundation line, vertically along exterior walls and to positive contact with roof air/vapour barrier or roofing membrane as applicable. Continuity also extends to waterproofing at podia areas. Continuity also extends to inner surface of glazing units.
.5 In order to maintain continuity of the envelope, interfacing of various building elements requires close coordination by all trades involved with exterior building elements. Positive mechanical connections and seal of transition medium extending

from primary wall air/vapour barrier to theoretical "insulation line" of window or door frame shall be made with proper construction sequencing established by the Contractor to ensure such interfacing. All such transition installations shall be inspected by the inspection and testing company selected by the Owner prior to concealing with subsequent construction. The testing work shall be paid as a cash allowance item in accordance with Section 01 21 00 - Allowances.

.6 Manufacturers of window and door frames shall ensure correctly designed and positioned metallic legs, extensions or recesses are provided at thermal break line to facilitate connections of rigid or flexible transition medium prior to setting such elements in their allotted openings.

.7 **Continuity of Fire Separations**:

.1 Conform to the following requirements to maintain the continuity of fire separations:

.1 Fire separations may be pierced by openings for electrical and similar service outlets provided such boxes are noncombustible and are tightly fitted.

.2 Where a fire separation is required to be of noncombustible construction terminates at an exterior wall, an underside of a floor, a ceiling or roof structure, or at a floor, , the opening shall be fire stopped with an approved listed material referenced in Section 01 60 00 - Product Requirements.

.2 Combustible members, fastenings and like shall not be used to anchor fixtures to fire separations.

.8 Design Requirements for Post Disaster Buildings:

.1 All new construction associated with this Project is designated under the OBC as "Post-Disaster".

.2 Provide all fitments, restraints and attachment to meet post-disaster design requirements in accordance with OBC for designated seismic category for location of Project as determined by:

.1 OBC (Supplementary Standard SB-1, Climate and Seismic Data);
.2 CAN/CSA S832 requirements.

.3 Seismic Performance:

.1 Design work of this Project (including, without limitation, all appendages, connections, bracings and total structural integrity including foundations) to ensure for safe resistance to withstand seismic motions and other load effects;
.2 Design masonry and stone cladding connections with additional anchorage to structural components in accordance with CSA A371 and CSA S304 requirements
.3 For changes to existing buildings, review existing connections and structural integrity to ensure safe resistance to seismic and other load effects.

.4 Retain a Professional Engineer to establish design criteria for Project based on:

.1 Anticipated ground motion;
.2 Soil type in specific geographic area;
.3 Occupancy category.

.5 Coordinate installation and cooperate with Mechanical Contractors and Electrical Contractors, to accommodate mechanical and electrical items, or any other work required to be incorporated in or coordinated with operational and functional components.

1.6 QUALITY CONTROL

.1 Manufacturer’s, fabricator’s and installer’s qualifications shall conform to the requirements specified under the respective trade Section of the Specifications, as applicable. Where

applicable, the Contractor shall obtain the manufacturer's field services as specified under the respective trade Section.

.2 **Quality Control System Protocol:**

.1 Prior to commencement of the Work, establish quality control system protocols, rules, related chains of command and commitment to provide quality work as intended in Contract Documents for the Work.

.2 Retain services of quality control staff and shop and field supervisors complete with the required skills, knowledge, duties, and responsibilities. Upon request, provide to the Consultant a full resume of the supervisors showing their qualifications.

.3 **Source Quality Control:**

.1 Refer to the respective trade Sections for source quality control requirements.

.4 **Field Quality Control:**

.1 The Contractor shall perform all inspections and testing required by the OBC or Authorities Having Jurisdiction, the Contract Documents and as required to clearly demonstrate compatibility of the materials, integrity of systems and quality of Work performance. Inspections and testing may apply, without limitation, to geotechnical work, compaction tests, cast-in-place concrete, concrete Products, waterproofing, structural steel, welding, building envelope, roofing, thermography, thermal bridging and air leaks and other requirements of the Contract. Cooperate and coordinate testing and inspection requirements with the applicable testing agency for designated requirements. Retain a copy of the geotechnical report referenced in paragraph 12 of the Request for Tenders on Site. Fully cooperate with the testing company by providing assistance on Site as well submitting samples of fill materials.

.2 Refer to the respective trade Sections for field quality control requirements.

.5 **Project Mock-ups:**

.1 Arrange with the Consultant to assist in preparing a schedule fixing the dates for mock-up review.

.2 Modify mock-ups in accordance with the Consultant's review at no additional cost to the Owner.

.3 Mock-ups shall serve as the standard for remaining parts of the Work.

END OF SECTION

PART 1 - GENERAL

1.1 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.2 IMPERIAL/INTERNATIONAL SYSTEM OF UNITS (SI)

.1 Submit all measurements in International System of Units (SI).

.2 Submittals containing measurements of any kind shall have measurements in language of International System of Units (SI) conforming to following standards:

.1 CAN3-A31-M75: Series of Standards for Metric Dimensional Coordination in Building

.2 CSA Z234.1: Metric Practice Guide

1.3 REFERENCES

.1 Where reference is made to the Code, Specification standards, manuals, Contract forms, installation, application and maintenance instructions, produced by various organizations, conform to the edition of standards specified or, if not specified, to the latest edition as amended and revised as of the date of the Contract.

.2 Amendments to reference documents after the date of the Contract affecting Contract Price shall be dealt with in accordance with Part 6 – Changes in the Work of the General Conditions of the Contract. If requested provide copy on Site of such standard(s).

.3 Where standards designate authorities such as "Engineer", "Owner" "Purchaser" or such similar designation, these designations shall be taken to mean "Consultant".

PART 2 - LIST OF ABBREVIATIONS AND ACRONYMS

2.1 ACRONYMS

.1 Following acronyms are used in Contract Documents:

.1 AA: Aluminum Association (USA)

.2 AAMA: American Architectural Manufacturers Association

.3 AATCC: American Association Of Textile Chemists And Colorists

.4 ABS: Acrylonitrile Butadiene Styrene

.5 ACI: American Concrete Institute

.6 ACT: Acoustic Ceiling Tile

.7 ADA: Americans With Disabilities Act

.8 ADAAG: ADA Accessibility Guidelines

.9 AHA: American Hospital Association

.10 AIEE: American Institute of Electrical Engineers

.11 AISC: American Institute of Steel Construction

.12 AISI: American Iron And Steel Institute

.13 AMCA: Air Movement And Control Association

.14 AMP: National Association Of Architectural Metal Manufacturers - Architectural Metal Products

.15 ANSI: American National Standards Institute

.16 AODA: Accessibility for Ontarians with Disabilities Act

.17 APA: American Plywood Association

.18 API: American Petroleum Institute

.19 ASHE: American Society for Healthcare Engineering

.20 ASHRAE: American Society of Heating, Refrigeration and Air-conditioning Engineers

.21 ASME: American Society of Mechanical Engineers

.22 ASTM: American Society for Testing and Materials

.23 AWI/AWMAC: American Woodwork Institute/Architectural Woodwork Manufacturers Association of Canada

.24 AWI: American Woodwork Institute

.25 AWMA: American Woodwork Manufacturers Association

.26 AWMAC: Architectural Woodwork Manufacturer's Association of Canada

.27 AWS: American Woodwork Standards

.28 AWWA: American Water Works Association

.29 BCA: Building Commissioning Association

.30 BCLMA: British Columbia Lumber Manufacturer's Association

.31 BHMA: Building Hardware Manufacturer's Association

.32 BMEC: Building Materials Evaluation Commission

.33 BCF: Bulk Continuous Filament

.34 CAC: Ceiling Attenuation Class

.35 CAGBC: Canadian Green Building Council

.36 CAN: National Standards of Canada

.37 CCA: Canadian Construction Association

.38 CCA: Chromated Copper Arsenate

.39 CCDC: Canadian Construction Documents Committee

.40 CCMC: Canadian Construction Materials Centre

.41 CEC: Canadian Electrical Code (published by CSA)

.42 CFR: Code Of Federal Regulations

.43 CGA: Canadian Gas Association

.44 CGSB: Canadian General Standards Board

.45 CISC: Canadian Institute of Steel Construction

.46 CLA: Canadian Lumbermen's Association

.47 CLS: Canadian Lumber Standard

.48 CMHC: Canadian Mortgage and Housing Corporation

.49 CNC: Computer Numerical Control

.50 COFI: Council of Forest Industries of British Columbia

.51 CPCI: Canadian Prestressed Concrete Institute

.52 CPMA: Canadian Paint Manufacturer's Association

.53 CRCA: Canadian Roofing Contractor's Association

.54 CRF: Condensation Resistance Factor

.55 CRI: Carpet And Rug Institute

.56 CSA: Canadian Standards Association

.57 CSC: Construction Specifications Canada

.58 CSDMA: Canadian Sheet Door Manufacturers Association

.59 CSP: Concrete Surface Profile

.60 CSPI: Corrugated Steel Pipe Institute

.61 CSSBI: Canadian Sheet Steel Building Institute

.62 CTC: Canadian Transport Commission

.63 CUFCA: Canadian Urethane Foam Contractors Association

.64 CWC: Canadian Wood Council

.65 DND: Department of National Defence, Construction Material Board

.66 DFO: Department of Fisheries and Oceans

.67 DFT: Dry Film Thickness

.68 DHI: Door and Hardware Institute

.69 EEMAC: Electrical and Electronic Manufacturers Association of Canada

.70 ECP: Environmental Choice Program

.71 EPA: Environmental Protection Agency

.72 ESA: Electrical Safety Authority

.73 EPDM: Ethylene Propylene Diene Monomer

.74 FDA: US Food And Drug Administration

.75 FM: Factory Mutual

.76 FSC: Forestry Stewardship council

.77 GANA: Glass Association of North America

.78 HCFC: Hydrochlorofluorocarbon

.79 HPDL: High Pressure Decorative Laminate

.80 HPVA: Hardwood Plywood And Veneer Association

.81 HST: Harmonized Sales Tax

.82 HSS: Hollow Structural Steel

.83 HMMA: Hollow Metal Manufacturers Association

.84 ICRI: International Concrete Repair Institute

.85 IEEE: Institute of Electrical and Electronic Engineers

.86 IGMA: Insulating Glass Manufacturer's Alliance

.87 IGMAC: Insulating Glass Manufacturers Association Of Canada

.88 IPA: Isopropyl Alcohol

.89 ISO: International Organization for Standardization

.90 LEED: Leadership in Energy and Environmental Design

.91 LSGASM: Laminators Safety Glass Association - Standards Manual

.92 LSRCA: Lake Simcoe Regional Conservation Authority

.93 MEK: Methyl Ethyl Ketone

.94 MNR: Ministry of Natural Resources

.95 MOE: Ministry of Environment

.96 MPI: Master Painters Institute

.97 MTO: Ministry of Transportation, Province of Ontario

.98 NAAMM: National Association of Architectural Metal Manufacturers

.99 NBC: National Building Code of Canada

.100 NBFU: National Board of Fire Underwriters (USA)

.101 NCMA: National Concrete Masonry Association

.102 NEMA: National Electrical Manufacturer's Association (USA)

.103 NFPA: National Fire Protection Association

.104 NFRC: National Fenestration Rating Council

.105 NHLA: National Hardwood Lumber Association

.106 NLGA: National Lumber Grades Authority

.107 NLGA: National Lumber Grades Authority

.108 NPDES: National Pollutant Discharge Elimination System

.109 NRC: National Research Council of Canada

.110 NRC: Noise Reduction Coefficient
.111 NRCC: National Research Council Of Canada
.112 NSC: National Standards of Canada
.113 NSF: National Sanitation Foundation

.114 OAA: Ontario Association of Architects
.115 OBC: Ontario Building Code 2012 (Ontario Regulation 332/12)
.116 OCPA: Ontario Concrete Pipe Association
.117 OFC: Ontario Fire Code
.118 OFM: Ontario Fire Marshall
.119 OGCA: Ontario General Contractors Association
.120 OHSA: Occupational Health and Safety Act
.121 OIRCA: Ontario Industrial Roofing Contractor's Association
.122 OLS: Ontario Land Surveyors
.123 OMCA: Ontario Masonry Contractors' Association
.124 OMCA: Ontario Masonry Contractors’ Association
.125 OPCA: Ontario Painting Contractors Association
.126 OPSS: Ontario Provincial Standard Specification
.127 ORD: Other Recognized Document

.128 PCB: Polychlorinated Biphenyl
.129 PDCA: Painting And Decorating Contractors Of America
.130 PEO: Professional Engineers of Ontario
.131 PVC: Polyvinyl Chloride

.132 RSIC Reinforcing Steel Institute of Canada

.133 SDI: Steel Door Institute
.134 SCAQMD: South Coast Air Quality Management District
.135 SJI: Steel Joist Institute
.136 SSPC: Society For Protective Coatings
.137 STC: Sound Transmission Class

.138 TSSA: Technical Standards & Safety Authority
.139 TPO: Thermoplastic Olefin
.140 TTMAC: Terrazzo Tile And Marble Association of Canada

.141 ULC: Underwriters' Laboratories of Canada

.142 UL: Underwriters' Laboratories Incorporated (USA)

.143 cUL: Underwriter's Laboratories Incorporated (USA) Product with this mark have been evaluated to Canadian safety requirements, which may be somewhat different from U.S. safety requirements.

.144 VOC: Volatile Organic Compound

.145 WCMA: Window Covering Manufacturers Association

.146 WDMA: Window And Door Manufacturers Association

.147 WHPS Warnock Hersey Professional Services

2.2 ABBREVIATIONS

.1 Following abbreviations are used in Contract Documents:

REC	recessed
REFURB	refurbish
REINF	reinforced
REQ'D	required
rev	revision
RFI	request for information
RH	right hand
RHR	right hand reverse
RM	room
rpm	revolutions per minute

RS	reducing strip
RSI	R-Value – SI Units
RSF	resilient strip flooring
RT	rubber tile
RTR	rubber tread
RUB	sheet rubber
RWL	rain water leader
RWP	rigid wall protection
SAN	sanitary
SB	sand blast
SBS	styrene butadiene styrene
SC	solid core
SCG	side coiling grille
SCRN	screen
SCTR	shower track and curtain
SD	soap dispenser
SDS	soap dispenser with shelf
SGL	security glazing
SH	sheet membrane
SHF	shelf
SH-ST	shower seat
SH-ROD/C	shower rod with curtain
SHV	sheet vinyl
SHV-C	sheet vinyl - conductive
SHV-S	sheet vinyl - safety
SHV-SD	sheet vinyl - static dissipative
SHV-WG	sheet vinyl - wood grain
SIM	similar
SLR	sealer (concrete)
SLT	slate tile
SMAC	security metal acoustic ceiling
SMAC	security metal acoustic ceiling
SN	stair nosing
SND	sanitary napkin disposal
SPC	special coating
SPD	soap dish
SPEC	specification
SPF	sports flooring
SPGL	spandrel glass
SPR	sprinkler
SPS	solid polymer surface
sq ft	square feet
sq mi	square mile
sq yd	square yard
SQ	square
SR	seamless resin
SS	stainless steel
SSCG	corner guard - stainless steel
SSPC	security steel plate ceiling
ST	street
STL	steel

STN	stain finish
STONE	stone
STRUCT	structural
SUSP	suspended
SV	stone veneer
t	tonne
T&G	tongue & groove
TB	tack board
TBR	to be removed
TCP	Transmission Control Protocol
TDD	towel dispenser/disposal
TDL	towel disposal
TDT	traffic deck topping
TEFC	totally enclosed fan-cooled
TEL	telephone
TEMP	temporary
TERR-C	terrazzo - concrete
TERR-E	terrazzo - epoxy
TERR-P	terrazzo - precast
TGL	tempered glass
TH	towel hook
TTD	toilet tissue dispenser
TTD-S	toilet tissue dispenser – safety
TRR	temperature rise rated.
TWB	towel bar
TYP	typical
U/C	under cut
U/G	under ground
UNO	unless noted otherwise
UPS	uninterrupted power supply
U/S	under side
UTP	unshielded twisted pair
V	volt
VAC	voltage alternating current
VB	vapour barrier
VBX	view box
VCT	vinyl composite tile
VERT	vertical
VEST	vestibule
VFD	variable frequency drive
VGP	Vertical General Purpose High Pressure Decorative Laminate
VGS	Vertical Post-forming High Pressure Decorative Laminate
VOC	volatile organic compound
VWC	vinyl wall covering
VWP	vinyl wall protection
W	watt
WB	white board
WC	water closet
W-CAB	writing cabinet

WD	wood
WF	wide flange
WFGB	gypsum board - wood fiber reinforced
WGL	wired glass
WHC	wheel chair
WI	wrought iron
WM	wire mesh
WP	waterproofing
WP-C	cementitious waterproofing
WPM	waterproof membrane
WR	washroom
WSC	wood slat ceiling.
WVP	wood veneer paneling
WWF	welded wide flange
WWF	welded wire fabric.
WWM	welded wire mesh
yd	yard
Z	zinc
ZCS	zinc coated steel
ZVB	zone valve box

PART 3 - REFERENCE ARCHITECTURAL STANDARDS

3.1 AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM)

.1 ASTM A36/A36M: Standard Specification for Carbon Structural Steel

.2 ASTM A53/A53M: Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless

.3 ASTM A123/A123M: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products

.4 ASTM A153/A153M: Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

.5 ASTM A167: Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip

.6 ASTM A185/A185M: Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete

.7 ASTM A240/A240M: Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications

.8 ASTM A276: Standard Specification for Stainless Steel Bars and Shapes

.9 ASTM A307: Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength

.10 ASTM A312/A312M: Standard Specification for Seamless, Welded, and Heavily Cold Worked Austenitic Stainless Steel Pipes

.11 ASTM A325M: Standard Specification for Structural Bolts, Steel, Heat Treated 830 MPa Minimum Tensile Strength [Metric]

.12 ASTM A500/A500M: Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes

.13 ASTM A510/A510M: Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy

.14 ASTM A554: Standard Specification for Welded Stainless Steel Mechanical Tubing

.15 ASTM A568M: Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for

.16 ASTM A580/A580M: Standard Specification for Stainless Steel Wire

.17 ASTM A645/A645M: Standard Specification for Pressure Vessel Plates, Five Percent Nickel Alloy Steel, Specially Heat Treated

.18 ASTM A653/A653M: Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process

.19 ASTM A666: Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar

.20 ASTM A743/A743M: Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application

.21 ASTM A792/A792M: Standard Specification for Steel Sheet, 55 % Aluminum-Zinc Alloy-Coated by the Hot-Dip Process

.22 ASTM A821/A821M: Standard Specification for Steel Wire, Hard Drawn for Prestressing Concrete Tanks

.23 ASTM A1003/A1003M: Standard Specification for Steel Sheet, Carbon, Metallic and Nonmetallic Coated for Cold Formed Framing Members

.24 ASTM A1008/A1008M: Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable

.25 ASTM A1011/A1011M: Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength

.26 ASTM B26/B26M: Standard Specification for Aluminum-Alloy Sand Castings

.27 ASTM B117: Standard Practice for Operating Salt Spray (Fog) Apparatus

.28 ASTM B209: Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate

.29 ASTM B209M: Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]

.30 ASTM B210: Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes

.31 ASTM B211M1: Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold-Finished Bar, Rod, and Wire [Metric]

.32 ASTM B221: Standard Specification for Aluminum and Aluminum-Alloy Extruded Bar, Rod, Wire, Profiles, and Tubes

.33 ASTM B221M: Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]

.34 ASTM B247M: Standard Specification for Aluminum and Aluminum-Alloy Die Forgings, Hand Forgings, and Rolled Ring Forgings [Metric]

.35 ASTM B429/B429M1: Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube

.36 ASTM B4561: Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium

.37 ASTM B793: Standard Specification for Zinc Casting Alloy Ingot for Sheet Metal Forming Dies and Plastic Injection Molds

.38 ASTM A633/A633M: Standard Specification for Normalized High-Strength Low-Alloy Structural Steel Plates

.39 ASTM C39/C39M: Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens

.40 ASTM C67: Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile

.41 ASTM C90: Standard Specification for Loadbearing Concrete Masonry Units

.42 ASTM C97/C97M: Standard Test Methods for Absorption and Bulk Specific Gravity of Dimension Stone

.43 ASTM C119: Standard Terminology Relating to Dimension Stone

.44 ASTM C129: Standard Specification for Nonloadbearing Concrete Masonry Units

.45 ASTM C144: Standard Specification for Aggregate for Masonry Mortar

.46 ASTM C165: Standard Test Method for Measuring Compressive Properties of Thermal Insulations

.47 ASTM C170/C170M: Standard Test Method for Compressive Strength of Dimension Stone

.48 ASTM C177: Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus

.49 ASTM C192/C192M: Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory

.50 ASTM C207: Standard Specification for Hydrated Lime for Masonry Purposes

.51 ASTM C208: Standard Specification for Cellulosic Fiber Insulating Board

.52 ASTM C216: Standard Specification for Facing Brick (Solid Masonry Units Made from Clay or Shale)

.53 ASTM C267: Standard Test Methods for Chemical Resistance of Mortars, Grouts, and Monolithic Surfacing’s and Polymer Concretes

.54 ASTM C297/C297M: Standard Test Method for Flatwise Tensile Strength of Sandwich Constructions

.55 ASTM C305: Standard Practice for Mechanical Mixing of Hydraulic Cement Pastes and Mortars of Plastic Consistency

.56 ASTM C307: Standard Test Method for Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacing’s

.57 ASTM C309: Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete

.58 ASTM C373: Standard Test Method for Water Absorption, Bulk Density, Apparent Porosity, and Apparent Specific Gravity of Fired Whiteware Products

.59 ASTM C413: Standard Test Method for Absorption of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing's, and Polymer Concretes

.60 ASTM C423: Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method

.61 ASTM C475/C475M: Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board

.62 ASTM C482: Standard Test Method for Bond Strength of Ceramic Tile to Portland Cement Paste

.63 ASTM C510(11): Standard Test Method for Staining and Color Change of Single- or Multicomponent Joint Sealants

.64 ASTM C518: Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus

.65 ASTM C553: Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications

.66 ASTM C568/C568: Standard Specification for Limestone Dimension Stone

.67 ASTM C579: Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing's, and Polymer Concretes

.68 ASTM C580: Standard Test Method for Flexural Strength and Modulus of Elasticity of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing's, and Polymer Concretes

.69 ASTM C595/C595M: Standard Specification for Blended Hydraulic Cements

.70 ASTM C609: Standard Test Method for Measurement of Light Reflectance Value and Small Color Differences Between Pieces of Ceramic Tile

.71 ASTM C615/C615M: Standard Specification for Granite Dimension Stone

.72 ASTM C616/C616M: Standard Specification for Quartz-Based Dimension Stone

.73 ASTM C627: Standard Test Method for Evaluating Ceramic Floor Tile Installation Systems Using the Robinson-Type Floor Tester

.74 ASTM C629/C629M: Standard Specification for Slate Dimension Stone

.75 ASTM C630: Standard Specification for Water-Resistant Gypsum Backing Board

.76 ASTM C635/C635M: Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings

.77 ASTM C636/C636M: Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels

.78 ASTM C645: Standard Specification for Nonstructural Steel Framing Members

.79 ASTM C648: Standard Test Method for Breaking Strength of Ceramic Tile

.80 ASTM C661: Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer

.81 ASTM C665: Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing

.82 ASTM C719: Standard Test Method for Adhesion and Cohesion of Elastomeric Joint Sealants Under Cyclic Movement (Hockman Cycle)

.83 ASTM C754: Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products

.84 ASTM C794: Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants

.85 ASTM C834: Standard Specification for Latex Sealants

.86 ASTM C840: Standard Specification for Application and Finishing of Gypsum Board

.87 ASTM C882/C882M: Standard Test Method for Bond Strength of Epoxy-Resin Systems Used With Concrete By Slant Shear

.88 ASTM C920: Standard Specification for Elastomeric Joint Sealants

.89 ASTM C954: Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness

.90 ASTM C957/C957M: Standard Specification for High-Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane With Integral Wearing Surface

.91 ASTM C979/C979M: Standard Specification for Pigments for Integrally Colored Concrete

.92 ASTM C1021: Standard Practice for Laboratories Engaged in Testing of Building Sealants

.93 ASTM C1027: Standard Test Method for Determining Visible Abrasion Resistance of Glazed Ceramic Tile

.94 ASTM C10281: Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method

.95 ASTM C10361: Standard Specification for Flat Glass

.96 ASTM C1047: Standard Specification for Accessories for Gypsum Wallboard and Gypsum Veneer Base

.97 ASTM C10481: Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass

.98 ASTM C1087: Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems

.99 ASTM C1093: Standard Practice for Accreditation of Testing Agencies for Masonry

.100 ASTM C1116/C1116M: Standard Specification for Fiber-Reinforced Concrete

.101 ASTM C11721: Standard Specification for Laminated Architectural Flat Glass

.102 ASTM C1177/C1177M: Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing

.103 ASTM C1184: Standard Specification for Structural Silicone Sealants

.104 ASTM C1185: Standard Test Methods for Sampling and Testing Non-Asbestos Fiber-Cement Flat Sheet, Roofing and Siding Shingles, and Clapboards

.105 ASTM C1186: Standard Specification for Flat Fiber-Cement Sheets

.106 ASTM C1248: Standard Test Method for Staining of Porous Substrate by Joint Sealants

.107 ASTM C1289: Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board

.108 ASTM C1338: Standard Test Method for Determining Fungi Resistance of Insulation Materials and Facings

.109 ASTM C1396/C1396M: Standard Specification for Gypsum Board

.110 ASTM C1401: Standard Guide for Structural Sealant Glazing

.111 ASTM C1629/C1629M: Standard Classification for Abuse-Resistant Nondecorated Interior Gypsum Panel Products and Fibre-Reinforced Cement Panels

.112 ASTM C1658/C1658M: Standard Specification for Glass Mat Gypsum Panels

.113 ASTM D226/D226M: Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing

.114 ASTM D245: Standard Practice for Establishing Structural Grades and Related Allowable Properties for Visually Graded Lumber

.115 ASTM D256: Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics

.116 ASTM D368: Standard Test Method for Specific Gravity of Creosote and Oil-Type Preservatives

.117 ASTM D412e2: Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension

.118 ASTM D471: Standard Test Method for Rubber Property—Effect of Liquids

.119 ASTM D523: Standard Test Method for Specular Gloss

.120 ASTM D543: Standard Practices for Evaluating the Resistance of Plastic to Chemical Reagents

.121 ASTM D570e1: Standard Test Method for Water Absorption of Plastics

.122 ASTM D624: Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers

.123 ASTM D635: Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position

.124 ASTM D638: Standard Test Method for Tensile Properties of Plastics

.125 ASTM C642: Standard Test Method for Density, Absorption, and Voids in Hardened Concrete

.126 ASTM D695: Standard Test Method for Compressive Properties of Rigid Plastics

.127 ASTM D696: Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30°C and 30°C With a Vitreous Silica Dilatometer

.128 ASTM D732: Standard Test Method for Shear Strength of Plastics by Punch Tool

.129 ASTM D785: Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials

.130 ASTM D790: Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials

.131 ASTM D792: Standard Test Methods for Density and Specific Gravity (Relative Density) of Plastics by Displacement

.132 ASTM D816: Standard Test Methods for Rubber Cements

.133 ASTM D1002: Standard Test Method for Apparent Shear Strength of Single-Lap-Joint Adhesively Bonded Metal Specimens by Tension Loading (Metal-to-Metal)

.134 ASTM D1037 : Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials

.135 ASTM D1044 - 08e1 Standard Test Method for Resistance of Transparent Plastics to Surface Abrasion

.136 ASTM D1056: Standard Specification for Flexible Cellular Materials Sponge or Expanded Rubber

.137 ASTM D1149: Standard Test Methods for Rubber Deterioration-Cracking in an Ozone Controlled Environment

.138 ASTM D1204: Standard Test Method for Linear Dimensional Changes of Nonrigid Thermoplastic Sheeting or Film at Elevated Temperature

.139 ASTM D1308: Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes

.140 ASTM D1499 - 13 Standard Practice for Filtered Open-Flame Carbon-Arc Exposures of Plastics

.141 ASTM D1621: Standard Test Method for Compressive Properties Of Rigid Cellular Plastics

.142 ASTM D1622: Standard Test Method for Apparent Density of Rigid Cellular Plastics

.143 ASTM D1654: Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments

.144 ASTM D1709: Standard Test Methods for Impact Resistance of Plastic Film by the Free-Falling Dart Method

.145 ASTM D1730: Standard Practices for Preparation of Aluminum and Aluminum-Alloy Surfaces for Painting

.146 ASTM D1781: Standard Test Method for Climbing Drum Peel for Adhesives

.147 ASTM D1863/D1863Me1: Standard Specification for Mineral Aggregate Used on Built-Up Roofs

.148 ASTM D1929: Standard Test Method for Determining Ignition Temperature of Plastics

.149 ASTM D2000: Standard Classification System for Rubber Products in Automotive Applications

.150 ASTM D2047: Standard Test Method for Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine

.151 ASTM D2137: Standard Test Methods for Rubber Property—Brittleness Point of Flexible Polymers and Coated Fabrics

.152 ASTM D2240: Standard Test Method for Rubber Property—Durometer Hardness

.153 ASTM D2244: Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates

.154 ASTM D2247: Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity

.155 ASTM D2395e1: Standard Test Methods for Specific Gravity of Wood and Wood-Based Materials

.156 ASTM D2583: Standard Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor

.157 ASTM D2794: Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact)

.158 ASTM D2843: Standard Test Method for Density of Smoke from the Burning or Decomposition of Plastics

.159 ASTM D3273: Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber

.160 ASTM D3363e2: Standard Test Method for Film Hardness by Pencil Test

.161 ASTM D3389: Standard Test Method for Coated Fabrics Abrasion Resistance (Rotary Platform Abrader)

.162 ASTM D37631: Standard Test Method for High Speed Puncture Properties of Plastic Using Load and Displacement Sensors

.163 ASTM D4060: Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser

.164 ASTM D4434/D4434M: Standard Specification for Poly(Vinyl Chloride) Sheet Roofing

.165 ASTM D4442: Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Base Materials

.166 ASTM D4491(09): Standard Test Methods for Water Permeability of Geotextiles by Permittivity

.167 ASTM D45411: Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers

.168 ASTM D4812: Standard Test Method for Unnotched Cantilever Beam Impact Resistance of Plastics

.169 ASTM D5456: Standard Specification for Evaluation of Structural Composite Lumber Products

.170 ASTM D5456: Standard Specification for Evaluation of Structural Composite Lumber Products

.171 ASTM D6207: Standard Test Method for Dimensional Stability of Fabrics to Changes in Humidity and Temperature

.172 ASTM E72: Standard Test Methods of Conducting Strength Tests of Panels for Building Construction

.173 ASTM E84: Standard Test Method for Surface Burning Characteristics of Building Materials

.174 ASTM E90: Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements

.175 ASTM E96/E96M: Standard Test Methods for Water Vapor Transmission of Materials

.176 ASTM E108: Standard Test Methods for Fire Tests of Roof Coverings

.177 ASTM E119: Standard Test Methods for Fire Tests of Building Construction and Materials

.178 ASTM E136: Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C

.179 ASTM E154: Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover

.180 ASTM E283: Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen

.181 ASTM E329: Standard Specification for Agencies Engaged in Construction Inspection, Testing or Special Inspection

.182 ASTM E330: Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference

.183 ASTM E331: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference

.184 ASTM E336: Standard Test Method for Measurement of Airborne Sound Attenuation between Rooms in Buildings

.185 ASTM E413: Classification for Rating Sound Insulation

.186 ASTM E488/E488M: Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements

.187 ASTM E514/E514M: Standard Test Method for Water Penetration and Leakage Through Masonry

.188 ASTM D543: Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents

.189 ASTM E547: Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Cyclic Static Air Pressure Difference

.190 ASTM E557: Standard Guide for Architectural Design and Installation Practices for Sound Isolation between Spaces Separated by Operable Partitions

.191 ASTM E605: Standard Test Methods for Thickness and Density of Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members

.192 ASTM E6481: Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source

.193 ASTM E662: Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials

.194 ASTM E699: Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components

.195 ASTM E736: Standard Test Method for Cohesion/Adhesion of Sprayed Fire-Resistive Materials Applied to Structural Members

.196 ASTM E759: Standard Test Method for Effect of Deflection on Sprayed Fire-Resistive Material Applied to Structural Members

.197 ASTM E760: Standard Test Method for Effect of Impact on Bonding of Sprayed Fire-Resistive Material Applied to Structural Members

.198 ASTM E761: Standard Test Method for Compressive Strength of Sprayed Fire-Resistive Material Applied to Structural Members

.199 ASTM E779: Standard Test Method for Determining Air Leakage Rate by Fan Pressurization

.200 ASTM E783: Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors

.201 ASTM E795: Standard Practices for Mounting Test Specimens During Sound Absorption Tests

.202 ASTM E814: Standard Test Method for Fire Tests of Penetration Firestop Systems

.203 ASTM E859: Standard Test Method for Air Erosion of Sprayed Fire-Resistive Materials (SFRMs) Applied to Structural Members

.204 ASTM E894: Standard Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings

.205 ASTM E935: Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings

.206 ASTM E937: Standard Test Method for Corrosion of Steel by Sprayed Fire-Resistive Material (SFRM) Applied to Structural Members

.207 ASTM E985: Standard Specification for Permanent Metal Railing Systems and Rails for Buildings

.208 ASTM E1105: Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference

.209 ASTM E1155: Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers

.210 ASTM E1186: Standard Practices for Air Leakage Site Detection in Building Envelopes and Air Barrier Systems

.211 ASTM E12641: Standard Classification for Acoustical Ceiling Products

.212 ASTM E1300e1: Standard Practice for Determining Load Resistance of Glass in Buildings

.213 ASTM E1332: Standard Classification for Rating Outdoor-Indoor Sound Attenuation

.214 ASTM E1333: Standard Test Method for Determining Formaldehyde Concentrations in Air and Emission Rates from Wood Products Using a Large Chamber

.215 ASTM E1414/E1414M: Standard Test Method for Airborne Sound Attenuation Between Rooms Sharing a Common Ceiling Plenum

.216 ASTM E1513: Standard Practice for Application of Sprayed Fire-Resistive Materials (SFRMs)

.217 ASTM E1745: Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs

.218 ASTM E1966: Standard Test Method for Fire-Resistive Joint Systems

.219 ASTM E2174e1: Standard Practice for On-Site Inspection of Installed Fire Stops

.220 ASTM E2179: Standard Test Method for Laboratory Measurement of the Effectiveness of Floor Coverings in Reducing Impact Sound Transmission Through Concrete Floors

.221 ASTM E2307: Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus

.222 ASTM E2353: Standard Test Methods for Performance of Glass in Permanent Glass Railing Systems, Guards, and Balustrades

.223 ASTM E2357: Standard Test Method for Determining Air Leakage of Air Barrier Assemblies

.224 ASTM E2393: Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers

.225 ASTM F836M: Standard Specification for Style 1 Stainless Steel Metric Nuts

.226 ASTM F1249: Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor

.227 ASTM F710: Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring

.228 ASTM F436M: Standard Specification for Hardened Steel Washers [Metric]

.229 ASTM F476: Standard Test Methods for Security of Swinging Door Assemblies

.230 ASTM F588: Standard Test Methods for Measuring the Forced Entry Resistance of Window Assemblies, Excluding Glazing Impact

.231 ASTM F738M: Standard Specification for Stainless Steel Metric Bolts, Screws, and Studs

.232 ASTM F793: Standard Classification of Wall Covering by Use Characteristics

.233 ASTM F842: Standard Test Methods for Measuring the Forced Entry Resistance of Sliding Door Assemblies, Excluding Glazing Impact

.234 ASTM F844: Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use

.235 ASTM F925: Standard Test Method for Resistance to Chemicals of Resilient Flooring

.236 ASTM F970:Standard Test Method for Static Load Limit

.237 ASTM F1233: Standard Test Method for Security Glazing Materials And Systems

.238 ASTM F1249: Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor

.239 ASTM F1344: Standard Specification for Rubber Floor Tile

.240 ASTM F1514: Standard Test Method for Measuring Heat Stability of Resilient Flooring by Colour Change

.241 ASTM F1859: Standard Specification for Rubber Sheet Floor Covering Without Backing

.242 ASTM F1860: Standard Specification for Rubber Sheet Floor Covering With Backing

.243 ASTM F1861e1: Standard Specification for Resilient Wall Base

.244 ASTM F1869: Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride

.245 ASTM F2169: Standard Specification for Resilient Stair Treads

.246 ASTM F2170: Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes

.247 ASTM G21: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi

3.2 CANADIAN STANDARDS ASSOCIATION (CSA)

.1 CAN3-A82.2-M78(R2003): Methods of Sampling and Testing Brick

.2 CAN/CSA A23.1/A23.2: Concrete Materials and Methods of Concrete Construction /Methods of Test for Concrete

.3 CAN/CSA A23.3: Design of Concrete Structures

.4 CAN/CSA A82.1-M89: Burned Clay Brick (Solid Masonry Units Made from Clay or Shale)

.5 CAN/CSA A82.27-M91: Gypsum Board

.6 CAN/CSA A179: Mortar and Grout for Unit Masonry

.7 CAN/CSA A371: Masonry Construction for Buildings

.8 CAN/CSA A440/A440.1: Windows/Special Publication A440.1, User Selection Guide to CSA Standard CAN/CSA-A440, Windows

.9 CAN/CSA A3000: Cementitious Materials Compendium (Consists of A3001, A3002, A3003, A3004 and A3005)

.10 CAN/CSA G40.20/ G40.21: General Requirements for Rolled or Welded Structural Quality Steel/Structural Quality Steels

.11 CAN/CSA G164 M92(03): Hot Dip Galvanizing of Irregularly Shaped Articles

.12 CAN/CSA O80 Series: Wood Preservation

.13 CAN/CSA O132.2.0: General Requirements for Flush Wood Doors

.14 CAN/CSA O132.2: Wood Doors

.15 CAN/CSA O141 - Softwood Lumber

.16 CSA S16: Design of Steel Structures

.17 CAN/CSA S136: North American Specification for the Design of Cold-Formed Steel Structural Members

.18 CAN/CSA S157/S157.1: Strength Design in Aluminum

.19 CAN/CSA Z91: Health and Safety Code for Suspended Equipment Operations

.20 CSA A23.1/A23.2: Concrete materials and methods of concrete construction/Test methods and standard practices for concrete

.21 CSA A82.56-M76(03): Aggregate for Masonry Mortar

.22 CSA A123.3: Asphalt Saturated Organic Roofing Felt

.23 CSA A165 Series: Standards on Concrete Masonry Units (Consists of A165.1, A165.2 and A165.3)

.24 CSA A231.1/A231.2: Precast Concrete Paving Slabs/Precast Concrete Pavers

.25 CSA A370: Connectors for Masonry

.26 CAN/CSA A3000: Cementitious Materials Compendium (Consists of A3001, A3002, A3003, A3004 and A3005)

.27 CSA B111: Wire Nails, Spikes and Staples

.28 CSA B651: Accessible Design for the Built Environment

.29 CSA B651: Accessible Design for the Built Environment

.30 CSA C22.1: Canadian Electrical Code, Part I (22nd Edition), Safety Standard for Electrical installations

.31 CSA G30.3-M83(98): Cold-Drawn Steel Wire for Concrete Reinforcement

.32 CSA G30.5-M83(98): Welded Steel Wire Fabric for Concrete Reinforcement

.33 CSA G30.18: Carbon steel bars for concrete reinforcement

.34 CSA G40.20/G40.21: General Requirements for Rolled or Welded Structural Quality Steel/ Structural Quality Steel

.35 CSA O121: Douglas Fir Plywood

.36 CSA O141: Softwood Lumber

.37 CSA O151: Canadian Softwood Plywood

.38 CSA O153: Poplar Plywood

.39 CSA S16.1: “Steel Structures for Buildings”.

.40 CSA S136.1: - Commentary on North American specification for the design of cold-formed steel structural members

.41 CSA S304.1: Design of Masonry Structures

.42 CSA S478: Guideline on Durability in Buildings

.43 CSA W47.1: Certification of Companies for Fusion Welding of Steel

.44 CSA W47.2:Certification of Companies for Fusion Welding of Aluminum

.45 CSA W48: Filler Metals and Allied Materials for Metal Arc Welding

.46 CSA W48.1: Carbon Steel Covered Electrodes for Shielded Metal Arc Welding

.47 CSA W55.3: Certification of Companies for Resistance Welding of Steel and Aluminum

.48 CSA W59: Welded Steel Construction (Metal Arc Welding)

.49 CSA W59.2: Welded Aluminum Construction

.50 CSA W117.2: Safety in Welding, Cutting and Allied Processes

.51 CSA W178.2: Certification of Welding Inspectors.

3.3 AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI)

.1 ANSI A14.3: American National Standards for Ladders - Fixed - Safety Requirements

.2 ANSI A108/A118/A136.1: American National Standards for the Installation of Ceramic Tile

.3 ANSI A115: Hardware Preparations for Steel Doors and Frames

.4 ANSI A115-IG 94: Installation Guide for Doors and Hardware

.5 ANSI A117.1: Tactile Surface

.6 ANSI A117: Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People

.7 ANSI A118.1: Specifications for Dry-Set Portland Cement Mortar

.8 ANSI A118.3: Specification for Chemical Resistant, Water Cleanable Tile Setting and Grouting Epoxy and Water Cleanable Tile Setting Epoxy Adhesive

.9 ANSI A118.4: Specification for Latex-Portland Cement Mortar

.10 ANSI A118.6: Specification for Ceramic Tile Grouts

.11 ANSI A118.7: Polymer modified cement grouts for tile Installation

.12 ANSI A118.8: American National Standard Specifications for Modified Epoxy Emulsion Mortar Grout.

.13 ANSI A136.1: Specification for Organic Adhesives for the Installation of Ceramic Tile

.14 ANSI A137.1: American National Standards Specifications for Ceramic Tile

.15 ANSI A137.2: American National Standard Specifications for Glass Tile

.16 ANSI A208.1: Standard for Particleboard

.17 ANSI A208.2: Standard for Medium Density Fiberboard (MDF)

.18 ANSI A224.1: Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames

.19 ANSI A250.4: Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors and Hardware Reinforcing

.20 ANSI A250.10: Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames

.21 ANSI H35.1/H35.1M: Alloy and Temper Designation Systems for Aluminum

.22 ANSI Z97.1: Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test

.23 ANSI Z124.3: Plastic Lavatories - Solid Surface

.24 ANSI Z124.6: Plastic Sinks - Solid Surface

.25 ANSI/ASHRAE/IESNA 90.1: Energy Standard for Buildings Except Low-Rise Residential Buildings, I-P Edition

.26 ANSI/BHMA A156.3: Exit Devices

.27 ANSI/BHMA A156.5: Auxiliary Locks and Associated Products

.28 ANSI/BHMA A156.10: Power Operated Pedestrian Doors

.29 ANSI/BHMA A156.19: Power Assist and Low Energy Power Operated Doors

.30 ANSI/BHMA A156.115: Hardware Preparation in Steel Doors and Steel Frames

.31 ANSI/DHI A115.IG: Installation Guide for Doors and Hardware

.32 ANSI/HPVA HP-1: American National Standard for Hardwood and Decorative Plywood

.33 ANSI/NEMA LD 3: High-Pressure Decorative Laminates

.34 ANSI/UL 263: Fire Tests of Building Construction and Materials

.35 ANSI/UL 325: Door, Drapery, Gate, Louver, and Window Operators and Systems

.36 ANSI/UL 1479: Fire Tests Of Through-Penetration Firestops

.37 ANSI/UL 2079: Tests for Fire Resistance of Building Joint Systems

.38 ANSI/WDMA I.S. 1A: Industry Standard for Architectural Wood Flush Doors

.39 IAPMO/ANSI Z124.3: Plastic Lavatories

.40 IAPMO/ANSI Z124.6: Plastic Sinks

.41 ICC/ANSI A117.1: Accessible and Useable Buildings and Facilities

3.4 AMERICAN ARCHITECTURAL MANUFACTURERS ASSOCIATION (AAMA)

.1 AAMA 501.1: Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure

.2 AAMA 501.2: Quality Assurance and Diasnostic Water Leakage Field Check of Installed Storefronts, Curtain Wallsm and Sloped Glazing Systems

.3 AAMA 611: Voluntary Standards for Anodized Architectural Aluminum

.4 AAMA 701/702:Combined Voluntary Specification for Pile Weatherstrip (701) and Replaceable Fenestration Weatherseals (702)

.5 AAMA 920: specification for Operating Cycle Performance of Side-Hinger Exterior Door Systems

.6 AAMA 1303.5: Voluntary Specifications for Forced-Entry Resistant Aluminum Sliding Glass Doors

.7 AAMA 1503: Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections

.8 AAMA 1801: Voluntary specification for the Acoustical Rating of Windows, Doors, Skylights and Glazed Wall Sections

.9 AAMA 2603: Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels

.10 AAMA 2604: Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels

.11 AAMA 2605: Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels

3.5 CANADIAN GENERAL STANDARDS BOARD (CGSB)

.1 CAN2-51.32-M77: Sheating, Membrane, Breather Type CPL

.2 CAN/CGSB 1.5-M91: Low Flash Petroleum Spirits Thinner

.3 CAN/CGSB 1.40-97: Anticorrosive Structural Steel Alkyd Primer

.4 CAN/CGSB 1.59-97: Alkyd Exterior Gloss Enamel

.5 CAN/CGSB 1.74-01: Alkyd Traffic Paint

.6 CAN/CGSB 1.81-M90: Air Drying and Baking Alkyd Primer for Vehicles and Equipment

.7 CAN/CGSB 1.88-92: Gloss Alkyd Enamel, Air Drying and Baking

.8 CAN/CGSB 1.104-M91: Semigloss Alkyd Air Drying and Baking Enamel

.9 CAN/CGSB 1.105-M91: Quick-Drying Primer

.10 CAN/CGSB 1.108-M89: Bituminous Solvent Type Paint

.11 CAN/CGSB 1.132-M90: Zinc Chromate Primer, Low Moisture Sensitivity

.12 CAN/CGSB-1.140-M89: Oil-Alkyd Type Red Lead, Iron Oxide Primer

.13 CAN/CGSB 1.146-99: Cold Cured, Gloss Epoxy Coating

.14 CAN/CGSB 1.153-00: High Build, Gloss, Epoxy Coating

.15 CAN/CGSB-1.159-92: Acrylic Cellulose Notrate Gloss Lacquer

.16 CAN/CGSB 1.165-04: Cold Curing Epoxy Primer

.17 CAN/CGSB 1.171-98: Inorganic Zinc Coating

.18 CAN/CGSB 1.181-99: Ready-Mixed Organic Zinc-Rich Coating

.19 CAN/CGSB 1.183-99: Zinc-Rich Epoxy Coating

.20 CAN/CGSB 1.186-M89: High Performance Glazed Coating System, Interior

.21 CAN/CGSB 1.189-00: Exterior Alkyd Primer for Wood

.22 CAN/CGSB 1.198-00: Exterior Alkyd Primer for Wood

.23 CAN/CGSB 1.213-04: Etch Primer (Pretreatment Coating or Tie Coat) for Steel and Aluminum

.24 CAN/CGSB 1.40-97: Anticorrosive Structural Steel Alkyd Primer

.25 CAN/CGSB 1.500-75:Methods of Test for Toxic Trace Elements in Protective Coatings

.26 CAN/CGSB 4.2-M87: Textile Test Methods

.27 CAN/CGSB 4.129-93: Carpet for Commercial Use

.28 CAN/CGSB 4.162-M80: Hospital Textiles - Flammability Performance Requirements

.29 CAN/CGSB 7.1-98: Lightweight Steel Wall Framing Components

.30 CAN/CGSB 12.1-M90: Tempered or Laminated Safety Glass

.31 CAN/CGSB 12.3-M91 : Flat, Clear Float Glass

.32 CAN/CGSB 12.4-M91 : Heat Absorbing Glass

.33 CAN/CGSB 12.5-M86: Mirrors, Silvered

.34 CAN/CGSB 12.8-97: Insulating Glass Units

.35 CAN/CGSB 12.9-M91: Spandrel Glass

.36 CAN/CGSB 12.10-M76: Glass, Light and Heat Reflecting

.37 CAN/CGSB 12.11-M90: Wired Safety Glass

.38 CAN/CGSB 12.12-M90: Plastic Safety Glazing Sheets

.39 CAN/CGSB 12.13-M91: Patterned Glass

.40 CAN/CGSB 12.20-M89: Structural Design of Glass for Buildings

.41 CAN/CGSB 19.13-M87: Sealing Compound, One-Component, Elastomeric, Chemical Curing

.42 CAN/CGSB 19.17-M90: One-Component Acrylic Emulsion Base Sealing Compound

.43 CAN/CGSB 19.24-M90: Multicomponent, Chemical-Curing Sealing Compound

.44 CAN/CGSB 25.20-95: Surface Sealer for Floors

.45 CAN/CGSB 31.116-M90: Pretreatment Solution for Galvanized Steel

.46 CAN/CGSB 37-GP-9Ma: Primer, Asphalt, Unfilled, for Asphalt Roofing, Dampproofing and Waterproofing

.47 CAN/CGSB 37.2-M88: Emulsified Asphalt, Mineral-Colloid Type, Unfilled, for Dampproofing and Waterproofing and for Roof Coatings

.48 CAN/CGSB 37.3-M89: Application of Emulsified Asphalts for Dampproofing or Waterproofing

.49 CAN/CGSB 37.4-M89: Fibrated, Cutback Asphalt, Lap Cement for Asphalt Roofing

.50 CAN/CGSB 37.5-M89: Cutback Asphalt Plastic, Cement

.51 CAN/CGSB 37.16-M89: Filled, Cutback Asphalt for Dampproofing and Waterproofing

.52 CAN/CGSB 37.27-M89: Chemical Emulsifier Type, Emulsified Asphalt for Mastic Flooring

.53 CAN/CGSB 37.29-M89: Rubber Asphalt Sealing Compound

.54 CAN/CGSB 37.50-M89: Hot Applied, Rubberized Asphalt for Roofing and Waterproofing

.55 CAN/CGSB 37.51-M90: Application for Hot-Applied Rubberized Asphalt for Roofing and Waterproofing

.56 CAN/CGSB 37.54-95: Membrane, Modified, Bituminous, Prefabricated, and Reinforced for Roofing

.57 CAN/CGSB 37.54-95: Polyvinyl Chloride Roofing and Waterproofing Membrane

.58 CAN/CGSB 37.58-M86: Membrane, Elastomeric, Cold-Applied Liquid, for Non-Exposed Use in Roofing and Waterproofing

.59 CAN/CGSB 51-GPP: Manual for Installers of Spray Urethane Foam Thermal Insulation

.60 CAN/CGSB 51.20-M87: Thermal Insulation, Polystyrene, Boards and Pipe Covering

.61 CAN/CGSB 51.23-92: Spray-Applied Rigid Polyurethane Cellular Plastic Thermal Insulation

.62 CAN/CGSB 51.26-M: Thermal Insulation, Urethane and Isocyanurate, Boards, Faced.

.63 CAN/CGSB 51.32-M77: Sheathing, Membrane, Breather Type

.64 CAN/CGSB 51.33-M89: Vapour Barrier Sheet, Excluding Polyethylene, for Use in Building Construction

.65 CAN/CGSB 51.34-M86: Vapour Barrier, Polyethylene Sheet for Use in Building Construction

.66 CAN/CGSB 63.14-M89: Plastic Skylights

.67 CAN/CGSB 69.17/ANSI/BHMA A156.2-03: Bored and Preassembled Locks and Latches

.68 CAN/CGSB 69.18/ANSI/BHMA A156.1-06: Butts and Hinges

.69 CAN/CGSB 69.20/ANSI/BHMA A156.4-00: Door Controls (Closers)

.70 CAN/CGSB 69.21/ANSI/BHMA A156.5-01: Auxiliary Locks and Associated Products

.71 CAN/CGSB 69.22/ANSI/BHMA A156.6-05: Architectural Door Trim

.72 CAN/CGSB 69.23/ANSI/BHMA A156.7-03: Template Hinge Dimensions

.73 CAN/CGSB 69.24/ANSI/BHMA A156.8-05: Door Controls - Overhead Holders

.74 CAN/CGSB 69.26-96: Power Operated Pedestrian Doors

.75 CAN/CGSB 69.28/ANSI/BHMA A156.12-05: Interconnected Locks and Latches

.76 CAN/CGSB 69.29/ANSI/BHMA A156.13-05: Mortise Locks and Latches

.77 CAN/CGSB 69.31/ANSI/BHMA A156.15-06: Closer/Holder Release Device

.78 CAN/CGSB 69.32/ANSI/BHMA A156.16-02: Auxiliary Hardware

.79 CAN/CGSB 69.34/ANSI/BHMA A156.18-06: Materials and Finishes

.80 CAN/CGSB 71.20-M88: Adhesive, Contact, Brushable

.81 CAN/CGSB 75.1-M88: Tile, Ceramic

.82 CAN/CGSB 79.1-M91: Insect Screens

.83 CAN/CGSB 82.5-M88: Insulated Steel Doors

.84 CAN/CGSB 85.10-99: Protective Coatings for Metals

.85 CAN/CGSB 92.1-M89 : Sound Absorptive Prefabricated Acoustical Units

.86 CAN/CGSB 138.1-96: Fabric for Chain Link Fence

.87 CAN/CGSB 138.2-96: Steel Framework for Chain Link Fence

.88 CAN/CGSB 138.3-96: Installation of Chain Link Fence

.89 CAN/CGSB 138.4-96: Gates for Chain Link Fence

.90 CAN/CGSB 149.10-M86: Determination of the Airtightness of Building Envelopes by the Fan Depressurization Method

.91 CAN/CGSB 149.15-96: Determination of the Overall Envelope Airtightness of Buildings by the Fan Pressurization Method Using the Building's Air Handling Systems

.92 CGSB 1-GP-12 (Withdrawn): Replaced by Federal Specification 595B: Colors used in Government Procurement

.93 CGSB 1-GP-105M: Primer, Quick Drying

.94 CGSB 1-GP-121M: Coating, Vinyl, Pretreatment, for Metals (Vinyl Wash Primer)

.95 CGSB 1-GP-171: Inorganic zinc-rich primer and touch-up paint

.96 CGSB 19-GP: Sealing Compound, One-Component, Butyl-Polyisobutylene Polymer Base, Solvent Curing

.97 CGSB 31-GP-107Ma:Non-inhibited Phosphoric Acid Base Metal Conditioner and Rust Remover

.98 CGSB 37-GP-6Ma: Asphalt, Cutback, Unfilled, for Dampproofing

.99 CGSB 37-GP-9Ma: Primer, Asphalt, Unfilled, for Asphalt Roofing, Dampproofing and Waterproofing

.100 CGSB 37-GPa: Application of Asphalt Lap Cement

.101 CGSB 37-GPa: Application of Unfilled Cutback Asphalt for Dampproofing

.102 CGSB 37-GP: Application of Asphalt Primer for Asphalt Roofing, Dampproofing and Waterproofing

.103 CGSB 37-GP: Application of Filled Cutback Asphalts for Dampproofing and Waterproofing

.104 CGSB 37-GP: Roofing and Waterproofing Membrane, Sheet Applied, Elastomeric

.105 CGSB 37-GP: Roofing and Waterproofing Membrane, Sheet Applied, Flexible, Polyvinyl Chloride

.106 CGSB 37-GP: Membrane, Modified, Bituminous, Prefabricated, and Reinforced for Roofing

.107 CGSB 37-GP: Mat Reinforcing, Fibrous Glass for Membrane Waterproofing Systems and Built-Up Roofing

.108 CGSB 41-GPa: Rigid Vinyl Extrusions for Windows and Doors

.109 CGSB 41-GP: Pipe, Polyethylene, for the Transport of Liquids

.110 CGSB 51-GP-23-M: Thermal Insulation, Urethane, Spray in Place.

.111 CGSB 71-GP: Adhesive, Organic, for Installation of Ceramic Wall Tile

.112 CGSB 71-GP: Adhesive, Flexible, for Bonding Cellular Polystyrene Insulation

.113 CGSB 81-GP-4M: Flooring, Seamless, Decorative Epoxy, Troweled Finish

.114 CGSB 81-GP: Application of Seamless Flooring

.115 CGSB 149-GP-2MP: Manual for Thermographic Analysis of Building Enclosures

3.6 NATIONAL FIRE PROTECTION ASSOCIATION (NFPA)

.1 NFPA 30: Flammable and Combustible Liquids Code

.2 NFPA 45: Standard on Fire Protection for Laboratories Using Chemicals

.3 NFPA 70: National Electrical Code

.4 NFPA 75: Standard for the Protection of Information Technology Equipment

.5 NFPA 80: Standard for Fire Doors and Other Opening Protectives

.6 NFPA 101: Life Safety Code

.7 NFPA 252: Standard Methods of Fire Tests of Door Assemblies

.8 NFPA 253: Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source

.9 NFPA 255: Standard Method of Test of Surface Burning Characteristics of Building Materials

.10 NFPA 257: Standard on Fire Test for Window and Glass Block Assemblies

.11 NFPA 258 : Recommended Practice for Determining Smoke Generation of Solid Materials

.12 NFPA 265: Standard Methods of Fire Tests For Evaluating Room Fire Growth Contribution of Textile Coverings on Full Height Panels and Walls

.13 NFPA 268: Standard Test Method For Determining Ignitibility of Exterior Wall Assemblies Using a Radiant Heat Energy Source

.14 NFPA 286: Standard Methods of Dire Tests for Evaluatoing Contribution of Wall and ceiling Interior Finish to Room Fire Growth

.15 NFPA 701: Standard Methods of Fire Tests for Flame Propagation of Textiles and Films

.16 NFPA 704: Standard System for the Identification of the Hazards of Materials for Emergency Response

3.7 UNDERWRITERS' LABORATORIES/UNDERWRITERS' LABORATORIES OF CANADA (UL/ULC)

.1 CAN/ULC S101: Standard Methods of Fire Endurance Tests of Building Construction and Materials

.2 CAN/ULC S102: Standard Test Method for Surface Burning Characteristics of Building Materials

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 GENERAL

.1 Be informed of procedures to be followed on the Contract and the degree of testing and inspection to be expected during course of the Work. Coordinate testing and inspection work and furnish labour and materials as necessary to accommodate the work described under this Section.

1.4 APPOINTMENT OF TESTING AND INSPECTION COMPANIES

.1 From time to time during progress of the Work, the Owner may require that testing be performed to determine that materials provided for the Work meet specified requirements, installation of specified materials is in compliance with approved methods, and final resulting assemblies meet specified performance requirements.

.2 The Owner will, with recommendations from the Consultant, appoint testing and inspection companies, representing, reporting and responsible to the Owner through the Consultant, except the following, which must be included in the Contract Price:

.1 Inspection and testing required by laws, ordinances, rules, regulations or orders of public authorities and Authorities Having Jurisdiction.

.2 Inspection and testing performed exclusively for Contractor's convenience.

.3 Testing, adjustment and balancing of conveying systems, mechanical and electrical equipment and systems.

.4 Mill tests and certificates of compliance.

.5 Tests specified in the Contract Documents to be carried out by Contractor under supervision of Consultant.

.6 Inspections and tests specifically indicated to be Contractor’s responsibility in Divisions 02 – 49 of the Project Manual.

.3 Where tests or inspections by designated testing laboratory reveal Work not in accordance with the Contract requirements, pay costs for additional tests or inspections as required by Consultant to verify acceptability of corrected work.

1.5 PAYMENT FOR TESTING AND INSPECTION SERVICES

.1 The cost of testing and inspection will be authorized as a cash allowance item under the price and payment procedures set out in Section 01 29 00 – Payment Procedures.

.1 Testing and inspection companies shall submit monthly invoice original to the Consultant and a copy to the Owner for review, relating invoices to tests and inspection reports. Provide original receipts for all disbursements.

.2 When approved for payment, invoices will be forwarded by the Consultant to the Contractor for inclusion in the Contractor's next progress payment application.

1.6 INSPECTION AND TESTING REQUIRED BY CONTRACT DOCUMENTS:

.1 Appoint and pay independent inspection and testing company to verify the requirements of the Contract Documents. Be responsible for quality control. Employ quality control staff, supervisors and implement quality control procedures.

.2 Inspection and testing required by Contract Documents, codes, regulations, plan approval authority, other legally constituted authorities and/or Authorities Having Jurisdiction shall be the Contractor’s responsibility and paid for by the Contractor.

.3 Additional testing required as a result of changes in materials, proportions of mixes requested by Contractor and Subcontractors as well as any extra testing of materials occasioned by lack of identification or by their failure to meet Specification requirements or testing of structure or elements including load testing, shall be carried out at the Contractor's expense.

.4 A review by the Consultant and/or other consultants does not relieve the Contractor of its responsibility for performance of the Work in accordance with the Contract Documents. The Contractor shall be responsible for the care and control of the Work and is solely responsible for quality control and shall implement supervisory and quality control procedures. Inspection or testing performed exclusively for the Contractor's convenience shall be the sole responsibility of the Contractor.

1.7 INSPECTION AND TESTING REQUIRED BY CONSULTANT:

.1 In addition to the inspection and testing specified to be provided as part of the Work or provided by the Contractor for its own verification of the Work, the Consultant may appoint separate inspection and testing companies for certain work where specifically stated in the Contract Documents or where the Consultant may later require. Wherever documents state that inspection and testing companies may be appointed by the Owner or Consultant, give adequate notice prior to commencement of this portion of the Work to the Consultant to determine if such inspection and testing companies will be appointed.

.2 Services performed by inspection and testing companies and other consultants serve to assist the Consultant and do not to replace the Contractor's responsibility for conforming to the requirements of the Contract Documents. The Contractor is responsible for continuous checking and inspections of the Work to ensure the Work is in accordance with the Contract Documents it proceeds. In such cases, the following will apply:

.1 The Owner will pay costs of such additional inspection and testing; except where such additional tests or inspections reveal Work not in accordance with Contract, the Contractor shall bear cost of such tests and further tests as required to verify the acceptability of corrected Work;

.2 The Consultant will advise the Contractor of work to be inspected and companies appointed and will provide the testing companies with necessary Drawings and Specifications;

.3 The Contractor will advise and coordinate with the Consultant and applicable inspection and testing companies a minimum of five (5) Working Days prior to commencement of the work to be inspected or tested and ensure proper facilities and coordination are provided. Do not perform any work without the required inspection and testing.

.3 Establish a schedule of testing, number of testing reports and submission and distribution of testing reports. Provide to the Consultant all pertinent data regarding Site conditions, dates, test references, product identification, procedures and description, instructions and recommendations and other relevant information. Identify clearly the Product and system not meeting the requirements of the Contract Documents and submit measures and recommendations for correcting the situation. Advise the Consultant promptly when a Product or system fails to meet the applicable standards.

.4 Materials and work not in accordance with the requirements of the Contract Documents will be rejected at any time during the progress of the Work. Defective material and work, whenever found prior to Total Performance of the Work, may be rejected regardless of previous inspection or testing.

.5 Any inspection shall not constitute a relief of the Contractor's responsibility under the Contract, but shall serve as a precaution against oversight or errors.

.6 Where evidence exists that defective work has occurred or that work has been carried out incorporating defective materials, the Owner, through the Consultant, reserves the right to have tests, inspections or surveys performed and analytical calculations of structural strength (and the like) made in order to help determine the extent of the defect and whether work must be replaced. Tests, inspections or surveys carried out under these circumstances will be made at the Contractor's expense, regardless of the test results.

1.8 TESTING AGENCY QUALIFICATIONS

.1 Conduct testing in accordance with the requirements of the OBC unless advised otherwise in the Contract Documents or by the Consultant. Obtain certification where required by the applicable codes and standards. The Contractor shall also:

.1 Ensure the testing agency is an independent testing agency with experience and capability to conduct the relevant testing, as documented according to ASTM E548-94e1 Standard Guide for General Criteria Used for Evaluating Laboratory Competence

.2 Quality assurance protocols and capability of testing agencies to perform designated tests on construction materials shall be evaluated in accordance with the following:

.1 ASTM E329-11: Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection
.2 ASTM E699-09: Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components

.2 Qualifications of Inspectors: Submit a list of inspectors to be employed on the Work and obtain the Consultant's approval.

.3 Perform all testing and inspection using qualified inspectors and/or technologists certified by a professional engineer or performed directly by a professional engineer registered to practice in the Province of Ontario in conformance with applicable codes and certification programs.

1.9 QUALITY ASSURANCE

.1 Qualifications of Inspectors: Inspectors for this Work shall be as recommended by the Consultant, subject to approval of the Owner.

.2 All work of the testing and inspection agency shall be performed by qualified and/or certified personnel under professional supervision or performed directly by a professional engineer registered to practice in the Province of Ontario in conformance with all applicable codes and certification programs.

.3 Ensure inspectors and personnel are qualified to perform the type of inspection or testing required and meet, as applicable, the requirements of the following standards:

.1 ASTM E329: Standard Specification for Agencies Engaged in Construction Inspection and/or Testing;

.2 ASTM C1077: Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation;

.3 ASTM C1093 Practice for Accreditation of Testing Agencies for Masonry;

.4 ASTM D3666: Specification for Minimum Requirements for Agencies Testing and Inspecting Road and Paving Materials;

.5 ASTM E2174: Practice for On-Site Inspection of Installed Fire Stops;

.6 ASTM E 2393: Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers;

.4 Perform concrete testing using a testing company that conforms to the requirements of CSA A283. The inspection report format and distribution requirements will be established by the Consultant.

.5 The testing and inspection company performing concrete testing shall be certified under CSA A283, Qualification Code for Concrete Testing Laboratories, for Category 1 Certification.

.6 Concrete testing shall be performed by a testing company conforming to the requirements of the CSA A283 as required for this Contract. The inspection report format and distribution requirements will be established by the Consultant.

.7 Welder's qualifications shall be in accordance with Section 01 40 00 – Quality Requirements.

.8 Requirements of Regulatory Agencies:

.1 All testing shall be conducted in accordance with the requirements of the OBC, except where this would, in the Consultant's opinion, cause undue delay or give results that are not representative of the rejected material in place. In such a case, tests shall be conducted in accordance with the standards given by the Consultant.

.2 Obtain certification where required by applicable codes and standards.

.3 Refer to GC 2.3 – Review and Inspection of the Work of the General Conditions of the Contract for further details regarding rejected work.

1.10 COOPERATION WITH TESTING AND INSPECTION COMPANIES

.1 Representatives of the testing laboratories shall have access to the Work at all times; provide facilities for such access in order that the laboratories may properly perform its function.

.2 Cooperate with testing and inspection companies and give adequate notice to the Consultant of any changes in source of supply, additional work shifts and any other proposed changes.

.3 Prior to commencing significant segments of the Work, give appropriate notification to the Consultant and independent testing and inspection agencies so as to afford them reasonable opportunity to review work previously completed. Failure to meet this requirement may be cause for the Consultant to classify the work as defective.

.4 Install no Product before it is tested when a test is specified in the Contract Documents. Do not execute any work where a test or inspection is required and the inspectors cannot attend.

.5 Cooperate in permitting access for inspection to all places where the Work is being done or material is stored prior to shipping.

.6 Allow free access to testing agencies and supply necessary sampling materials for tests. Supply additional labour required to assist the testing and inspection companies in making tests.

.7 The testing and inspection service does not relieve the Contractor of its responsibility for normal shop inspection, quality control of production and for errors made by them. The testing and inspection also does not constitute the Owner's acceptance of any of the Work.

1.11 REPORTS AND DOCUMENTS

.1 The Contractor shall ensure that the testing and inspection company will submit shop inspection and Site inspection reports within 5 Working Days of each inspection.

.2 Distribute reports as follows:

.1 Owner, 1 copy;

.2 Consultant, 2 copies;

.3 Contractor, 2 copies (1 for Data Manual); and

.4 Engineering Consultants, 1 copy each;

.3 The Contractor shall ensure that the inspectors will provide a written report on each inspection or test, including in the report: all pertinent data as to Site conditions, dates, test references, actual product identification, procedures and descriptions, Site instructions given, recommendations and any other information required by standards applicable to the reporting of tests and inspections;

.1 The reports shall clearly indicate any failure of Products or procedures to meet the applicable standards. Give recommendations for retesting or correction. The Contractor shall contact the Consultant immediately when product or procedure fails to meet applicable standards.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 GENERAL

.1 The following list of testing and inspection services listed in Part 3 of this Section serves to illustrate a non-exhaustive scope of independent inspection and testing services that may be required by the Owner or Consultant. When such services are required, and unless they are indicated to be included in the Contract Price, they shall be paid for through cash allowance as specified in this Section.

.2 Give total cooperation to the Owner's testing agency during testing and inspection of designated items.

3.2 DEWATERING

.1 Monitor dewatering techniques, pumping quantities and actual infiltration into excavations at both vertical and horizontal planes.

.2 Take periodic samples of water being discharged from settlement ponds to determine acceptability of water under the bylaws of the Local Municipalities.

3.3 EXCAVATING, BACKFILLING AND COMPACTING

.1 Review and be familiar with the geotechnical report referred to in paragraph 12 of the Request for Tenders.

.2 Perform founding strata tests, inspections and measurements to:

.1 prove bearing capacity of soil before placement of concrete and asphalt,

.2 determine actual level established at excavation and

.3 determine acceptable founding elevations.

.3 Perform periodical tests and inspections to:

.1 determine the depth of existing soil which must be removed in order to provide a soil capable of supporting necessary founding work, fill, and paved areas without deleterious settlement;

.2 determine quality of fill and backfill material for use under floor slabs and exterior areas, including natural moisture content, optimum moisture and maximum density, quantity of water to be added or removed to produce correct moisture content for compaction and maximum density, proper placing and compaction in final location, moisture and density of compacted soil in place and compaction carried out to specified densities.

.4 If soil densities, upon testing, do not meet the requirements of this Specification, further tests and inspections will be requested by the Consultant and paid for by the Contractor.

3.4 ASPHALTIC CONCRETE

.1 Verify qualifications of source of materials, installer and proposed equipment to be used.

.2 Review asphaltic concrete mix designs and related laboratory tests on aggregates and asphaltic materials.

.3 Carry out field tests to determine conformance with the Specifications regarding asphaltic concrete density, bitumen content and type, and stone grading for each Day's work.

.4 Verify that the specified compaction has been obtained and correct pavement thickness is achieved for every 100 ft² or less of paved area for each lift of asphaltic concrete using nuclear densimeter.

.5 Verify that the specified thickness of pavement has been provided for every 100 ft² or less of paved area for each lift of asphaltic concrete.

3.5 STRUCTURAL CONCRETE

.1 Perform inspection work at the concrete supplier source with quality control in accordance with the procedures specified in CAN/CSA-A23.1, 2, and 3-00 and include:

.1 verification that the ready-mix supplier is qualified to supply concrete in accordance with the Specifications and has capacity to supply concrete as required by the Construction Schedule;

.2 review of proposed concrete mix designs; and

.3 sampling, testing and inspection of materials as may be required.

.2 Review production samples of aggregates and manufacturers' test results of cement and reinforcing steel to verify conformance to the Contract Documents.

.3 Cement from specified Canadian manufacturers will be accepted without additional tests, providing verification is given that cement type complies with the Specifications.

.4 Routinely test materials in accordance with the provisions of and procedures established in CAN/CSA-A23.1-M00 to determine the following:

.1 strength of concrete at 7 and 28 Days;

.2 insitu strength of concrete placed under "Cold Weather Requirements" at 7 Days;

.3 air content of air-entrained standard mass concrete; and

.4 slump of all concrete at the time of placing.

.5 Execute a concrete strength testing programme as follows:

.1 footings, columns, walls, grade beams, slabs-on-grade - 3 cylinders from each pour of 130 yd^3 or less placed in any 1 Day, with lab cured reports at 1 at 7 Days, 1 at 14 Days and 2 at 28 Days;

.2 suspended slabs and girders which are required to sustain construction loads:

.1 for work at or above 5°C, 4 cylinders from each pour of 130 yd^3 or less placed in any 1 Day; with lab cured reports at 1 at 7 Days, 1 at 14 Days and 2 at 28 Days;

.2 for work below 5°C, 6 cylinders from each pour of 130 yd^3 or less placed in any 1 day, with lab cured reports at 1 at 7 Days, 1 at 14 Days and 2 at 28 Days and job cured reports at 1 at 7 Days and 1 at 14 Days.

.3 Test air content of air-entrained standard density concrete making one test for each vibrated concrete batch. For exposure classifications F-1, C-1 and C-2, test at frequency in accordance with CAN/CSA-A23.1, Clause 17.4.1. Perform the first test before placing any concrete. After stable air content has been established, the frequency of tests will be determined by the Consultant. For exposure classifications F-2 and C-4, test at the time of obtaining strength test specimens.

.6 Test the air content and unit weight of light weight concrete by the volumetric method, with one test for each batch placed.

.7 In addition, for slabs-on-grade, obtain other necessary specimens for the determination of laboratory modulus of rupture. Modulus of rupture tests shall be taken at 90 Days.

.8 For concrete cylinder test reports, include the following:

.1 specific locations of concrete represented by sample;

.2 verification that test specimens are stored within an enclosure which is maintained at specified temperatures;

.3 design strength;

.4 unit weight of sample;

.5 exposure class;

.6 aggregate size and admixtures incorporated;

.7 date, hour and temperature at time sample was taken;

.8 percentage of air content;

.9 test strength of cylinder; and

.10 type of failure if test fails to meet Specifications.

.9 For reinforcing steel:

.1 identify and correlate reinforcing steel with mill test reports to assure conformance to the Contract Documents;

.2 conduct and pay for the testing of specimens for each grade and size of reinforcing steel contained in any 100 tonnes of steel shipped by means of a series of tests which include 2 bars for each test required of each size and grade of steel used;

.3 reinforcing steel tests shall be made in accordance with the requirements of applicable CSA G30 Series specified; and

.4 ensure that the mechanical splices of reinforcing bars and its installation comply with Specifications and perform tension tests to destruction on approximately 5% of mechanical splices.

.10 Verify tolerances as follows:

.1 confirm that concrete work meets tolerance requirements,

.2 use the elevation survey records of elevations of soffit form surfaces and finished concrete surfaces specified in Sections 03 10 00 – Concrete Forming and Section 03 30 00 – Cast-in-Place Concrete as the basis for judging compliance;

.3 use approved aluminum straightedge to judge compliance with specified slab finish tolerances except that dipstick equipment shall be used to measure F number tolerances.

.11 Perform the required standard tests for grout under baseplates.

3.6 CONCRETE SLAB FINISHING

.1 Verify the grading of underslab compacted granular base and ambient temperatures.

.2 Review of placement of slab reinforcement and construction joint.

.3 Pre-pour review of equipment, workers and techniques of casting slabs.

.4 Pre-pour review of equipment, workers and techniques of casting slabs.

.5 Perform saw-cuts before slab temperature starts to fall.

.6 Identify Products and monitoring procedures employed in the finishing and saw cutting of concrete floors.

.7 Observe the application of curing compounds and hardeners as applicable to sample slabs, recording the rates of application.

.8 Verify slab finishing tolerances using laser equipment. Where applicable and specified in the Contract Documents, super flat floor tolerances (F System) shall be verified.

.9 Perform testing in accordance with requirements of ASTM F1869 for moisture on concrete floors. Moisture emission from the concrete floor shall not exceed 1.5 kg/93 m² (3.5 lbs/1000 sq ft) in 24 hours.

.10 Perform relative humidity test in accordance with the requirements of ASTM F2170 using in situ probes and measure internal relative humidity of slab; concrete slab and air space above floor slab shall be at service temperature and relative humidity of area for 48 hours prior to measuring concrete relative humidity; conduct a minimum of three tests for first 1,000 sq.ft and one additional test for each 1,000 sq.ft.; conduct one test near centre and others around the perimeter of area; relative humidity probe test shall not exceed 75% unless recommended otherwise by flooring manufacturer(s). Do not proceed with installation until moisture problem has been corrected. Provide results to the Consultant prior to the commencement of installation.

.11 Conduct pH testing to ensure the alkali salt residue is within limits acceptable to the manufacturer and to avoid adhesive failure, discoloration, shrinkage and softening of floor covering. If pH results are higher than that which is acceptable to the manufacturer, neutralize the floor prior to beginning of installation by sanding, vacuuming and/or by water plus mild muriatic acidic application as recommended by the manufacturer. Retest to ensure that the pH has been neutralized.

.12 Prepare concrete slabs to receive resilient flooring in accordance with requirements of ASTM F210; areas to receive flooring finishes shall have no release agents, sealers, hardeners or curing compound. The concrete slab shall meet moisture and relative humidity of concrete slab and other requirements recommended by the flooring manufacturer. Do not proceed with the installation of finish flooring until moisture problem has been corrected.

.13 Slab Levelness:

.1 floors shall be measured in accordance with ASTM E1155M (Test Method for Determining Floor Flatness and Levelness Using the F-Number System), "F number" system (inch-pound units) shall be verified by an independent testing company;

.2 submit test reports to the Consultant for review; and

.3 prior to commencement of installation of partitions, ensure that the floor meets the requirements specified in this Section. If the floor does not meet required levelness, provide a leveling topping at no cost to the Owner.

3.7 MASONRY

.1 Verify that masonry units being supplied to Site conform to the Specifications.

.2 Verify mortar mix and grout designs. Check the source of grout. Test mortar and grout in accordance with CSA A179.

3.8 STRUCTURAL STEEL

.1 **Shop Inspection**

.1 Verify that fabrication is carried out in conformance to CAN3-S16.1 and the Contract Documents, using modern up-to-date shop practice suitable for the type of work under consideration.

.2 Conduct as many shop visits as necessary to establish that the steelwork is correctly fabricated.

.2 **Materials Inspection**

.1 Provide certified mill test reports for structural shapes and plates.

.2 Verify types of bolts, rivets and welding electrodes.

.3 Verify the manufacturers' data on shop paint and verify its conformance to the Contract Documents.

.4 Identify and correlate materials used for fabrication.

.5 Verify structural section, shape, size, weight and length as well as straightness, camber, twists out of square or out of parallel.

.3 Ensure reviewed detail Shop Drawings are used for fabrication.

.4 Inspect and check the quality of work and fabrication as follows:

.1 qualifications of fabricator and welders;

.2 correctness of procedures, materials and equipment;

.3 drilling and punching of holes, shearing and cutting of copes, weld preparation; cold or hot bending and forming;

.4 assembly of members, sequence, fit-up and tolerances of bolted, riveted and welded shop connections;

.5 straightness of assembled members within allowable tolerances;

.6 camber of members as specified;

.7 end bearing surfaces: smoothness of texture and correct angle cut;

.8 grinding or planing of surfaces or edges;

.9 shop rivets for size, grip and tightness; and

.10 1 in 10 shop bolts for size, grip, washer and tightness to be checked by torque wrench.

.5 Inspect and check welds as follows:

.1 check welds according to standards as approved by the Canadian Welding Bureau;

.2 inspection organization undertaking welding inspection shall be qualified in accordance with requirements of CSA W178.1, "Certification of Welding Inspection Organizations", and shall be approved by the Canadian Welding Bureau;

.3 examine for proper setting of amperage of welding machines;

.4 visually inspect root pass for cracking and penetration, back-up plates and clipping, pre-heating and distortions;

.5 ensure removal of slag between passes, check general quality of finished weld, size, length and spacing, and conduct special inspection of testing of shop welds other than visual inspection upon the specific instructions of the Consultant.

.6 begin by inspecting approximately 10% of welds. Where problems arise in this area, inspect as much as 100% of welds, with inspection beyond the first 10% to be performed at no additional cost to the Owner; and

.7 check on surface preparation and cleaning of material to be free of rust, dirt, slag and grease by chemical, blast or hand cleaning, as specified in the Contract Documents - one visual inspection per 50 tonne of steel.

.6 Inspect shop painting method of application whether by dipping, spraying or brushing, verifying mil thickness of primer for conformance to the Contract Documents, and that primer has been omitted in the designated locations shown on the Drawings.

.7 Review miscellaneous items including the following:

.1 identification of members for field erection;

.2 shop handling and storing of members during and after fabrication; and

.3 preparation of members for shipping such as strapping or binding in suitable sizes.

.8 Provide field inspection, including fit-up, placing, plumbing, leveling, temporary and permanent bracing, welded and bolted connections, and field touch-up of shop painting for conformance to the Contract Documents. Provide general inspection of field cutting and alterations, slag removal at welded joints, and instrument verification of erection tolerances.

3.9 AIR BARRIER/VAPOUR RETARDER

.1 Refer to Section 01 83 16 - Exterior Enclosure Performance and Testing.

3.10 INSPECTION OF WINDOW ASSEMBLIES

.1 Record weather conditions and temperatures of substrata and atmosphere.

.2 Check building structure for dimensions, deflections, plumbness and twist to ensure it is within the specified and detailed tolerances to accept the systems.

.3 Check concrete structure for opening sizes, tolerances, deflection, plumbness and exact plane to ensure it is within specified and detailed tolerances to accept the windows.

.4 Check anchorages to the building structure. Ensure they are installed satisfactorily at locations permitted by the design of the building structure. Do not interfere with other items to be installed that are secure and are made corrosion resistant.

.5 Check window systems to ensure true alignment horizontally and vertically.

.6 Check provisions to compensate for thermally induced expansion and contraction.

.7 Check to ensure thermal breaks are provided, properly located and continuous.

.8 Check that rain screen provisions have been included.

.9 Check that all concealed joints and screw heads and similar fasteners holding components together are made airtight and watertight.

.10 Check that metal air/vapour barriers and their sealants are installed and sealed airtight, free of perforations of any kind, that provisions to allow for expansion, contraction and deflection are provided and that units will not deflect and pop.

.11 Check that insulation is continuous, secure and has been installed to the required thickness.

.12 Check that glass is properly installed, with all lights in same planes and locations within glazing pockets, and that glazing gaskets, sealants and spacers are installed so no pumping of the glazing materials can occur.

.13 Check methods of substrate cleaning for the application of sealants to ensure the proper application of the sealants.

.14 Check that pressure plates are applied securely and in a manner that pressure on glass is equally applied and continuous so that no distortion to the glass occurs.

.15 Check that packing insulation is provided and installed to be thermally efficient and continuous.

.16 Check metal finishes for correct installations, uniformity of colour and for match to acceptable samples and mock-ups.

.17 Check glass for uniformity of colour with adjacent glass units.

.18 Check glass for distortion of image from any cause.

.19 Check interface of window systems with other building components for air, thermal and water tightness and material compatibility.

.20 Check that the system does not permit build-up of ice and hoar frost within components.

.21 Check compatibility of materials within curtain wall systems.

.22 Check windows for air movements within systems and at joints between systems and adjacent construction using artificial smoke devices.

.23 Check continuity and compression of firestopping.

.24 Check glass units for seal failures.

.25 Check edges of glass units for nicks, chips and other defects which could cause breaking due to thermally induced stresses.

.26 Check glass for obstructions to vision.

.27 Check glass bite within glazing pockets.

.28 Check quality of exposed metal work for quality of joints, flatness, distortions, rough edges and alignment.

.29 Check spandrel panels for compliance with accepted samples, mock-ups and with specified criteria. Check anchorages, alignment of joints, joint sizes, reveal sizes, panel sizes and tolerances in plane of panel faces, thicknesses, compatibility of sealants, staining, application of joint primer, flashings, grain direction, code markings with respect to location as indicated on reviewed Shop Drawings, quality of finish, epoxy bonds, drainage holes, exposed edge finish, edge damage and flaws.

.30 Check for compliance with Specifications, Drawings, samples, Site samples, on-Site accepted mock-ups and tested prototype.

.31 Check that no alkali run-off from building structure onto metal and glass surfaces occurs.

.32 Report immediately to the Consultant any items being installed contrary to the Contract Drawings and Specifications for the Consultant's decision and action.

3.11 TESTING AND INSPECTION OF MECHANICAL SYSTEMS

.1 In addition to testing procedures and Contractor's periodic field review during construction performed under Divisions 20, 21, 22 and 23, carry out certifications required by the Authority Having Jurisdiction.

.1 See the Mechanical Divisions noted above for further testing requirements.

3.12 TESTING AND INSPECTION OF ELECTRICAL SYSTEMS

.1 Refer to Division 26 - Electrical for further testing requirements.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to

.1 and the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: General requirements for sound control and construction of airtight assemblies to prevent sound flanking and structure-borne sound transmission.

.2 Related Requirements: Specifications throughout entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards (including any amendments thereto) listed in this Section in effect as of the closing date and time for the Request for Tenders that was issued for the Contract are applicable unless otherwise indicated.

1.5 PERFORMANCE

.1 Conform to CSAZ8000 for general design and construction requirements of health care facilities;

.2 Ensure construction of all assemblies is airtight. Responsibility for airtight construction falls on the Contractor. Employ pertinent details for airtightness and coordinate work between trades to ensure airtightness is achieved. Conform to requirements of ASTM E497.

.3 Representative details for airtight penetrations, recessed elements, edges and similar conditions requiring acoustic treatment are shown on Drawings. Specific materials and components to be used to accomplish airtight detailing are specified in the technical Specifications (Divisions 02 - 49). Bring to attention of Consultant any condition that may require special details or materials in order to achieve airtightness.

.4 Requirements specified in this Section are to be read in conjunction with other requirements stipulated in Contract Documents. They do not in any way negate or supersede other provisions stipulated elsewhere in Contract Documents.

.5 Carefully locate and treat ducts, grilles, diffusers, electrical outlets, boxes and other similar mechanical and electrical devices.

.6 Build and install all construction joints, structural penetrations, mechanical and electrical duct penetrations, pipe and conduit penetrations, electrical boxes and fixtures, cabinets, doors, access panels, windows, frames, supports and similar penetrations or openings in such manner as to prevent sound transmission and flanking.

.7 Provide lintels, extra frames, blocking, escutcheons, grouting, gaskets, packing, caulking, dense putties, taping, filling, and other filler materials as required to stop sound

transmission. Use flexible sealant or acoustical gasket to seal between assemblies and dissimilar surfaces.

.8 Extend construction to a minimum of 3 mm (1/8") and a maximum of 13 mm (1/2") of adjacent construction or penetrations to provide suitable space for packing and caulking.

.9 Do not locate recessed wall fixtures such as medicine cabinets, electrical, telephone, data outlets that penetrate assemblies back-to-back or in same cavity. Locate such boxes or outlets at least 250 mm (10") apart laterally and if interconnected, use flexible connections.

.10 Cut openings in construction accurately for electrical boxes, piping, ductwork and other penetrating elements. Leave enough space around such elements so they remain free of rigid connection with the surrounding construction.

.11 Prior to packing and caulking penetrations, verify that all penetrating elements such as piping and ductwork are free and clear of the opening to be packed and caulked.

.12 Where multiple layers of gypsum board are used, stagger all joints in adjacent layers for a minimum of 610 mm (24”).

.13 Apply all acoustical sealants and caulks in accordance with manufacturer's instructions and requirements of ASTM C919.

.14 Airtight construction requirements for the Project include, but are not limited to the following:

.1 Partition Bases: Provide continuous bead of acoustical sealant at all locations where gypsum board meets structural floor or roof (this includes all sides of partitions). Depth of sealant to be equal thickness of gypsum layer or layers.
.2 Partition Heads: Provide the same detail as for bases at flat structure. Refer to Drawings for details for other conditions.
.3 Partition or Ceiling Joints at Dissimilar Materials: Provide continuous bead of acoustical sealant at all locations where gypsum board meets dissimilar material. Depth of sealant to be equal thickness of gypsum layer or layers.
.4 Pipe, Duct, Conduit, or Structural Penetrations: In accordance with requirements of Division 21, 22, 23, 26 and 27.
.5 Electrical Boxes: Provide acoustical putty pad continuously around boxes. Refer to Divisions 26 and 27 for additional requirements.
.6 Electrical, Lighting, or Other Recessed Boxes Over 100 mm x 100 mm (4" x 4"): Provide one layer of 13 mm (5/8") gypsum board continuous around the back of such boxes. Caulk or tape all joints and caulk all conduit penetrations with acoustical sealant. Refer to Divisions 26 and 27 for additional requirements.

.15 Sound Isolation: Isolate mechanical equipment located on same floor or above patient rooms, offices, nurse stations and similar occupied space from floor.

.16 General STC ratings:

.1 Provide airtight partitions and ceilings in locations indicated to meet required minimum Sound Transmission Class (STC) ratings. Coordinate work of various Subcontractors to avoid “short circuiting” of the STC ratings. Refer to Drawings for STC ratings.
.2 If not stated otherwise in the Contract Documents, STC rating shall be those indicated in the OBC.

PART 2 - EXECUTION

2.1 NOISE AND VIBRATION MANAGEMENT (DURING CONSTRUCTION)

.1 Noise Control: Perform construction operations to minimize noise. Comply with municipal Noise By-Laws, requirements of Authorities Having Jurisdiction and Owner's facility procedures to avoid disruption of normal facility activities.

.1 Assess potential effects of construction noise on facility occupants in accordance with ASTM E1686.

.2 Monitor noise produced from construction operations in accordance with ASTM E1780.

.2 Perform noise- and vibration-producing work in less sensitive hours of the day or week as directed by the Owner. Refer to Section 01 10 00 for additional requirements.

.3 Repetitive and/or intermittent, high-level noise: permitted only during times indicated in Section 01 10 00. Do not allow sound levels to be more than 70 dBA for more than 12 minutes in any hour and/or more than 80 dBA for more than 3 minutes in any hour, measured at 3 m (10') from the source.

.4 Work deemed noisy or inducing excessive vibrations by the Owner may be restricted to Saturdays and Sundays or outside of normal weekday working hours (while still complying with municipal Noise By-Laws) without additional costs to the Owner. Refer to Section 01 10 00 for additional requirements.

.5 Maximum permissible construction equipment noise levels:

Equipment	dBA
Concrete Mixers	75
Concrete Pumps	75
Cranes	75
Derricks Impact	75
Pile Drivers	95
Jack Hammers	75
Rock Drills	80
Pneumatic Tools	80
Saws	75
Vibrators	75
Other noise sources:	70

.6 Equip vehicles and equipment with efficient noise attenuation devices (mufflers) and sound deflectors as required to minimize and maintain noise levels in vicinity of Site below the preceding limits measured 3 m (10') from the source.

.7 Where necessary place noise attenuation devices (barriers) around stationery pumps and compressors.

.8 Provide Owner with a minimum of 5 Days written notice of any construction activity that may cause excessive noise or vibration. Reschedule such construction activities if they interfere with Owner's sensitive procedures.

.9 Contractor may be required to temporarily halt operations involving excessive noise or vibration to accommodate emergency and/or sensitive activities without additional cost to the Owner. The Contract Price shall include and allow for such temporary shut downs.

END OF SECTION

Updated through ADD#8

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

.2 Provide any permit necessary for temporary facilities and controls. Provide and maintain all temporary facilities and controls specified in the Contract Documents. Remove them when directed and/or when no longer required. Payment for temporary facilities and controls shall be made by the Contractor unless specified otherwise in the Contract Documents.

.3 Provide and maintain adequate temporary supports, structures, light, power and water in accordance with GC 3.1 – CONTROL OF THE WORK and GC 3.3 – TEMPORARY SUPPORTS, STRUCTURES AND FACILITIES of the General Conditions of the Contract, as required by all trades and to facilitate the Work to proceed without delay at all times of the year. The cost of temporary light, power and water shall be included in the Contract Price. The Contractor shall pay for installation, light, power and water used, its maintenance and removal.

1.3 TEMPORARY UTILITIES

.1 Temporary Water Supply:

.1 Arrange and pay for the supply of water required for construction purposes.

.2 Provide connections, piping and fittings for distribution of water and remove such temporary distribution upon completion of the Work.

.2 Temporary Power:

.1 Provide continuous temporary power and lighting service. If necessary, arrange and coordinate off-Site power source for continuous temporary power and lighting service. Arrange and pay for energy charges and include costs in the Contract Price for connection and provision of a separate meter.

.3 Temporary Heating, Ventilation and Air Conditioning:

.1 Provide temporary heating, ventilation and air conditioning for enclosed building until Substantial Performance of the Work to ensure adequate protection of the Work under way and of completed Work. Temporary heating, ventilation and air conditioning without limitation includes heating, cooling and desiccant de-humidification equipment, associated power cables, gas lines, temporary duct work and accessories.

.2 Provide also temporary heating, ventilation and air conditioning for portions of the Work where exposed to atmospheric elements during construction.

.4 Temporary Controlled Environment:

.1 Provide a controlled environment and dehumidifier for the drying and curing of construction Work to prevent the growth of mold and to speed up the drying of concrete to meet moisture emission levels required by finish flooring installation. Conform to the following performance

requirements, except where more stringent requirements are required by the work of other Sections and Contract Documents:

.1 Supply Air: Minimum 1 air change every 120 minutes.
.2 Filtration of out air - 100%.
.3 Temperatures - minimum between 15°C (59°F) and 27°C (80°F).
.4 Relative humidity - maintain at or below 50%.
.5 Ensure moisture content in wood and hardwood materials is stabilized to maximum percentage recommended by AWI/AWMAC requirements.
.6 Control condensation and maintain environmental conditions, including air and surface temperatures suitable for surface preparation, application and curing of paints and coatings.
.7 Conform to noise criteria requirements specified in the Contract Documents.

.2 Provide proper heating for drying out of new work. Maintain the minimum temperature specified in this Section. Uniformly distribute heat to avoid hot or cool areas or excessive drying. Protect concrete, masonry, excavations, backfilling and other work from frost during construction.

.3 Dehumidify interior spaces continuously during installation and curing periods required for moisture emitting work to maintain the required relative humidity levels, including without limitation work involving:

.1 joint compounds, skim coating, gypsum board work and plaster;
.2 cementitious materials;
.3 paints; and
.4 finish carpentry, casework, wood paneling, wood flooring and other millwork.

.4 As soon as construction is sufficiently advanced, and in order to prevent delays in the progress of the Work, enclose the building using necessary tarpaulins, plastic sheeting or glazing and temporary doors, with locks to doors.

.5 Construction heaters used inside the building must be vented to outside or be flameless type. Do not use direct fired space heaters and propane, salamander type heaters. Ventilate heated areas and keep the building free of exhaust and combustion gases.

.6 Maintain supervision of the operation of temporary heating and ventilation equipment. Maintain temporary climate control equipment in service until the completion of building commissioning or when use of the equipment is no longer required as directed by the Consultant.

.7 Remove climate control equipment from the Site after the successful commissioning of new HVAC equipment.

.8 Do not use any of the permanent facilities and controls without obtaining written permission from Consultant.

.5 Use of Building HVAC System:

.1 Before any portion of the heating system can be considered by the Consultant for use by Contractor, the Contractor shall verify the following requirements:

.1 equipment must be properly commissioned with safety and operating devices operational.
.2 proper electrical power requirements and equipment operating within nameplate ratings.
.3 flow rates of equipment verified to be within design tolerances.
.4 submission of operating and maintenance manuals.
.5 service and maintain systems and equipment in accordance with operating and maintenance manuals.

.2 On completion of the work for which permanent heating system was used, the Contractor shall replace filters, inspect and replace defective bearings and lubricate all bearings and clean strainer baskets. This includes, without limitations, painting of equipment if required, repacking of pumps, and cleaning out of ductwork (all as instructed by the Consultant).

.3 Warranties for the heating system shall not commence until the entire system is in as near original condition as possible and is so certified by the Consultant. Warranties shall not commence earlier than the date that Substantial Performance of the Work is achieved.

.4 Pay costs for providing and maintaining temporary heat.

.5 Be responsible for any damage to the Work due to failure in providing adequate heat and protection during construction.

.6 Temporary Drainage:

.1 Protect excavation, trenches and building from damage by rainwater, ground water, backing up of drains or sewers and other water, frost and other weather conditions. Provide sheeting, piling, shoring, pumps, equipment, temporary drainage, protective covering and enclosures. Provide necessary pumps including spare pump for keeping the Work free of water throughout the construction period.

.2 Keep Site properly and efficiently drained during construction and until completion. Be responsible for disturbances, dirt and damage which may be caused by or result from water backing up or flowing over, though, from or along any part of the Work or due to operations which may cause water to flow elsewhere. Drain water away from Site without causing any danger to public health.

.7 Temporary Protection:

.1 Provide and maintain the following temporary protection at all times:

.1 at window openings, provide translucent, weatherproof protection until windows and glazing are installed;
.2 for door openings, provide minimum wood doors, frames, hinges, locks and bolts to exterior and interior to existing areas;
.3 at air intakes, provide protection against infiltration of dirt, dust and other deleterious matter; and
.4 Provide temporary stair treads and landings.

.2 Provide scaffolding enclosures to enable the Work to continue during inclement weather and winter conditions.

.3 Notify the Fire Department and Consultant immediately should a fire of any nature occur regardless of whether the fire has been extinguished or not. Notify the Fire Department and Consultant of any fire alarm shutdowns and also provide notice once the fire alarm has been recertified and is operational.

.4 Establish a log book maintained by the Contractor which records all activity affecting the Owner’s fire alarm system. The log book shall record date, time, trade, worker's name, nature and location of work performed, zone or zones affected, status of system while work was performed, time and date of completion of operation, and status of system upon completion of work. At the end of each Working Day, Contractor shall review the log and sign indicating the system is fully operational, except as recorded otherwise in the log. Inform the Owner of the system status and which zones may be affected daily prior to commencement of any new operation that affects the fire alarm system.

1.4 CONSTRUCTION FACILITIES

.1 Temporary Support Structure and Facilities

.1 Design, erect, operate, maintain and remove temporary structural and other temporary facilities. Engage and pay professional engineers licensed to practice in Province of Ontario and skilled in the appropriate disciplines to perform these functions where required by law or by Contract Documents and in cases where such temporary facilities and their methods of construction are of such a nature that professional engineering skill is required to produce safe and satisfactory results.

.2 Design metal guards and walls-acting-as-guards in accordance with the requirements of the OBC, “Loads on Guards” and “Loads on Walls Acting as Guards”. Provide guards for the work of various trades such as masonry, structural steel stud framing system, metal siding system, curtain wall, and gypsum board, as applicable.

.3 Provide and maintain temporary ladders, ramps, walks and hand rails as necessary during construction in compliance with the requirements of the *Ontario Occupational Health and Safety Act* (Ontario), in particular paragraphs 4.1.10.1 and 4.1.10.3

.2 **Contractor's Field Offices and Sheds:**

.1 Provide Contractor's field offices and storage sheds within the Place of the Work only. Provide offices and sheds properly painted and maintained.

.2 Provide the following field office facilities:

.1 A room to accommodate 12 persons for Site conference and job meetings, heated and air conditioned to maintain a temperature of 21° C (70° F) ± 2° C (4° F);
.2 One photocopy machine;
.3 "No Smoking" signs; and
.4 Proper flammable and explosive materials storage.

.3 **Sanitary Facilities**

.1 Provide and maintain temporary facilities for use by workers in compliance with the *Occupational Health and Safety Act* (Ontario), and applicable by-laws. Provide portable, weatherproof toilets, serviced at least weekly.

.4 **Garbage Removal**

.1 Do not use institutional garbage bin facilities for the removal of construction rubbish and debris. Provide garbage bins and schedule the pick-up of garbage.

1.5 CONSTRUCTION HOISTS AND SCAFFOLDING

.1 Provide, maintain and locate where directed by the Consultant, the required hoisting equipment. Equipment shall be positioned so as not to interfere with the Work. Do not block public roads, or impede traffic during operation. If required to temporarily block traffic, control and flag person shall direct traffic in a manner acceptable to municipal authorities. The equipment shall be operated by a qualified hoist operator along with well-trained flag and signal persons. Coordinate and make required arrangements for the use of hoists by Subcontractors and Suppliers. Provide concrete pads for hoisting equipment and remove when no longer required. Restore area to its pre-construction condition.

1.6 VEHICULAR ACCESS AND PARKING

.1 Provide access roads as may be necessary to provide safe and adequate access for materials, Products and other supplies to the Site. Provide and maintain access sidewalks, roadways and similar facilities as may be required for access to the Work. Do not block public roads or impede traffic during the progress of the Work. If required to temporarily block traffic, provide a flag person to direct traffic in a manner acceptable to municipal authorities. Remove accumulations

of ice and snow from areas providing access to Site. Ensure access to Site is available for emergency vehicles and comply with the fire plan for vehicular traffic.

1.7 TEMPORARY BARRIERS AND ENCLOSURES

.1 **~~Hoarding and Boardwalk~~Enclosures:**

.1 Provide enclosures~~hoarding~~ and gates in accordance with the requirements of the Local Municipality, the *Occupational Health and Safety Act* (Ontario), Regulations for Construction Projects and applicable requirements of other Authorities Having Jurisdiction to:

.1 protect public, Owner's occupants, personnel and property from injury and damage; and

.2 exclude non-construction personnel and public from parts of the Place of the Work under construction.

~~.2 Framing, sheathing and decking shall be in accordance with the details indicated on the Contract Drawings and materials listed herein are minimum requirements which may be exceeded by the Contractor's design.~~

~~.3 Wood Hoarding and Boardwalk Framing: National Lumber Grades Authority No; 1 Grade SPF.~~

~~.4 Wire Mesh: 50 mm x 50 mm x 3.4 mm (2" x 2" x 1/8") galvanized.~~

~~.5~~.2 The limit of the Place of the Work shall be as indicated on the Contract Drawings.

~~.6~~.3 Prohibit the use of roads outside of the Place of the Work except for construction purposes and as required for access to the Place of the Work.

~~.7~~.4 Maintain ~~hoarding~~ enclosures in a clean condition, free of unauthorized bills, signs and defacement.

~~.8~~.5 Remove and dispose of ~~hoarding~~ enclosures upon completion of the parts of the Work.

.2 **Temporary Heated Enclosures**

.1 Conform to the requirements of the *Occupational Health and Safety Act* (Ontario).

.2 Take precautions and provide temporary protection to prevent damage to the Work affected by temperature, water, weather and other environmental conditions.

.3 Provide temporary heated enclosures in advance of cold weather to continue full operations through cold climatic temperature and weather throughout the Work.

.4 Provide heating to maintain the recommended Product storage, mixing, substrate, ambient air, placement, Product installation and curing temperatures recommended by the respective Product manufacturers.

.5 Provide temporary enclosures and heating as required by the Contract Documents.

.3 **Existing Trees:**

.1 Remove trees indicated to be removed on the Drawings in a manner to prevent hazard to persons and property. Employ an expert woodsmen for tree removal over 150 mm (6") caliper.

1.8 PROJECT IDENTIFICATION

.1 Provide a sign approved by the Consultant that identifies the Contract Work as detailed 2400 mm x 3600 mm (8'x12'), including wood frame support and minimum 19 mm (3/4") exterior grade plywood with reinforced resin facing and wood trim at the perimeter.

.1 Mount at location and height as directed by the Consultant.

END OF SECTION

Part 1 General

1.1 SECTION INCLUDES

.1 Informational and warning devices.

.2 Protection and control of public traffic.

.3 Operational requirements.

1.2 RELATED SECTIONS

.1 This section describes requirements applicable to all Sections within Divisions 02 to 49.

1.3 REFERENCES

.1 Ontario Traffic Manual (OTM)- Book 7 - Temporary Conditions

.2 Town of East Gwillimbury and regulations are enforceable in the Place of Work.

1.4 ACCESS TO SITE

.1 Provide and maintain access roads, sidewalk crossings, ramps and construction runways as may be required for access to Work.

1.5 PUBLIC TRAFFIC FLOW

.1 Provide and maintain competent signal flag operators, traffic signals, barricades and flares, lights, or lanterns as required to perform Work and protect the public.

1.6 PROTECTION OF PUBLIC TRAFFIC

.1 Comply with requirements of Acts, Regulations and By-Laws in force for regulation of traffic or use of roadways upon or over which it is necessary to carry out Work or haul materials or equipment.

.2 When working on the travelled way:

.1 Place equipment in position to present a minimum of interference and hazard to the travelling public.

.2 Keep equipment units as close together as working conditions permit and preferably on the same side of the travelled way.

.3 Do not leave equipment on the travelled way overnight.

.3 Do not close any lanes of the road without the approval of the authority having jurisdiction and the Consultant. Before re-routing traffic erect suitable signs and devices in accordance with instructions contained in OTM Book 7.

.4 Keep the travelled way graded, free of potholes and of sufficient width for the required number of lanes of traffic.

.1 Provide a minimum seven (7) m wide temporary roadway for traffic in two-way sections through Work and on detours.

.2 Provide a minimum five (5) m wide temporary roadway for traffic in one-way sections through Work and on detours.

.5 Provide paved (or gravelled if first accepted by the authority having jurisdiction) detours or temporary roads to facilitate passage of traffic around restricted construction areas as shown on the provided plans.

.1 Do grading for detours.

.2 Place and compact granular sub-base.

.3 Place and compact granular base.

.4 Place and compact asphalt concrete pavement.

.5 Provide temporary line painting as required.

.6 Provide and maintain road access and egress to property fronting along Work under Contract and in other areas as indicated, unless other means of road access exist that meet the approval of the authority having jurisdiction.

1.7 INFORMATIONAL AND WARNING DEVICES

.1 Provide and maintain signs, flashing warning lights and other devices required to indicate construction activities or other temporary and unusual conditions resulting from the project work which requires road user response.

.2 Supply and erect signs, delineators, barricades and miscellaneous warning devices as specified in provincial and municipal guidelines.

.3 Place signs and other devices in locations recommended by OTM Book 7.

.4 Meet with the Consultant prior to commencement of Work to prepare

.1 a list of signs and other devices required for project. If the situation on site changes, revise the list to the approval of the Consultant.

.5 Continually maintain traffic control devices in use by:

.1 Checking signs daily for legibility, damage, suitability and location. Clean, repair or replace to ensure clarity and reflectance.

.2 Removing or covering signs which do not apply to conditions existing from day to day.

1.8 CONTROL OF PUBLIC TRAFFIC

.1 Provide competent flag persons, trained in accordance with, and properly equipped as specified in Provincial and municipal guidelines for the following situations:

.1 When public traffic is required to pass working vehicles or equipment which block all or part of the travelled roadway.

.2 When it is necessary to institute a one-way traffic system through a construction area or other blockage where traffic volumes are heavy, approach speeds are high and a traffic signal system is not in use.

.3 When workmen or equipment are employed on the travelled way over the brow of hills, around sharp curves or at other locations where oncoming traffic would not otherwise have adequate warning.

.4 Where temporary protection is required while other traffic control devices are being erected or taken down.

.5 For emergency protection when other traffic control devices are not readily available.

.6 In situations where complete protection for workers, working equipment and public traffic is not provided by other traffic control devices.

.7 At each end of restricted sections where pilot cars are required.

.8 Delays to public traffic due to contractor's operators: maximum 5 minutes.

.2 Provide pilot cars as required. Equip pilot cars with orange flashing lights and signs clearly designating vehicles as pilot cars.

.3 Where roadway carrying two-way traffic is to be restricted to one lane for twenty-four (24) hours each day, provide a portable traffic signal system.

.1 Adjust as necessary, and regularly maintain the system during the period of restriction.

.2 Signal system to requirements of OTM Book 7.

1.9 OPERATIONAL REQUIREMENTS

.1 Maintain existing conditions for traffic throughout the period of Contract except that, when required for construction under this Contract and when measures have been taken as specified and approved by Consultant to protect and control public traffic, existing conditions for traffic to be restricted as per Provincial standards.

.2 Maintain existing conditions for traffic crossing right-of-way.

.3 Maintain existing conditions for traffic crossing right-of-way except when required for construction. With the approval of the Consultant, existing conditions for cross traffic are to be restricted as per OTM Book 7.

1.10 FIRE ROUTES

.1 Maintain access to the property including overhead clearances for use by emergency response vehicles.

END OF SECTION

Part 1 General

1.1 RELATED REQUIREMENTS

.1 Section 01 55 26 - Traffic Control and Procedures

1.2 REFERENCE STANDARDS

.1 Canadian General Standards Board (CGSB)

.1 CGSB 1.59-97, Alkyd Exterior Gloss Enamel.

.2 CAN/CGSB 1.189-00, Exterior Alkyd Primer for Wood.

.2 Canadian Standards Association (CSA International)

.1 CSA-O121-M1978 (R2003), Douglas Fir Plywood.

1.3 INSTALLATION AND REMOVAL

.1 Provide temporary controls in order to execute the Work expeditiously.

.2 Remove from the site all such work after use.

1.4 HOARDING

.1 Erect temporary site enclosures using 38 x 89 mm construction grade lumber framing at 600 mm centres and 1200 x 2400 x 13mm exterior grade fir plywood to CSA O121.

.2 Apply plywood panels vertically as indicated.

.3 Provide two lockable truck entrance gates and at least one pedestrian door as directed and conforming to applicable traffic restrictions on adjacent streets. Equip gates with locks and keys.

.4 Erect and maintain pedestrian walkways including roof and side covers, complete with signs and electrical lighting as required by law.

.5 Paint the public side of the site enclosure in selected colours with one coat of primer to CAN/CGSB 1.189 and one coat of exterior paint to CGSB 1.59. Maintain the public side of the enclosure in clean condition.

.6 Erect temporary site enclosure using new 1.2m high snow fence wired to rolled steel "T" bar fence posts spaced at 2.4m on centre. Provide one lockable truck gate. Maintain fence in good repair.

.7 Provide barriers around trees and plants designated to remain. Protect from damage by equipment and construction procedures.

1.5 GUARD RAILS AND BARRICADES

.1 Provide secure, rigid guard rails and barricades around deep excavations, open shafts, open stairwells, and open edges of floors and roofs.

1.6 DUST TIGHT SCREENS

.1 Provide dust tight screens or partitions to localize dust generating activities, and for the protection of workers, finished areas of the Work and the public.

.2 Maintain and relocate protection until such work is complete.

1.7 ACCESS TO SITE

.1 Provide and maintain access roads, sidewalk crossings, ramps and construction runways as may be required for access to Work.

1.8 PUBLIC TRAFFIC FLOW

.1 Provide and maintain competent signal flag operators, traffic signals, barricades and flares, lights, or lanterns as required to perform Work and protect the public.

1.9 FIRE ROUTES

.1 Maintain access to the property including overhead clearances for use by emergency response vehicles.

1.10 PROTECTION FOR OFF-SITE AND PUBLIC PROPERTY

.1 Protect surrounding private and public property from damage during the performance of the Work.

.2 Be responsible for damage incurred.

END OF SECTION

Part 1 General

1.1 SCOPE AND PURPOSE

.1 This section covers the requirements for the erosion and sediment control (ESC) plan.

.2 The purpose is to prevent loss of soil during construction by stormwater runoff and wind erosion, protect stockpiled topsoil, prevent sedimentation of stormwater and receiving streams and prevent pollution of the air with dust and particulate matter.

1.2 RELATED SECTIONS

.1 Section 31 22 13- Rough Grading

.2 Section 31 22 19– Finish Grading

1.3 REFERENCES

.1 OPSS 805 Temporary Erosion and Sediment Control Measures

.2 OPSS 1860 Geotextiles

.3 Town of East Gwillimbury Engineering Standards and Design Criteria, Section 10.4

.4 The Erosion and Sediment Control Guidelines from Urban Construction," issued by the Greater Golden Horseshoe Area Conservation Authorities

.5 EPA 832/R-92-005 - Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992.

1.4 DEFINITIONS

.1 Erosion: Deterioration, displacement, or transportation of land surface by wind or water, intensified by land-clearing practices related to construction activities.

.2 Rain or Rain Storm: An event defined as causing the pooling of water on the road or other impervious surfaces.

.3 Sediment: Particulate matter transported and deposited as a layer of solid particles within a body of water.

.4 Snow Melt: An event in snow conditions when the temperature is above 0 degrees C or when environmental conditions cause snow on the ground to melt.

1.5 SUBMITTALS

.1 Provide requested information specified in Section 01 33 00.

.2 Provide within 7 days of the commencement of work.

.3 Application for Payment: Concurrent with each application, provide the following Inspection Log information:

.1 Weekly inspection record.

.2 Report damages or deficiencies and maintenance of erosion and sediment control measures.

.3 Identify and address standing rainwater or snowmelt conditions.

Part 2 Products

2.1 SILT FENCING

.1 Posts: Posts to support wire-backed sediment fence barriers shall be metal T-posts. Metal ties shall be used to secure the sediment fence to the metal T-posts.

.2 Geotextile: Geotextile for berm barriers and rock flow check dams shall be woven, Class II geotextile according to OPSS 1860. The filtration opening size (FOS) shall be no greater than 300 µm

.3 Wire Fencing: The wire fence used in wire-backed sediment fence barrier shall be 1.63 mm diameter galvanized steel fence with a 5 cm by 10 cm weave and a 0.91 m height.

2.2 CATCH BASIN SEDIMENT CONTROLS

.1 During construction, all catch basins shall be provided with sediment control, in accordance with the following requirements.

- Sediment Traps within the site: Catch basin sediment traps shall be provided for unpaved areas draining 2 hectares or greater and less than 4 hectares and shall be constructed in accordance with OPSS 805 Temporary Erosion and Sediment Control Measures and as indicated on Sediment Control Notes and Plans prepared by the consultant.
- Roadway Catch Basin Sediment Control Devices: all roadside catch basins shall be provided with sediment protection in accordance with OPSS 805 Temporary Erosion and Sediment Control Measures and as indicated on Sediment Control Notes and Plans prepared by the consultant.

2.3 MUD MAT

.1 A mud mat shall be constructed at the site entrance and exit leading onto any existing road. The stone pad shall be a minimum of 300mm thick, 15m long and 10m wide. The first 10m from the entrance/exit shall be constructed with 50mm clear stone. The remaining 5m shall be constructed with 150mm rip rap. The mud mat must be maintained as required given the site conditions to ensure mud tracking is kept to a minimum.

.2 The mud mat shall be located as indicated on Sediment Control Notes and Plans prepared by the consultant.

.3

Part 3 Execution

.1 Prevent cleared topsoil and excavated earth stockpiled on site from being eroded by a rain storm, snow melt or wind.

.2 Install silt fencing and mud mat at the construction entrance. The sediment control fence shall be constructed in accordance with OPSS 805 Temporary Erosion and Sediment Control Measures.

.3 Maintain silt fencing at a height indicted on contract drawings.

.4 Extend geotextile filter fabric 150 mm below grade, and return 150 mm towards the opposite direction of flow.

.5 Space posts not further than 1.8m apart.

.6 Limit the operation of vehicles on site to paved surfaces or temporary gravel surfaces in order to avoid disturbing the soil.

.7 All erosion and sediment controls should comply with the requirement of “The Erosion and Sediment Control Guidelines from Urban Construction,” issued by the Greater Golden Horseshoe Area Conservation Authorities.

3.2 MUNICIPAL STORMWATER

.1 Protect catch basins, drains, culverts and other points of entry into municipal stormwater collection systems.

.2 Each Week: Inspect for erosion and sediment control measures, to ensure proper functions are not damaged.

3.3 REMOVAL

.1 Temporary sediment control shall be removed, and associated excavations backfilled and compacted when the area being protected has been completely stabilized by final cover placement. When the final cover is vegetated and placement could not be advanced to allow the establishment and stabilization of the site prior to Contract Completion, temporary sediment control shall be left in place.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 BASIC PRODUCT REQUIREMENTS

.1 Where Specification requirements include design of a Product or system and minimum material requirements are specified, the design of such Product or system shall employ the materials specified within the applicable Section. Where materials or components are not specified, the Contractor shall augment materials with those of its choice within the applicable Code limitations while maintaining integrity of design and architectural requirements.

.2 Defective Products, whenever identified by the Consultant or Owner prior to completion of the Work will be rejected, regardless of previous reviews by the Consultant or a testing company. The Consultant's and/or Owner's review shall not be considered to be complete in every detail or exhaustive and shall also not relieve any Contractor, Subcontractor, Supplier, manufacturer, fabricator, or other third party of responsibility for any deficiency that may exist or for any departures or deviations from the requirements of the Contract Documents or of the responsibility to co-ordinate the Work, or portion of the Work, of one trade with another. The Contractor shall remove and replace defective and/or damaged Products at its own expense and be responsible for delays and expenses caused by the rejection Products. In addition to the foregoing, the Contractor shall also comply with the requirements of GC 2.3 – REVIEW AND INSPECTION OF WORK and GC 2.4 DEFECTIVE WORK of the General Conditions of the Contract.

.2 **Material, Equipment and Fixtures**

.1 Products employed in the Work shall be those which affect indoor air quality as little as possible. Provide adequate ventilation during installation of finishing materials to avoid effects on indoor air quality.

.2 Unless otherwise indicated in the Contract Documents, maintain uniformity of Product and manufacturer for any like item, material, equipment or assembly.

.3 **Toxic or Hazardous Substances and Materials**

.1 Products, materials and substances employed in the Work shall be free of mould amplification. In addition to the requirements specified herein, take special care while handling, storing and installing materials such as, without limitation, particleboard, plywood, cellulose materials, wallpaper, ceiling panels, gypsum boards and insulation with kraft paper back up.

.2 Product with visible or invisible signs of mould amplification, whether installed or not, shall be considered defective and shall be removed at the Contractor's expense. Retain a qualified and experienced bio-contamination investigator acceptable to the Consultant to conduct sampling and laboratory analysis and other required assessment steps to

determine whether or not materials are impacted by mould amplification and follow up recommended contamination management method. The Contractor shall pay for sampling and assessment costs if the Contractor causes the mould amplification. As a minimum requirement, conform to the New York City Department of Health and Mental Hygiene November 2008, "Guidelines on Assessment and Remediation of Fungi in Indoor Environments", and appropriate levels of requirements for mould removal.

.3 Ensure construction workers are not exposed to amplified moulds. Take every reasonable precaution in the circumstances for the protection of workers, as air movement and handling of contaminated material can release spores into the atmosphere which can cause adverse health effects. Mould metabolites, including mycotoxins, when in contact with skin or inhaled may irritate skin, eyes, nose and throat resulting in allergy-like symptoms such as difficulty in breathing, runny nose, watery eyes, fatigue, headache, asthmatic attacks and general 'flu' like symptoms.

.4 Do not permit workers with weakened immune systems to work in mould amplified areas as they may experience an increased risk of fungal infection. Follow work practices set out by Health Canada in "Fungal Contamination of Public Buildings: Health Effects and Investigation Methods". Conform to "New York City Department of Health & Mental Hygiene Bureau of Environmental & Occupational Disease Epidemiology 2000, Guidelines on Assessment and Remediation of Fungi in Indoor Environments" and appropriate levels of requirements for mould removal.

.5 Be familiar with Mould Guidelines for the Canadian Construction Industry standard construction document CCA 82, 2004.

.6 Where odourless Products are not available, Products shall be chosen, where possible, so odours are minimized within a one month gas-off period following installation at normal occupancy ventilation levels. Ventilation levels during the construction period shall be set sufficiently high to encourage the gassing off of materials to their minimum levels prior to occupancy of the building.

.7 Select Products for installation, especially within the air-handling and distribution systems, to minimize the introduction of pollutants into the fresh air supply to the building.

.8 With respect to the material, plant, equipment and fixtures specified in the Contract Documents, where more than one brand or manufacturer is named in the Specifications or on the Drawings, the Contractor shall use one of the specified manufacturers or brands (or equivalent) provided that the requirements of Drawings and Specifications are met.

.9 Ensure materials, plant, equipment and fixtures are not damaged or defective and of the quality specified in the Contract Documents and compatible for its intended purpose. If requested by the Consultant, provide evidence as to type, source and quality of any material, plant, equipment or fixture. The Contractor shall remove and replace defective Products, at its own expense, regardless of previous reviews, and be responsible for delays and expenses caused thereby. Replace factory finished equipment, or parts thereof, whose paint finish is damaged and cannot be reasonably remedied by paint touch-up.

.10 When conflict occurs between specified technical description and manufacturer's standard model numbers and/or manufacturer's printed description of given model number, the technical description specified in the Contract Documents shall govern. Have manufacturers make necessary modifications in its manufacturing methods to meet the requirements specified in the Contract Documents.

.11 Do not expose trademarks, labels and nameplates, including applied labels, in finished Work. Remove visible trademarks and labels except those which are giving operating instructions, which are essential to obtain identification of mechanical and electrical equipment for maintenance and replacement purposes, and as required for mandatory fire ratings.

.12 The Owner retains the right to select all choices available within specified Products colours, finishes, and other options unless specified otherwise in the Contract Documents.

.4 **Availability**

.1 Immediately upon signing the Contract, review Product delivery requirements and anticipate foreseeable supply delays for any items. If delays in the supply of Products are likely or possible, or Products are no longer available, or a specified manufacturer is no longer in business, notify the Consultant of such in order that substitutions or other remedial action may be authorized in ample time to prevent delay in the performance of the Work.

.2 Utilize Products which are specified in the Contract Documents by its proprietary names, by part, or catalogue number. No substitutes for the Products specified by its proprietary names, part or catalogue number shall be permitted without the Consultant's acceptance in writing.

.3 In the event of failure to notify the Consultant of a specific Product's unavailability at the commencement of the Work and should it subsequently appear that Work may be delayed for such reason, the Consultant reserves the right to substitute more readily available Products of similar character, at no increase in the Contract Price.

.4 No substitution of materials will be allowed for Products with long delivery times.

.5 **Mechanical & Electrical Location Drawings**

.1 Mechanical and electrical drawings indicate the approximate locations of mechanical and electrical items diagrammatically. Prior to installation, request and obtain the final locations and arrangement drawings for mechanical and electrical items. Allow the Consultant to adjust final locations within a 1500 mm (5') radius from the diagrammatic position indicated, without change to the Contract Price.

.2 Align and cluster devices and fitments neatly in accordance with the mounting heights specified in the Contract Documents, properly aligned horizontally and vertically.

.6 **Fire Rating**

.1 Where material, component or assembly is required to be fire rated, fire rating shall be determined on the basis of results of tests conducted in conformance with CAN/ULC-S101-M by one of following testing authorities acceptable to the Authorities Having Jurisdiction:

.1 Underwriters' Laboratories of Canada (ULC); www.ulc.ca
.2 Underwriters' Laboratories Inc. (UL); www.ul.com
.3 FM Global; www.fmglobal.com http://www.allendale.com
.4 National Research Council of Canada; www.nrc.ca
.5 National Board of Fire Underwriters; www.fireunderwriters.ca
.6 Warnock Hersey -ITS; www.etlsmeko.com

.2 Where reference is made to only one testing authority, an equivalent fire rating as determined or listed by another of aforementioned testing authorities is acceptable if approved by Authorities Having Jurisdiction. Obtain and submit to the Consultant such approval of authorities, in writing, when requesting acceptance of a proposed equivalent rating or test design.

.7 **Manufacturers' Written Instructions**

.1 Unless specified otherwise in the Contract Documents, use each Product in accordance with manufacturers' published written instructions regarding handling, storage, preparation, methods of installation, protection and cleaning. Take into account Site conditions and provide ancillary Products or accessories.

.2 Conform to the manufacturers' recommended installation temperatures. If finishes are installed at temperatures different from operation or service temperatures, make provisions

for expansion and contraction in service in a manner acceptable to the manufacturer and Consultant. Repair the resulting damage should expansion provisions prove inadequate.

.3 Notify the Consultant, in writing, of conflicts between Contract Documents and manufacturers' instructions so the Consultant may establish the course of action to be taken. If requested by the Consultant, make a copy of those instructions available at the Site.

.4 Improper installation or erection of Products, due to failure to comply with these requirements, shall require removal and re-installation at no increase in the Contract Price.

.5 Whenever specific reference to following the manufacturers' directions or instructions is made in the Specifications, upon request from the Consultant, submit to the Consultant copies of such directions or instructions for review before commencing such work.

.8 **Anchors and Fasteners**

.1 Supply the appropriate anchors, fasteners, accessories and adhesives required for fabrication and erection of Work.

.2 Unless specified otherwise in the Contract Documents, use exposed metal fastenings and accessories of the same texture, colour and finish as the Product being fastened.

.3 Use metal fastenings of the same material as metal component being fastened, or of metal which will not generate electrolytic action and cause damage to fastening or metal component under moist conditions. In general, use stainless steel or hot dip galvanized steel anchors occurring on or in exterior wall, slab or other exterior locations, unless a higher standard is indicated or specified in the Contract Documents. If anchors or fasteners will be exposed, use stainless steel anchors and fasteners.

.4 Fastening devices or adhesives shall be of appropriate type, used in sufficient quantity and in such manner as to provide positive, permanent fastening which will not shift, work loose or fail during occupancy of building due to vibration or other causes resulting from normal use of the building. Install anchors at sufficient spacing to provide the required load/stress carrying capacity. Do not use wood plugs.

.5 Lay out fastenings neatly, evenly spaced and aligned. Keep exposed fastenings to a minimum.

.6 Supply adequate instructions and templates and, if necessary, supervise installation where fastenings or accessories for any Section are required to be built into work of other Sections.

.7 Do not use fastenings which will cause spalling, cracking, or deformation or deterioration of material to which, or adjacent to which, they are being fastened.

.8 Do not use powder actuated fastening devices which are used in tension, without approval by the Consultant. Take stringent safety precautions when using powder actuated fastenings. Use only low velocity plunger-type devices.

.9 Use the specified adhesives (or, if not specified, those recommended by the manufacturers of the materials involved) compatible with materials to be joined, and effective in forming permanent joint of adequate strength.

.10 Use screws, nails, staples and other similar, driven fasteners suitable to materials to be joined and to conditions under which they are installed and used. Ensure, in finished work, that fasteners are appropriately sized to take durable hold under stress to be encountered without damage to, or weakening of, elements secured together. Ensure fastenings will not corrode or cause staining of exposed surfaces.

.11 Braze and solder to form durable connections of strength adequate to resist stresses to be encountered without deformation of the elements joined. Prepare base metals and use

methods and materials to ensure clean joints and to prevent staining, corrosion, discolouration, deformation or other damage to finished work.

.12 Weld in accordance with CSA W59-M for steel and in accordance with CSA W59.2-M for aluminum, unless specified otherwise in the Contract Documents. Have welding performed by companies that are certified operatives in accordance with CSA W47.1 or CSA W47.2-M.

.13 Provide accessory items or materials required, such as brackets, cleats, connectors, sealants, lubricants, cleaners, protection and similar items, whether specified or not in the Contract Documents, so that the Work is complete and shall perform as required.

.9 **Built in Items**

.1 Provide and coordinate the location of chases, slots and reglets including frames, sleeves, inserts, anchors, fasteners and bolts, forms and templates.

.10 **Barrier Free Design Requirements:**

.1 Conform to the requirements of the OBC and CAN/CSA B651 - 12, Accessible Design for the Built Environment.

.2 Barrier shall mean anything that prevents a person with a disability from fully participating in all aspects of society because of his or her disability, including without limitation:

.1 information or communication barriers (e.g., a publication that is not available in large print, or unavailability of text telephones in most public buildings, or unavailability of sign language interpreters, or insufficient signage, etc.);
.2 attitudinal barriers (e.g., assuming people with a disability cannot perform a certain task when in fact they can); and
.3 technological barriers(e.g. traffic lights that change before a person with a disability has time to cross the intersection).

.3 Employ and install the following, as required, to remove potential barriers: high contrast signage, Braille, tactile (raised numbers, words) and/or audio output alternatives to all signage such as elevator numbers, room numbers and washrooms signs; detectable tactile surfaces approaching stairs or changes in grade and high contrast horizontal strips at edge of each tread in a stairway. Provide 50 mm (2”) wide colour-contrasted strips extending full width of tread; strips by www.ecoglo.ca (or equivalent);

.4 Install switches, telephones, fire-alarm pull stations, washroom accessories and other equipment and devices requiring accessibility by building staff and public, excluding mechanical and electrical room installations, to meet barrier-free requirements. If there is conflict between this requirement and any other OBC requirement, notify the Consultant prior to installation;

.5 Ensure countertops conform to the requirements of CAN/CSA B651 1-12, Accessible Design for Built Environment.

1.4 PRODUCT DELIVERY, HANDLING AND STORAGE

.1 Package, crate and brace Products to prevent damage during delivery, storage and handling.

.2 Provide protection to existing surfaces, finished surfaces and work of others to prevent damage during delivery, storage and handling.

.3 Store packaged materials in original, undamaged condition with manufacturers' labels and seals intact.

.4 Handle and store materials in accordance with the manufacturers' and suppliers' recommendations, in protected locations.

.5 Store materials susceptible to environmental damage in weather-tight enclosures, raised clear of the ground and protected from weather, dampness and deterioration.

.6 Store and mix paints in a single designated, heated and ventilated room. Remove oily rags and other combustible debris from the Place of the Work daily. Take every precaution necessary to prevent spontaneous combustion.

.7 Replace Products damaged during delivery to the Place of the Work, storage, handling or installation.

.8 Conform to written procedures for safe handling, storage and use of noxious and hazardous materials including special precaution, safe clean-up and disposal procedures. Conform to the environmental protection requirements under the OBC.

.9 **Flammable and Toxic Materials**

.1 Enforce and maintain fire prevention methods at the Site in accordance with the requirements of the Authorities Having Jurisdiction. Follow proper safety precautions when employing and storing flammable and toxic materials. Do not permit the accumulation of debris.

.2 Do not store flammable and toxic materials in the building. Take measures to prevent spontaneous combustion. Place clothes and other disposable materials which are fire hazards in closed metal containers and remove them from the building on a daily basis.

.3 Provide adequate ventilation where flammable and toxic materials are being applied; use only spark proof equipment during application; prohibit smoking and open flames during application.

.4 Do not dispose of volatile fluid wastes in storm or sanitary sewers or open drainage courses.

.5 Do not store materials on the roof which could be subject to falling or blowing off of the roof as result of wind which could cause damage to property and jeopardize public safety.

1.5 CONCEALMENT OF SERVICES

.1 Conceal pipes, service lines and ducts in chases, behind furring or above ceilings, except where they are indicated as being exposed to view on the Contract Drawings. Where no ceiling is provided, such items may be exposed but must be neatly and logically arranged.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 EXAMINATION

.1 **Mobilization**

.1 After the start-up meeting and before submitting the first billing application, submit a list of major Subcontractors and Suppliers and tentative construction progress schedules; establish submission schedules, long term delivery items and designation of responsible personnel.

.2 Verify and confirm the location of the Work, temporary office and storage areas with the Consultant.

.3 Verify the construction facilities, controls, temporary hoarding, dust partitions, parking, hours, noisy work, interruption of services, smoking, cell phone usage and construction aids.

.4 Verify temporary utilities, safety and first-aid procedure, security procedures, and housekeeping procedures.

.2 **Acceptance of Conditions**

.1 Examine the Site, at no cost or risk to the Owner, for all matters relating to the Work, extent of Work, means of access and egress, all obstacles, rights and interests of other parties which may be interfered with during execution of the Work, all conditions and limitations the Contractor ought reasonably to take into consideration in performing the Work, including obstructions, existing structures or facilities, local conditions, actual levels, character and nature of Project, and any other consideration which may affect performance of the Work.

.2 Examine existing Site conditions at no additional cost to Owner, surfaces and substrata upon which the Work depends. Drawings are, in part, diagrammatic and are intended to convey the scope of the Work and indicate general and approximate location, arrangement and sizes of fixtures, equipment, ducts, piping, conduit and outlets and similar items. Obtain more accurate information about locations, arrangement and sizes from study and coordination of Drawings, including Shop Drawings and manufacturers' literature and become familiar with conditions and spaces affecting these matters before proceeding with the Work.

.3 **Existing Services and Operations**

.1 Make necessary enquiries to determine the locations of existing services such as, but not limited to, hydro, telephone, water, natural gas, and sewer. Temporarily relocate, shore, underpin or in any way accommodate existing services which affect the Work.

.2 Should any piping, sewers, cables, or similar services be encountered during the Work that are not known from the Owner's and utilities companies' records, Contract Documents or tender documents, notify the Consultant and do not proceed with removal or cutting until directed to do so by the Consultant.

.3 Protect and maintain in operation all existing services and systems. When removing or altering existing services, make safe, secure and maintain seals as applicable for all lines affected.

1.4 PREPARATION

.1 General Preparation Requirements

.1 Provide shoring, bracing, and related supports to maintain the integrity of the structural components of the Work.

.2 Provide protection to adjacent work and obtain Consultant’s approval regarding adequacy and type of protection provided.

.3 Provide protection from ambient temperature and other elements where working outside and at building envelope items.

.2 Planning, Scheduling & Coordination Requirements

.1 Plan and schedule the Work to accommodate anticipated difficulties, indicated on and inferable from the Contract Documents.

.2 Co-ordinate the Work with Subcontractors and Other Contractors and proceed with the Work expeditiously.

.3 Existing Utility Services

.1 Before commencing the Work, establish the location and extent of existing services in the area of the Work and notify Consultant of any anomalies.

.2 If unknown services are encountered, immediately notify the Consultant and confirm findings in writing. Obtain the Consultant's written direction if such services require cutting, capping or relocation.

1.5 EXECUTION

.1 Existing Conditions

.1 Make good surfaces and finishes damaged or disturbed due to the Work to match the existing surfaces and finishes. Ensure that the materials used to repair damage are compatible with the existing work.

.2 Restore lands outside of limits of Work which are disturbed due to the Work, to its original condition.

.2 Installation

.1 Except if otherwise specified in the Contract Documents, use each Product in accordance with the manufacturers’ published or written instructions, Specifications or recommendations regarding handling, storage, preparation, Site conditions, ancillary Products or accessories, methods of installation, protection and cleaning. Submit a copy of such instructions to the Consultant and indicate if and where there is discrepancy between the instructions and requirements of the Specifications and obtain direction.

.2 Whenever specific reference to following the manufacturers’ directions or instructions is made in the Specification Sections, submit copies of such directions or instructions to the Consultant as requested thereof for review before commencing such work.

.3 Execute the Work in accordance with industry practice for the type of Work unless Contract Documents stipulate more precise requirements. Do not let unskilled or incompetent workers perform the Work.

.4 Execute the Work in a neat and careful manner to retain the Work plumb, square, and straight.

.5 Ensure the Work is properly related to form close joints and appropriately aligned junctions, edges and surfaces and is free of warp, twist, wind, wave or other irregularities.

.6 When required by the Specification Sections or manufacturers' recommendations, have the manufacturer, supplier or accredited agent, inspect their Products.

.7 Load no part of the structure during construction with a load greater than it is calculated to bear safely when completed. Make every temporary support as strong as the specified permanent support. Place no load on a concrete structure until it has sufficient strength to safely carry such load.

.8 Conceal pipes, ducts, conduits, tubing, wiring and other items requiring concealment in the floor, wall and ceiling construction of finished areas except where indicated or specified otherwise in the Contract Documents. If in doubt as to method of concealment, or intention of Contract Documents, request clarification from the Consultant before proceeding with the work in question.

.9 Install and arrange fixtures, equipment, ducts, piping and conduit to conserve as much headroom and space as possible, and avoid interference and obstruction of access. Observe good installation practice for safety, access, maintenance and follow the manufacturers' recommendations. The location of fixtures, access panels, outlets and mechanical and electrical components indicated on the Contract Drawings are approximate. Make changes to comply with these requirements at no additional cost to the Owner.

.10 If requested by the Consultant, and before their installation, relocate equipment, services, doors, openings, furring and other work at no additional cost to the Owner provided such relocation involves only reasonable minor adjustments and reasonable advance notice is given in writing by the Consultant. Ensure the identification of electrical and mechanical system installations and other automated systems or equipment is provided in accordance with the Contract Documents.

.11 Lay out mechanical and electrical work in advance of concrete placement and furring installation to allow for its proper concealment.

.12 Test and inspect service piping before applying covering and before work is concealed.

.3 **Snow Removal**

.1 Allow no accumulation of ice and snow on Site and on roof deck when roofing operations are scheduled to take place.

.2 Be responsible for general clearing of snow from access roads within the Site, Site circulation paths, at hoarding, Contractor's parking areas and elsewhere as required to permit access to the Work, parking and uninterrupted construction progress.

.3 Maintain trailer area, storage areas as well as the Work areas of this Contract free of ice and snow in order to maintain the progress of the Work. Place cleared snow in areas on Site as directed by the Consultant.

.4 Remove ice and snow from the Site and from the roof deck when roofing operations are in session.

.5 Be responsible to keep access road and circulation paths accessible during a snow fall. Remove snow as necessary to prevent the interruption of the Work in progress until completion of the Work.

1.6 SYSTEMS STARTING AND ADJUSTING

.1 **Trial Usage and Instructions**

.1 Thoroughly instruct the Owner's authorized representatives in the safe operation of systems and equipment after installation and prior to Substantial Performance of the Work. Coordinate with the Consultant and arrange schedule for instruction times. Ensure that operating and/or maintenance documents have been submitted to Consultant prior to demonstration. Submit a commissioning schedule to the Consultant a minimum of 4 weeks prior to the commissioning of each system.

.2 Arrange and pay for the services of qualified service engineers and manufacturers' representatives to instruct the Consultant on specialized portions of installation, such as refrigeration machines, boilers, automatic controls and water treatment.

.3 Submit a complete record of instructions as part of the maintenance instructions and data book to be given to the Consultant. For each instructional period, supply the following data:

.1 date;
.2 system or equipment involved;
.3 names of persons giving instructions;
.4 names of persons being instructed; and
.5 other persons present.

.4 Schedule instructional periods during a 30 Day period not more than 2 Days/week, unless otherwise agreed with the Consultant.

.5 Permit the Consultant trial usage of the systems or parts of systems for purpose of testing and learning operational procedures. Trial usage shall not affect warranties nor be construed as acceptance of the systems, and no claim for damage shall be made against the Consultant for any injury or breakage to any part or parts of systems due to the aforementioned tests, where such injuries or breakage are caused by a weakness or inadequacy of parts, or by defective materials or quality of performance of any kind.

.6 Obtain and submit to the Consultant a statement signed by the Owner's representatives stating they understand system and equipment installation, operation and maintenance requirements.

.7 Obtain and submit to the Consultant letters from the manufacturers of equipment and systems indicating that their technical representatives have inspected and tested systems and have approved methods of installation, connections and operation. Arrange all necessary inspections and approvals.

1.7 PROTECTING INSTALLED CONSTRUCTION

.1 Protection of Work During Construction

.1 Provide continuous protection to public, Work, Owner's property and adjacent property during construction. Protect the work of other trades from damage while performing subsequent work.

.2 Protect finished flooring from damage. Make special efforts and take measures when moving heavy loads or equipment over finished flooring. Keep floors free of oils, grime, grease or other materials likely to discolour the flooring or affect the bond of applied surfaces.

.3 Adequately protect floors and roofs from damage. Take special measures when moving heavy loads or equipment over them.

.4 Make good any damaged Work.

.5 Protect glass and other finishes against heat, slag and weld splatter using suitable protective shields or covers.

.6 Provide and maintain in working order, suitable underwriters' labelled fire extinguishers and locate in suitable positions, to the approval of Authorities Having Jurisdiction.

.7 Protect the public and those employed to perform the Work from injury. Equipment (mobile), when not in use, shall have keys removed and locked up in a secure location.

.8 Secure the Site, premises, and materials at all times.

.2 Correction after Completion: In conformance with the General Conditions of the Contract, make good any defects and deficiencies due to faulty materials or quality of performance that become apparent in the Work within 12 months from the date of the Certificate of Substantial Performance or for such longer period for certain Products as specified in the Contract Documents. Conform to the requirements of General Conditions of the Contract and provide a warranty for a 12 month period and for extended periods where applicable, in writing ,in an approved form acceptable to the Consultant and signed by an authorized official of the Contractor.

1.8 CLEANING

.1 Progress Cleaning:

.1 Keep access areas to the Work in a tidy condition, free from the accumulation of waste products and debris during construction and on completion of the Work, other than any waste or debris caused by the Owner’s crew or Other Contractors.

.2 Keep the Site and building, including concealed spaces, free from the accumulation of dirt, debris, garbage and excess material. Remove oily rags and waste from the premises at the close of each Working Day, or more often if required by the Consultant.

.3 Remove waste material and debris from the Site at the end of each Working Day. Remove from finished surfaces any deposits which could stain, harden, set or become difficult to remove.

.4 Remove rubbish and surplus materials promptly and dispose of in a legal manner. Do not allow scrap piles to accumulate. Do not permit fires.

.5 Lower waste materials in a controlled manner with minimum handling; do not drop or throw materials from heights. Schedule cleaning operations so dust and other contaminants resulting from the cleaning process will not fall on wet, newly painted surfaces. Sprinkle dusty debris with water.

.6 Sweep adjacent roads and sidewalks daily to remove dirt and clods of earth deposited on adjacent public and private properties by construction traffic.

.7 Vacuum-clean interior areas prior to the commencement of finishing work and maintain areas free of dust and other contaminants during finishing operations.

END OF SECTION

Part 1 - General

1.1 RELATED REQUIREMENTS

.1 Section 01 35 43 Environmental Procedures

.2 Section 31 00 99 Earthwork for Minor Work

1.2 REFERENCE STANDARDS

.1 Not Used

1.3 QUALIFICATIONS OF SURVEYOR

.1 Qualified registered land surveyor, licensed to practise in Place of Work, acceptable to the Consultant.

1.4 SURVEY REFERENCE POINTS

.1 Existing base horizontal and vertical control points are designated on drawings.

.2 Locate, confirm and protect control points prior to starting site work. Preserve permanent reference points during construction.

.3 Make no changes or relocations without prior written notice to the Consultant.

.4 Report to the Consultant. When reference point is lost or destroyed or requires relocation because of necessary changes in grades or locations.

.5 Require surveyor to replace control points in accordance with original survey control.

1.5 SURVEY REQUIREMENTS

.1 Establish two permanent bench marks on site, referenced to established bench marks by survey control points. Record locations, with horizontal and vertical data in Project Record Documents.

.2 Establish lines and levels, locate and lay out, by instrumentation.

.3 Stake for grading, fill and landscaping features.

.4 Stake slopes and berms.

.5 Establish pipe invert elevations.

.6 Stake batter boards for foundations.

.7 Establish foundation column locations and floor elevations.

.8 Establish lines and levels for mechanical and electrical work.

1.6 EXISTING SERVICES

.1 Before commencing work, establish location and extent of service lines in area of Work and notify the Consultant of findings.

.2 Remove abandoned service lines within 2m of structures. Cap or otherwise seal lines at cut-off points as directed by the Consultant.

1.7 LOCATION OF EQUIPMENT AND FIXTURES

.1 Location of equipment, fixtures and outlets indicated or specified are to be considered as approximate.

.2 Locate equipment, fixtures and distribution systems to provide minimum interference and maximum usable space and in accordance with manufacturer's recommendations for safety, access and maintenance.

.3 Inform the Consultant of impending installation and obtain approval for actual location.

.4 Submit field drawings to indicate relative position of various services and equipment when required by the Consultant.

1.8 RECORDS

.1 Maintain a complete, accurate log of control and survey work as it progresses.

.2 On completion of foundations and major site improvements, prepare a certified survey showing dimensions, locations, angles and elevations of Work.

.3 Record locations of maintained, re-routed and abandoned service lines.

1.9 ACTION AND INFORMATIONAL SUBMITTALS

.1 Submit name and address of Surveyor to the Consultant.

.2 On request of the Consultant, submit documentation to verify accuracy of field engineering work.

.3 Submit certificate signed by surveyor certifying and noting those elevations and locations of completed Work that conform and do not conform with Contract Documents.

1.10 SUBSURFACE CONDITIONS

.1 Promptly notify Consultant in writing if subsurface conditions at Place of Work differ materially from those indicated in Contract Documents, or a reasonable assumption of probable conditions based thereon.

.2 After prompt investigation, should Consultant determine that conditions do differ materially, instructions will be issued for changes in Work as provided in Changes and Change Orders.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 CLOSEOUT PROCEDURES

.1 The Consultant will perform a final review in accordance with GC 5.4 – SUBSTANTIAL PERFORMANCE OF THE WORK, GC 5.5 – PAYMENT OF HOLDBACK UPON SUBSTANTIAL PERFORMANCE OF THE WORK and GC 5.7 – FINAL PAYMENT of the General Conditions of the Contract. Conform to the *Construction Act* (Ontario) for the procedures related to the retention and release of the holdback funds.

.2 **Takeover Procedure**

.1 Conform to the requirements of the following conditions for take-over procedure:

.1 Comply with recommended takeover procedures contained in OAA/OGCA Document No. 100, except as modified by the Contract Documents.

.2 Provide a written notification to the Consultant for requesting review of the Work for confirmation that Substantial Performance of the Work has been achieved in accordance with the *Construction Act* and submit all required documents.

.3 Provide a written request to the Consultant for a deficiency review of the Work. Such request shall include a statement by the Contractor that Work has been completed in compliance with Contract Documents.

.3 **Defect and Deficiency**

.1 Neither the Owner's representatives nor the Consultant will be responsible for the issuance of deficiencies lists. The Contractor assumes the prime responsibility for ensuring items shown on the Drawings and described in Specifications are complete.

.2 Promptly correct the deficiencies noted by the Consultant. Do not proceed with the installation of subsequent parts of the Work until deficiencies have been corrected. Make good all defects and deficiencies prior to final inspection of the Work.

.3 During inspection, a decision will be made as to which elements must be completed at a later date due to uncontrollable circumstances such as weather, which defects must be rectified before the building can be accepted, and which defects are to be treated as warranty items.

.4 Advise the Consultant in writing upon the completion of rectification of deficiencies. Failure to provide such notification may be cause to withhold final payment.

.4 **Documents**

.1 Submit documents in accordance with the requirements of the Contract Documents.

.2 Submit the required documents along with the request for certification of Substantial Performance of the Work. The Consultant's inspection for Substantial Performance of the Work is not required until such submittal is received.

1.4 CLEANING

.1 Final Cleaning

.1 Prior to occupancy, clean the Place of the Work thoroughly, free of rubbish and surplus material. Dispose of rubbish and debris. Vacate the Place of the Work in a clean and tidy condition satisfactory to the Consultant.

.2 Prior to cleaning, submit to the Consultant a complete list of manufacturers' cleaning/ maintenance instructions for all components of the Work.

.3 Final finishing is in addition to and compatible with cleaning and finishing specified in the Specification Sections.

.4 Clean new and existing components in accordance with the manufacturers' recommendations.

.5 For tile flooring:

.1 Sweep floor free of debris, clean corners and base boards free of marks and dirt, scrub new flooring using appropriate solutions to remove factory installed protective coatings, apply two coats of sealer recommended by the manufacturer of flooring materials to new flooring and let the floor completely dry between coats, using Products approved by the Consultant.

.6 For carpet:

.1 Vacuum carpet flooring using power brush equipped vacuum cleaner, removing stains using stain removal methodology approved by the Consultant; and
.2 Where carpet is exposed to extensive dry wall dust and other fine dust particles, lift carpet pile using rotary pile lifting machine. In addition, carpet shall be cleaned using an extraction method approved by the manufacturer.

.7 Remove dust and all marks from:

.1 walls;
.2 ceilings;
.3 window coverings;
.4 doors;
.5 windows and frames;
.6 exposed interior and exterior glazed surfaces;
.7 hardware;
.8 mechanical and electrical fixtures and equipment; and
.9 all metals.

.8 At the Place of the Work, outside of the building envelope, remove debris, rake sod and sweep sidewalks and pavement.

.9 Use experienced professional cleaners for final cleaning. Use only cleaning materials recommended by the manufacturer of the surface to be cleaned.

.10 Final cleaning includes, without limitations, the requirements specified in this Section and the removal of surplus materials, tools, construction machinery and equipment from Site. Carry out final cleaning in accordance with the manufacturers' instructions for each material and in accordance with the applicable Specification Sections.

.11 Remove stains, spots, marks, dust and smudges caused by work within the Work areas of this Contract from decorative work, electrical and mechanical fixtures, furniture fitments, walls, ceiling and floors. Vacuum, clean and buff resilient flooring.

.12 Clean and polish interior and exterior glass, windows, entrances, skylights, mirrors, hardware, wall tile, stainless steel, chrome, porcelain, baked enamel, plastic laminate, mechanical, plumbing fixtures and electrical fixtures.

.13 Vacuum clean and dust building interiors, behind grilles, louvres and screens. Vacuum clean ducts, fans, blowers and coils if units were operated without filters during construction.

.14 Broom clean and wash interior as well as exterior walks, paved surfaces, concrete floors, steps and other similar surfaces.

.15 Replace broken, damaged, disfigured or scratched glass and mirrors, which are part of the Work.

.16 Close rooms and areas finished by cleaners, painters and decorators to all but authorized persons.

.17 Upon completion of final cleaning, remove cleaning equipment, excess materials and debris from building and Site.

1.5 CLOSEOUT SUBMITTALS

.1 **Certificate of Substantial Performance**

.1 Conform to the *Construction Act* (Ontario) and publish a copy of the Certificate of Substantial Performance, once, in a construction trade newspaper; and

.2 Promptly submit copies of the construction trade newspaper containing the publication of the copy of Certificate of Substantial Performance to the Consultant.

.2 As-Built Documents:

.1 Prior to applying for the Certificate of Substantial Performance, provide an electronic set of as-built Drawings to the Consultant. Submit final reviewed As-Built Drawings and Specifications on electronic disk, and in a set of white prints in the following formats:

.1 1 set in AutoCAD v. 2014 minimum format;
.2 1 set in PDF format; and,
.3 1 set of white prints of Drawings and Specifications.

.2 Electronic formats of Drawings and Specifications are to be submitted on USB flash drive.

.3 Electronic copies of the Contract Documents may be obtained from the Consultant if necessary. These Drawings may not include changes issued as Addenda, Supplemental Instructions or Change Orders. The Consultant assumes no responsibility for the completeness of the Drawings and inclusion of instructions and details issued during the construction period.

.4 Print lettering and numbers in size to match original. Lines may be drawn free hand provided they are neat and accurate. Add "AS-BUILT RECORD" at each drawing title block and on the title page of the Specification Sections.

.5 Be responsible for:

.1 maintaining As-Built Drawings during progress of the Work, in complete sets, at the Place of the Work;
.2 including additional changes over and above those included in any addenda, Supplemental Instructions and Change Orders;
.3 recording the following changes and deviations on As-Built Drawings:

.1 depths of various elements of foundation in relationship to first floor level;
.2 field changes of dimensions; and
.3 other significant deviations and changes which are concealed in construction and cannot be identified by visual inspection.

.4 showing the actual locations of the following on as-built Drawings:

.1 access doors and panels;
.2 inverts of services at key points within building, at points where entering and leaving building, and at property lines;
.3 services dimensions in relation to structure and building grid lines;
.4 duct work, piping, conduit, mechanical and electrical equipment and associated the Work; and
.5 concealed piping, conduit, equipment and conveying systems, including such items provided for future use.

.5 ensuring As-Built Drawings shall include construction, fixed equipment, and mechanical and electrical systems installed or built. Drawings shall include a life safety plan for each floor including, but not limited to, the following:

.1 exit signage;
.2 fire extinguishers;
.3 fire alarm devices;
.4 pull stations;
.5 sprinkled areas;
.6 conformance to NFPA 101 requirements;
.7 changes recorded in a manner consistent with original Drawings.
.8 removal of outline clouds and notations from Drawings; and
.9 incorporation of any review comments made by Consultant;

.6 ensuring printed copies of As-Built Drawings and Specification Sections are available for inspection at all times as the Work progresses.

.3 **Operation and Maintenance Data**

.1 Provide the Consultant with three sets of operating and maintenance instructions and data books, a minimum of 10 Days prior to advising the Consultant that the Work is substantially performed, including:

.1 complete listing of materials, Products and equipment including serial numbers, manufacturer's names and sources of supply;
.2 description of each system and of each major component of systems;
.3 operation and installation instructions for each assembly, component and system;
.4 complete cleaning and maintenance instructions for each finish, assembly, component and system, including warnings of harmful practices;
.5 lists of spare parts for each assembly, component and system complete with names, addresses and telephone numbers of Suppliers;
.6 operating curves of mechanical and electrical equipment;
.7 a lubrication schedule of all equipment;
.8 page-size valve tag schedule and flow diagrams;
.9 water treatment procedures and tests;
.10 final balancing reports for mechanical systems;
.11 installation manual or installation instructions for each mechanical, electrical or architectural item, stamped and signed by the Subcontractors submitting them;
.12 As-Built Drawings of mechanical, electrical and special installations;
.13 final reviewed Shop Drawings; and
.14 copies of all warranties, properly executed.

.2 Provide books consisting of 3-ring hard cover, loose-leaf binders, indexed as to contents and identified on binding edges as "Operation and Maintenance Data, for York Regional Police No. 1 District Headquarters" and include the following:

.1 title sheet, labelled " Operation and Maintenance Data ", containing Project name and completion date;
.2 list of contents;
.3 complete listing of installing Subcontractors' names, addresses and telephone numbers with notation as to which portions of the Contract have been provided by them for future repair or maintenance;
.4 schedule of finishes (as-built) listing paints, colours and fabrics provided.
.5 Refer to Divisions 21, 22, 23 and 26 for supplementary requirements.
.6 Provide maintenance instructions as required by the Contract Documents.
.7 Ensure binders contain the name of the Contractor and date of Substantial Performance of the Work.
.8 Submit all “Operation and Maintenance Data” in PDF format compatible with Adobe Acrobat 5.0 on DVD disc clearly marked and labeled accordingly.
.9 Organize and label contents into applicable categories of the Work, parallel to the Specification Sections and include a table of contents.
.10 Use consistent terminology in books.

.3 Submit maintenance and operation data which are the manufacturer's latest published editions at the date of submission. Include the following:

.1 data books and literature;
.2 instructions in plain English to guide the Owner in the proper operation and maintenance of building components;
.3 maintenance instructions, specifying warnings of any maintenance practice that may damage or disfigure specified Products;
.4 operational information on Products, cleaning and lubrication schedules, filters, overhaul and adjustment schedules and similar maintenance information;
.5 recommended maintenance materials; and

Organize the contents into applicable categories of the Work, numbered to match the Specification Section numbering system. Insert tabs between each Specification Section.

.4 Should any finish, Product or assembly be injured or damaged by faulty maintenance materials, practices not warned against in maintenance manual or by failure to deliver proper maintenance manuals in time, promptly rectify such damage or injury at no additional cost to the Owner.

1.6 DEMONSTRATIONS FOR OWNER’S PERSONNEL

.1 Provide qualified technicians to demonstrate operation and/or maintenance of systems to the Owner’s staff.

1.7 MISCELLANEOUS CLOSEOUT SUBMITTALS

.1 Submit:

.1 hard copies and PDF files of closeout documentation compatible with Adobe Acrobat 5.0 on USB flash drive to the Owner;

.2 keys, passwords, licenses, security tools;

.3 hydro certificate, Electrical Safety Authority (ESA) certificates and similar certifications;

.4 one valve directory, framed behind glass and installed in main mechanical room;

.5 electrical panel directories, inside panels;

.6 one electrical riser diagram, framed behind glass and mounted; and

.7 final certified survey by an Ontario land surveyor.

1.8 END OF WARRANTY PERIOD INSPECTION

.1 At the beginning of the 12th month after Substantial Performance of the Contract, in accordance with the Contract Documents, the Owner, Contractor and Consultant, along with key Subcontractors as designated by the Consultant, shall carry out a complete inspection of the building and its systems to determine which deficiencies are to be rectified under warranty.

1.9 WARRANTY PERIODS

.1 Where equipment includes extended warranty periods (e.g. 5 years) the first year of the warranty period is to be governed by terms and conditions of the standard one year warranty prescribed by the General Conditions of the Contract and the remaining years of the warranty period shall be administered directly by the equipment manufacturer and/or supplier. Submit signed and dated copies of extended warranties to the Consultant.

.2 Warranties are to include parts, labour, travel costs and living expenses incurred by manufacturer’s authorized technician to provide factory authorized on-site service.

.3 Repair and/or replace any defects that appear in the Work within the warranty period without additional expense to the Owner. Be responsible for costs incurred in Making Good defective work, including repair or replacement of building finishes, other materials, and damage to other equipment. Ordinary wear and tear and damage caused wilfully or due to carelessness of Owner’s staff or agents is exempted.

.4 Do not include Owner deductible amounts in warranties.

.5 It is understood that warranties are to commence from time of Substantial Performance of the Work, regardless of what is noted within following Sections of Specification. Be responsible for providing whatever "bridging" or additional extended warranty period is required from time that material is purchased until this time.

.6 Visit building during warranty period with Owner representatives. Owner to organize these visits. At these meetings, Owner representatives are to review performance of systems. If performance is satisfactory, then no further action needs to be taken. If unsatisfactory, then correct deficiencies, as directed by Owner representatives, to satisfaction of Owner's representatives. These site visits to occur:

.1 once during 1st month of building operation;

.2 once during 3rd month of building operation;

.3 once between 4th and 10th month in a season opposite to 1st and 3rd month visits.

END OF SECTION

Updated through ADD#8

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the exterior enclosure performance and testing work specified herein. This includes, but is not necessarily limited, to:

.1 Below-grade construction, including foundation walls and slabs-on-grade.

.2 Above-grade construction, including:

.1 exterior opaque wall materials and assemblies;

.2 roofing systems, including steep-slope and low-slope roofing;

~~.3 outdoor plazas, planters and plaza paving systems and assemblies over occupied spaces; and~~

~~.4~~.3 openings and glazed assemblies including windows, doors, ~~curtain wall~~ and ~~sloped glazing systems~~skylights.

.3 Interface and penetration conditions (flashings, expansion joints and sealants) between each of the materials, components and systems that comprise the above and below-grade building exterior enclosure.

.2 This Section includes the general design and performance requirements for the work of Sections which comprise the building enclosure portion of the Work. The requirements specified in this Section shall be read in conjunction with other requirements specified in Contract Documents.

.3 This Section also outlines the process for independent, third-party verification that the installed performance of the building enclosure meets or exceeds the minimum performance requirements stipulated in the Contract Documents for this Project.

.1 Provision of inspection and testing services do not relieve Contractor of responsibility for compliance with Contract Document requirements.

.2 Specified inspections, tests, and related actions do not limit Contractor's quality-control procedures that facilitate compliance with Contract Document requirements.

.3 Use of testing to discover deficiencies will not be permitted where Contractor's quality-control procedures would make these tests unnecessary.

1.4 REFERENCES

.1 The following definitions apply to this Section:

.1 "Post-Disaster Building": means a building that is essential to provision of services in event of a disaster. This facility is classified as post disaster as defined in the OBC.

~~.2 "Operational and Functional Component" and "OFC": means components within building which are directly associated with the function and operation of the facility. OFCs consist of architectural components, building services components, and building contents. Items specified herein may be designated as OFCs and may need to be designed in accordance with performance requirements specified herein and in Section 13 48 50.~~

.3.2 "Building Envelope" and "Building Enclosure": means the part of the building that physically separates the exterior environment from the interior environment. It includes above-grade walls and openings, below-grade walls, roofs, and the various components and accessories used to achieve continuity and physical connections and transitions between various assemblies.

.4.3 "Air Barrier Assembly": means a collection of Air Barrier Materials (i.e. self-adhered sheet air barriers, liquid applied membranes, medium density sprayed polyurethane foam, mechanically fastened commercial building wraps and boardstock air barriers) and Air Barrier Accessories (i.e. sealants, tapes and transition membranes) assembled together to form a continuous barrier to air infiltration into the environmental separator.

~~.5 "Air Barrier Material": means a primary material that controls the movement of air into and out of a building.~~

~~.6 "Air Barrier Accessory": means the materials or products which are used to connect different Air Barrier Materials to form a continuous air barrier assembly.~~

~~.7 "Vapour Barrier": means material or system within the building construction assembly that impedes water vapour transmission to less than 72 ng/(s-sq.m-Pa) when tested in accordance with ASTM E96 to prevent the accumulation of moisture having potential to cause deterioration of the Building Enclosure.~~

.8.4 "Testing with Sealed Openings": means testing with intentional openings sealed means that mechanical openings are purposely closed off. Mechanical systems that are intended to be sealed with dampers are only be sealed by closing the damper, with no additional sealing provided. Windows and doors are left in the closed and locked position.

.9.5 "Enclosure-Only Testing": similar to sealed openings approach, except all mechanical penetrations are temporarily masked to completely prevent air leakage through them.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings: arrange pre-installation meetings attended by third-party inspection and testing company, Consultant, and Subcontractors whose work is directly associated with or impacted by Building Enclosure activities prior to starting work on the Building Enclosure.

.1 Quality Management Plan: review Contractor's quality control plan, and confirm that approaches to quality control and quality assurance procedures are coordinated with third-party inspection and testing company monitoring and testing requirements.

.2 Document and Product Review: review Contract Documents and confirm compatibility between overlapping and adjacent components supplied and installed by multiple parties who are contributing different Products associated with the assembly of the Building Enclosure.

.2 Scheduling: Schedule construction of sample panels and mock-ups, and associated pre-construction testing thereof to account for site-specific installation conditions. Ensure sufficient time is accounted for to permit corrections to proposed construction methods without negatively impacting the Construction Schedule.

.3 Role of the Consultant: Consultant is the registered professional of record and is responsible for responding to the Owner's stated project requirements and providing statements of compliance to the Authorities Having Jurisdiction indicating that the objectives of building code functional statements for Building Enclosure performance are met.

.1 Consultant will rely on third-party inspection and testing company reports in conjunction with the Contractor's field quality control reports to provide opinion on Building Enclosure performance.

.4 Role of the third-party inspection and testing company: Owner will engage third-party inspection and testing company acceptable to Owner and Consultant that specializes in Building Enclosure testing, and that has documented experience with construction of similar extent and complexity as that required for the Project.

.1 Third-party inspection and testing company will schedule and arrange testing during construction of the Building Enclosure and provide observation during installation of Building Enclosure components in accordance with their contract with Owner.

.2 Third-party inspection and testing company must assist in establishing best-practice installation procedures for Products forming the Building Enclosure.

.3 Third-party inspection and testing company must assist in establishing methods for corrective action where site conditions or actual installation result in non-conforming Building Enclosure performance.

.4 Third-party inspection and testing company will perform testing as directed by the Owner and Consultant, and will schedule with Contractor mutually agreed timing for access to site and performance of their activities.

.1 Third-party inspection and testing company will make recommendations for correction to observed deficiencies to Consultant. Consultant will make final recommendation for any assembly modifications to Contractor.

.5 Role of the Contractor:

.1 Provision and coordination of trades, and sequence of construction to ensure total performance of Building Enclosure from substructure to walls and to roof, including proper insulation depths, continuity of air barrier system joints, junctures and transitions between materials, assemblies of materials, and products.

.2 Organize preconstruction meetings between trades involved in entire Building Enclosure system to discuss where each trade scope begins and ends, responsibility and sequence of installation for proper insulation, waterproofing, air-tight joints, junctures, and transitions between materials, products and assemblies of products specified in different sections.

.3 Build mock-ups satisfactory to Consultant and third-party inspection and testing company of each assembly type including, junctures, and transitions between products, materials and assemblies.

.4 Cooperate with agencies performing required inspections, tests, and similar services, and provide reasonable auxiliary services as requested. Notify third-party inspection and testing company sufficiently in advance of operations to permit assignment of personnel. Auxiliary services required include, but are not limited to, following:

.1 Provision of access to the Work.

.2 Provision of incidental labour and facilities necessary to facilitate inspections and tests.

.3 Provision of adequate quantities of representative samples of materials that require testing or assistance in taking samples.

.4 Delivery of samples to testing laboratories.

.5 Provision of security and protection of samples and test equipment at Project Site.

1.6 ACTION SUBMITTALS

.1 Product Data: Submit in accordance with Division 01 for the following:

.1 Submit manufacturer's instructions, printed product literature and data sheets for the exterior enclosure commissioning work and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Include recommendations for product application and use.

.3 Include test data substantiating that products comply with requirements.

.2 Shop Drawings: Submit Shop Drawings indicating material characteristics, details of construction, connections, and relationship with adjacent construction.

~~.1 Energy Simulation: Submit energy simulation data conforming to the following:~~

~~.1 Performance of Glazing: simulated using WINDOW (latest edition) software by Lawrence Berkley Laboratories ("LBL").~~

~~.2 Performance of Framing (opaque and glazed assemblies): simulated using THERM software by LBL.~~

~~.2 Simulations must be carried out by a qualified simulator and summary reports must bear seal of a Professional Engineer and clearly demonstrate materials used to reduce thermal bridging in the field and at the interfaces of Building Enclosure assemblies.~~

~~.3 Alternatively test results based on testing in accordance with AAMA 1503.1 may be submitted in lieu of energy simulation to verify performance.~~

1.7 INFORMATIONAL SUBMITTALS

.1 Contractor's Quality Control Plan: submit quality control plan before pre-construction conference, describing approach to maintaining material and installation quality including the following:

.1 Lists of third-party standards, guidelines or reference documents forming part of proposed construction best-practices used to achieve specified performance requirements;

.2 Substrate preparation and installation of air barrier and vapour retarding membranes;

.3 Treatment of transitions between Building Enclosure components and their penetrations (including doors, frames, glazing, flashings, louvers and other penetrations);

.4 Confirmation of compatibility between Building Enclosure components;

.5 Proposed list of observations and tests forming a part of Contractor's quality assurance and quality control activities;

.6 Methods for addressing corrective action plans and addressing deficient or incompatible installation procedures;

.7 Format and frequency of reports, records of pre-construction meetings and site modifications; and

.8 Proposed construction schedule indicating stages of Building Enclosure construction and potential dates for Consultant's, and third-party inspection and testing company's review activities.

.2 Manufacturer's Certificates: Submit third-party verification stating conformance with Project requirements, including any material compatibility or limitations specific to Project conditions.

.3 Test and Evaluation Reports: Submit reports indicating test methods and results, and stating specifically which attributes apply to the products supplied to the Project.

.4 Manufacturer's Installation Instructions: Submit written installation requirements stating required workmanship practices to achieve assembly performance required for the Project.

1.8 CLOSEOUT SUBMITTALS

.1 Maintenance Schedule: Submit summary table that indexes Building Enclosure components requiring maintenance and indicates frequency at which each component requires repair or replacement (i.e. replacement of sealants, gaskets, glazing units, paints or coatings and similar components).

.2 Operation and Maintenance Data: Submit operation and maintenance data for each component listed in aforementioned schedule including the following as a minimum:

.1 Product Data Sheets as specified in this Section.

.2 Extended Warranty Information: Include warranties for products, equipment, components, and sub-components whose duration exceeds one year. Include warranties on components with the system they are a part of. Reference all specific operation and maintenance procedures that must be performed to keep warranty valid.

.3 Sources of Material: Include reference to contact information where specific materials can be obtained.

.4 Installation and Maintenance Instructions: Submit information for each material, component or system.

1.9 QUALITY ASSURANCE

.1 Mock-Ups: Construct mock-ups of each assembly as specified in this Section, including junctures, transitions and interfaces to establish baseline quality for installation and workmanship, and to evaluate enclosure-related constructability and performance, with a specific emphasis on required coordination of Subcontractors and sequencing necessary to ensure that performance of enclosure materials, components, systems, assemblies, and interfaces meets or exceeds requirements of Contract Documents.

.1 Required Mock-ups: Provide “first installation” in-situ or on site mock-up (as determined by Consultant) of each major Building Enclosure system, including:

.1 Each below grade underslab and vertical waterproofing system.

.2 Each type of horizontal waterproofing system enclosing occupied space below.

.3 Each substantially different type of vertical enclosure assembly (including associated air barriers, insulation, and support materials) including, but not limited to precast concrete assemblies, masonry assemblies, curtain wall and glazed assemblies, and rain screen cladding assemblies.

.4 Each low-slope and each steep-slope roofing assembly.

.5 Each expansion joint assembly.

~~.2 Extent of Mock-ups: Ensure extent of each mock-up includes interface of various materials and systems, both between various major assemblies (e.g. foundation waterproofing connection to wall assembly) and between various materials in the same assembly (e.g. interface between window and wall).~~

~~.1 Wall mock-ups must be minimum of 10 sq. m (100 sq. ft.) and extend one full structural bay wide by one full story high plus additional height as required to connect to assemblies below and above. Ensure mock-up includes typical exterior wall-to-interior floor slab connection. In addition, conform to the following:~~

~~.1 Curtain Wall Systems, Entrances and Windows: minimum of one full sized unit within rough opening demonstrating installation of transition membranes, sealants and flashings.~~

~~.2 Masonry Unit Panels: assemble a test panel including placement of a single opening (window and/or door) demonstrating installation of joint sealants and flashings, and placement of vents and weeps.~~

~~.3 Air Barrier Membranes: apply air barrier membrane to minimum area of 36 sq.m (390 sq. ft), including placement of a single opening (window and/or door) demonstrating overlaps, adhesion to substrates, and compatibility with adjacent materials.~~

~~.4 Cladding Panels (each type): assemble a test panel including placement of a single opening (window and/or door) demonstrating progressive installation, attachment to substrate, installation of insulation, joint sealants, and placement of flashings and closure strips.~~

~~.2 Roof mock-ups must be minimum of 10 sq. m (100 sq. ft.) and include parapet or roof edge conditions, as well as typical pipe, supports, and similar penetrations.~~

~~.3 Horizontal below-grade waterproofing or slab-on-grade vapour retarder mock-ups must be minimum of 10 sq. m (100 sq. ft.) and include edge conditions and typical penetration details.~~

~~.4 Vertical below-grade waterproofing (foundation wall waterproofing) mock-ups must include typical edge, termination, and penetration details.~~

~~.3 Sequencing Requirements: Stage each component within mock-ups so that each layer of construction can be reviewed and tested as required to verify performance before succeeding layers of materials are applied.~~

~~.4~~.2 Post Mock-Up Debrief: arrange for post mock-up debrief meetings attended by Contractor, Owner, third-party inspection and testing company, Consultant, and Subcontractors whose work is directly associated or impacted by Building Enclosure activities.

.1 Schedule debrief meeting immediately after testing results and observations of the mock-ups is completed.

.2 Incorporate lessons-learned arising from observed conditions and testing into Contractor's quality control plan.

~~.5~~.3 Modifications to Mock-Ups: mock-ups may require modifications to account for site conditions and compatibility between adjacent materials and assemblies.

.1 Provide corrective actions as required to obtain acceptance. Repair mock-ups which are permitted to form a part of the final construction that have been damaged or that failed testing.

~~.2 Mandatory Qualifications:~~

~~.1 Mandatory Passive House Certification:~~

~~.1 Prior to commencement of building envelope work for this project, the Project Manager, site superintendent, building envelope coordinator and mechanical and electrical coordinators from the Contractor's team assigned to Project shall have received formal training in the Passive House Trades Course (minimum 3 day workshop) as offered by Peel Passive; https://www.peelpassivehouse.ca or similar. All costs are Contractor's responsibility. Proof of certification to be submitted upon request. Proposed replacements for any of these positions by the Contractor will require the same certification prior to commencing work on the project.~~

~~.2 Mandatory Passive House Training:~~

~~.1 At least one senior on-site member (site foreman) from all sub trades performing work which forms part of the building envelope and the mechanical and electrical sub trades will be required to attend a mandatory one-day passive house training course. Duration of training shall be not less than 8 hours. Instructor shall be provided and paid for by Owner. Contractor to assume all other costs, including provision of on-site facilities to administer the course and required compensation to Contractor's team members for attending training.~~

~~.2 Owner and Consultant will schedule with Contractor mutually agreed timing for delivery of training to avoid delays to the Work.~~

PART 2 - PRODUCTS

2.1 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Statement of Building Enclosure Design Intent: The design intent of this building's enclosure is to provide exterior floor, wall, and roof assemblies which prevent uncontrolled air and vapour infiltration into the building; eliminate water infiltration (including condensation) into conditioned spaces; and provide thermal insulation continuity to minimize cold bridging. Products and assemblies used to perform these functions must be technically sound, durable and serviceable.

.1 Design Assumptions:

.1 Exterior Air Temperature:

.1 Summer: 30 deg C dry bulb, 23 deg C wet bulb
.2 Winter: - 24 deg C

.2 Ambient Interior Air Temperature (Design (for all spaces within the building, except for mechanical and electrical rooms and the garage):

.1 Summer: 24 deg C dry bulb
.2 Winter: 22 deg C

.3 Interior Relative Humidity: 55 percent +/- 5 percent

.2 General Assembly Performance:

.1 Assemblies described in Contract Documents are expected to achieve the minimum performance requirements specified in this Section as verified by inspection and testing. Performance criteria identified in this Section shall supersede other criteria identified in other parts of Contract Documents.

.2 Comply with applicable building code, and other regulations and requirements of Authorities Having Jurisdiction, in design, engineering, fabrication and installation of the Work.

.3 Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.4 When difficult-to-construct material connections occur within Building Enclosure construction, advise Consultant at once so that details can be reviewed and installation methodologies confirmed. Poor installation of a difficult-to-construct detail is not acceptable.

.5 Design of Building Enclosure assemblies is based on "Rain Screen" principle. The definition of the rain screen principle for the purpose of these Specifications is "as advocated by National Research Council of Canada".

.1 This approach is founded on the premise that multiple-element protection is necessary in most situations to achieve effective control, by means of

.1 a first line of defense that minimizes rainwater passage into wall by minimizing number and size of holes and managing driving forces acting on wall;
.2 a second line of defense that intercepts all water that gets past first line of defense and effectively dissipates it to exterior.

.2 All voids between assembly components as well as those between components and structure shall have:

.1 Gaskets, baffles, overlaps, seals and compartmentalization as required to provide a barrier "Rain Screen" to effectively prevent excessive rain water entry into any of Building Enclosure cavities but allow pressure moderation of cavity air spaces.
.2 Low permeability Vapour Barriers to minimize vapour diffusion, where required.
.3 Air barriers and seals as required to prevent entry of interior building air into Building Enclosure cavities, and exterior air into building. Air barriers and seals shall be able to withstand wind design pressures.
.4 Thermal separators, isolators and seals placed to eliminate direct contact between interior humid air and a cold surface or structural component to prevent condensation and ice build-up on surfaces during cold weather.

.6 Air Barrier Continuity:

.1 This Project incorporates design principles of positive air and vapour leakage control at Building Enclosure line. Drawing details illustrate continuity of air barrier/vapour retarder at penetrating elements such as door, window and louver frames.

.1 In order to maintain continuity of Air Barrier Assemblies, interfacing of various building elements requires close coordination by all trades involved with exterior building elements.

.2 Air-barrier assembly extends nominally from foundation line, vertically along exterior walls and to positively contact with roof air barrier/vapour retarder or roofing membrane as applicable. Continuity also extends to waterproofing at podium areas, and to inner surface of glazing units. Provide a continuous, unbroken and non-perforated air and vapour seal to totally enclose Building Enclosure and to separate interior and exterior environments.

.3 Manufacturers of window and door frames must ensure correctly designed and positioned metallic legs, extensions or recesses are provided at thermal break line to facilitate connections of rigid or flexible transition materials prior to setting these elements in their allotted openings.

.4 Penetrations of air barrier and paths of air infiltration / exfiltration must be sealed.

.5 Air barrier system shall have following characteristics:

.1 It must be continuous, with all joints sealed.
.2 It must be structurally supported to withstand positive and negative air pressures applied to Building Enclosure.
.3 Connection shall be made between:

.1 Foundation and walls.
.2 Walls and windows or doors.
.3 Different wall systems.
.4 Wall and roof.
.5 Wall and roof over unconditioned space.
.6 Walls, floor and roof across construction, control and expansion joints.
.7 Walls, floors and roof to utility, pipe and duct penetrations.

.6 Materials: materials used for air barrier system in opaque wall assemblies shall comply with CAN/ULC S741 and shall have an air permeance not exceeding 0.02 L/(s·m2) (0.004 cfm/ft2) under a pressure differential of 75 Pa (1.57 psf) when tested in accordance with ASTM E2178.

.3 Air Leakage Criteria (in-situ): The air leakage of the following assemblies must not exceed the following criteria when tested in the field in accordance with ASTM E783.

.1 Whole Building ('enclosure-only testing' and with 'sealed openings' testing results) for office area: less than 0.6 air changes per hour (ACH) under a pressure differential of 50 Pa (1.04 psf) and normalized leakage rate of 0.22 L/(s·m2) under a pressure differential of 50 Pa (1.04 psf).

.2 Opaque wall assemblies: less than 0.2 L/(s·m2) under a pressure differential of 75 Pa (0.04 cfm/ft2 @ 1.57 psf)

.3 Fixed glazed assemblies: less than 0.01 L/(s·m2) under a pressure differential of 300 Pa (0.002 cfm/ft2 @ 6 psf)

.4 Operable assemblies:

.1 Glazed ~~Windows, Sliding doors and~~ Swing Doors: less than less than 0.06 L/(s·m2) under a pressure differential of 75 Pa (0.01 cfm/ft2 @ 1.57 psf)

.2 Sectional doors: less than 2.0 L/(s·m2) under a pressure differential of 75 Pa (0.4 cfm/ft2 @ 1.57 psf)

~~.3 Rolling doors: less than less than 5.0 L/(s·m2) under a pressure differential of 75 Pa (1 cfm/ft2 @ 1.57 psf)~~

.4 Thermal Performance Criteria: install insulation materials to maintain continuity of performance of the Building Enclosure meeting thermal resistance or thermal conductance ratings specified below:

.1 Roofing Assemblies:

.1 Nominal: Minimum ~~R60~~ R35 ci sq.ft·h·deg F/BTU (RSI 10.59 sq.m·deg·K/W)

.2 Opaque Wall Assemblies Above-Grade:

.1 Nominal: Minimum ~~R40~~ R25 ci sq.ft·h·deg F/BTU (RSI ~~7.064~~.4 sq.m·deg·K/W)

.3 ~~Curtain Wall and~~ Glazed Assemblies:

.1 Maximum U0.23 BTU/sq.ft·h·deg F (U1.30 W/sq.m·K)

.2 Solar Heat Gain Coefficient: Maximum 0.4

.4 Skylights:

.1 Maximum U0.22 BTU/sq.ft·h·deg F (U1.25 W/sq.m·K)

.2 Solar Heat Gain Coefficient: Maximum 0.4

.5 Slabs-on-Grade:

.1 Nominal: Minimum ~~R40~~ R15 sq.ft·h·deg F/BTU (RSI ~~7.062~~.64 sq.m·deg·K/W)

.5 Water Infiltration: There must be no uncontrolled water infiltration when following assemblies are tested in the field in accordance with the test method described in Part 3 of this Section.

.6 Thermal Bridging: Ensure wall assembly and interface details are thermally broken and meet the OBC SB-10 requirements for continuous insulation to reduce structural connections which create thermal bridging.

.1 As a minimum, provide materials to minimize or prevent thermal bridging at the following locations and interfaces:

.1 Cladding and insulation attachment at opaque wall assemblies.

.2 At-grade transitions.

.3 Slab-edges and transitions.

.4 Glazing-to-wall transitions.

.5 Interior-to-exterior wall intersections.

.6 Assembly corners.

.7 Parapets.

.8 Roof penetrations and transitions.

.9 Exterior-to-interior structural components .

.2 Generally, select and install thermal break materials in accordance with “Building enclosure Thermal Bridging Guide, 2016 Ed.” prepared by Morrison Hershfield to meet “EFFICIENT” Performance Categories in accordance with Chapter 4.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine substrates, areas, and conditions, for compliance with requirements for installation tolerances, supports, and other conditions affecting performance of the Work.

3.2 PREPARATION

.1 Protect construction from weather and other sources of moisture that are deleterious to the tested assemblies.

.2 Repair or replace Building Enclosure components that are damaged as a consequence of exposure to weather conditions deleterious to the final construction.

3.3 WORKMANSHIP

.1 Install materials and systems according to best-practices relating to quality of workmanship, and coordination and installation of specified Products to maintain continuity of the Building Enclosure.

.1 Treatment of Penetrations: Use methods for making and sealing penetrations to maintain continuity of vapour, water and air control assemblies.

.1 Ensure mechanical and electrical work scheduled installed/modified within exterior Building Enclosure system is properly tied into Building Enclosure and does not compromise performance of Building Enclosure.

.2 Ensure mechanical and electrical penetrations through Building Enclosure are sealed against air leakage and water penetration and are designed to prevent condensation within exterior Building Enclosure system.

.3 Ensure mechanical water piping that is installed/modified within exterior wall system is free of leaks and protected from freezing.

.2 Modification of Installation: Identify installation difficulties and make modification to installation to account for site conditions that differ from manufacturer's standard detailing or testing results. Make such modifications to reduce or eliminate potential for installation deficiencies.

.3 Sequencing and Compatibility: Confirm compatibility between Products provided by different parties or that are used to join dissimilar components. Sequence such transitions and overlap materials to ensure they shed water to the exterior face of the Building Enclosure.

.4 Workmanship: Train installers on Building Enclosure best-practices and provide them with update when modifications occur resulting from changes to site conditions and testing results.

3.4 FIELD QUALITY CONTROL (PERFORMANCE TESTING)

.1 The objective of performance testing is to demonstrate that each Building Enclosure system, and system-to-system interface meets or exceeds the performance requirements of the Contract Documents and the Building Enclosure Design Intent specified in this Section.

.1 Unless otherwise indicated, costs associated with initial performance testing shall be paid by Owner through cash allowance.

.2 Costs associated with re-testing caused by failure of the Building Enclosure tests, during mock-up review or during the construction phase, shall be the responsibility of the Contractor.

.2 Contractor's Collaboration: third-party inspection and testing company will coordinate with Contractor's schedule and make themselves aware of current work. Third-party inspection will bring to attention of the Consultant and Contractor any observation or testing requirement forming a part of their scope of auditing services, but not less than those listed in this Section.

.1 Access to Site: Contractor must provide reasonable access to the Project site, and any personnel to assist third-party inspection and testing company in performance of their service and maintain site safety.

.2 Services: Contractor must provide electrical, water or other utilities or services required by third-party inspection and testing company for performance of their work.

.3 Scheduling and Coordination:

.1 Contractor must coordinate sequence of testing activities to accommodate required inspection and testing services with minimum delay.

.2 Contractor must coordinate construction activities to avoid removing and replacing construction to accommodate observations and tests required by third-party inspection and testing company.

3.5 NON-CONFORMANCE

.1 Non-conformance and deficiencies identified during periodic site visits or performance testing shall be resolved as follows:

.1 Third-party inspection and testing company will record the results of the performance test or its site visit observation in a report. All deficiencies or non-conformance issues shall be noted as action items on a punch-list and reported to Contractor through Consultant.

.2 Corrections of identified minor deficiencies may be made during the site visit at the discretion of third-party inspection and testing company. In such cases the deficiency and associated resolution will be documented in the field report.

.3 As site visits or tests progress and a deficiency is identified, the third-party inspection and testing company will discuss the issue with Contractor and Consultant for follow-up and resolution.

.1 Third-party inspection and testing company shall document deficiency and Contractor's response.

.2 Contractor shall correct the deficiency and notify third-party inspection and testing company and Consultant in writing that issue is resolved and/or product, material or assembly is ready to be retested.

.3 Contractor shall reschedule the test and the test shall be repeated. This process shall be repeated until test results meet or exceed requirements of Contract Documents.

.4 Contractor shall be responsible for costs associated with re-testing.

3.6 AIR INFILTRATION TESTING

.1 Glazed Assemblies (curtain wall and punched windows):

.1 Test Method(s): pressurized chamber testing in accordance with ASTM E783.

.2 Scope of Testing: Mock-up (first installation) and during construction phase.

.3 Frequency: As determined by third-party inspection and testing company.

.4 Success Criteria: As specified in this Section.

.2 Opaque Wall Assemblies (including transitions to adjacent systems, field of air barrier and penetrations):

.1 Test Method(s):

.1 pressurized chamber testing in accordance with ASTM E783.

.2 smoke tracer testing in accordance with ASTM E1186.

.2 Scope of Testing: Mock-up (first installation) and during construction phase.

.3 Frequency: As determined by third-party inspection and testing company.

.4 Success Criteria: As specified in this Section.

.3 Whole Building Air Leakage Testing:

.1 Test Method(s):

.1 Fan pressurization testing in accordance with ASTM E779 or orifice blower door testing in accordance with ASTM E1827 or EN 13829 Method A (should Owner elect to pursue Passive House certification).

.2 Smoke Tracer: third-party inspection and testing company may include observations using smoke tracer or theatrical fog in accordance with ASTM E1186 in conjunction with building pressurization to confirm anomalies identified using infrared scanning or to differentiate thermal bridging effects.

.2 Frequency:

.1 At completion of air barrier work, and prior to installation of insulation ('enclosure-only testing').

.2 At completion of mechanical systems work, upon systems start-up ('sealed openings testing').

.3 Success Criteria: As specified in this Section.

3.7 WATER PENETRATION TESTING

.1 Glazed Assemblies (curtain wall and punched windows):

.1 Test Method(s): pressurized chamber testing in accordance with ASTM E1105

.2 Scope of Testing: Mock-up (first installation) and during construction phase.

.3 Frequency: As determined by third-party inspection and testing company.

.4 Success Criteria: No leakage at 720 Pa (15 psf) pressure differential.

.2 Roof Assemblies:

.1 Test Method(s):

.1 Water-spray test in accordance with AAMA 501.2 at transitions, corners, penetrations determined by Consultant.

.2 Scope of Testing: Mock-up (first installation) and during construction phase.

.3 Frequency: As determined by third-party inspection and testing company.

.4 Success Criteria: No leakage.

.3 Opaque Wall Assemblies including auxiliary components such as louvers, expansion joints and similar components:

.1 Test Method(s): Water-spray test in accordance with AAMA 501.2 at transitions, corners, penetrations determined by Consultant.

.2 Scope of Testing: Mock-up (first installation) and during construction phase.

.3 Frequency: As determined by third-party inspection and testing company.

.4 Success Criteria: No leakage.

3.8 THERMAL PERFORMANCE VERIFICATION

.1 Wall Assemblies including openings and auxiliary components such as louvers, expansion joints and similar components:

.1 Test Method(s): Thermographic scan in accordance with ASTM C1060 or CAN/CGSB 149-GP-2MP.

.2 Frequency: As determined by third-party inspection and testing company.

.3 Success Criteria: Insulation is at full thickness and continuous in all cavities. No unacceptable thermal bridging.

.2 Roof Assemblies:

.1 Test Method(s): Thermographic scan in accordance with ASTM C1153.

.2 Frequency: As determined by third-party inspection and testing company.

.3 Success Criteria: Insulation is at full thickness and continuous. No thermal anomalies associated with wet insulation.

3.9 ADHESION TESTING

.1 Air Barrier Membrane Testing:

.1 Test Method(s): Pull-off testing in accordance with ASTM D4541

.2 Frequency: As determined by third-party inspection and testing company.

.3 Success Criteria: Pull-off strength of membrane conforms to manufacturer’s published data.

.2 Sealants Adhesion Tests:

.1 Test Method(s):

.1 Destructive: in accordance with Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C1193 or Method A, Tail Procedure, in ASTM C1521.

.2 Non-destructive: in accordance with ASTM C1521, using Nondestructive Spot Method.

.3 For joints with dissimilar substrates, verify adhesion to each substrate separately.

.2 Frequency: As determined by third-party inspection and testing company.

.3 Success Criteria: Sealant adhesion passes sealant manufacturer's field-adhesion hand-pull test published data.

3.10 REPAIR AND PROTECTION

.1 Repair damaged construction and restore substrates and finishes following observation, testing, sample taking and similar services. Repair surfaces immediately after testing and sampling is completed to prevent damage to assemblies resulting from moisture diffusion or air leakage.

.2 Protection of Installed Products: take necessary precautions to prevent puncturing, tearing, weakening or damaging of Building Enclosure membranes during construction; and immediately repair damage as directed by Consultant.

END OF SECTION

Part 1 General

.1 A registered, licensed, professional land surveyor (Ontario Land Surveyor) qualified to operate at the project location, shall perform the following activities which include providing the Consultant with completed drawings to the minimum Specifications below, and in general conformance to those provided in the Contract Documents.

.2 The surveyor shall include within the total costing, all confined space entry and underground utility locates as the Project requires in order to obtain the necessary inverts and utility alignments indicated in the Contract Documents. If necessary, the surveyor will engage external service providers to complete the Work. Costs for private location services (if required) are to be included in the Bid price.

.3 Construction engineering drawings provided shall be utilized for **reference purposes only** and do not replace survey Work. All inverts, manholes, pipe sizes, and any other site features are to be verified in the field. Furthermore, the engineering drawings provided do not replace private locates.

.4 The completed survey will be reviewed against these Specifications and any deviation will be brought to the attention of the surveyor and shall be rectified at no additional cost to the Owner or its representatives.

Part 2 Requirements

2.1 SURVEY PERFORMANCE REQUIREMENTS

.1 All survey services and plans must be provided in accordance with the Accuracy Standards for Land Title Surveys as adopted by the National Society of Professional Surveyors and the American Land Title Association, prepared to the Minimum Standard Detail requirements for ALTA/ACSM Surveys and include all optional items requested.

.2 The survey must be performed using professional survey equipment and employ the Canadian Standard of measurements.

.3 The accuracy of the survey measurements shall comply with the Regulations made under the applicable provincial Surveyors Act.

.4 The survey benchmark used shall;

.5 Have an elevation based on the geodetic datum.

.6 Two on-site “temporary” benchmarks shall be provided and set by the surveyor. Elevations must be established based on a minimum of 3 geodetic benchmarks.

.7 Have the location ID and elevation indicated, and a description provided.

.8 The survey shall indicate all legal property lines referenced to the north (incl. bearings, dimensions, and curve data).

2.2 DRAWING REQUIREMENTS

.1 As a minimum, all Drawings shall contain the following;

.2 North arrow.

.3 Bar scale (1:500, unless otherwise approved by the Consultant).

.4 Key plan showing the subject property location.

.5 Name and address of surveyor.

.6 Surveyor's license number.

.7 Drawing size shall be 36” x 48” (unless otherwise approved by the Consultant).

.8 The topographic survey and digital terrain model are required in Land Development Desktop and shall contain (but are not limited to) all topographic features (either natural or man made), 3-D contour break lines, spot elevations, and drainage features. The TIN must be provided after quality checks to prevent aberrations in the contours and with extraneous vectors removed. All crossing break lines must be resolved prior to creating the TIN.

.9 The Drawing shall show ground contour lines generated at 0.25 metre intervals and labelled at 0.50 metre intervals.

.10 Parcel limits and lease limits are to be incorporated and shown on all Drawings.

.11 Each survey type must be submitted as a separate Drawing file independent of other survey types if requested by the Consultant or owner.

2.3 Legal/Boundary Information

.1 The complete legal description of the property and street address (where applicable).

.2 Easements, both existing and proposed, based on a current registry search indicating the registered owner (include the date of search). Any subsequent changes shall be brought to the attention of the Consultant immediately.

.3 Right of Way (ROW) lines, including names and numbers of highways and roadways where applicable and the registered owner.

.4 Exact measurements and descriptions of all property line encroachments (aboveground and underground).

.5 Names of adjacent landowners and lot and block numbers, street addresses, and known landuse.

.6 Complete interior lot lines shall be shown where applicable.

.7 Existing Zoning shall be indicated for the subject property and all adjacent properties.

.8 The gross land area of the lands under survey and any parts thereof shall be appropriately labelled on the face of the plan. Appropriate units shall be selected for area labels with sufficient decimal places shown (a minimum of 2 decimal places are required).

.9 The surveyor shall Provide the signed and sealed survey plan that shall fully comply with the applicable provincial Surveys Act, Surveyors Act and the Regulations made under them. In addition, all applicable Drawing items must be in accordance with Part 3 of this Section.

2.4 Topographic Information

.1 The required survey(s) shall include all site features and improvements (aboveground and underground) within the Project including all Work completed by the Contractor unless otherwise directed by the Consultant. The survey shall include all aboveground features 30 metres beyond the construction limit in all directions unless otherwise directed by the Consultant. Where the width of an adjacent road, ROW or encroachment is within the 30 metres, the survey shall be extended to include the entire road, ROW or encroachment (up to and including the opposite street line) unless otherwise specified by the Consultant. The survey shall include all underground features 50 metres beyond the construction limit in all directions unless otherwise specified by the Consultant. Where the nearest catch basin, maintenance hole, or water valve exceeds 50 metres, the survey shall be extended to include the catch basin, maintenance hole or water valve, unless otherwise specified by the Consultant. Topographic information shall include all items listed within this Specification.

.2 Existing ground contours are to be based on a maximum of 15 metre grid shots, generated at 0.25 metre intervals based on geodetic datum (labelled at 0.5 metre intervals). Other spot elevations include, but are not limited to:

- .1 High points, low points, and grade changes
- .2 Along property line
- .3 Centreline of roadways
- .4 Gutter lines
- .5 Top and bottom of the curb
- .6 Top and bottom of slope
- .7 Top and bottom of retaining walls and toe walls (or steep grade changes)
- .8 Ditch inverts, streams, rivers, etc. (include direction of flow)
- .9 Flood hazard area limits if applicable
- .10 Edge of pavement (identify if shoulder, barrier curb, curb & gutter)
- .11 Top of service structures (maintenance holes, catchbasins, water valves)
- .12 Edge of sidewalk

.3 Above ground features include, but are not limited to:

- .1 Buildings/structures, including;
- .2 Finished floor elevation (FFE)
- .3 Length of each side of the structure
- .4 Truck dock(s) and/or truck well(s)
- .5 Porches
- .6 Garden centre(s)

.7 Trash and bale storage area(s)
.8 Cart coral(s)
.9 Fences, including lengths, type of construction, and any openings/gates
.10 Retaining walls and toe walls (including length and width)
.11 Signage (labelled with type and material)
.12 Roadway and parking lot painting (incl. size and number of regular and handicapped parking spaces)
.13 Walkways and sidewalks
.14 Curb depressions / Curb cuts
.15 Construction debris
.16 Surface materials (i.e.. asphalt, paving stone, concrete, sod)
.17 Berms
.18 Trees (identify the type of tree and diameter of the trunk at a height of 1.2 metres from the ground if more than 0.1 metres in diameter)
.19 Bushes, woods, or brush
.20 Sprinkler heads or other indications of irrigation
.21 Large boulders, plantings, or landscaping features
.22 Bodies of water including current elevation (& date), and high water elevation
.23 Evidence of flooding or erosion
.24 Railroad tracks

.4 Underground storm and sanitary service, including;

.1 Maintenance holes (top & bottom elevation, size, upstream and downstream inverts)
.2 Catchbasin maintenance holes (top & bottom elevation, size, upstream and downstream inverts)
.3 Catchbasins (top & bottom elevation, size, upstream and downstream inverts)
.4 Pipes drawn and shown from structure to structure (size, material/type, direction of flow, length, and slope)
.5 Orifice plates installed in drainage structures.
.6 Location of connection to any buildings
.7 Underground storage tanks (location only)
.8 Headwalls, including top and bottom elevations
.9 Culverts, with upstream and downstream inverts, size and material
.10 Lift stations (location only)

.5 Watermain lines including off-site sources and the following;

.1 Hydrants
.2 Valves/curb stops, including measured depths
.3 Location of connection to any buildings including valves

.4 Meters
.5 Chambers (including type, i.e.. meter chamber, valve chamber)
.6 Watermain lines (size, material/type)

.6 Above and underground utility lines including, but not limited to:

.1 Light standards
.2 Gas
.3 Telephone
.4 Hydro
.5 Junction boxes
.6 Pylon signs
.7 Cable TV
.8 Fibre optics
.9 Utility poles, maintenance holes, handwells, pedestals
.10 Listing of the sources of information (i.e. utility companies, locate companies, companies specializing in confined space entry)

.7 Off-site adjoining roadways (include the same level of detail as within the Project) including, but not limited to:

.1 Road names
.2 Type of driving surface
.3 Medians and openings
.4 Lane configuration and marking
.5 Underground and above-ground services and utilities
.6 Driveways
.7 Width of right-of-way and width of pavement labelled
.8 Shoulders, curbs and sidewalks

.8 The surveyor shall sign the “Certificate of Survey” as provided within Schedule ‘C’ for the areas where Work has been completed. Modifications to the certificate, where required by the Surveyor, will be approved by the Consultant prior to completion.

.9 All surveys are to include all legal and boundary information as noted within this Specification.

Part 3 Execution

3.1 Drawing Specifications

.1 The Consultant will provide a base drawing that is to be used solely for the Consultant’s purposes and that includes all base layers, blocks, details and line types required to provide the final Drawings in the Specified formats. This Specification is to be used in conjunction with the provided base Drawing. Any

documents or Drawings issued for the surveyor's use shall not be forwarded to any third party without written authorization from the Consultant.

.2 All information shall be submitted on compact disk(s) in AutoCAD 2004 or 2007 dwg format (".dxf" format is **not** acceptable). Any special fonts, symbols, logos, blocks, shape files, or cross-reference files not included in attached Schedule 'B' shall also be included on compact disk(s). Presentation Drawings shall not be rotated. Where applicable, AutoCAD base point 0,0 = Softdesk base point 0,0. North shall always be up on digital files presented to the Consultant.

.3 The drawing shall be accompanied by an ASCII point file containing the following: NORTHINGS EASTINGS ELEVATIONS DESCRIPTIONS

.4 Elevation text insertion points shall be located at the same coordinates as the spot elevation point marker.

.5 Contours shall be constructed of continuous polylines with true Z elevations. Contours shall be labelled above or at the end of lines (lines are not to be broken). The digital terrain model (Softdesk) or a 3D AutoCAD line Drawing of the existing ground surface will be provided in digital format.

.6 All plans shall be referenced to the Coordinate Reference System as utilized by the local governing authority. Coordinate System utilized shall be noted on the submitted Drawing.

.7 Any area not included in the survey due to restricted access, flooding, or other factors should be identified on the Drawing accordingly.

.8 The Consultant will reject surveys or Drawings that do not meet all requirements noted herein and no payment will be made for rejected Work until the requirements have been met and final survey Drawings are accepted as complete.

3.2 Drawing Requirements

.1 The Consultant will provide a base Drawing that is to be used solely for reference purposes and that includes all base layers, blocks, details and line types required to provide the final Drawings in the Specified format. The following is to be used for reference in conjunction with the provided base Drawing.

END OF SECTION

Updated through ADD#10

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide concrete floor finishing including but not limited to following:

.1 dry shake floor hardener.

.2 curing and sealing.

.3 premoulded joint filler.

.4 sawcutting construction and control joints in concrete.

.5 caulking construction and control joints and over premoulded joint filler with sealant.

.2 Related Requirements: Specifications throughout entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Maintenance Data: Submit maintenance manuals in accordance with Section 01 70 00 to the Consultant. Contribute to this manual complete, detailed and specific instruction for maintaining, preserving and keeping clean surfaces of this work and which give adequate warning of maintenance practices or materials detrimental to sealed surfaces.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of the Products, systems and assemblies specified in this Section and with the approval and training of the Product manufacturers.

.3 Cast in place concrete and concrete materials shall be inspected and tested by a CSA certified testing laboratory.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mock-ups: Provide mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work. As a minimum, Provide slab panel at least 1220 mm (4'-0") by 1525 mm (5'-0") feet and 100 mm (4") thick to demonstrate specified slab finish. Provide each slab panel with full length joint line.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Store materials on Site in manner to prevent damage thereto. Protect materials from inclement weather. Comply with CSA A23.1.

.2 Protect materials and work of this Section from damage in accordance with CSA A23.1. Protect other work from damage resulting from this work. Replace damaged work which cannot be satisfactorily repaired.

1.9 PROJECT CONDITIONS

.1 Temporary Lighting: Minimum 1-200 W light source, placed 2.5 m (8') above floor surface, for each 40 m^2 (430 sq ft) floor being finished.

.2 During hot weather or cold weather, conform to requirements of CSA A23.1 for mixing, placement and protection of concrete in extreme weather. During cold weather, Provide temporary heating and enclosures required.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 5 years against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this 5 year warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: failure of floor finish to remain in place, bonding failure, finish becoming defective, spalling and/or cracking.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers (or equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Adsil Advanced Silane Technology.

.2 Advanced Floor Products, Inc.

.3 ChemRex Inc.

.4 CPD Construction Products

.5 Day1 (Solomon Colors)

.6 Euclid Chemical

.7 PROSOCO.

.8 Sika Canada Inc.

.9 W.R. Meadows of Canada

.2 Substitution Limitations: Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent Products in Consultant's opinion and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Design and Performance Requirements:

.1 Concrete finishing shall comply with applicable CSA and ACI standards and best practices whether specifically listed in this Section or not. Generally, perform Work in accordance with CSA-A23.1/A23.2.

.2 Place cast-in-place concrete of appropriate properties for intended use in accordance with requirements of applicable CSA-A23.1/A23.2 for applicable concrete exposure class and content of mix. Refer to Section 03 30 00.

.3 Coordinate with finish flooring supplier and installer to ensure adequate slab flatness is provided for floor finish scheduled to be installed on slab.

.4 Finish concrete floors with a smooth, dense, steel trowel finish to achieve the following tolerances per CSA-A23.1/A23.2 (Table 22)

.1 For surfaces scheduled to have thick-set tile, for concrete surfaces exposed to view (sealed concrete) in back-of-house areas, under raised flooring, and unless otherwise indicated: Class A (Overall FF 20 and FL 15)
.2 Under resilient finishes and other flooring less than or equal to 3 mm thick: Class B (Overall FF 25 and FL 20)
.3 Under thin-set flooring (tiling), and concrete surfaces exposed to view (sealed concrete) in public areas: Class C (Overall FF 30 and FL 25)
.4 At helicopter hangar: Class D (Overall FF 50 and FL 40)

.5 Repair cracks in concrete floors to suit the floor finish and long-term serviceability requirements of floor.

.6 Tolerances: Construct forms to produce plumb and level concrete and true to linear building lines. Conform to CSA A23.1, Clause 6.4 for maximum variations (not accumulative).

.7 Static Coefficient of Friction: Ensure floor surfaces are stable, firm and slip resistant after completing finishing procedures (where exposed). Provide Products with the following minimum values as determined by ASTM D2047 unless otherwise indicated:

.1 Level Surfaces: Minimum 0.6.
.2 Ramp Surfaces: Minimum 0.8.

2.3 MATERIALS

.1 Dry-shake Floor Hardener: Provide factory-mixed, ready-to-use dry shake floor hardener. Ensure items are delivered to the Site in sealed, moisture resistant bags, ready to apply, finish and cure.

.1 Non-Metallic Quartz Hardener: Provide 1 of following:

.1 "Surflex" by Euclid Chemical,
.2 “Maximent HD” by ChemRex Inc.,
.3 "Diamag 7" by Sika Canada Inc.

.2 Use in following locations: Exposed ‘sealed’ concrete floors subject to wheel traffic ~~(sally port)~~ and helipad. ~~Do not use on floors subject to steel wheels.~~

.2 Liquid Densifier/Sealer and Dustproofing Compound (SLR): "LS/CS-SCS Indoor Gold" by PROSOCO, or “Liqui-Hard” by W.R. Meadows Inc. or equivalent ~~meeting LEED v4 emissions criteria~~.

.1 Gloss Level: Low sheen

.2 Film Forming Protective Treatments: Follow application of penetrating concrete floor densifier with minimum of two coats of general-purpose medium gloss, film forming sealer to treat surfaces to increase resistance damage from water, staining, and abrasion.

.1 Basis-of-Design: “Bellatrix” by W.R. Meadows Inc. or approved equivalent.

.3 Use in following locations: Where interior horizontal concrete slabs are indicated on Drawings and Schedules to be ‘sealed’ or marked as ‘exposed’. Do not use on floors exposed to water, salts and inorganic acids.

.3 Joint Sealants: In accordance with performance requirements of Section 07 92 00.

.1 Standard Joint Sealant: 2 component, chemically reactive polyurethane modified sealant over premoulded joint filler; self-levelling, grey colour. Provide 1 of following:

.1 Vulkem 245 by Tremco, or equivalent ~~meeting LEED v4 criteria~~.

.2 Heavy Duty Sealant for Sawcut Joints: Epoxy modified joint sealant, cold-applied, 2 component, pour grade self levelling compound with minimum Shore A Hardness of 80 and Shore D Hardness of 50.

.1 Loadflex by Sika Canada Inc., or equivalent ~~meeting LEED v4 criteria~~.

.3 Backer Rod: Extruded, closed cell, circular polyethylene foam, sized 25% larger than joint width into which it will be installed.

.4 Miscellaneous Materials:

.1 Water for Curing: Water conforming to CSA A23.1, Clause 7.4.1 clear and entirely free from any elements which might cause staining of concrete.

.2 Polyethylene Film (for Water Curing): Minimum 0.1 mm (4 mils) thick, complying with maximum allowable moisture loss requirements of ASTM C156.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 After concrete has been placed, strike off concrete level and flush to screeds with true straight edge.

.2 Immediately after striking off concrete, level and consolidate with wooden darby or bull float. Complete levelling and consolidation before free moisture (bleeding) rises to surfaces.

.3 Wait until concrete stiffens sufficiently to sustain foot pressure with only about 6 mm (1/4") indentation.

.4 Float concrete with hand float or with power float. If free bleeding water remains on surface at this time, remove it before floating.

3.3 INSTALLATION

.1 Floor Finishing:

.1 Laser screed floor slabs as scheduled herein, using laser screed vehicle. Laser vibratory screed is to be operated only by trained and qualified personnel who are familiar with equipment.

.2 Power screed interior floor slabs with mechanical vibratory screeding equipment. Machine float and machine trowel floor surfaces to smooth, level and dense surfaces free from trowel marks, ridges and depressions, except where specified otherwise.

.3 Power screed exterior floor slabs with mechanical vibratory screeding equipment. Float using magnesium floats and trowel to level and dense surfaces and finish to sidewalk "swirl" texture.

.4 Use hand held vibrators and hand screed, float and trowel areas where power equipment is inaccessible, to same density and surface quality specified in Contract Documents for floors finished with power operated equipment.

.5 For concrete mixes containing steel fibre reinforcement, ensure finishing process leaves surface free of protruding fibres. If fibres protrude from surface after concrete has set, remove protruding fibres by grinding.

.6 Non-Metallic Quartz Hardener:

.1 In areas indicated to receive non-metallic quartz hardener, power screed floor slab and float.

.2 Over floated concrete (at plastic stage), apply premixed non-metallic quartz shake in 2 equal applications at right angles to total application rate of 7.5 kg/m2 (1.5 lbs/sq ft) of floor area. Distribute evenly. Do not throw shake. Float between application of shake and after second shake application with power float. Machine trowel to smooth, level and dense surface, in uniform colour, free from trowel marks, ridges, pinholes and other defects.

.7 Liquid Densifier/Sealer and Dustproofing Compound: In areas to receive penetrating floor sealer, prepare surfaces as recommended, mix and apply at rate of application in accordance with manufacturer's recommendation.

.8 Miscellaneous Finishes:

.1 In areas specified to receive subsequent epoxy or urethane floor overlay or coating, finish concrete floor surface with 1 pass steel trowel.

.2 Swirled Finish: In final trowelling of Steel Trowel Finish, where swirled finish is scheduled, impart slightly textured surface to concrete by spin trowelling.

.3 Install abrasive nosings to stair treads prior to placement of concrete and hand trowel treads to swirl, non-slip surface.

.2 Sawcutting of Control Joints And Construction Joints:

.1 Saw cut control joints (contraction joints) to CSA-A23.1/A23.2, 24 hours maximum after placing of concrete, and before concrete develops random contraction cracks. Do not postpone sawing operations beyond these time limitations.

.2 Refer to Section 03 30 00 for joint requirements for structural work. For other requirements, provide control joints in unreinforced slabs, spaced at maximum 4.5 m (14.76 ft) on centre in square patterns.

.3 Construct control joints for a depth equal to no more than one-fourth of concrete thickness. Do not cut through reinforcement, heating systems and other embedded items.

.4 Form control joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades, minimum 3 mm (1/8 inch) wide, ensuring cutting action will not tear, abrade, or otherwise damage surface.

.5 Continuously spray water on saw blade during sawing. Grind edges of sawcuts to eliminate burrs; do not grind to bevel or chamfer joint edges.

.6 After sawing and grinding, clean joints with jet of water and blow-out with compressed air. Immediately broom clean, residue caused by sawing operation as work progresses.

.7 When cleaned joints are dry and prior to traffic being allowed over area, install temporary filler using polyethylene rope in such joints to prevent contamination.

.8 Install joint-filler strips at junctions with slabs-on-grade and vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated on Drawings and Schedules.

.9 Do not fill isolation joints, construction joints and control joints sooner than 120 Days after concrete placement. Execute joint sealing during cool, dry ambient conditions when slab is in contracted state to minimize future joint separation at sealant filled joints.

.10 Ensure joints are clean and sound. Remove oil, dirt, debris, paint and other materials that may be a bond breaker. Remove temporary filler from sawcut joints. Clean joints and blow with compressed air.

.11 Extend joint fillers full width and depth of joint, terminating flush with finished concrete surface, unless otherwise indicated on Drawings and Schedules. Overfill joints during placement. Cut flush or grind flush with floor within 24 hours after placement.

.3 Curing/sealing of Floors:

.1 Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with CSA A23.1/A23.2 for cold-weather protection and hot-weather protection during curing.

.2 Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

.3 Curing Methods: Cure formed and unformed concrete for at least seven days, or until minimum structural strength of concrete indicated in Section 03 30 00, and as required by CSA A23.1/CSA 23.2 (Table 2) for exposure class and floor finishes specified.

.4 Joint Sealant:

.1 Following joint sealant installation Specifications, do not apply in areas of concrete slab to receive subsequent floor finishes such as quarry tile, ceramic tile, carpet, resilient tile and epoxy topping system.

.2 Do not fill isolation joints, construction joints and control joints sooner than 120 Days after concrete placement. Execute joint sealing during cool, dry ambient conditions when slab is in contracted state to minimize future joint separation at sealant filled joints.

.3 Remove temporary filler from sawcut joints. Remove 6 mm (1/4") scored strip from top of premoulded joint filler. Clean joints and blow clean with compressed air.

.4 ReInstall backer rod into construction/expansion joints, set to proper sealant depth per sealant manufacturer's printed directions. Fill remainder of joint with standard joint sealant.

.5 No sooner than 120 Days, fill interior sawn construction and control joints in concrete slabs full depth with heavy duty sawcut joint sealant in accordance with manufacturer's printed directions. Joints must be overfilled with sealant and then shaved flush with slab surface once hardened.

.6 Caulk over premoulded isolation joint fillers with specified standard joint filler sealant.

.7 Prime wall of joint as recommended by sealant manufacturer. Mix sealant as directed by manufacturer. Coat surfaces of metal in contact with sealant with primer as recommended by sealant manufacturer.

.8 Fill exterior sawn construction and control joints and over premoulded isolation joint filler with specified standard joint sealant.

.9 Comply with manufacturer's application and substrate temperature requirements.

3.4 REPAIR/RESTORATION

.1 Crack Repair:

.1 After concrete has cured, examine concrete floor surfaces and repair cracks. Route cracks out with mechanical router to minimum depth of 13 mm (1/2"). Then clean and fill cracks in same manner as control joints.

.2 Correct defects in defined traffic floor only by grinding or removal and replacement of defective slabs. Areas requiring corrective work will be identified by Consultant. Verify corrected areas with Consultant.

.2 Perform corrective work at times convenient to the Consultant and at no cost to the Owner.

3.5 FIELD QUALITY CONTROL

.1 Employ services of a trained concrete technician from staff of surface hardener manufacturer to give assistance to this Section in proper use of material during initial periods of installation.

.2 Give 5 (five) Days' notice to surface hardener manufacturer in advance of commencing work.

.3 Independent inspection and testing company may be appointed and paid for by the Owner to carry out inspection and testing as directed by the Consultant.

.4 Perform tests in accordance with CSA A23.2.

.5 Forward inspection company's reports of tests to the Consultant with opinion or reason for any abnormalities noted thereon.

.6 Cooperate with and assist Inspection Company's personnel during inspection and tests.

.7 Remove defective materials and completed work which fail tests and replace as directed by the Consultant.

3.6 FLOOR FINISHING SCHEDULE

Scheduled Floor Finish	**Concrete Finish Required**	**Hardener**	**Curing/Sealing Method***
Carpet	Steel Trowel	None Required	Dissipating curing compound or water or poly curing.
Resilient Flooring	Steel trowel followed by blastrack.	None Required	Dissipating curing compound (where approved by flooring manufacturer), or water or poly curing
Trowel Applied Composition Flooring (Epoxy, Urethane Acrylic, Polyester):	Steel trowel followed by blastrack in accordance with CSA A23.1.	If recommended by composition flooring material manufacturer	Poly curing
Liquid Applied Rubber or Plastic Membrane (Mechanical Waterproofing):	Steel trowel in accordance with CSA A23.1	None required	Water or poly curing
Thinset Ceramic and Quarry Tile, Clay Tile and Brick Tile	Steel trowel in accordance with CSA A23.1	None required	Water or poly curing
Ceramic and Quarry Tile, Clay Tile and Brick Tile over mortar bed	Steel trowel followed by blastrack in accordance with CSA A23.1	None required	Water or poly curing
Exposed Concrete – Interior	Steel trowel in accordance with CSA A23.1.	Non-Metallic Quartz Hardener	Curing/sealing compound
Exposed Concrete – Exterior	Nonslip Broom Finish (final texture to be determined in coordination with the Owner)	Non-Metallic Quartz Hardener	Curing/sealing compound

.1 * Curing/Sealing Method: Refer to room finish schedule for specific types of sealers required on exposed concrete floors.

.2 ** Exposed concrete finishes: Provide swirled finish where concrete is scheduled to be exposed at ramps or in staircases.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and any additional documents referred to therein.

1.3 SUMMARY

.1 Work Included: This Section includes the common work results for masonry specified herein. This includes, but is not necessarily limited, to general requirements for:

.1 Masonry mortars and grouts.

.2 Masonry anchorage and connectors.

.3 Masonry accessories.

.4 Unit masonry components.

.5 Unless indicated otherwise, requirements specified in this Section govern masonry requirements for The Work

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Submit manufacturer's instructions, printed product literature and data sheets for masonry and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 List of Materials Used in Constructing Mock-ups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

.1 Submittal is for information only. Receipt of list does not constitute approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Consultant and approved in writing.

.4 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Submit shop drawings detailing temporary bracing required, designed to resist wind pressure and lateral forces during installation.

.2 Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.

.3 Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars.

.4 Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

.5 Samples: Submit samples in accordance with Section 01 30 00.

.1 2 of each type of masonry unit specified, including special shapes.

.2 1 of each type of masonry accessory and flashing specified.

.3 1 of each type of masonry anchorage, reinforcement and connector proposed for use.

.4 As required for testing purposes.

.6 Certificates: submit manufacturer's product certificates certifying materials comply with specified requirements.

.7 Test and Evaluation Reports:

.1 Test reports to certify compliance of masonry units and mortar ingredients with specified performance characteristics and physical properties.

.2 Submit data for masonry units, in addition to requirements set out in referenced CSA and ASTM Standards, indicating initial rates of absorption.

1.7 CLOSEOUT SUBMITTALS

.1 Submit manufacturer's instructions for care, cleaning and maintenance of masonry units for incorporation into manual specified in Section 01 70 00.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from one source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.1 Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted by Consultant.

.3 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.4 Mock-ups:

.1 Construct mock-up panel of typical exterior masonry wall construction 1200 x 1800 mm (48 inches x 72 inches) showing masonry colours and textures, use of reinforcement, ties, through-wall flashing, weep holes, jointing, pointing, coursing, mortar and quality of work.

.1 Include a sealant-filled joint at least 400 mm (16 inches) long in each mockup.

.2 Include lower corner of window opening at upper corner of exterior wall mockup. Make opening approximately 300 mm (12 inches) wide by 400 mm (16 inches) high.

.3 Include through-wall flashing installed for a 600-mm (24-inch) length in corner of exterior wall mockup approximately 400 mm (16 inches) down from top of mockup, with a 300-mm (12-inch) length of flashing left exposed to view (omit masonry above half of flashing).

.4 Include studs, sheathing, sheathing joint-and-penetration treatment, air barrier, veneer anchors, flashing, cavity drainage material, and weep holes in exterior masonry-veneer wall mockup.

.2 Mock-ups will be used to judge quality of work, substrate preparation, operation of equipment and material application.

.1 Mock-ups may also be used for testing to determine compliance with performance requirements. Perform following tests.

.1 For clay units, in addition to requirements set out in referenced CSA and ASTM Standards include data indicating initial rate of absorption.

.3 Construct mock-up where directed by Consultant.

.4 Allow 24 hours for inspection of mock-up by Consultant before proceeding with work.

.5 When reviewed by Consultant, mock-up to demonstrate minimum standard for this work.

.6 Subject to compliance with requirements, reviewed mock-ups may become part of the completed Work if undisturbed at time of Substantial Performance of the Work.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

.2 Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

.3 Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

.4 Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

.5 Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.10 SITE CONDITIONS

.1 Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

.1 Extend cover a minimum of 600 mm (24 inches) down both sides of walls, and hold cover securely in place.

.2 Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 600 mm (24 inches) down face next to unconstructed wythe, and hold cover in place.

.2 Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

.1 Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.

.2 Protect sills, ledges, and projections from mortar droppings.

.3 Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

.4 Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

.3 Ambient Conditions: assemble and erect components when temperatures are above 4 deg C (40 deg F).

.4 Cold weather requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in CAN/CSA-A371 and following requirements.

.1 Maintain temperature of mortar between 5 deg C and 50 deg C (40 deg F and 122 deg F) until batch is used or becomes stable.

.2 Maintain ambient temperature of masonry work and its constituent materials between 5 deg C and 50 deg C (40 deg F and 122 deg F and protect site from windchill.

.3 Maintain temperature of masonry above 0 deg C (32 deg F) for minimum of 7 days, after mortar is installed.

.4 Preheat unheated wall sections in enclosure for minimum 72 hours above 10 deg C (50 deg F), before applying mortar.

.5 Hot weather requirements:

.1 Protect freshly laid masonry from drying too rapidly, by means of waterproof, non-staining coverings.

.2 Keep masonry dry using waterproof, non-staining coverings that extend over walls and down sides sufficient to protect walls from wind driven rain, until masonry work is completed and protected by flashings or other permanent construction.

.6 Spray mortar surface at intervals and keep moist for maximum of 3 days after installation.

PART 2 - PRODUCTS

2.1 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Masonry Structural Design Standard: Design masonry systems in accordance with limit states design method of the Ontario Building Code and CSA S304. Design masonry walls for maximum deflection of L/360 under design loads.

.2 Masonry Connectors Standard: Comply with CAN/CSA-A370, for minimum requirements for design of masonry connectors (ties, anchors, fasteners, and repair connectors) to interconnect wythes of masonry assemblies, attach masonry veneer to structural backings, and connect masonry assemblies to intersecting walls or to other structural members.

.3 Masonry Construction Standard: Comply with CAN/CSA-A371, except as modified by requirements in the Contract Documents.

.4 Masonry Materials Standards:

.1 Clay Masonry Units: Comply with CSA A82, for minimum requirements for testing, freeze-thaw durability, finish, texture, colour, compressive strength, absorption, efflorescence, size, warpage, and out-of-square.

.2 Concrete Masonry Units: Comply with CSA A165 Series, for minimum requirements for compressive strength, concrete type, moisture content, and other physical properties.

.3 Mortar and Grout: Comply with CSA A179, for minimum requirements for mortar for use in bedding, jointing, and bonding of masonry units; and grout (fine or coarse) for use in filling core, cell, or cavity space in unit masonry construction.

.4 Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work and will be within 6 m (20 feet) vertically and horizontally of a walking surface.

.5 Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.

.1 Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

.2 If no ULC or NRCC fire tests are indicated, construct masonry fire protection and fire separation of thickness for required fire resistance ratings, and conforming to the Fire Performance Ratings, Appendix D to the National Building Code of Canada.

.3 Ensure fire and smoke masonry separations conform to building code requirements with respect to materials, classification, equivalent thicknesses, fire resistance ratings, type of concrete and other requirements of authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine conditions, substrates and work to receive work of this Section.

.2 Examine openings to receive masonry units. Verify opening size, location, and that opening is square and plumb, and ready to receive work of this Section.

.1 Inform Consultant of unacceptable conditions immediately upon discovery.

.2 Proceed with installation after unacceptable conditions have been remedied.

.3 Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Substrate conditions which have been previously installed under other sections or contracts, are acceptable for product installation in accordance with manufacturer's instructions prior to installation of masonry.

.3 Site conditions are acceptable and are ready to receive work.

.4 Built-in items are in proper location, and ready for roughing into masonry work.

.4 Commencing installation means acceptance of existing conditions.

3.2 PREPARATION

.1 Surface Preparation: prepare surface in accordance with manufacturer's written recommendations.

.2 Establish and protect lines, levels, and coursing.

.3 Protect adjacent materials from damage and disfiguration.

3.3 INSTALLATION

.1 Do masonry work in accordance with CAN/CSA-A371 except where specified otherwise.

3.4 SITE QUALITY CONTROL

.1 Manufacturer's Services:

.1 Manufacturer's site services: provide manufacturer's site services, consisting of product use recommendations and periodic site visits for inspection of product installation, in accordance with manufacturer's instructions.

.2 Schedule site visits to review work as installation is about to begin.

3.5 CLEANING

.1 Unless otherwise indicated on Drawings and Schedules, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

.2 Leave Work area clean at end of each day.

3.6 PROTECTION

.1 Temporary Bracing:

.1 Provide temporary bracing of masonry work during and after erection until permanent lateral support is in place.

.2 Brace masonry walls as necessary to resist wind pressure and lateral forces during construction.

.2 Moisture Protection:

.1 Keep masonry dry using waterproof, non-staining coverings that extend over walls and down sides sufficient to protect walls from wind driven rain, until completed and protected by flashing or other permanent construction.

.2 Cover completed and partially completed work not enclosed or sheltered with waterproof covering at end of each workday. Anchor securely in position.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the masonry mortar and grout work specified herein. This includes, but is not necessarily limited, to:

.1 Pre-packaged dry combined materials,

.2 Auxiliary materials required for a complete installation,

.3 Mixing procedures.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

.2 Definitions: The following definitions as indicated in CSA A179 apply to this Section:

.1 Type N mortar: a moderate-strength mortar suitable for general use in exposed masonry above grade and recommended particularly when high compressive and/or lateral masonry strengths are not required. Minimum compressive strength of 3.5 Mpa (510 psi) after 28 days in accordance with “Property Specifications” of CSA A179.

.2 Type S mortar: a mortar suitable for general use and recommended particularly when high lateral strength of masonry is required. It can also be used for below-grade applications Minimum compressive strength of 8.5 Mpa (1235 psi) after 28 days in accordance with “Property Specifications” of CSA A179.

.3 Type M mortar: a high-strength mortar recommended when maximum masonry compressive strength is required, or for masonry below grade and in contact with earth. Minimum compressive strength of 14 Mpa (2030 psi) after 28 days in accordance with “Property Specifications” of CSA A179.

.4 Type O mortar: a low-strength, high-lime mortar suitable for use in nonloadbearing interior walls, or loadbearing walls with low-strength requirements. Minimum compressive strength of 2 Mpa (290 psi) after 28 days in accordance with “Property Specifications” of CSA A179.

.5 Fine Grout: Minimum compressive strength of 10 Mpa (1450 psi) after 28 days in accordance with “Property Specifications” of CSA A179. Maximum aggregate size and grout slump: CAN/CSA-A179.

.6 Coarse Grout: Minimum compressive strength of 12.5 Mpa (1815 psi) after 28 days in accordance with “Property Specifications” of CSA A179. Maximum aggregate size and grout slump: CAN/CSA-A179.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 PRECONSTRUCTION TESTING

.1 Preconstruction Testing Service: Owner may engage a qualified independent testing agency to perform preconstruction testing indicated below. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

.1 Mortar Test: Perform test for each mix required, according to CAN/CSA A179 for the following:

.1 Compressive strength.

.2 Consistency.

.3 Mortar aggregate ratio.

.4 Sand/cement ratio.

.5 Water content and water/cement ratio.

.6 Air content.

.7 Splitting tensile strength.

.2 Grout Test: Perform test for each mix required, according to CAN/CSA A179 for the following:

.1 Compressive strength.

.2 Sand/cement ratio.

.3 Water content and water/cement ratio.

.4 Slump.

1.7 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Submit confirmation of source or product data sheet, prior to mixing or preparation of mortars, to Consultant, for:

.1 Aggregate: course aggregate and sand.

.2 Cement.

.3 Lime.

.4 Colour pigment samples.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Samples: submit unit samples in accordance with Section 04 05 00, supplemented as follows:

.1 Submit two 300 mm (12 inch) size samples of coloured mortar.

.4 Test Reports: submit certified test reports including sand gradation tests in accordance with CAN/CSA-A179 showing compliance with specified performance characteristics and physical properties, and in accordance with Section 04 05 00.

.5 Certificates: submit product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mock-ups: Construct mock-ups in accordance with Section 01 40 00 and requirements of Section 04 05 00.

.4 Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements: deliver materials to site in original factory packaging, labelled with manufacturer's name and address.

.2 Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

.3 Store aggregates where grading and other required characteristics can be maintained, and contamination avoided.

.4 Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.

1.10 SITE CONDITIONS

.1 Ambient Conditions: maintain materials and surrounding air temperature to the most stringent requirements of manufacturer's recommendations, Section 04 05 00 and CAN/CSA A371.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Pre-packaged Mortar and Grout

.1 King Packaged Materials (a Sika Company);

.2 Maxi-Mix;

.3 Quikcrete;

.4 Spec Mix;

.2 Mortar Pigments

.1 BayFerrox;

.2 Interstar Pigment, Admixture and Fibers;

.3 Solomon Pigments;

.4 Venator Pigments (previously Rockwood Pigments).

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Use only pre-blended, prepackaged dry combined materials (mortar and grout) mixed under controlled factory conditions or in site silo. Ingredients batching limitations to be within 1% accuracy. Hand mixing of bags and sand is not permitted.

.2 Water Repellent Admixture: Provide water repellent admixture to all exterior masonry units and mortar to yield resistance to water penetration in accordance with ASTM E514 (Class E water permeance)

2.3 MATERIALS

.1 Portland Cement: CAN/CSA-A3001, Type GU - General use hydraulic cement (Type 10), unless indicated otherwise.

.1 Colour: Provide natural color or white cement as required to produce mortar color indicated on Drawings and Schedules. At architectural concrete masonry units, provide white colour cement.

.2 Where required for cold-weather construction, provide Type HE – High Early Strength Hydraulic Cement (Type 30) or accelerator admixtures as recommended by pre-blended mortar and grout manufacturer.

.2 Pre-Packaged Dry Combined Materials: CAN/CSA-A179, factory-packaged blend of dry cementitious materials, lime and dry sand, proportioned and blended at a manufacturing plant, and requiring only the addition of water, and mixing at construction site; with Types as follows (based on Property Specifications):

.1 Mortar for exterior masonry above grade:

.1 Load Bearing: Type S (Portland Cement/Lime).

.2 Non-Load Bearing: Type N (Portland Cement/Lime).

.2 Parapet walls: Type S (Portland Cement/Lime).

.3 Mortar for interior masonry:

.1 Load Bearing: Type S (Portland Cement/Lime).

.2 Non-Load Bearing: Type N (Portland Cement/Lime).

.4 Mortar for foundation walls, manholes, sewers, pavements, walks, patios and other exterior masonry at or below grade: type M or Type S.

.3 Aggregate: CAN/CSA-A179

.4 Water: clean and potable.

.5 Hydrated Lime: to ASTM C207, Type S.

2.4 AUXILIARY MATERIALS

.1 Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979. Use only pigments with a record of satisfactory performance in masonry mortar.

.1 Use colouring admixture not exceeding 10% of cement content by mass, or integrally coloured masonry cement, to produce coloured mortar to match approved sample. Ensure admixtures are approved prior to use. Use in accordance with specific manufacturer's recommendations.

.2 Water-Repellent Admixture: Low VOC, water-repellent mortar admixture intended for use with masonry units containing integral water repellent by same manufacturer.

.1 Acceptable Products:

.1 “RainBloc for Mortar” by ACM Chemistries

.2 “Rheopel Mortar Admixture” by BASF Canada Inc.

.3 “Dry-Block Mortar Admixture” by GCP Applied Technologies

.4 Approved equivalent.

2.5 MORTAR MIXING

.1 Use only pre-packaged dry combined materials, pre-blended, pre-coloured mortar produced under controlled factory conditions or in site silo.

.2 Mix mortar ingredients in accordance with CAN/CSA-A179 and manufacturer’s instructions in quantities needed for immediate use.

.3 Add mortar colour and admixtures in accordance with manufacturer's instructions. Provide uniformity of mix and colouration.

.4 Use continuous silo mixer or batch type mixer in accordance with CAN/CSA-A179.

.5 Use of calcium chloride or chloride-based admixtures is prohibited.

.6 Use mortar within 2 hours after mixing. Discard unused mixed mortar after 2 hours.

.7 Contractor to appoint one individual to mix mortar, for duration of project. In event that this individual is changed, mortar mixing must cease until new individual is trained, and mortar mix is tested.

2.6 GROUT MIXING

.1 Use only pre-packaged, pre-mixed, pre-bagged dry combined grout materials specifically designed for applications indicated and produced under controlled factory conditions or in site silo.

.2 Conform to CSA A23.1/A23.2 and CAN/CSA-A179.

.1 Fine Grout: Minimum compressive strength of 10 Mpa (1450 psi) after 28 days in accordance with “Property Specifications” of CSA A179. Maximum aggregate size and grout slump: CAN/CSA-A179.

.2 Coarse Grout: Minimum compressive strength of 12.5 Mpa (1815 psi) after 28 days in accordance with “Property Specifications” of CSA A179. Maximum aggregate size and grout slump: CAN/CSA-A179.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Plug clean-out holes with masonry units. Brace masonry for wet grout pressure.

3.3 MORTAR AND GROUT WORK

.1 Do masonry mortar and grout work in accordance with CSA A371 and CAN/CSA-A179 except where specified otherwise.

.2 Mix mortar and grout in accordance with manufacturer’s instructions.

.3 Clean mixing boards and mechanical mixing machine between batches.

.4 Ensure mortar compressive strength is weaker than units it is binding.

.5 Keep cavities clean of mortar droppings and other materials during construction.

.6 Remove excess mortar from grout spaces.

.7 Do not place grout until the entire height of masonry to be grouted has attained enough strength to resist grout pressure.

.8 Work grout into masonry cores and cavities to eliminate voids.

.9 Comply with requirements in CAN/CSA-A371 for cleanouts and for grout placement, including minimum grout space and maximum pour height.

.1 Limit height of vertical grout pours to not more than 1.5m (60 inches).

.2 Do not install grout in lifts greater than 400 mm (16 inches), without consolidating grout by rodding.

.3 Do not displace reinforcement while placing grout.

3.4 TOOLING

.1 Provide joints in masonry, firmly pointed, compacted and tooled.

.2 Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated on Drawings and Schedules.

.3 Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated on Drawings and Schedules.

.4 For parged masonry, provide raked joints, minimum 13 mm (1/2 inch) unless otherwise indicated on Drawings and Schedules.

3.5 CLEANING

.1 Leave Work area clean at end of each day.

.2 Remove droppings and splashings using clean sponge and water.

.3 Clean masonry with low pressure clean water and soft natural bristle brush.

.4 Upon completion remove surplus materials, rubbish, tools and equipment.

3.6 PROTECTION

.1 Cover completed and partially completed work not enclosed or sheltered with waterproof covering at end of each workday. Anchor securely in position.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the masonry anchorage and reinforcing work specified herein. This includes, but is not necessarily limited, to:

.1 Masonry ties,

.2 Joint reinforcement,

.3 Masonry anchors,

.4 Fasteners,

.5 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

.2 Definitions: The following definitions as indicated in CSA A370 apply to this Section:

.1 Masonry Ties: masonry connectors used to interconnect the wythes of a masonry wall; or attach masonry veneer to its structural backing;

.2 Masonry Anchors: masonry connectors used to connect masonry walls to intersecting walls or to other structural members, attach stone to its structural backing, or interconnect stone;

.3 Masonry Fasteners: masonry connectors used to secure masonry ties and anchors to structural elements;

.4 Repair Connectors: repair connectors used to restore or improve masonry construction.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit in accordance with requirements of Section 01 30 00 for each type of product indicated on Drawings and Schedules. Include recommendations for application and use. Include test data substantiating that products comply with requirements.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings in accordance with Section 01 30 00.

.1 Submit drawings detailing bar bending details, anchorage details lists and placement drawings

.2 On placement drawings, indicate sizes, spacing, location and quantities of reinforcement and connectors.

.3 Indicate on shop drawings, bar bending details, lists, quantities of reinforcement, sizes, spacings, locations of reinforcement and mechanical splices, with identifying code marks to permit correct placement.

.4 Indicate sizes, spacings and locations of chairs, spacers and hangers.

.5 Prepare reinforcement drawings in accordance with Reinforcing Steel Manual of Standard Practice - by Reinforcing Steel Institute of Canada. ANSI/ACI 315 and ACI 315R.

.4 Test Reports: submit certified test reports including sand gradation tests in accordance with CAN/CSA-A370 showing compliance with specified performance characteristics and physical properties, and in accordance with Section 04 05 00.

.5 Certificates: submit product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from one source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mock-ups: Construct mock-ups in accordance with Section 01 40 00 and requirements of Section 04 05 00.

.4 Source Limitations for Masonry Connectors: Obtain masonry connectors from single source from single manufacturer for each product type required.

.5 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

1.8 SITE CONDITIONS

.1 Make site measurements necessary for proper fit of members.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle materials in accordance with manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Blok Lok; a Hohmann & Barnard company;

.2 Fero Corporation;

.3 Heckmann Building Products Inc.

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Design masonry anchorage and reinforcing in accordance with CSA A370, the Ontario Building Code and CSA S304 and the following requirements:

.1 Size units to accommodate total thickness of wall assemblies, including thickness of sheathing, air barrier and vapour retarder membranes, and insulation where applicable.

.2 Mechanical free play: For single- and multi-component ties, not to exceed 1.2 mm (0.05 inches) when assembled in any possible configuration and position of adjustment, including any mechanical free play between a tie component and the structural backing.

.3 Displacement: For single- and multi-component ties, not to exceed 2.0 mm (0.08 inches) under a compressive or tensile load of 0.45 kN (100 lbs.), when assembled in any possible configuration and position of adjustment, including free play; displacement includes secondary deformations of the structural backing.

.4 Positive restraint: For adjustable ties, provide positive restraint to prevent disengagement at all positions of adjustment including that of maximum adjustment.

.5 Corrosion protection and material compatibility: Unless indicated otherwise, Provide Type 316 stainless steel anchoring and reinforcing materials and accessories at exterior locations and high-moisture (where relative humidity levels are greater than 75%) interior locations (e.g. pools and showers). At other interior locations, mill galvanized and hot-dipped galvanized materials are permitted.

.6 Structural integrity: Determined in accordance with CSA A370.

.7 Load determination: Determined in accordance with CSA S304.1.

.8 Include expansion joints to accommodate movement in wall system and between wall system and building structure, caused by structural movements, without permanent distortion, damage to infills, racking of joints, breakage of seals, or water penetration.

.9 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of OBC and CAN/CSA S832. Provide connections with additional anchorage and lateral stabilization in accordance with CSA A371 and CSA S304 requirements.

2.3 MATERIALS

.1 Provide ties and anchors specified in this Section that are made from materials that comply with the following unless otherwise indicated on Drawings and Schedules.

.1 Mill-Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 641/A 641M, Class 1 coating.

.2 Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 153/A 153M, Class B-2 coating.

.3 Stainless-Steel Wire: ASTM A 580/A 580M, Type 316L.

.4 Galvanized Steel Sheet: ASTM A 653/A 653M, Commercial Steel, Z275 (G90) zinc coating.

.5 Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.

.6 Stainless-Steel Sheet: ASTM A 666, Type 316L.

.7 Stainless-Steel Bars: ASTM A 276 or ASTM A 666, Type 304.

.8 Steel Bar reinforcement: CSA-A371, and CAN/CSA G30.18, Grade 400.

2.4 MASONRY TIES

.1 Unless otherwise indicated on Drawings and Schedules, size wire ties in accordance with CSA A370 and CSA S304.1. Corrugated strip ties are not permitted.

.2 Masonry ties components to stainless steel as specified in this Section. Galvanized components are not permitted.

.3 Provide ties that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall. Provide units consisting of a wire tie, a metal plate section and insulation support. Provide proprietary adjustable ties, types, styles and sizes to suit application in accordance with manufacturer's recommendations and as follows:

.1 For tying to Exterior Structural Metal Stud Framing:

.1 "Stud Shear Connectors™" by Fero Corporation

.2 “Blok Lok BL607 connector with Flex O Lok Tie, Flex O Lok insulation retaining device and Blok Lok Coated Tek Screws” by Blok Lok; a Hohmann & Barnard company.

.2 For tying to Concrete Masonry Backup:

.1 "Block Shear Connectors™" by Fero Corporation

.2 “Blok Lok BL507S connector with Flex O Lok Tie and Flex O Lok insulation retaining device” by Blok Lok; a Hohmann & Barnard company.

.3 For tying to Poured Concrete Backup:

.1 "Rap Tie System" by Fero Corporation

.2 “Blok Lok BL407 connector with Flex O Lok Tie and Flex O Lok insulation retaining device and Blok Lok Coated Tek Screws” by Blok Lok; a Hohmann & Barnard company.

.4 For tying to Structural Steel Columns and Beams:

.1 "CAT Tie System" by Fero Corporation

.2 “Blok Lok BLT-9A” or “Blok Lok Gripstay System” by Blok Lok; a Hohmann & Barnard company.

2.5 JOINT REINFORCEMENT

.1 Provide wire reinforcement to CSA A371 with corrosion protection to CSA S304, CSA G30.3-M and CSA A370.

.2 Provide masonry reinforcements as required to improve performance of masonry walls and control shrinkage cracking. Fabricate reinforcing in accordance with CSA-A23.1/A23.2 and Reinforcing Steel Manual of Standard Practice by the Reinforcing Steel Institute of Canada.

.1 Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 400 mm (16 inches) o.c.

.2 Provide in lengths of not less than 3 m (10 feet) , with prefabricated corner and tee units.

.3 Single Wythe Joint Reinforcement:

.1 Interior dry locations: Mill galvanized, cold drawn steel wire.

.2 Interior high-moisture locations; Steel wire, hot dip galvanized: to ASTM A 641, Class 3 after fabrication.

.3 Exterior locations: Stainless steel conforming to ASTM A 580, Type 304.

.4 Provide ladder type reinforcement unless indicated otherwise. Where vertical reinforcement is not required in masonry walls, truss types are permitted.

.5 Provide shop fabricated corners, intersections and curved configuration where required.

.6 Acceptable Products:

.1 Ladder Type: “Ladur” by Dur-O-Wal Limited or “BL10, BL 11 or BL 13" by Blok-Lok Limited or approved equivalent.

.2 Truss Type: “DW 100 Dur-O-Wal Truss” or “BL30, BL 31 or BL 32" by Blok-Lok Limited or approved equivalent.

.4 Multiple Wythe Joint Reinforcement Provide adjustable types as follows:

.1 Interior dry locations: Mill galvanized, cold drawn steel wire.

.2 Interior high-moisture locations; Steel wire, hot dip galvanized: to ASTM A 641, Class 3 after fabrication.

.3 Exterior locations: Stainless steel conforming to ASTM A 580, Type 304.

.4 Provide ladder type reinforcement unless indicated otherwise. Where vertical reinforcement is not required in masonry walls, truss types are permitted.

.5 Acceptable Products:

.1 Ladder Type: “Ladur” by Dur-O-Wal Limited or “BL10, BL 11 or BL 13" by Blok-Lok Limited or approved equivalent.

.2 Truss Type: “DW 100 Dur-O-Wal Truss” or “BL30, BL 31 or BL 32" by Blok-Lok Limited or approved equivalent.

2.6 MASONRY ANCHORS

.1 Conform to CAN/CSA A370 and to suit application.

2.7 FASTENERS

.1 Provide fasteners as recommended by manufacturer.

.2 Bolts and Screws: size and type to suit application, locate where indicated.

.3 Powder-Driven Fasteners: pin styles and lengths to suit fastening application in accordance with manufacturers use, load and hold recommendations.

.4 Adhesives: epoxies, mastics and contact cements for fastening applications, use in accordance with manufacturers' recommendations.

2.8 FABRICATION

.1 Fabricate reinforcing in accordance with CSA-A23.1/A23.2 and Reinforcing Steel Manual of Standard Practice by the Reinforcing Steel Institute of Canada.

.2 Fabricate connectors in accordance with CSA-A370.

.3 Obtain Consultant’s confirmation for locations of reinforcement splices other than shown on reviewed Shop drawings.

.4 Upon confirmation of Consultant, weld reinforcement in accordance with CSA W186.

.5 Ship reinforcement and connectors, clearly identified in accordance with drawings.

2.9 SOURCE QUALITY CONTROL

.1 Upon request, provide Consultant with certified copy of mill test report of reinforcement steel and connectors, showing physical and chemical analysis, minimum 5 weeks prior to commencing reinforcement work.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 MANUFACTURER'S INSTRUCTIONS

.1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.

3.3 INSTALLATION

.1 Provide masonry connectors and reinforcement in accordance with CSA-A370, CSA-A371, CSA-A23.1/A23.2, and CSA-S304.1, unless indicated otherwise.

.2 Prior to placing concrete, mortar, obtain Consultant’s approval of placement of reinforcement and connectors.

.3 Install additional reinforcement to masonry as indicated.

3.4 BONDING AND TYING

.1 Bond walls of two or more wythes using metal connectors in accordance with CSA S304.1, CSA-A371, and as indicated.

.2 Tie masonry veneer to backing in accordance with Ontario Building Code, CSA-S304.1, CSA-A371, and as indicated.

3.5 REINFORCED LINTELS AND BOND BEAMS

.1 Reinforce masonry lintels and bond beams as indicated.

.2 Place and grout reinforcement in accordance with CSA-S304.1, CSA-A371 and CSA-A179.

.3 Support and position reinforcing bars in accordance with CAN/CSA A371.

3.6 GROUTING

.1 Grout masonry in accordance with CSA-S304.1, CSA-A371 and CSA-A179, and as indicated.

.2 Refer to Section 04 05 13 for additional requirements.

3.7 ANCHORS

.1 Install metal anchors as indicated.

3.8 LATERAL SUPPORT AND ANCHORAGE

.1 Install lateral support and anchorage in accordance with CSA-S304.1 and as indicated.

3.9 MOVEMENT JOINTS

.1 Ensure reinforcement is not continuous across movement joints unless otherwise indicated.

3.10 FIELD BENDING

.1 Do not field bend reinforcement and connectors except where indicated or authorized by Consultant.

.2 When field bending is authorized, bend without heat, applying a slow and steady pressure.

.3 Replace bars and connectors which develop cracks or splits.

3.11 FIELD TOUCH-UP

.1 Touch up damaged and cut ends of epoxy coated or galvanized reinforcement steel and connectors with compatible finish to provide continuous coating.

3.12 CLEANING

.1 Leave Work area clean at end of each day.

.2 Upon completion remove surplus materials, rubbish, tools and equipment.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the masonry accessories work specified herein. This includes, but is not necessarily limited, to:

.1 Moisture control materials,

.2 Miscellaneous masonry accessories required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit in accordance with requirements of Section 01 30 00 for each type of product indicated on Drawings and Schedules. Include recommendations for application and use. Include test data substantiating that products comply with requirements.

.2 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.3 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.4 Shop Drawings:

.1 Submit Shop Drawings in accordance with requirements of Section 01 30 00. Indicate flashings, installation details, sizes, spacing, location and quantities of fasteners on Drawings.

.5 Certificates: submit product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers,

.3 Mock-ups: Construct mock-ups in accordance with Section 01 40 00 and requirements of Section 04 05 00.

.4 Source Limitations for Masonry Accessories: Obtain masonry accessories from single source from single manufacturer for each product type required.

1.8 SITE CONDITIONS

.1 Make site measurements necessary for proper fit of members.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle materials in accordance with manufacturer's written instructions.

.2 Keep fillers and adhesives dry, protected against dampness, and freezing.

.3 Store packaged materials off ground and in accordance with manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Blok Lok; a Hohmann & Barnard company;

.2 Heckmann Building Products Inc.;

.3 Mortar Net Solutions;

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Design exterior envelope cavity walls based on Rain Screen Principle advocated by NRCC and Provide for drainage of water entering envelope cavity wall system. Provide for compartments in long cavity wall and at corners to achieve appropriate pressure equalization in exterior envelope cavity wall design;

.2 Design exterior walls to provide continuous, complementary, and compatible air/vapour/thermal barriers throughout building envelope. Provide continuity of air seal materials and assemblies.

.3 Include expansion joints to accommodate movement in wall system and between wall system and building structure, caused by structural movements, without permanent distortion, damage to infills, raking of joints, breakage of seals, or water penetration.

2.3 FLASHING MATERIALS

.1 Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual", Section 07 62 00 and as follows:

.1 Provide prefinished sheet metal (painted galvanized steel) conforming to ASTM A653/A 653M, Z275 (G90) coating designation; prepainted by coil-coating process to comply with ASTM A755/A 755M.

.2 Thickness: Not less than 0.455 mm (0.021 inch – 26 ga).

.3 Coating: Conforming to AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in colour coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

.1 Basis-of-Design: “Pre-coat 10000 Series” by ArcelorMittal based on “Kynar 500” by Arkema or approved equivalent.

.4 Fabricate continuous flashings in sections 2400 mm (96 inches) long minimum, but not exceeding 3.7 m (12 feet). Provide splice plates at joints of formed, smooth metal flashing.

.5 Fabricate through-wall flashing with drip edge unless otherwise indicated. Fabricate by extending flashing 13 mm (1/2 inch) out from wall, with outer edge bent down 30 degrees and hemmed.

.6 Fabricate metal drip edges from prepainted galvanized steel. Extend at least 76 mm (3 inches) into wall and 13 mm (1/2 inch) out from wall, with outer edge bent down 30 degrees and hemmed.

.2 Cavity Wall Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 1.0 mm (0.039 inch)

.1 Acceptable Products:

.1 “CCW-705-TWF Thru-Wall Flashing” by Carlisle Coatings & Waterproofing

.2 “Perm-A-Barrier Wall Flashing” by GCP Applied Technologies.

.3 “Blok Lok Airtight 40 Self Adhered Air and Vapour Barrier” by Hohmann & Barnard, Inc.

.4 “Air-Shield Thru-Wall Flashing” by W.R. Meadows Inc., Canada

.5 “Blueskin TWF” by Henry Company

.6 “AquaBarrier™ TWF” by IKO Industries Ltd.

.7 “ExoAir TWF” by Tremco Incorporated, an RPM company

.8 “Sopraseal WFM” by Soprema Inc.

.2 Primer: as per manufacturer’s recommendation.

.3 Mechanical fasteners: recommended by flashing manufacturer to suit project requirements.

.3 Application: Unless otherwise indicated, use the following:

.1 Where flashing is indicated to receive counterflashing, use metal flashing.

.2 Where flashing is indicated to be turned down at or beyond the wall face, use metal flashing.

.3 Where flashing is partly exposed and is indicated to terminate at the wall face, use metal flashing with flexible flashing adhered overtop, and a metal drip edge.

.4 Where flashing is fully concealed, use flexible flashing.

2.4 AUXILIARY MATERIALS

.1 Weeps/Vents: Following types are acceptable:

.1 Cellular Plastic: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 3 mm (1/8 inch) less than depth of outer wythe, in color selected from manufacturer's standard.

.2 Acceptable Products:

.1 “Cell Vent” by Blok-Lok Limited

.2 “No. 85 Cell Vent” by Heckmann Building Products Inc.

.3 “Quadro-Vent” by Hohmann & Barnard, Inc.

.4 “CellVent” by Mortar Net Solutions

.2 Cavity Drainage Material / Grout Screens: Free-draining, monofilament screen fabricated form high-strength, non-corrosive from polymer strands that will not degrade within the wall cavity and that will isolate flow of grout in designated areas.

.1 Provide strips, full depth of cavity and minimum 250 mm (10 inches) high, with dovetail shaped notches or similar design to prevent clogging with mortar droppings.

.2 Acceptable Products:

.1 “Mortar Net” by Mortar Net Solutions

.2 “Mortar Trap” by Blok Lok Limited.

.3 “Cavity Net DT” by Wire Bond.

.3 Control joint filler: purpose-made elastomer 70 durometer hardness to ASTM D2240 of size and shape indicated and to suit conditions.

.1 Acceptable Products:

.1 Concrete Masonry Units: "RS Series Rubber Control Joint" by Blok-Lok or “No. 352 Rubber Control Joint” by Heckmann Building Products Inc. or approved equivalent.

.2 Brick Masonry: “NS Series Neoprene Sponge” by Blok Lok or approved equivalent.

.4 Control Joint Bond Break: CAN/CGSB-51.34-M, 0.15 mm (6 mil) clear polyethylene cut into 1-piece strips with width to suit wall thickness.

.5 Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D226, Type I (No. 15 asphalt felt) to separate masonry from dissimilar materials, including foundations and slabs

.6 Compressible Filler: Closed cell, pre-moulded filler strips complying with ASTM D1056, Grade 2A1; of width and thickness indicated. Pre-moulded filler shall be twice thickness of opening to be filled.

.1 "NS Series Neoprene Sponge" by Blok Lok or approved equivalent by W.R Meadows of Canada.

.7 Dampproofing Emulsion: CAN/CGSB-37.2, Heavy bodied black asphalt coating "700-01 Asphalt Emulsion Dampproofing" by Bakor; or "Dehydratine No 4" by Euclid or approved equivalent.

.8 Sealant: ASTM C920, Grade NS, Use M, Class 50; Polyurethane or silicone type, tested for non-staining of masonry conforming to requirements of Section 07 92 00. Colour to be selected by Consultant.

.9 Air Barrier / Vapour Retarder: Refer to Section 07 27 14.

.10 Insulation: As specified in Section 07 21 00.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 MANUFACTURER'S INSTRUCTIONS

.1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.

3.3 INSTALLATION

.1 Install continuous movement joint fillers in movement joints at locations indicated on reviewed Shop Drawings, and generally as follows:

.1 Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

.2 Concrete Masonry Units: Conform to requirements of NCMA TEK 10-2C

.1 Locations: Generally, Provide control joints at following locations:

.1 at column grid locations,

.2 at changes in wall height,

.3 at changes in wall thickness, such as at pipe and duct chases and pilasters,

.4 at (above) movement joints in foundations and floors,

.5 at (above and below) movement joints in roofs and floors that bear on a wall,

.6 near one or both sides of door and window openings unless other crack control measures are used, such as joint reinforcement or bond beams, and

.7 adjacent to corners of walls or intersections within a distance equal to half the control joint spacing

.2 Spacing: Ensure distance between joints does not exceed length to height ratio of 1.5:1 or 7.6 m (25 ft), whichever is less.

.3 Masonry Veneer Assemblies: Conform to requirements of BIA Technical Note 18.

.1 Locations: Generally, Provide expansion joints at following locations:

.1 at or near corners

.2 at offsets and setbacks

.3 at wall intersections

.4 at changes in wall height

.5 where wall backing system changes

.6 where support of brick veneer changes

.7 where wall function or climatic exposure changes

.8 periodically along continuous lengths of wall

.9 immediately below shelf angles

.2 Spacing:

.1 For brickwork without openings, space vertical joints no more than 7.6 m (25 ft),

.2 For brickwork with openings, space vertical joint no more than 6.1 m (20 ft). Locate control joints in symmetrical arrangements and as noted on reviewed Shop Drawings.

.3 When spacing between vertical joints in parapets is more than 4.6 m (15 ft), make joints wider or place additional joints halfway between joints. Extend to top of brickwork, including parapets.

.4 Below shelf angles, Provide horizontal, pressure-relieving joints by inserting a compressible filler of width required for installing sealant and backer rod specified in Section 07 92 00, but not less than 10 mm (3/8 inch).

.5 Provide expansion joints at brick infills, between the top of brickwork and structural frame.

.6 Where no shelf angles are provided, accommodate movement by:

.1 placing expansion joints around elements that are rigidly attached to the frame and project into the veneer, such as windows and door frames

.2 installing metal caps or copings that allow independent vertical movement of wythes

.3 installing jamb receptors that allow independent movement between the brick and window frame

.4 Installing adjustable anchors or ties

.2 Mechanical fasteners: install fasteners to suit application and in accordance with manufacturer's written installation instructions.

.3 Reglets: install reglets at locations indicated on reviewed Shop Drawings.

.4 Brick vents: install brick vents at locations indicated on reviewed Shop Drawings.

.5 Install weep hole vents in vertical joints immediately over flashings, in exterior wythes of cavity wall and masonry veneer wall construction, at maximum horizontal spacing of 600 mm (24 inches) on centre. Do not locate vent within 600 mm (24 inches) next to corners of building.

.6 Grout screens: install purpose made screens in cavities where indicated and as directed, size and shape to suit purpose and function.

.7 Flashings: Build in flashings in masonry in accordance with CAN/CSA-A371.

.1 Install flashings under exterior masonry bearing on foundation walls, slabs, shelf angles, and steel angles over openings, and at base of cavity wall and where cavity interrupted by horizontal members or supports and as shown on drawings. Install flashings under weep hole courses and as indicated.

.2 In cavity walls and veneered walls, carry flashings from front edge of exterior masonry, under outer wythe, then up backing minimum 150 mm (6 inches), and as follows:

.1 For masonry backing embed or bond flashing 25 mm (1 inch) in joint.

.2 For concrete backing, insert or bond flashing into reglets.

.3 For gypsum board and glass fibre faced sheathing backing, bond to wall using manufacturer's recommended adhesive.

.3 Lap joints 150 mm (6 inches) and seal with adhesive. Seal joints thoroughly.

.4 Form flashing (end dams) at lintels, sills and wall ends to prevent water from travelling horizontally past flashing ends.

.5 Extend flashing through exterior wythe of masonry to exterior. Provide exposed edge of flashing to maximum 6 mm (1/4 inch) and present a neat, even appearance.

.6 Provide 2.66 mm (0.104 inch - 12 ga) metal drip hemmed with a drip edge at all locations where thorough wall flashing occurs at a wall face.

.7 Remove excess projecting material.

.8 Install vertical flashing where outer veneer returns at window or door jambs, to prevent contact of veneer with inner wall.

3.4 CLEANING

.1 Leave Work area clean at end of each day.

.2 Upon completion remove surplus materials, rubbish, tools and equipment.

END OF SECTION

SEE ADD#4
Q#98

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the concrete unit masonry work specified herein. This includes, but is not necessarily limited, to:

.1 Concrete masonry units.

.2 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

.2 Definitions

.1 CMU(s): Concrete masonry unit(s).

.2 Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings stamped and signed by professional engineer registered or licensed in Province of Ontario, for lintels, and reinforced masonry.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.1 Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted by Consultant.

.3 Sample Panels (Mock-ups): Build sample panels to verify selections made under sample submittals and to demonstrate aesthetic effects.

.1 Build sample panels for each type of exposed unit masonry construction in sizes approximately 1500 mm (60 inches) long by 1200 mm (48 inches) high by full thickness.

.2 Where masonry is to match existing, erect panels adjacent and parallel to existing surface.

.3 Protect approved sample panels from the elements with weather-resistant membrane.

.4 Review of sample panels is for colour, texture, and blending of masonry units; relationship of mortar and sealant colours to masonry unit colours; tooling of joints; aesthetic qualities of workmanship; and other material and construction qualities specifically approved by Consultant in writing.

.4 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

1.8 DELIVERY, STORAGE, AND HANDLING

.1 Deliver, store and handle materials in accordance with Section 04 05 00 and with manufacturer's written instructions.

.2 Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

1.9 FIELD CONDITIONS

.1 Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

.1 Extend cover a minimum of 600 mm (24 inches) down both sides of walls and hold cover securely in place.

.2 Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

.3 Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

.1 Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.

.2 Protect sills, ledges, and projections from mortar droppings.

.3 Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

.4 Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

.4 Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in CAN/CSA-A371.

.1 Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in CAN/CSA-A371.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Concrete Unit Masonry:

.1 Brampton Brick Limited;

.2 Permacon;

.3 Basalite Concrete Products;

.4 Approved equivalent

.2 Architectural Concrete Masonry Units:

.1 Richvale York Block Inc.

.2 Day & Campbell Limited.

.3 Shouldice.

.4 Thames Valley Brick.

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Fire-Resistance Ratings: Where indicated on Drawings and Schedules, provide units that comply with requirements for fire-resistance ratings indicated on Drawings and Schedules as determined by testing according to CAN/ULC-S101, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

.2 Classification: same as specified in this Section except as modified by aggregate used in units and equivalent thickness of units to comply with applicable Code for fire-resistance ratings indicated. For fire-resistance ratings requiring a fire-resistance rating of 3 hours or greater, use CAN/ULC-S101 certified units.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Masonry Structural Design Standard: Design masonry systems in accordance with limit states design method of the Ontario Building Code and CSA S304. Design masonry walls for maximum deflection of L/360 under design loads.

.2 Masonry Connectors Standard: Comply with CAN/CSA-A370, for minimum requirements for design of masonry connectors (ties, anchors, fasteners, and repair connectors) to interconnect wythes of masonry assemblies, attach masonry veneer to structural backings, and connect masonry assemblies to intersecting walls or to other structural members.

.3 Masonry Construction Standard: Comply with CAN/CSA-A371, except as modified by requirements in the Contract Documents.

.4 Masonry Materials Standards:

.1 Concrete Masonry Units: Comply with CSA A165 Series, for minimum requirements for compressive strength, concrete type, moisture content, and other physical properties.

.2 Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

.5 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of Ontario Building Code and CAN/CSA S832.

2.4 CONCRETE MASONRY UNITS

.1 Concrete Block Masonry Units (CMU): Metric modular units to CSA A165 Series (CSA A165.1).

.1 Classification: Provide normal weight units conforming to the following requirements unless otherwise indicated.

.1 Hollow Units: Type H/15/A/O (typical assemblies, < 75% of the gross cross-sectional area)

.2 Semi-Solid Units: Type SS/15/A/O (sound-rated and fire-resistance rated assemblies, ≥ 75% but < 100% of the gross cross-sectional area)

.2 Provide H/15/C/O lightweight units where required for fire-rating requirements or at suspended slabs.

.1 Hollow Units: Type H/15/A/O (typical assemblies, < 75% of the gross cross-sectional area)

.2 Semi-Solid Units: Type SS/15/A/O (sound-rated and fire-resistance rated assemblies, ≥ 75% but < 100% of the gross cross-sectional area)

.3 Provide “moisture-controlled” units (Moisture Content Facet: Type “M”) where masonry will be exposed to moisture or changes in humidity.

.4 Dimensions: As noted on Drawings.

.5 Special shapes: provide bull-nosed units for exposed corners. Provide purpose-made shapes for lintels, beams and bond beams. Provide additional special shapes as indicated or required.

2.5 MORTAR AND GROUT MATERIALS

.1 Conform to requirements of Section 04 05 13.

2.6 REINFORCEMENT

.1 Provide wire reinforcement to CSA A371 with corrosion protection to CSA S304, CSA G30.3-M and CSA A370. Conform to requirement of Section 04 05 19.

2.7 AUXILIARY MATERIALS

.1 Integral Water Repellent: Provide units made with integral water repellent for all units unless indicated otherwise.

.1 Provide polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514 as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.

.2 Acceptable Products:

.1 “RainBloc” by ACM Chemistries, Inc.

.2 “Rheopel Plus” by BASF Canada Inc.

.3 “Dry-Block” by GCP Applied Technologies Inc.

.4 Approved equivalent.

2.8 MASONRY ACCESSORIES

.1 Refer to Section 04 05 23.

2.9 TOLERANCES

.1 Tolerances for standard concrete unit masonry tolerances in accordance with CAN/CSA-A165.1, supplemented as follows:

.1 Maximum variation between units within specific job lot not to exceed 2 mm.

.2 No parallel edge length, width or height dimension for individual unit to differ by more than 2 mm.

.3 Out of square tolerance not to exceed 2 mm.

.2 Tolerances for architectural concrete masonry units in accordance with CAN/CSA-A165.1, supplemented as follows:

.1 Maximum variation in length or height between units within specific job lot for specified dimension not to exceed 2 mm (0.08 inch).

.2 No parallel edge length, width or height dimension for individual unit to differ by more than 2 mm (0.08 inch).

.3 Out of square tolerance not to exceed 2 mm (0.08 inch).

.4 Maximum variation in width between units within specific job lot for specified dimension not to exceed 2 mm (0.08 inch).

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 For the record, prepare a written report, endorsed by Installer, listing conditions detrimental to performance of work.

.3 Verify that foundations are within tolerances specified.

.4 Verify that reinforcing dowels are properly placed.

.5 Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

.6 Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

.1 Conform to requirements of CSA A371.

.2 Build chases and recesses to accommodate items specified in this and other Sections.

.3 Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

.4 Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

.5 Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

.6 Build around frames previously set and braced. Fill behind hollow frames within masonry walls with mortar or grout and embed anchors.

.7 Fit masonry closely against electrical and plumbing outlets so collars, plates and covers overlap and conceal cuts.

.8 Hollow Units: spread mortar setting bed from outside edge of face shells. Gauge amount of mortar on top and end of unit to create full joints, equivalent to shell thickness. Avoid excess mortar.

.9 Solid Units: apply mortar over entire vertical and horizontal surfaces. Avoid bridging of airspace between brick veneer and backup wall with mortar.

.10 Ensure compacted head joints. Use full or face-shell joint as indicated.

.11 Tamp units firmly into place.

.12 Do not adjust masonry units after mortar has set. Where resetting of masonry is required, remove, clean and reset units in new mortar.

.13 Unless indicated otherwise, tool joints as follows:

.1 Interior exposed: raked or concave as determined by Consultant during Shop Drawing review.

.2 Interior concealed: flush.

.14 After mortar has achieved initial set up, tool joints.

.15 Do not interrupt bond below or above openings.

.16 Bond Pattern for Exposed Masonry:

.1 Concrete block units:

.1 Bond: running.

.2 Coursing height: 200 mm (8 inches) for one block and one joint.

.2 Do not use units with less than nominal 100-mm (4-inch) horizontal face dimensions at corners or jambs.

.17 Special Shapes:

.1 Install special units to form corners, returns, offsets, reveals and indents without cut ends being exposed and without losing bond or module.

.2 Install reinforced concrete block lintels over openings in masonry where steel or reinforced concrete lintels are not indicated.

.3 End bearing: not less than 200 mm, and as indicated on drawings.

.18 Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar before laying fresh masonry.

.19 Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

.20 Fill space between steel frames and masonry solidly with mortar unless otherwise indicated on Drawings and Schedules.

.21 Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.

.22 Fill cores in hollow CMUs with grout 600 mm (24 inches) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated on Drawings and Schedules.

.23 Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated on Drawings and Schedules.

.1 Install compressible filler in joint between top of partition and underside of structure above.

.2 Fasten partition top anchors to structure above and build into top of partition. Space anchors in accordance with requirements of CSA S304.1 and CSA A370.

.3 At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 84 10.

3.3 CONTROL JOINTS AND MOVEMENT JOINTS

.1 Install continuous movement joint fillers in movement joints at locations indicated on reviewed Shop Drawings, and generally as follows:

.1 Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

.2 Conform to requirements of NCMA TEK 10-2C

.3 Locations: Generally, Provide control joints at following locations:

.1 at column grid locations,

.2 at changes in wall height,

.3 at changes in wall thickness, such as at pipe and duct chases and pilasters,

.4 at (above) movement joints in foundations and floors,

.5 at (above and below) movement joints in roofs and floors that bear on a wall,

.6 near one or both sides of door and window openings unless other crack control measures are used, such as joint reinforcement or bond beams, and

.7 adjacent to corners of walls or intersections within a distance equal to half the control joint spacing

.4 Spacing: Ensure distance between joints does not exceed length to height ratio of 1.5:1 or 7.6 m (25 ft), whichever is less.

3.4 REINFORCEMENT

.1 Install reinforcing in accordance with Section 04 05 19.

3.5 CONNECTORS

.1 Install connectors in accordance with Section 04 05 19.

3.6 MORTAR AND GROUT PLACEMENT

.1 Place mortar in accordance with Section 04 05 13.

3.7 LINTELS

.1 Provide concrete or masonry lintels where shown and where openings of more than 300 mm (12 inches) for brick-size units and 600 mm (24 inches) for block-size units are shown without structural steel or other supporting lintels.

.2 Provide minimum bearing of 200 mm (8 inches) at each jamb unless otherwise indicated on Drawings and Schedules.

3.8 REPAIRING, POINTING, AND CLEANING

.1 Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

.2 Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated on Drawings and Schedules.

.3 In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

.1 Standard Concrete Unit Masonry:

.1 Allow mortar droppings on masonry to partially dry then remove by means of trowel, followed by rubbing lightly with small piece of block. Clean wall surface with suitable brush or burlap.

.4 Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

.1 Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

.2 Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Consultant's approval of sample cleaning before proceeding with cleaning of masonry.

.3 Protect adjacent nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.

.4 Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.

.5 Clean concrete masonry by cleaning method indicated on Drawings and Schedules in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.

END OF SECTION

SEE ADD#4, Q#98 & ADD#15, Q#363

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the masonry veneer work specified herein. This includes, but is not necessarily limited, to:

.1 Architectural concrete masonry units.

.2 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit drawings stamped and signed by professional engineer registered or licensed in Province of Ontario.

.2 Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.

.3 Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

.4 Samples: Submit samples in accordance with Division 01, for each type and colour of the following:

.1 Architectural concrete masonry units.

.2 Special masonry shapes.

.5 List of Materials Used in Constructing Mock-ups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.

.1 Submittal is for information only. Receipt of list does not constitute approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Consultant and approved in writing.

.6 Cold-Weather and Hot-Weather Procedures: Submit detailed description of methods, materials, and equipment to be used to comply with requirements of CSA A371.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from one source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.4 Mock-ups: Construct mock-ups in accordance with Section 01 40 00 and requirements of Section 04 05 00. Build mock-ups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

.1 Build mockup of typical wall area as designated on site.

.2 Where masonry is to match existing, erect mock-ups adjacent and parallel to existing surface.

.3 Clean one-half of exposed faces of mock-ups with masonry cleaner as indicated.

.4 Protect reviewed mock-ups from the elements with weather-resistant membrane.

.5 Review of mock-ups is for colour, texture, and blending of masonry units; relationship of mortar and sealant colours to masonry unit colours; tooling of joints; and aesthetic qualities of workmanship.

.1 Review of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Consultant specifically approves such deviations in writing.

.6 Subject to compliance with requirements, reviewed mock-ups may become part of the completed Work if undisturbed at time of Substantial Performance of the Work.

.5 Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and colour, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

1.8 DELIVERY, STORAGE, AND HANDLING

.1 Deliver, store and handle materials in accordance with Section 04 05 00 and with manufacturer's written instructions.

.2 Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

1.9 FIELD CONDITIONS

.1 Protection of Masonry: During construction, cover tops of veneer, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

.1 Extend cover a minimum of 600 mm (24 inches) down face of veneer, and hold cover securely in place.

.2 Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry. Immediately remove grout, mortar, and soil that come in contact with masonry.

.1 Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.

.2 Protect sills, ledges, and projections from mortar droppings.

.3 Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

.4 Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

.3 Cold-Weather Requirements and Hot-Weather Requirements: maintain materials and surrounding air temperature to the most stringent requirements of manufacturer’s recommendations, Section 04 05 00 and CAN/CSA A371.

.1 Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing

conditions. Comply with cold-weather construction requirements contained in CAN/CSA-A371.

1.10 WARRANTY

.1 Installer's Extended Warranty: Standard form, signed by Installer, covering Work of this Section, for warranty period of five years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Arriscraft

.2 Brampton Brick

.3 IXL Brick;

.4 Meridian Brick (Previously Forterra Brick);

.5 Permacon;

.6 Richvale York Block

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Masonry Standard: Comply with CAN/CSA-A371 and CSA S304, except as modified by requirements in the Contract Documents.

.1 Design masonry veneer assemblies, including comprehensive engineering analysis by a Professional Engineer licensed to practice in the Province of Ontario, in accordance with requirements of Ontario Building Code, and using performance requirements and design criteria indicated in this Section.

.2 Design masonry in accordance with requirements of CSA S304.1 unless noted otherwise.

.2 Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects will be exposed in the completed Work and will be within 6 m (20 feet) vertically and horizontally of a walking surface.

2.3 EXTERIOR ARCHITECTURAL CONCRETE MASONRY (MA)

.1 Provide architectural concrete masonry units complying with CAN/CSA-A165 Series, H/20/A/O.

.1 Density Classification: Normal weight.

.2 Sizes: Ensure units are manufactured to dimensions 10 mm (3/8 inch) less than nominal dimensions to allow for mortar joint.

.3 Basis-of-Design:

.1 MA-2: "ONYX PRP Contempo" by Brampton Brick

.2 MA-3: "Adair Parliament" by Arriscraft

.3 Concrete Block at Base: “Standard Block” by Brampton Brick

.4 Provide in sizes and colours noted on Drawings.

.4 Nominal Size: As indicated on Drawings.

.5 Texture: As selected by Consultant from manufacturer's full range.

.6 Colours: As selected by Consultant from manufacturer's full range.

.2 Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

.1 Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.

.2 Sills (MA-1): “White Rocked Cambridge Sills” by Arriscraft.

.3 Integral Water Repellent: Provide exposed units made with integral water repellent complying with the following:

.1 Integral Water Repellent: polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E514/E514M as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.

2.4 MORTAR AND GROUT MATERIALS

.1 Conform to requirements of Section 04 05 13.

2.5 TIES AND ANCHORS

.1 Conform to requirements of Section 04 05 19.

2.6 EMBEDDED FLASHING MATERIALS

.1 Conform to requirements of Section 04 05 23.

2.7 MISCELLANEOUS MASONRY ACCESSORIES

.1 Conform to requirements of Section 04 05 23.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Perform masonry work in accordance with CSA-A371, CSA A370 and CSA-A179, and as defined and specified in Section 04 05 00.

.2 Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

.3 Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

.4 Select and arrange units for exposed unit masonry to produce a uniform blend of colours and textures. Mix units from several pallets or cubes as they are placed.

.5 Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds more than 30 g/(minute x 20,000 sq. mm). Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

.1 As specified in CSA A371.

3.4 LAYING MASONRY WALLS

.1 Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

.2 Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in bond pattern indicated on Drawings; do not use units with less-than-nominal 100-mm (4-inch) horizontal face dimensions at corners or jambs.

.3 Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

.4 Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

.5 Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

3.5 MORTAR BEDDING AND JOINTING

.1 Lay masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

.2 Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

.3 Refer to Section 04 05 13 for additional requirements.

3.6 ANCHORING MASONRY VENEERS

.1 Anchor masonry veneers to structural back-up assemblies with masonry-veneer anchors to comply with requirements indicated in Section 04 05 19.

3.7 EXPANSION JOINTS

.1 Install expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span expansion joints without provision to allow for in-plane wall or partition movement.

.2 Refer to Section 04 05 23 for additional requirements.

3.8 LINTELS

.1 Install steel lintels where indicated. Provide minimum bearing of 200 mm (8 inches) at each jamb unless otherwise indicated.

3.9 FLASHING, WEEP HOLES, AND VENTS

.1 Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to move flow of water downward in wall, and where indicated.

.2 Install vents at shelf angles, ledges, and other obstructions to move flow of air upward in cavities, and where indicated.

.3 Install flashings and masonry accessories as noted in Section 04 05 23 unless otherwise indicated.

3.10 REPAIRING, POINTING, AND CLEANING

.1 Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

.2 Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

.3 In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

.4 Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

.1 Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

.2 Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Consultant’s approval of sample cleaning before proceeding with cleaning of masonry.

.3 Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.

.4 Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.

.5 Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.

3.11 MASONRY WASTE DISPOSAL

.1 Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide structural steel stud framing system including but not limited to following:

.1 wall studs subjected to lateral loads (no axial loads other than self weight and weight of applied finishes).

.2 steel bridging.

.3 top and bottom track.

.4 head, sill and jamb members for wall openings.

.5 studs, bridging and track connections.

.6 top and bottom connections to structure complete details to accommodate structure deflections.

.7 exterior sheathing.

.2 Related Requirements: Specifications throughout entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Definitions: the following definitions shall apply to this Section:

.1 Steel Thickness:

.1 “Base Steel Thickness”: Thickness of bare steel exclusive of coatings.

.2 “Design Thickness”: Target or "nominal" thickness used to determine structural properties of the cold formed Products.

.3 “Minimum Thickness”: Design thickness minus minimum allowable under-tolerance required by CSA S136 (95% of design thickness) or material specification; whichever is more stringent.

.4 “Designation Thickness”: For the purposes of this Specification, thicknesses provided will be minimum base steel thicknesses in accordance with CSA S136 and determined by the following table:

Designation Thickness	Minimum Base Steel Thickness		Gauge No. (For reference Only)	Colour
(mils)	(in)	(mm)	Ga	
33	0.0329	0.836	20	White
43	0.0428	1.087	18	Yellow
54	0.0538	1.367	16	Green
68	0.0677	1.72	14	Orange

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings of work of this Section in accordance with Section 01 30 00, bearing stamp and signature of a structural Professional Engineer licensed to design structures and registered in Province of Ontario. Ensure Shop Drawings show the following items as minimum:

.1 coating materials,
.2 connection details for attaching framing to itself and for attachments to structure,
.3 connections to concrete, steel and other structures abutting and supporting the steel stud work,
.4 details and erection diagrams including temporary bracing required for erection purposes,
.5 details of other pertinent components of work and adjacent constructions to which work is attached,
.6 erection Drawings of steel studs and panel assemblies.
.7 layout diagrams for setting anchor bolts,
.8 member sizes, locations and thicknesses exclusive of coating,
.9 profiles, dimensions, openings as well as requirements of related work and critical installation procedures,
.10 provision for expansion and contraction,

.11 screwed connection details,
.12 shop details indicating sizes, cuts and connections of all members,
.13 splice details as required, and
.14 welds, both field and shop welds.

.2 If requested by Consultant, submit calculations certified by a Professional Engineer licensed to design structures and registered in Province of Ontario, substantiating sizes for members and connections based on the design loads before fabrication and erection. Indicate design loads on Shop Drawings.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials

.2 Installers: Provide work of this Section executed by competent installers with minimum of 5 years' experience in application of the Products, systems and assemblies specified in this Section and with approval and training of the Product manufacturers.

.3 Companies Engaged in Welding: Certified by the Canadian Welding Bureau to CSA W47.1 and welders qualified for the base material and procedures to be executed. Welding shall conform to CSA W59

.2 Licensed Professionals: Employ a full time structural Professional Engineer registered in the Province of Ontario, carrying minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the Work of this Section during fabrication and erection,

.6 stamp and sign each Shop Drawing, and

.7 provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.3 Mock-ups: Provide mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Construct 1 typical site mock-up of structural metal stud framing assemblies. Provide mock-up approximately 2400 mm x 2400 mm (8' x 8'). Do not commence work of this Section until mock-up has been reviewed by the Consultant.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Transport, store and handle materials in a manner to prevent damage. Store units off ground and protected from mud and rain splashes.

.2 Deliver materials in original, unopened containers or bundles stored in a place providing protection from damage and exposure to exterior elements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Bailey Metal Products Ltd.

.2 Dietrich Metal Framing Canada;

.3 DCM Metal Corp.

.2 Substitution Limitations: Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent Products in Consultant's opinion and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Design shall be based on Limit States Design principles using factored loads and resistance. Resistance and resistance factors shall be determined in accordance with the OBC and CSA S136 requirements.

.2 For wind load calculations, velocity pressure shall be based on OBC requirements

.3 Design guards and walls-acting-as-guards in accordance with requirements of the OBC, in particular paragraphs 4.1.10.1 "Loads on Guards" and 4.1.10.3 "Loads on Walls Acting as Guards".

.4 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of OBC and CAN/CSA S832

.2 Design and Performance Requirements:

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Exterior cladding for this Project is based on "Rain Screen" design principle as recommended by the Division of Building Research of National Research Council of Canada. This principle requires that construction behind cladding act as an air and vapour barrier to prevent passage of moisture laden air and diffusion of water vapour. Construction behind cladding shall accommodate installation of sealants, insulation, compartmentalization of air space, air/vapour barrier system and drainage slots as required and shown. To ensure provision for continuity of thermal blanket, vapour and air barrier within construction specified herein and with adjacent barrier construction is part of responsibility of this Section.

.3 Stud Design, Depth and Thicknesses:

.1 For studs, conform to the design thicknesses in the table below. Use greater stud thicknesses if required by design and performance requirements related to applied loadings and deflection criteria specified in Contract Documents.

Minimum Thicknesses for Framing Members					
Stud Depth	Designation Thickness	Minimum Base Steel Thickness		Gauge No. (For reference Only)	Colour
(mm)	(mils)	(in)	(mm)	Ga	
92	33	0.0329	0.836	20	White
102	33	0.0329	0.836	20	White
152	43	0.0428	1.087	18	Yellow
203	43	0.0428	1.087	18	Yellow

.2 Design metal framing based on stud depth shown on Drawings. Adjust stud material thicknesses and spacings as required to meet design criteria. Use greater or lesser depths only if reviewed with Consultant.

.3 Section properties shall be computed on basis of nominal core thickness.

.4 Do not rely on collateral sheathing to help restrain member rotation and translation perpendicular to minor axis.

.5 Design metal framing based on wall stud spacing at 400 mm (16") maximum. Use lesser stud spacing if required to meet design criteria.

.4 Design Deflections:

.1 Design metal framing for exterior wall systems and their connections to withstand their own weight, weight of exterior sheathing, motion of operable elements, minimum design loads, pressure, suction of wind and internal pressure.

.1 Maximum flexural stud deflection under specified wind loads shall be limited to L/480 for stud system supporting masonry veneer in accordance with requirements of CSA S304.1.

.2 Maximum flexural stud deflection under specified wind loads shall be limited to L/360 for stud system supporting other cladding in accordance with requirements of CSA S16 and CSA S136.

.2 Deflection limit shall be such that integrity of air/vapour barrier will be maintained at design loading. Permanent deformation of members due to applied loads is not permitted.

.3 Notwithstanding limits specified herein, the structural steel framing system shall not deflect under design loads sufficient to cause noise, breaking of sealants, or to break integrity of insulation thermal blanket or air/vapour barrier seal.

.5 Design connections to accommodate vertical deflection movement of structure, frame shortening and vertical tolerances without imposing axial loads onto framing. Leave a minimum gap of 25 mm (1"). Larger gaps may be required for longer spans to accommodate structural movement.

.6 Limit free play and movement in connections perpendicular to plane of framing to ± 0.51mm (0.02“) relative to building structure.

.7 Design components and assemblies to accommodate specified erection tolerances of structure.

.8 Bridging:

.1 Provide bridging to prevent member rotation and member translation perpendicular to minor axis. Provide for secondary stress effects due to torsion between lines of bridging.

.2 Provide bridging at 1200 mm (48”) oc maximum. Space bridging at equal intervals over span length of member. Closer spacings may be required to satisfy structural

design requirements. Provide minimum of 2 rows of equally spaced bridging. Design anchorage and splice details for bridging.

.3 Design bridging to prevent member rotation and member translation perpendicular to minor axis. Provide for secondary stress effects due to torsion between lines of bridging.

.9 Design for local loading due to anchorage of cladding and interior wall mounted fixtures where required to meet design requirements.

.10 Connections between wind bearing steel stud members shall be by bolts, welding or sheet metal screws.

.11 Provide head, sill and jamb members and connections to frame openings larger than 100 mm (4“) in any dimension.

.12 Anchor top and bottom track to structure at a maximum spacing of 800 mm (32 “) oc. Closer spacings may be required to satisfy structural design requirements.

.13 Construct work to Provide for expansion and Contraction of components as will be caused by ambient temperature range without causing buckling, failure of joint seals, undue stress on fasteners or other effects detrimental to appearance or performance.

2.3 MATERIALS

.1 Steel: Sheet steel to ASTM A924.

.2 Zinc Coating: Studs, track, and components to be hot-dipped galvanized with coating conforming to Z275.

.3 Welding Materials: To CSA W59.

.4 Screws: #8 or heavier, 11 mm dia. pan head, self-drilling, case hardened, self-tapping sheet metal screws, 0.008 mm coating of zinc or cadmium plating. Screw length equal to thickness of materials penetrated plus not less than 1/2 inch (12 mm) penetration of the stud. Use not less than 3/8 inch (10 mm) pan head self-drilling, self-tapping screws for fastening studs to track.

.5 Anchors: Concrete expansion anchors or other suitable drilled type fasteners, as selected by the steel stud design engineer.

.6 Bolts, Nuts, Washers: Hot dipped galvanized to ASTM A153, 2 oz/sq ft (600 g/m2) zinc coating.

.7 Touch-up Primer: Zinc rich, to CAN/CGSB 1.181.

.8 Insulation for Deflection Channel: Owens Corning Commercial Wall Insulation or equivalent by Roxul (or Equivalent).

.9 Structural Metal Stud Framing:

.1 Ensure steel conforms to requirements of CSA S136 and identified with respect to Specification, grade, mechanical properties and coating type and thickness.

.2 Provide steel having metallic coatings conforming to ASTM A653/A653M or ASTM A792/A792M. Ensure wind bearing steel studs and tracks have a minimum coating of Z275 (G90) galvanizing in accordance with ASTM A653/A653M. Other coatings (e.g. aluminum-zinc alloy to ASTM A792/A792M) providing equal or better corrosion protection may be used.

.3 Wind bearing steel stud, configuration and Cutouts: CAN/CGSB 7.1.

.4 Size: 150 mm (6") unless otherwise indicated.

.5 Design Wind Loading: As noted herein and in accordance with OBC.

.6 Maximum Span: As noted herein.

.7 Top Track: Telescopic 2 piece slip track. Fill deflection cavity with batt insulation.

.8 Bottom Track: Of sufficient width to receive studs. Ensure gap between end of stud and web of track does not exceed 4.8 mm (3/16”). Provide 9 mm (3/8") diameter weep holes draining through exterior flange at 800 mm (32") oc.

.9 Colour code ends of individual gauges of studs as indicated in designation thickness table specified herein.

.10 Zinc-Rich Paint: CAN/CGSB-1.81-M.

.11 Isolation Strip for Studs: Provide one of the following:

.1 Asphalt-Saturated Organic Felt: ASTM D226, Type I (No. 15 asphalt felt), nonperforated or CSA A123.3; No. 15 Type.

.2 Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

.1 “Rubatex” by Rubatex Corp. or “Perma-Stik 122X” by Jacobs and Thompson Inc.,
.2 “Arnofoam” by Arno Adhesive Tapes Incorporated
.3 “Greyflex Expanding Foam Sealant” by Emseal Corporation.

.12 Bituminous Paint: Provide dielectric separation and which will dry to be tack-free and able to withstand high temperatures. Bituminous paint, alkali-resistant bituminous paint or epoxy resin solution to provide dielectric separation which will dry to be tack-free and withstand high temperatures. Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

.1 Acceptable Products: Carboline Bitumastic 50 by Carboline Canada, or Copper Creek Top Service 760 Black by Sherwin Williams Company, 410-02 by Bakor Inc. or other Equivalent Product and manufacturer acceptable to Consultant.

.13 Exterior Gypsum Sheathing Board: Refer to Section 09 21 16.

.14 Anchors, Fasteners and Welds: Supply veneer anchors for installation under this Section by Section 04 05 19.

.1 Bolts and nuts shall conform to the requirements of ASTM A307 or ASTM A325M. Provide washers. Hot-dip galvanize bolts, nuts and washers.

.2 Sheet metal screws shall have a minimum of coating thickness of 0.008 mm (0.33 mil) of zinc. Other coatings providing equal or better corrosion protection may be used.

.3 Welding materials shall conform to requirements of CSA W59-M.

.4 Welding electrodes shall be of the 480 MPa minimum tensile strength series (e.g. E480XX, ER480S-X).

.5 Ensure zinc rich paint for touching up welds and damaged metallic coatings conforms to CAN/CGSB-1.181.

.6 Concrete anchors shall have a minimum coating thickness of 0.008 mm (0.33 mil) of zinc. Other coatings providing equal or better corrosion protection may be used.

.7 Powder actuated/low velocity fasteners shall not be permitted for fastening to structural steel or for fastening to concrete.

2.4 FABRICATION

.1 Do not commence fabrication until shop and erection Drawings have been reviewed, and samples have been approved.

.2 Except as noted herein, fabricated wall framing components shall conform to requirements of CAN/CGSB-7.1.

.3 Insofar as practical, execute fitting and assembly in shop with various parts or assemblies ready for erection at building site.

.4 Provide cutouts centred in webs of members to accommodate services. Limit dimensions of unreinforced cutouts to suite design requirements and effects on strength and stiffness of members.

.5 Take field measurements and levels required to verify or supplement those shown on Drawings for proper layout and installation of work. Coordinate dimensional tolerances in adjacent building elements and confirm prior to commencement of work.

.6 Accurately machine file and fit frames rigidly together at joints, corners and mitres. Match components carefully to produce perfect continuity of line and design.

.7 Fabrication Tolerances: Provide light-weight steel framing true and plumb within following tolerances:

.1 Track and Framing:

.1 Member Depth: ± 0.76 mm, (± 0.03").
.2 Flange Width: ± 0.76 mm (± 0.03") (where exterior board is attached directly to flange).
.3 Minimum flange width shall be 32 mm (1-1/4”).
.4 Lip length: +3 mm (+1/8").
.5 Thickness: -0 mm (-0").
.6 Corner Angles: ± 3 mm (±1/8").
.7 Framing Length: ± 3 mm (±1/8").

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verification of Conditions:

.1 Before commencing installation, examine work of other Sections to which this work will be fastened. Report immediately in writing to Consultant all discrepancies in accuracy and suitability which will adversely affect this work.

.2 Ensure openings and recesses to receive this work are within acceptable tolerances. Proceed with installation only after structural defects are corrected, permanent connections are completed and supporting structure is straight and plumb.

.3 Commencement of installation shall indicate acceptance of work of other Sections upon which this work depends.

3.2 ERECTION

.1 Ensure erection conforms to reviewed Shop Drawings. Methods of construction may be either piece by piece (stick-built) or by fabrication into panels (panelized) either on or off site.

.2 Erect work plumb, true and in proper alignment and relationship to established lines and grades. Modifications required to accommodate as-built conditions (other than minor dimensional changes) shall be submitted for review.

.3 Employ temporary bracing whenever necessary to withstand all loads to which structure may be subjected during erection and subsequent construction. Leave temporary bracing in place as long as required for safety and integrity of structure. Ensure during erection a margin of safety consistent with requirements of OBC and CSA S136-01 is provided.

.4 Erection Tolerances:

.1 For purposes of this Section, camber is defined as deviation from member or any portion of member with respect to its major axis, and sweep is defined as deviation from straightness of a member or any portion of a member with respect to its minor axis.

.2 For wind bearing studs, out of plumbness shall not exceed 1/500th of member length. Out of straightness (camber and sweep) shall not exceed 1/1000th of the member length.

.3 For track, camber shall not exceed 1/1000th of member length.

.5 Wind bearing stud erection:

.1 Install studs at 300 mm (12") or 400 mm (16") oc maximum. Ensure studs seat into top and bottom tracks. Ensure gap between end of stud and web of track does not exceed 4.8 mm (3/16”). Allow 25 mm (1") minimum at top of framing for anticipated floor slab deflection, unless otherwise noted on structural Drawings.

.2 Provide isolation strips under steel studs runners for wind breaking stud wall constructed on slab on grade, above grades and other locations as applicable to suit design requirements

.3 Align adjacent or abutting members in same plane to within 0.5 mm (0.02“) maximum.

.4 Spacing of studs shall not be more than ±3 mm (1/8") from design spacing. Cumulative error in spacing shall not exceed requirements of finishing materials.

.5 Align web cut-outs in studs as required for installation of through-the-knockout style bridging and services.

.6 Make all field measurements necessary to insure proper fit of all members.

.7 Reinforce cut-outs where distance from centreline of cut-out to end of member is less than 300 mm (12"). Submit reinforcing detail for review.

.8 Holes that are field cut into lightweight steel framing members shall conform to requirements specified herein.

.9 Replace and remove damaged members from Site.

.10 Unless a closer spacing is shown on shop requirements of OBC and Drawings, anchor top and bottom tracks securely to structure at 800 mm (32”) oc maximum. Place 1 additional anchor within 100 mm (4") of end of each piece of track and additionally as required by Shop Drawings.

.11 Install additional studs at abutting walls, openings, terminations against other materials and on each side at corners unless explicitly detailed otherwise on Shop Drawings.

.12 Place insulation in jamb and header assemblies that may be inaccessible after their installation into wall. Insure insulation is kept dry and not compressed.

.13 Handling and lifting of prefabricated panels shall not cause permanent distortion to any member or collateral material.

.6 Fasteners and Welds:

.1 Ensure connected parts are in contact. Provide clamping before welding or installing screws.

.2 Companies engaged in welding shall be certified by Canadian Welding Bureau to CSA W47.1. Companies shall have welding procedures approved and welders qualified for base material types and thicknesses that are to be welded.

.3 Welds shall conform to CSA S136-01 or CSA W59-M, whichever is applicable.

.4 For material less than 3 mm (1/16") thick, Shop Drawings may show nominal weld leg sizes. For such material, effective throats of welds shall not be less than thickness of thinnest connected part.

.5 Touch-up welds and coatings damaged by welding with zinc rich paint. Prior to touching-up prepare surface in accordance with paint manufacturer's recommendations.

.6 Sheet metal screw thread types, drilling capability and installation shall conform to manufacturer's recommendations. Sheet metal screws shall be of minimum diameter indicated on Shop Drawings but not less than a #8. Sheet metal screws covered by sheathing materials shall have low profile heads. Penetration beyond joined materials shall be not less than 3 exposed threads. Secure steel stud framing to bottom track with minimum #8 x 13 mm (1/2") long screws both sides of framing.

.7 Base resistance for sheet metal screws on manufacturer’s lower bond test values multiplied by appropriate resistance factor, diameter is given in CSA S136.

.8 Install concrete anchors in accordance with manufacturer's recommendations. Connections between light-weight steel framing members shall be by bolts, welding or sheet metal screws. Welded connections are only acceptable if touched-up with zinc-rich paint.

.9 Take delivery of veneer anchors for installation under this Section from Section 04 20 00. Install veneer anchors in accordance with manufacturer's recommendations. Ensure connectors attach to web side of stud with fasteners loaded in shear and have thin vertical edge to minimize accumulation of mortar droppings.

.7 Mechanically fasten track and clip angles to concrete slab by drill-in fastenings. Bear cost of repair satisfactory to Consultant of concrete chipped by drilling or fixing operations.

.8 Secure framing at top with sliding connection. Provide inner and outer track deflection head under steel beams and decks.

.9 Erection Tolerances: For purpose of this work, camber is defined as deviation from straightness of a member or any portion of a member with respect to its major axis and sweep is defined as deviation from straightness of a member or any portion of a member with respect to its minor axis:

.1 Out of plumbness shall not exceed 1/500th of member length; out of straightness (camber or sweep) shall not exceed 1/1000th of member length.

.2 For track, camber shall not exceed 1/1000 of member length.

.3 Do not space framing more than 3 mm (1/8") from design spacing. Cumulative error in spacing shall not exceed requirements of finishing materials.

.10 Field Cutting:

.1 Cut members using saw or shear. Torch cutting is not permitted.

.2 Field cut holes into light-weight steel framing shall be limited to 64 mm (2-1/2”) maximum across member web 110 mm (4-3/8") maximum along member length, 610 mm (24") oc minimum.

.3 Apply 1 coat of zinc-rich paint to all galvanized surfaces which have been damaged or had coating removed.

.4 Coordinate with other Sections for installation of anchors and ties required for work specified under other Sections.

.11 Exterior Sheathing:

.1 Provide exterior sheathing in accordance with manufacturer's instructions.

.2 Minimum Fastening Requirements:

.1 Perimeter Edge of Each Board: 200 mm (8") oc max.
.2 Intermediate Supports: 300 mm (12") oc max.

.3 Provide exterior sheathing neatly with tight butt joints and without gaps and holes.

.4 Bear edges of exterior sheathing fully onto structural framing.

.5 Do not crush exterior sheathing edges.

.6 Do not countersink fasteners below exterior paper skin of exterior sheathing boards.

.7 Secure exterior sheathing to exposed leg of inner track of telescopic 2-piece top track.

.8 Provide ready to receive air/vapour barrier membrane.

3.3 FIELD QUALITY CONTROL

.1 Field Tests and Inspections: Perform field tests and inspections including:

.1 checking mill test reports are properly correlated to materials; welded and screwed connections, connections to main structure member, sizes, location and material and coating thicknesses.

.2 sampling fabrication and erection procedures for general conformity to requirements of Contract Documents.

.3 checking fabricated members against specified member shapes.

.4 sample checking of screwed and bolted joints.

.5 sample checking that tolerances are not exceeded.

.6 general inspection of field cutting and alterations required by other trades.

.7 submission of reports to Consultant, Owner and local jurisdictional authorities covering work inspected with details of deficiencies discovered.

3.4 CLEANING

.1 Keep installed work clean as work progresses.

.2 Clean and Make Good to approval of Consultant, surfaces soiled or otherwise damaged in connection with this work. Replace finishes or materials that cannot be satisfactorily touched up, cleaned or which have been damaged by improper cleaning materials and methods at no additional cost.

.3 Upon completion of this work, remove all debris, equipment and excess material resulting from this work from site.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide metal fabrications including but not limited to following:

.1 steel framing and supports for cubicle and toilet partitions.

.2 steel framing and supports for overhead openings.

.3 steel framing and supports for architectural woodwork elements.

.4 steel framing and supports for mechanical and electrical equipment.

.5 steel framing and supports for openings including sliding doors, oversized doors, and glazing.

.6 steel framing and supports for masonry walls including lateral support.

.7 metal ladders and safety cages.

.8 door operator pedestals.

.9 metal floor plates and supports.

.10 metal bollards.

.11 steel pipe handrails and guardrails.

.12 floor trench and sump pit cover plates.

.13 metal gratings.

.14 roof coping.

.15 rooftop access, stairs, railings and platforms.

.16 ceiling-mounted monitors and equipment

.17 miscellaneous sections and framing for applications where framing and supports are not specified in other sections.

.18 miscellaneous sections and framing as required to complete the Work and as indicated in the Canadian Institute for Steel Construction (CISC) - Handbook of Steel Construction for applications where framing and supports are not explicitly specified in this Section.

.2 Related Requirements: Specifications throughout entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Coordination:

.1 coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

.2 coordinate installation of anchorages and steel weld plates and angles for casting into concrete. Supply setting Drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with the requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00. In addition to minimum requirements of Section 01 30 00, the Shop Drawings shall indicate following:

.1 large scale details of members, materials and connections.

.2 jointing details.

.3 methods of setting, sealing, securing, anchorage.

.4 field connections.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Metal Fabricator: Provide Products for Work of this Section by manufacturer with minimum 10 years’ experience in the manufacture of such materials.

.2 Installer’s Qualifications: Provide work of this Section executed by competent installers with minimum 5 years’ experience in the manufacture and application of metal fabrication work and assemblies specified in this Section and with the approval and training of manufacturers. Demonstrate experience of projects of similar scope and size, and

evidence of a continuing quality assurance program for both materials and installation crews.

.2 Welding:

.1 Provide welding in accordance with CSA W59-M performed by a fabricator and mechanics fully by Canadian Welding Bureau for fusion welding of steel structures to CSA W47.1 and for fusion welding of aluminum to CSA W47.2.

.3 Licensed Professionals: Employ a structural Professional Engineer carrying a minimum $2,000,000.00 professional liability insurance and registered in the Province of Ontario in accordance with requirements of Section 01 40 00, to:

.1 design components of the Work of this Section requiring structural performance

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations.

.4 be responsible for production and review of Shop Drawings.

.5 inspect work of this Section during fabrication and erection.

.6 stamp and sign each Shop Drawing.

.7 provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.4 Certification:

.1 Where metal fabrications require engineering design, submit certification, from a registered structural Professional Engineer as specified in this Section, stating that the structure is capable of supporting its own weight and specified live loads.

.5 Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements:

.1 Coordinate deliveries to comply with the Construction Schedule and arrange ahead for strategic off-the-ground, undercover storage locations. Do not load areas beyond designed limits.

.2 Handle and store metal materials at Site to prevent damage to other materials and to adjacent construction.

.2 Storage and Handling Requirements: Handle components with care and provide protection for surfaces against marring or other damage. Ship and store members with cardboard or other resilient spacers between surfaces. Use lifting chokers of material which will not damage surface of metal members.

PART 2 - PRODUCTS

2.1 DESCRIPTION

.1 Regulatory Requirements:

.1 The Work of this Section that functions to resist forces imposed by dead and live loads shall conform to latest requirements of the OBC and those of jurisdictional Authorities.

.2 Design and Performance Requirements:

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Design work of this Section to withstand within acceptable deflection limitations, specified tolerances in vertical and horizontal planes, its own weight, forces applied by movements of building structure and attached adjacent components, and maximum design loads due to pressure and suction of wind, snow, ice, rain and hail.

.3 Design load bearing structures in accordance with the requirements of the OBC and Provide miscellaneous steel supports, connections and anchors to suit design. Conform to the requirements of CAN/CSA-S16.1 and CAN/CSA-S136.

.4 Design stairs and railings in accordance with the OBC, CSA A23.3, CAN/CSA-B651 and other requirements of the Authorities Having Jurisdiction.

.5 Design free standing handrails and guardrails to the requirements of the OBC, CAN/CGSB 12.1-M90, and CAN/CGSB 12.20-M89 and CAN/CSA B651. Ensure handrails and guard rails connections are made of welded constructions unless indicated otherwise.

.6 Ensure metal fabrications conform to Class 1, Class 2 and Class 3 as defined in NAAMM AMP 555, paragraph 8.3 of Section 8, Quality Control or Assurance and as follows:

.1 Class 1 Workmanship: Items that are exposed to view in finished spaces in completed Work.
.2 Class 2 Workmanship: Items that are exposed to view in utility areas of the completed Work.
.3 Class 3 Workmanship: Items that are concealed from view in the completed Work.

.7 Ensure metal stairs conform to NAAMM AMP 555, Section 1, Classification of Stairs, and Classes of Stairs as follows:

.1 Metal Pan Stairs Class Designation: Commercial Class.
.2 Metal Grating Stairs Class Designation: Industrial Class.

.8 Design ladders and fabricate capable of withstanding the effects of loads and stresses within limits and under conditions specified in ANSI A14.3, AISC S310, *Occupational Health and Safety Act*, R.S.O. 1990 C.O.1, *Regulations for Industrial Establishments*, R.R.O. 1990, O. Regulation 851 as amended by O. Regulation 516/92 and all other Authorities Having Jurisdiction.

.9 Weld connections where possible, otherwise bolt connections. Countersink exposed fastenings, cut off bolts flush with nuts. Make exposed connections of the same material, colour and finish as the base material on which they occur.

.10 Welding of any structural component related to work of this Section shall be executed by a fabricator having certification in accordance with Division 3, CSA W47.1.

.11 Fabricate components carefully and accurately to enable erection within required limits so as not to induce excessive stresses, deflection, or distortion into the structure. Do not allow contact between dissimilar materials. Finished components to be rigid, free from discolouration and marks.

.12 Ensure railings conform to Class 1, Class 2 and Class 3 as defined in NAAMM AMP 555, Section 8, Quality Control or Assurance and as follows:

.1 Class 1 Workmanship: Items that are exposed to view in finished spaces in completed Work.

.2 Class 2 Workmanship: Items that are exposed to view in utility areas of the completed Work.
.3 Class 3 Workmanship: Items that are concealed from view in the completed Work.

.13 Allow for thermal and structural movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

.1 Temperature Change: 120°F (67°C), ambient; 180°F (100°C), material surfaces.

.14 Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

.15 Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, Provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.2 MATERIALS

.1 Steel:

.1 Structural Shapes, Plates, and similar components: New material conforming to CSA G40.20 and CSA G40.21, Grade 300W.

.2 Hollow Structural Sections: New material conforming to CSA G40.20 and CSA G40.21, Grade 350W, Class H.

.3 Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A 1008M, structural steel, Grade 170, new material, unless another grade is required by design loads; exposed.

.4 Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A 1011M, structural steel, Grade 205, new material, unless another grade is required by design loads.

.5 Steel Pipe:

.1 Handrails: Conforming to ASTM A53/A53M, Type E or S, Grade A or B, Standard Weight, Schedule 40 and Schedule 80, new material.
.2 Bumpers and Bollards: Conforming to ASTM A53/A53M, Schedule 80, new material.

.6 Steel Tubing: ASTM A500, cold-formed steel tubing.

.7 Galvanized Sheet Steel: 0.91 mm (20 ga) core thickness commercial quality to ASTM A653M, Grade A, with Z275 (G90) zinc coating designation to ASTM A653M

.8 Hardware: Hot dipped galvanizing with minimum zinc coating of 600 g/m2 in accordance with requirements of ASTM A153/A153M.

.2 Aluminum:

.1 Aluminum Extrusions: ASTM B221M size accurately formed as shown on Drawings, extruded aluminum alloy AA-6063- T5 or T6.

.2 Aluminum Plate and Sheet: ASTM B209M, minimum thickness 3 mm (1/8"); of type and characteristics to match finished extrusions.

.3 Structural aluminum: to CSA HA series - M, Type 6061-T6, clear anodized.

.3 Stainless Steel: Ensure finished surfaces exposed to view are free of pitting, seam marks, roller marks, oil-canning, stains, discolourations or other imperfections

.1 Stainless-Steel Sheet, Strip, and Plate: ASTM A167, ASTM A240/A 240M or ASTM A666.

.2 Stainless-Steel Bars and Shapes: ASTM A276.

.3 Stainless Steel Tubing: ASTM A554, Grade MT.

.4 Stainless Steel Pipe: ASTM A312M, Grade TP.

.5 Castings: ASTM A743M, Grade CF 8 or Grade CF 20.

.6 Unless otherwise indicated, Provide Type 304 stainless steel at interior locations and Type 316L at exterior locations.

.7 Finish:

.1 Concealed locations: AISI No. 2.
.2 Exposed locations: AISI No. 4.

2.3 ACCESSORIES

.1 Welding Materials: Conforming to CSA W48.1-M and CSA W59-M.

.2 Fasteners: Select fasteners for type, grade, and class required. Supply each type and size of bolt and nut of same manufacturer and of same lot.

.3 Butyl Tape: AAMA 800, extruded, non-drying, non-skinning, non-oxidizing, reinforced, polyisobutylene butyl tape of sufficient width and thickness, minimum 0.118 inch (3 mm) thick.

.4 Separator Sheet: ASTM D1330, 0.079 inch (2 mm) thick neoprene sheet.

.5 Cementitious Grout (Interior Applications Only):

.1 ASTM C1107, Grade B and C, pre-mixed, high strength, maximum bearing capacity, non-shrink, cementitious aggregate grout. Acceptable Products:

.1 ‘Sika Grout 212' by Sika Canada Inc.,
.2 ‘Non Shrink Structural Grout - Dry Pack Grout’ by Euclid Chemical Company
.3 ‘Sealtight CG 86 Construction Grout’ by W.R. Meadows.
.4 or Equivalent Products to the above.

.6 Epoxy Grout (For Exterior and Interior Applications):

.1 ASTM C579, multi-component, high strength, non-shrinking, non expanding, flowable epoxy grout having minimum 28 Day compressive strength of 13053 psi (90 MPa). Provide rapid set epoxy grout where required to suit conditions.

.1 Provide "Sika Anchor Fix" by Sika Canada Inc. or Equivalent.

2.4 FABRICATION

.1 Fabricate each item of work of this Section in accordance with following general requirements:

.1 members square and straight.

.2 members plumb and true.

.3 joints accurately and tightly fitted.

.4 intersecting members in true, flush planes.

.5 fasteners concealed.

.6 steel connections.

.2 Fabricate, fit and assemble work in shop where possible. Where shop fabrication is not possible, make trial assembly in shop.

.3 Provide hangers, rods, bars, bolts, anchors, brackets, rivets, bearing plates and bracing, fitting, drilling, stopping, and soldering as required for a complete assembly.

.4 Insulate dissimilar metals to prevent galvanic corrosion.

.5 Provide exposed metal fastenings and accessories of same material, texture, colour and finish as base metal to which they are applied or fastened.

.6 Welding:

.1 Weld connections unless otherwise indicated.

.2 Should there be, in the opinion of Consultant or inspection company, doubt as to the adequacy of welds, they shall be tested for efficiency and any work not meeting standards or requirements specified in this Section shall be removed and replaced with new work satisfactory to the Consultant.

.3 Carry out welding in accordance with following standards:

.1 CSA W48-M - for electrodes (if rods are used, only coated rods are allowed).
.2 CSA W59-M - for design of connections and workmanship.
.3 CAN/CSA W117.2 - for safety.

.4 Thoroughly clean welded joints and steel exposed for a sufficient space to properly perform welding operation. Ensure welds exposed to view and finish painted are continuous and ground smooth.

.7 Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

.8 Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

.9 Galvanize following members:

.1 members exposed to elements in final location;

.2 members embedded on exterior side of exterior walls;

.3 members embedded in concrete; and

.4 members specified in this Section or noted on Drawings.

2.5 FINISHES

.1 Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

.2 Unless otherwise indicated, galvanize metal fabrication items and supports at exterior locations; prime paint at interior locations.

.3 Shop Primers: Apply one shop coat of primer to metal items, with exception of galvanized or concrete encased items.

.1 Clean steel to SSPC SP6 and remove loose mill scale, weld flux and splatter. Clean surfaces to be field welded; do not paint.

.2 Non-galvanized steel: Conforming to CAN/CGSB-1.40.

.3 Galvanized steel: in accordance with CAN/CGSB-85.10.

.4 Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.

.5 Galvanizing Repair Paint: ASTM D520, Type III and CAN/CGSB-1.181, VOC compliant, high zinc-dust content paint for re-galvanizing welds in galvanized steel containing not less than 93% zinc dust by weight and compatible with topcoat. Conform to requirements of Section 09 91 00.

.6 Hot-dip galvanize members in accordance with requirements of ASTM A153/A153M with minimum coating weights or thicknesses as specified:

.1 Rolled, Pressed and Forged Steel Shapes, Plates, Bars and Strips: ASTM A123/A123M; average weight of zinc coating per sq ft of actual surface,

.1 For members having thickness of 4.8 mm (3/16") and less: 2 ounces
.2 For heavier members: 2.3 ounces.

.2 Iron and Steel Hardware: ASTM A153/A153M; minimum weight of zinc coating, in ounces per sq ft of surface in accordance with Table 1 of ASTM A153/A153M, for various classes of materials used on Project.

.3 Steel Sheet: ASTM A653/A653M; weight of zinc coating, per sq ft on both sides of sheet. Coating designation Z275 (G90) minimized spangle and chemically treated.

.7 Metal Filler: VOC compliant, polyester based metal filler designed for use over iron and steel substrates.

.8 Field Applied Steel Primer: 1 coat of Fast-curing, lead- and chromate-free, universal modified-alkyd primer conforming to Section 09 91 00. Minimum DFT: 0.025 mm (1 mil).

.9 Dielectric Separator: Acid and alkali resistant isolation coating to provide dielectric separation between masonry and metals. Provide best grade, quick drying, non-staining alkali resistant asphalt utility enamel by approved manufacturer to provide dielectric separation and which will dry to be tack-free and able to withstand high temperatures.

.1 Acceptable Products:

.1 “Carboline Bitumastic 50” by Carboline Canada,
.2 “Copper Creek Top Service 760 Black” by Sherwin Williams Company,
.3 “410-02” by Bakor Inc.
.4 equivalent.

.10 Aluminum Surfaces:

.1 Finish (Concealed locations): Utility Aluminum mill finished

.2 Finish (Exposed locations): Clear anodized coating AA-M12C22A31 (Architectural Class II), AAMA 611, Minimum 0.4 mils coating thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verification of Conditions: verify conditions of substrates previously installed under other Sections or contracts are acceptable for metal fabrications installation in accordance with manufacturer's written instructions.

3.2 ERECTION

.1 Erect work of this Section square, plumb, straight, and true, accurately fitted, with tight joints and intersections.

.2 Do welding work in accordance with CSA W59 unless specified otherwise.

.3 Securely anchor work of this Section and rivet, weld or bolt to structural framing of the building. Where secured to concrete, Provide bolts for setting in concrete. Provide expansion bolt supports to masonry.

.4 Provide necessary fitting, setting and cutting required in connection with the fitting of work of this Section to other parts of the Work.

.5 Exposed fastening devices to match finish and be compatible with material through which they pass.

.6 Supply components for work by other trades in accordance with Shop Drawings and Construction Schedule.

.7 Deliver items over for casting into concrete and building into masonry together with setting templates to appropriate location and construction personnel.

3.3 FINISHING

.1 Field Painting: Paint bolt heads, washers, nuts, field welds and previously unpainted items. Touch up with matching paint, shop primer damaged during transit and installation.

.2 Touch-up galvanized surfaces with zinc rich primer where burned by field welding.

3.4 CLEANING

.1 On completion of installation, carefully clean metal work. Remove surplus materials, rubbish, tools and equipment.

3.5 SCHEDULES

.1 Unless otherwise indicated, Provide metal fabrication items as detailed.

.2 SUPPORTS FOR OVERHEAD OPENINGS.

.1 Provide HSS, channel framing and 6 mm plate steel closures to profile as indicated.

.2 Provide inside jamb extensions, centre spring mount and motor supports in accordance with the manufacturer's instructions.

.3 SUPPORTS FOR ARCHITECTURAL WOODWORK ELEMENTS.

.1 Custom fabricate supports for architectural woodwork elements, using steel shapes and plates, as required to produce work of adequate strength and durability conforming to AWMAC requirements.

.2 Use proven details of fabrication, as required, to achieve proper assembly and alignment of the various components of the Work.

.3 Provide miscellaneous steel items required as part of the Work of Section 06 40 00 including but not limited to valance supports, vanity support brackets, bench supports and countertop supports.

.4 LATERAL SUPPORTS FOR MASONRY WALLS

.1 Interior walls: Supply 75 mm x 75 mm x 6 mm steel angles, 300 mm long to be secured to the underside of the structure as part of the Work of Section 04 22 00. Interior finish: prime painted.

.2 Exterior walls, inner wythe: Supply 100 mm x block width x 6 mm bent steel plate, 300 mm long to be secured to the underside of the structure as part of work of Section 04 22 00. Exterior Finish: Galvanized

.5 METAL LADDERS

.1 Stringers: 38 mm x 38 mm x 6 mm mm thick, angle.

.2 Platforms: 6 mm galvanized steel checkered plate

.3 Brackets: sizes and shapes as indicated, weld to stringers, complete with fixing anchors.

.4 Provide galvanized finish.

.5 Provide galvanized steel ladders for following locations:

.1 One ladder in each elevator pit from 1500 mm above last floor served to bottom of pit.
.2 On vertical exterior walls for roof access where indicated.

.6 Obtain exact locations of ladders from the Consultant where not otherwise indicated.

.6 METAL BOLLARDS.

.1 Bollards: 6 mm thick HSS. Refer to Drawings for bollard sizes and dimensions.

.2 Concrete fill and bases provided as part of work of Section 03 30 00. Bollards installed as part of this Section.

.3 Finish: galvanized.

.4 Bollard Protection: Provide bollard covers manufactured from UV-resistant, HPDE designed to be installed existing posts and sized to match bollard sizes.

.5 Color: To be selected by Consultant at a later date.

.6 Acceptable Products: "Post Guard" by Surguard; or equivalent.

.7 FLOOR TRENCH AND SUMP PIT COVER PLATES.

.1 Finish: Galvanized

.2 Fabricate from 6 mm thick steel plate set in L 55 x 55 x 6 frame. Include anchors at 1200 mm on centre for embedding in concrete. Supply trench covers in 1200 mm removable lengths.

.3 Provide perimeter gasket for air tight seal at pits connected with sanitary drainage piping.

.8 RAILINGS

.1 Minimum 3 mm (1/8”) nominal metal thickness, formed to shapes and sizes as indicated. Provide closed pipe ends and grind welds smooth.

.2 Outside diameter: as noted on the Drawings.

.3 Provide brackets and escutcheons in material and finish to match handrails.

.4 Unless otherwise indicated, galvanize exterior pipe railings after fabrication; shop coat prime interior railings after fabrication. Provide stainless steel material where noted.

.9 CHECKERED PLATE

.1 Rolled-Steel Floor Plate: ASTM A786/A 786M, rolled from plate complying with ASTM A36/A 36M or ASTM A283/A 283M, Grade C or D or CSA G40.20/G40.21.

.2 Aluminum-Alloy Rolled Tread Plate: ASTM B632/B 632M, Alloy 6061-T6.

.10 ROOFTOP ACCESS, STAIRS, RAILINGS AND PLATFORMS

.1 Provide freestanding railing and guard system, stair, platform and crossovers consisting of pipe, railings, uprights, bases, counterweights, and fittings conforming to requirements of *Occupations Health and Safety Act* (Ontario). All access, stairs, railings and platforms is to be non-penetrating types.

.2 Minimum 3 mm (1/8”) nominal outside diameter, formed to shapes and sizes as indicated. Provide closed pipe ends and grind welds smooth.

.3 Provide brackets and escutcheons in material and finish to match handrails.

.4 Unless otherwise indicated, Galvanize exterior pipe railings after fabrication;

.5 Fabricate metal tube railings and handrails in accordance with reviewed and accepted Shop Drawings and NAAMM AMP 555, but not less than that required to support structural loads in accordance with the OBC and CSA A500. As a minimum, conform to the following:

.1 Handrail, wall rail and guardrail assemblies and attachments shall withstand a minimum concentrated load of 200 pounds (0.89 kN) applied in any direction on the top rail.
.2 Infill area of guardrail system capable of withstanding a horizontal concentrated load of 200 psf (9.58 kPA) at any point in the system.

.6 Ensure railings conform to Class 1, Class 2 and Class 3 as defined in NAAMM AMP 555, paragraph 8.3 of Section 8, Quality Control or Assurance and as follows:

.1 Class 1 Workmanship: Items that are exposed to view in finished spaces in completed Work.
.2 Class 2 Workmanship: Items that are exposed to view in utility areas of the completed Work.
.3 Class 3 Workmanship: Items that are concealed from view in the completed Work.

.7 Stairs:

.1 Design stairs to carry stipulated live loads with maximum deflection of L/180.
.2 Fabricate stairs to NAAMM, Metal Stair Manual unless indicated otherwise.
.3 Weld connections where possible, otherwise bolt connections. Countersink exposed fastenings, cut off bolts flush with nuts. Make exposed connections of same material, colour and finish as base material on which they occur.
.4 Accurately form connections with exposed faces flush and mitres and joints tight. Make risers of equal height.
.5 Grind or file exposed welds and steel sections smooth.
.6 Shop fabricate stairs in sections as large and as complete as practicable.
.7 Form stairs using manufacturer's standard components but not less than the following:

.1 Form treads from minimum 6 mm thick steel plate to profile indicated, and secure to stringers with L 35 x 35 x 5 supports. Form landings from a minimum 6 mm thick steel plate, reinforced by L 55 x 55 x 6 spaced at minimum 600 mm on centre.
.2 Form steel grating treads and landings from metal bar grating to profile indicated and secure to stringers and supports as indicated. Form landings of steel grating and reinforce as required.
.3 Form stringers from MC 310 x 15.8.

.11 STEEL PAN STAIRS

.1 Refer to Section 05 51 00.

.12 METAL GRATING

.1 Provide standard steel rectangular bar grating and frame:

.1 Bearing Bars: Minimum 3/4" x 3/16" bars at 1-3/16" cc.
.2 Cross Bars: Maximum 4" cc, twisted.
.3 Free Area: 77.1%.
.4 Grating Anchorage to Frame: Welded.
.5 Finish: Galvanized and shop applied black paint.

.2 Acceptable Manufacturers:

.1 All American Grating.
.2 Fisher & Ludlow; Division of Harris Steel Limited.

.3 Borden Metal Products (Canada) Limited.
.4 or Equivalent manufacturers to the above.

.13 STEEL FRAMING AND SUPPORTS FOR GARBAGE ENCLOSURE.

.1 Frames: Fabricate frames from galvanized steel of profiles, and to sizes and shapes indicated. Miter frame members at corners and connect with concealed splice plates welded or brazed to back of frames. Provide minimum G90 coating or equivalent rust protection, for field painting.

.2 Gates: Fabricate gates as indicated with electrically welded joints, and finish to match grilles and frames.

.1 Furnish gates with hinges, latch and latch catch with provision for padlock which can be attached and operated from either side of installed gate.
.2 Furnish double gates with chain hook to hold gates open and centre rest with drop bolt for closed position.
.3 Provide rolling heavy-duty casters at each gate with minimum 45 kg (100 lbs) load rating for each caster as noted on Drawings.
.4 Ensure compatibility of metals to prevent galvanic action.
.5 Finish: Galvanized metal, G90 coating or equivalent, for field painting.

.3 Enclosure Panels: Composite material consisting of recycled linear low density polyethylene (LLDPE) and recycled wood, extruded into shapes. Thickness: Not less than 22 mm (0.875 inch).

.1 Basis-of-Design: “Trex Cladding” by Trex Company, Inc. or Equivalent
.2 Colour: To be selected by Consultant at a later date.

.14 PYLON SIGN FRAMING

.1 Provide pylon sign framing capable of withstanding the effects of gravity loads and the wind loads and stresses within limits and under conditions indicated:

.1 Wind Loads: Determine loads based on OBC for geographical location of Project.
.2 Base: Provide pylon signs with integral base consisting of channels, angles, plates, or other fittings. Drill holes in members for anchor-bolt connection.

.1 Provide anchor bolts of size required for connecting posts to concrete foundations.

.3 Provide nonferrous-metal or hot-dip galvanized anchors and inserts for exterior installations. Supply inserts, as required, to be set into concrete work.

.15 VEHICLE SAFETY GUARDS.

.1 Provide pipe guards of minimum 50 mm (2 inch) diam., extending from floor to 760 mm (30 inches) above floor, with 10 mm (3/8-inch) steel baseplates for bolting to floor

.2 Galvanize pipe guards after fabrication.

.16 FREE-STANDING PYLONS FOR DEVICES

.1 Base: Provide pylons with base consisting of channels, angles, plates, or other fittings. Drill holes in members for anchor-bolt connection.

.1 Provide anchor bolts of size required for connecting base to concrete. Where provide on roofs, provide sealing system composed of precast modular polyester curbs, polyester adhesive and 1-part moisture-cure, self-levelling, pourable sealer. Acceptable Products: “ChemCurb System” by Chem Link Inc.

.2 Internal Frames: Provide engineered internal steel framing system, designed to withstand wind pressures and other live loads. Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.

.1 Hot-dip galvanize steel framing system after fabrication to comply with ASTM A 123/A 123M.

.3 External Cladding: Provide external stainless steel cladding system designed to withstand design wind pressure and other live loads and for direct attachment of devices.

.1 Stainless-Steel Sheet: designed to withstand wind pressures and other live loads not less than 14 ga thick. Provide brushed stainless steel finish to match 'XL blend S' by Excelsior.
.2 Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.
.3 Provide preparation for surface-mounted devices at locations indicated on Drawings and at heights complying with requirements of AODA and authorities having jurisdiction. Coordinate with Division 26 and Division 28.
.4 Provide noncorroding anchors compatible with substrates encountered.

.17 MISCELLANEOUS SECTIONS AND FRAMING

.1 Supply and Install support elements and framing for all miscellaneous items. Construct supports from rolled steel sections assembled by welding.

.2 Design supports to withstand, within acceptable deflection limitations, their own weight, weight of items to be supported, loads imposed by motion of supported items, where applicable, and all live loads, static and dynamic which might be applied to supported items in the course of their normal function. Design supports with a safety factor of 3 or acceptable Limit States Design approach.

.3 Provide accessories, inserts and fixings necessary for attachment of supports to the building structure. Drill supports as required to receive attachment of supported items. Arrange supports to avoid conflicts with pipes, ducts, precast concrete connections, thermal, air and vapour barrier construction, framing provided under other Sections, and such that supports and their fixings are fully concealed from view within the finished work. Paint supports unless galvanizing is specified.

.4 Provide concealed support elements or framing as required for the following items:

.1 Provide miscellaneous steel sections which are not shown or identified on Drawings, or specified under another Section of the Specifications.
.2 Where items are required by other Sections of the Specifications to be built into masonry or concrete, Supply such members to such respective Sections.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, Products, equipment and services to complete the metal stairs work specified herein. This includes, but is not necessarily limited, to following:

.1 Steel stairs with concrete-filled pans and non-slip treads.

.2 Industrial stairs with steel treads.

.3 Steel guardrails and handrails for metal stairs.

.4 Steel handrails for walls near metal stairs.

.5 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 COORDINATION

.1 Installation of anchorages for metal stairs: Supply setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.6 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Project Meetings, generally: in accordance with Section 01 30 00, Project Meetings.

.2 Pre-installation Meetings: Schedule and hold a pre-installation meeting at the Project site at least one week before beginning work on this Section to coordinate activities with related Subcontractors.

.1 Required Attendance: Subcontractor performing work of this Section, representatives from manufacturers and fabricators involved in or affected by installation.

.2 Notification: Notify Consultant and Owner of scheduled meeting dates in advance; minimum 72 hour notice required.

.3 Agenda:

.1 Review progress of related construction activities and preparations for particular activity under consideration.

.2 Make note of required sequencing and coordination with materials and activities that have preceded or will follow.

.4 Reporting: Record significant discussions, agreements, and disagreements, including required corrective measures and actions.

.5 Distribution: Distribute minutes of the meeting to each party present and to other parties requiring information not more than 72 hours after meeting.

1.7 SUBMITTALS

.1 Submittals, generally: in accordance with Section 01 30 00, Submittal Procedures.

.2 Product Data: Submit manufacturer's product characteristics, catalogue cuts, installation instructions and other relevant information for each material and product used for metal stairs work specified in this Section.

.3 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.4 Shop Drawings:

.1 Submit Shop Drawings indicating material layouts, details of construction, connections, and relationship with adjacent construction. As a minimum indicate following:

.1 Include plans, elevations, sections and details as applicable.

.2 Show field-measured dimensions on Shop Drawings.

.3 In addition to minimum requirements indicate following:

.1 Large scale views of members, materials, connections, attachments, reinforcing, anchorages, and exposed fastening locations.

.2 Jointing details.

.3 Setting, sealing, securing, and anchoring techniques.

.4 Field connection methods.

.5 Samples: Submit selection and verification samples for Products requiring colour, texture, or design selection. Submit manufacturer's list of finishes or colour swatches for Consultant's selection.

.1 As a minimum submit samples of abrasive nosings to be used in Project.

.6 Mill Certificates: Submit mill certificates or data from a qualified independent testing agency with calibrated test equipment indicating steel complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.

.7 Welding Certificate: Submit certification for welding firms and welders to verify compliance with welding qualifications specified in this section.

1.8 CLOSEOUT

.1 Closeout Submittals, generally: in accordance with Section 01 70 00, Closeout Submittals.

.2 Operating and Maintenance Data: Submit care and maintenance instructions for metal stairs to be included in building operation and maintenance manual.

1.9 QUALITY ASSURANCE

.1 Manufacturer Qualifications: Provide Products for work of this Section by manufacturer with at least 10 years' experience manufacturing such materials.

.2 Installer Qualifications: Engage an entity with at least five years' experience installing, erecting, or assembling work similar in material, design, and extent to that shown on Drawings and Schedules, and whose work has resulted in construction with a track record of successful in-service performance.

.3 Welding Qualifications: Qualify procedures and personnel in accordance with the following:

.1 Steel: to CSA W47.1 and CSA W59

.2 Aluminum: to CSA W47.2 and CSA W59.2

.3 Stainless Steel: to CSA W47.1 (Annex K) and CSA W59.

.4 Professional Engineer's Qualifications: Employ Professional Engineer licensed to practice in Province of Ontario who carries professional liability insurance and has at least five years' experience providing engineering services of similar kind, scope, and complexity.

.1 Professional Engineer's Responsibility:

.1 production and review of Shop Drawings,

.2 design and certification of metal stairs, including attachments for building construction, in accordance with applicable codes and regulations,

.3 stamping and signing of each Shop Drawing and associated calculations.

.5 Single Source Responsibility: Obtain primary materials for this Section from a single source by a single manufacturer, and secondary materials from sources recommended by manufacturers of primary materials.

.6 Mock-Ups / First Installation Review: Construct mock-ups to verify selections made under submittals, demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

.1 Location: In-situ (i.e. first installation), as directed on site by Consultant.

.2 Purpose: To set benchmarks for installation and to judge subsequent work. Maintain Mock-ups during construction in undisturbed condition.

.3 Reviewed mock-ups: May become part of the completed work if undisturbed at the time of Substantial Performance of The work, provided they are undisturbed, and comply with requirements outlined in Contract Documents.

1.10 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle metal stairs materials in accordance with manufacturer's written instructions.

.2 Deliver materials to site in original factory packaging, labelled with manufacturer's name and address.

.3 Store materials off-ground, in clean, dry, well-ventilated area.

.4 Replace defective or damaged materials with new.

PART 2 - PRODUCTS

2.1 REGULATORY REQUIREMENTS

.1 Accessibility: Ensure the work of this Section complies with barrier-free requirements of the OBC, CAN/CSA-B651 and requirements of authorities having jurisdiction.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Professional Engineering Design and Certification: Design metal stairs, including comprehensive engineering analysis by a Professional Engineer licensed to practice in the Province of Ontario, in accordance with requirements of Ontario Building Code, and using performance requirements and design criteria indicated on Drawings and Schedules in this Section.

.2 Structural Performance of Stairs: Provide metal stairs capable of withstanding the effects of gravity loads and the following loads and stresses in accordance with OBC requirements (4.1.5. Live Loads Due to Use and Occupancy) within limits and under conditions indicated.

.3 Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.

.4 Limit deflection of treads, platforms, and framing members to L/360 or 6.4 mm (1/4 inch), whichever is less. Where stairs are intended to support tile, stone or other brittle materials, reduce deflection to L/720.

.5 Structural Performance of Guards and Handrails: Guards and railings and guards shall withstand the effects of gravity loads according to the minimum requirements of the Ontario Building Code, CSA A500 and the following loads and stresses within limits and under conditions indicated:

.1 Comply with requirements specified in OBC Clause 4.1.5.14. Loads on Guards and Handrails.

.6 NAAMM Stair Standard: Comply with "Recommended Voluntary Minimum Standards for Fixed Metal Stairs" in NAAMM AMP 510, "Metal Stairs Manual," for class of stair designated, unless more stringent requirements are indicated on Drawings and Schedules.

.1 Preassembled Stairs – Exits and Similar Locations: Commercial class.

.2 Industrial Stairs - Service Spaces, Penthouses etc.: Industrial class.

.7 At exposed connections, finish exposed welds of stairs, railings and guards and guards to comply with NOMMA's "Voluntary Joint Finish Standards" as follows:

.1 Preassembled Stairs – Exits and Similar Locations: Type 2 welds; completely sanded joint, some undercutting and pinholes okay

.2 Industrial Stairs - Service Spaces, Penthouses etc.: Type 3 welds; partially dressed weld with spatter removed.

.8 Material Finish: Provide materials with smooth, flat surfaces unless otherwise indicated on Drawings and Schedules. For components exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

.9 Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

.10 Exterior Elements: fabricate and install to prevent buckling, opening up of joints and overstressing of welds and fasteners under the following temperature conditions:

.1 Temperature Change: ambient temperature cycling of - 30 deg C (-22 deg F) to 82 deg C (180 deg F) over a 12-hour period.

.11 VOC Content and Emissions:

.1 VOC Emissions: For applicable items in this Section, comply with CDPH Standard Method v1.2–2017 (CA Spec 01350) and ensure products are certified per UL 2818, SCS Global Gold, or equivalent.

.2 VOC Content Requirements: Wet-applied materials used in scope of this Section must conform to the following:

.1 Paints and Coatings: SCAQMD Rule 1113 or CARB SCM.

.2 Adhesives and Sealants: SCAQMD Rule 1168.

.3 Methylene chloride and perchloroethylene must not be intentionally added in paints, coatings, adhesives, or sealants.

.3 Composite Wood (if applicable): must be ULEF or NAF type per CARB ATCM. Do not adhesives that contain urea-formaldehyde.

2.3 METALS

.1 Steel Plates, Shapes, and Bars: ASTM A 36/A 36M or equivalent to CSA G40.20/G40.21.

.2 Steel Tubing: ASTM A 500 (cold formed) or ASTM A 513.

.3 Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or equivalent to CSA G40.20/G40.21 or ASTM A 283/A 283M, Grade C or D.

.4 Uncoated, Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, structural steel, Grade 170 (Grade 25), unless another grade is required by design loads; exposed.

.5 Uncoated, Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, structural steel, Grade 205 (Grade 30), unless another grade is required by design loads.

.6 Galvanized-Steel Sheet: ASTM A 653/A 653M, Z275 (G90) coating, structural steel, Grade 230 (Grade 33), unless another grade is required by design loads.

.7 Aluminum Extrusions: ASTM B 221M (ASTM B 221), Alloy 6063-T6.

.8 Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

2.4 PREFILLED CONCRETE TREADS

.1 Concrete Materials and Properties: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with minimum 28-day compressive strength of 20 MPa (3000 psi) and maximum aggregate size of 13 mm (1/2 inch) unless otherwise indicated.

.2 Nonslip-Aggregate Concrete Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.

.1 Plain Steel Welded-Wire Reinforcement: ASTM A1064/A10645M, galvanized steel, 152 by 152 mm (6 by 6 inches), W1.4 by W1.4, unless otherwise indicated on Drawings.

.3 Reinforcement Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening welded-wire reinforcement in place.

.1 Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.

.4 For galvanized reinforcement, use galvanized wire or dielectric-polymer-coated wire bar supports.

2.5 FABRICATION

.1 Provide complete stair assemblies, including metal framing, hangers, struts, railings and guards, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.

.1 Join components by welding unless otherwise indicated on Drawings and Schedules.

.2 Use connections that maintain structural value of joined pieces.

.3 Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.

.2 Preassembled Stairs: Assemble stairs in shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

.3 Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1 mm (1/32 inch) unless otherwise indicated on Drawings and Schedules. Remove sharp or rough areas on exposed surfaces.

.4 Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

.5 Form exposed work with accurate angles and surfaces and straight edges.

.6 Weld connections to comply with the following:

.1 Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

.2 Obtain fusion without undercut or overlap.

.3 Remove welding flux immediately.

.4 Weld exposed corners and seams continuously unless otherwise indicated on Drawings and Schedules.

.7 Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated on Drawings and Schedules. Locate joints where least conspicuous.

.8 Fabricate joints that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

2.6 FASTENERS

.1 General: Provide zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941M (ASTM F 1941), Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.

.2 Bolts and Nuts: Regular hexagon-head bolts, ASTM F 568M, Property Class 4.6 (ASTM A 307, Grade A); with hex nuts, ASTM A 563M (ASTM A 563); and, where indicated on Drawings and Schedules, flat washers.

.3 Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated on Drawings and Schedules; with nuts, ASTM A 563M (ASTM A 563); and, where indicated on Drawings and Schedules, flat washers. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for exterior stairs.

2.7 STEEL-PAN STAIRS

.1 Fabricate stringers of steel channels, MC shapes, in sizes as required to support loadings. Provide closures for exposed ends of stringers where exposed.

.2 Construct platforms of steel plate and miscellaneous framing members as needed to comply with performance requirements and to support loadings.

.3 Weld stringers to headers; weld framing members to stringers and headers.

.4 Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements but not less than 3 mm (1/8 inch) thick. Weld to stringers.

.5 Form landings from minimum 3 mm (1/8 inch) thick steel plate, reinforced by L-shaped members spaced at minimum 400 mm (16 inches) on centre.

.6 Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.

.7 Provide clip angles for fastening of furring channels, where applied finish indicated for underside of stairs and landings.

.8 Extend stringers around mid landings to form steel base.

.9 Shape metal pans to include nosing integral with riser.

2.8 METAL FLOOR PLATE STAIRS

.1 Form treads and platforms to configurations shown from abrasive-surface floor plate of thickness needed to comply with performance requirements indicated in this Section, but not less than 6 mm (1/4 inch).

.1 Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.

.2 Form treads with integral nosing and back edge stiffener. Form risers from steel sheet not less than 3 mm (1/8 inch) thick, welded to tread nosings and stiffeners and to platforms.

.3 Form treads with integral nosing and back edge stiffener, and with open risers.

.4 Form landings from minimum 6 mm (1/4 inch) thick steel plate, reinforced by L-shaped members spaced at minimum 400 mm (16 inches) on centre.

.5 Weld steel supporting brackets to stringers and weld treads to brackets.

.6 Fabricate platforms with integral nosings matching treads and weld to platform framing.

.2 Metal Bar-Grating Stairs: form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

.1 Fabricate treads and platforms from welded steel grating with 25-by-3-mm (1-by-1/8-inch) bearing bars at 11 mm (7/16 inch) o.c. and crossbars at 100 mm (4 inches) o.c.

.2 Fabricate treads and platforms from welded steel grating with openings in gratings no more than 12 mm (1/2 inch) in least dimension.

.3 Surface: Serrated.

.4 Finish: Galvanized.

.5 Fabricate grating treads with rolled-steel floor plate nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts.

.6 Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

2.9 RAILINGS AND GUARDS

.1 Steel Tube Railings and guards and Guards: Fabricate railings and guards to comply with requirements indicated on Drawings and Schedules for design, dimensions, details, finish, and member sizes, including wall thickness of tube, post spacings, and anchorage, but not less than that needed to withstand loads indicated in this Section and in Ontario Building Code.

.1 Handrails: Pipe - 38 mm dia. x 2.4 mm wall thickness (1-1/2" dia. x .095" wall thickness) and conforming to OBC 3.4.6.5(5) unless otherwise indicated on Drawings.

.2 Close exposed ends of railing members with prefabricated end fittings.

.3 Provide wall returns at ends of wall-mounted handrails unless otherwise indicated on Drawings and Schedules. Close ends of returns unless clearance between end of rail and wall is 6 mm (1/4 inch) or less.

.2 Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, end closures, flanges, miscellaneous fittings, and anchors for interconnecting components and for attaching to other work. Supply inserts and other anchorage devices for connecting to concrete or masonry work.

.1 Connect posts to stair framing by direct welding unless otherwise indicated on Drawings and Schedules.

.2 For galvanized railings and guards, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous-metal components.

.3 For nongalvanized railings and guards, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanized anchors embedded in exterior masonry and concrete construction.

.3 Fillers: Provide fillers made from steel plate, or other suitably crush-resistant material, where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses and to produce adequate bearing area to prevent bracket rotation and overstressing of substrate.

2.10 STAIR NOSINGS

.1 Provide aluminum nosings with integral abrasive, featuring as-cast finish from aluminum oxide, silicon carbide, or both. Ensure units fit openings or conditions accurately in necessary lengths.

.1 Basis-of-Design: “Supergrit® Series” by Wooster Products Inc. or approved equivalent by one of the following:

.1 American Safety Tread Co., Inc.

.2 Balco Inc.

.3 Safe-T-Metal Company, Inc.

.2 Provide anchors for embedding units in concrete, either integral or attached to units, per manufacturer standards.

.3 Apply bituminous paint to concealed surfaces of cast-metal units set into concrete.

.4 Coat hidden surfaces of extruded units set into concrete with clear lacquer.

2.11 AUXILIARY MATERIALS

.1 Welding Rods and Bare Electrodes: Select according to CSA specifications for metal alloy welded.

.2 Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

.3 Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

.4 Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

2.12 FINISHES

.1 Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

.2 Finish metal stairs after assembly.

.3 Galvanizing: Hot-dip galvanize items exterior components to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M or equivalent to CAN/CSA-G164for other steel and iron products.

.1 Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

.2 Fill vent and drain holes that will be exposed in finished Work, unless indicated on Drawings and Schedules to remain as weep holes, by plugging with zinc solder and filing off smooth.

.4 Shop Primer:

.1 Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

.2 Universal Shop Primer (interior components): Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.

.1 Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

.3 Epoxy Zinc-Rich Primer (exterior components, not otherwise galvanized): Complying with MPI#20 and compatible with topcoat.

.1 Acceptable Products: “Zinc Clad IV” by Sherwin Williams or approved equivalent.

.5 Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

.1 Stripe paint corners, crevices, bolts, welds, and sharp edges.

.2 Apply one coat of shop primer except interior surfaces of pans.

.3 Apply two coats of primer of different colours to parts inaccessible after final assembly.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION OFSTAIRS

.1 Installation, generally: Install work of this Section in strict accordance with manufacturer's written installation instructions and reviewed Shop Drawings. Supplement manufacturer's installation instructions with additional installation requirements specified in this Section to produce specified work results.

.2 Install in accordance with NAAMM, Metal Stair Manual.

.3 Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.

.4 Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.

.5 Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated on Drawings and Schedules.

.6 Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

.7 Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

.8 Field Welding: Comply with requirements for welding in this Section.

.9 Place and finish concrete fill for treads and platforms to comply with Section 03 30 00, Cast-in-Place Concrete.

.1 Install abrasive nosings with anchors fully embedded in concrete. Center nosings on tread width.

.10 Install plumb and true in exact locations, using welded connections wherever possible to provide rigid structure. Provide anchor bolts, bolts and plates for connecting stairs to structure.

.11 Hand items over for casting into concrete or building into masonry to appropriate trades together with setting templates.

.12 Do welding work in accordance with CSA W59 unless specified otherwise.

.13 Touch up shop primer to bolts, welds, and burned or scratched surfaces at completion of erection.

3.3 INSTALLING RAILINGS AND GUARDS

.1 Adjust railing systems before anchoring to ensure matching alignment at abutting joints. Space posts at spacing indicated on Drawings and Schedules or, if not indicated on Drawings and Schedules, as required by design loads. Plumb posts in each direction. Secure posts and rail ends to building construction by anchoring posts to steel by welding directly to steel supporting members.

.2 Attach handrails to wall with wall brackets. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt. Provide brackets with 50-mm (2-inch) clearance from inside face of handrail and finished wall surface.

.3 Locate brackets as indicated on Drawings and Schedules or, if not indicated on Drawings and Schedules, at spacing required to support structural loads.

3.4 PROTECTION

.1 Protect metal stairs from damage, soiling and contaminating substances resulting from construction activities or caused by work of other trades.

.2 Where soiling or spills have occurred, remove spills and soiling from adjacent surfaces using cleaning procedures recommended in writing by the affected material's manufacturer. Do not use materials or processes that can damage finishes, surfaces, or construction.

.3 Promptly replace metal stairs work damaged during construction that cannot be satisfactorily repaired.

3.5 CLEANING AND WASTE MANAGEMENT

.1 Cleaning and Waste Management, generally: in accordance with Division 01.

.2 Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

.1 Apply by brush or spray to provide a minimum 0.05-mm (2.0-mil) () dry film thickness.

.3 Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

.4 Cleaning: Maintain clean construction area at the end of each day. When the activities of this Section are complete, remove materials, tools, equipment and rubbish.

.5 Waste Management and Disposal: sort waste for reuse, recycling, or disposal, as specified. Remove recycling bins and containers from site and dispose of contents at the appropriate waste disposal facilities.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide rough carpentry including but not limited to the following:

.1 framing with dimension lumber.

.2 roofing carpentry including nailers, rooftop equipment bases and support curbs.

.3 wood blocking.

.4 wood furring and grounds.

.5 plywood backing panels.

.6 preservative treatment of wood.

.7 fire retardant treatment of wood

.8 temporary wood treads on steel stairs and landings.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.1 Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

1.6 QUALITY ASSURANCE

.1 Installer Qualifications: Provide work of this Section executed by competent installers with a minimum 5 years' experience in the application of the Products, systems and assemblies specified in this Section and with the approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers

1.7 DELIVERY, STORAGE AND HANDLING

.1 Storage and Handling Requirements:

.1 Stack lumber flat with spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.

.2 Deliver interior wood materials that are to be exposed to view only after building is enclosed and weatherproof, wet work other than painting is dry, and HVAC system is operating and maintaining temperature and humidity at occupancy levels.

PART 2 - PRODUCTS

2.1 DESCRIPTION

.1 Regulatory Requirements;

.1 Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to Authorities Having Jurisdiction.

.2 Performance Requirements:

.1 Do not use Products containing added urea formaldehyde.

.2 Visual Characteristics: Measure knots, checks, shakes and slope of grain in visually graded lumber in accordance with ASTM D245 with exceptions as noted under NLGA 120d.

.3 For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not require incising, contain colorants, bleed through, or otherwise adversely affect finishes

.4 Grading:

.1 Lumber identification: by grade stamp of an agency certified by Canadian Lumber Standards Accreditation Board conforming to the Standard Grading Rules for Canadian Lumber published by the National Lumber Grades Authority.
.2 Plywood and wood based composite panel construction identification: by grade mark in accordance with applicable CSA standards. Ensure plywood grading agency is certified by APA The Engineered Wood Association; http://www.apawood.org
.3 Preservative Pressure-Treated and Fire-Retardant-Treated Wood and Plywood identification: by grade mark in accordance with the Canadian Wood Preservers Bureau and applicable ULC standards.
.4 Identify lumber by grade stamp of an agency certified by Canadian Lumber Standards Administration Board.
.5 Provide roof sheathing bearing manufacturer's grading stamp for identification.

2.2 MATERIALS

.1 Lumber:

.1 Unless specified otherwise in the Contract Documents, use No. 2 White Pine, No. 2 Red Pine, or No. 1 Construction S-P-F (spruce-pine-fir), lumber with moisture content of 19% or less, kiln dried, free from sap, shakes, splits, knots and other defects in accordance with following standards:

.1 CAN/CSA O141.
.2 NLGA Standard Grading Rules for Canadian Lumber.

.2 Furring, blocking, nailing strips, grounds, rough bucks, curbs, fascia backing and sleepers:

.1 Board sizes: "standard" or better grade.
.2 Dimension sizes: "standard" light framing or better grade.
.3 Post and timbers sizes: "standard" or better grade.

.3 Appearance Lumber: Graded in accordance with NLGA Para 125.

.4 Studs: Conforming to NLGA Para 121.

.5 Light Framing: Conforming to NLGA Para 122.

.6 Structural Light Framing: NLGA Para 124.

.7 Consultant reserves the right to select species and appearance grades to suit the Project's design requirements.

.2 Panels:

.1 Exterior Plywood: 19 mm (3/4") thick, waterproof, grade stamped exterior grade Douglas Fir plywood, select grade, un-sanded conforming to CSA O121-M.

.2 Interior Locations: minimum 19 mm (3/4") thick, unless otherwise indicated.

.1 Douglas Fir Plywood: Conforming to CSA O121-M, G1S or G2S.
.2 Canadian softwood plywood: Conforming to CSA O151; G1S or G2S.

2.3 ACCESSORIES

.1 Rough Hardware and Fastening Accessories:

.1 Supply rough hardware to frame and fix rough carpentry including but not limited to bolts, anchors, nails, expansion shields and other fastenings required.

.1 Wire Nails, Spikes and Staples: Conforming to CSA B111.
.2 Exterior locations and treated lumber: Stainless steel nails, type 316. Plain galvanized or electroplated nails are not acceptable. Do not use aluminum nails in conjunction with galvanized building components.
.3 Provide spiral thread nails except as indicated otherwise in the Contract Documents.
.4 Bolts: ASTM A307, minimum 12 mm (½") complete with nuts and washers.
.5 Connecting Hardware: Pre-engineered, pre-drilled, purpose made galvanized joist hangers, framing fasteners and anchors meeting structural requirements and pre-approval.
.6 Connection Steel: Mild structural steel, conforming to CSA G40.20/G40.21, Grade 300W.
.7 Proprietary fasteners (toggle bolts, expansion shields, screws, organic fibre plugs etc.): recommended for purpose by manufacturers.
.8 If stainless steel fasteners are used, use only Type 316 fasteners.

.2 Corrosion-resistant treatments:

.1 Exterior locations, interior high humidity locations and hardware in contact with wood preservative treatments: hot dip galvanized in accordance with ASTM A123.

.1 Minimum weight of zinc coating: 600 g/m² (185 ounces per sq.ft.) in accordance with ASTM A153M.
.2 Do not use electroplated galvanized fasteners in contact with wood preservatives.
.3 Other locations: cadmium plated hardware.

.2 Preservative Treatments:

.1 Preservative Pressure-Treated Wood and Plywood: in accordance with CSA O80.1

.1 Maximum moisture content: kiln dried, 19%. Do not use material that is warped or does not comply with requirements for untreated material.
.2 Treatment:

.1 Provide chemical treatment acceptable to Authorities Having Jurisdiction and containing no arsenic or chromium from one of the following manufacturers:

.1 Timber Specialties Company
.2 Wolmanized Wood;.
.3 or Equivalent to the above.

.2 For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.

.3 Application: Pressure treat the following wood elements and other items indicated on the Drawings:

.1 Wood nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.

.2 Fire-Retardant-Treated Wood and Plywood:

.1 Maximum moisture content: kiln dried, 19%. Do not use material that is warped or does not comply with requirements for untreated material.
.2 Surface Burning Characteristics: Conforming to CAN/ULC-S102 and UL FR-S rating.

.1 Flame Spread: ≤ 25
.2 Smoke Developed: ≤ 50

.3 Treatment:

.1 Provide chemical treatment acceptable to Authorities Having Jurisdiction and containing no arsenic or chromium from one of the following manufacturers:

.1 Dricon;
.2 FireFree;
.3 or Equivalent to the above

.2 Do not resurface or rip fire treated wood if it affects the ULC label.
.3 For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.

.4 Application: Provide fire-retardant-treatment for following wood elements and other items indicated on the Drawings:

.1 Plywood backing panels.

.3 Adhesives: waterproof in accordance with CSA O 112 and CAN/CGSB-71.26 requirements with VOC limit acceptable to Authorities Having Jurisdiction.

PART 3 - EXECUTION

3.1 VERIFICATION

.1 Site Verification of Conditions: Verify actual Site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Treat surfaces with wood preservative or fire retardant treatments before installation.

.2 Apply preservative by dipping or by brush to completely saturate and maintain wet film on surface for a minimum 3 minute soak for lumber and 1 minute soak for plywood.

.3 Provide pressure treatment to all material exterior and material within an envelope wall or exterior floor assembly.

.4 Coordinate with other Sections of the Specifications providing blocking, nailing strips and trims as required for installation of work.

3.3 INSTALLATION

.1 Properly frame together parts of the Work with members accurately cut to size, closely fitted, well spiked, and erected in a substantial manner, plumb, level, square and true to dimension.

.2 Locate joints over bearing or supporting surfaces.

.3 Provide running members full length wherever possible.

.4 Design for expansion and contraction of the materials.

.5 Frame, anchor, fasten, tie and brace members to provide necessary strength and rigidity.

.6 After cutting, drilling and fitting of "treated" wood and plywood but before installation, apply 1 full coat of wood preservative to exposed surfaces, including ends of blocking, furring, nailers and rough carpentry. Retreat surfaces exposed by cutting, trimming or boring with liberal brush application of preservative or fire retardant before application

.7 Provide fasteners and rough hardware for a rigid and secure installation. In addition to mechanical fasteners, place continuous adhesive bead where appropriate in accordance with manufacturer’s instructions.

.8 Countersink bolts where necessary to Provide clearance for other work.

.9 Select exposed framing for appearance. Install lumber and panel materials so that grade-marks and other defacing marks are concealed or are removed by sanding where materials are left exposed.

.10 Use dust collectors and high quality respirator masks when cutting or sanding wood panels.

.11 Mix intumescent paint coating Product to manufacturer's recommendations. Do not thin or strain. Apply primer and paint coating providing fire resistant barrier in accordance with manufacturer's recommendations to achieve the requirements of Authorities Having Jurisdiction.

.12 Miscellaneous Interior Carpentry:

.1 Provide plywood, blocking, furring, nailers, rough carpentry, grounds and nailing strips, as required for the proper installation and to support miscellaneous work indicated on the Drawings to meet the design requirements.

.2 This non-exhaustively includes the following: support for fascia, composite wood panels, wall mounted equipment, crash rails, bumpers and wood blocking required for wall-mounted items, wood blocking required for roofing and exterior walls and other similar locations.

.13 Equipment Mounting Panels:

.1 Provide “fire treated” plywood.

.2 Install wood panels required for mechanical, electrical and communication trades for mounting of items including but not limited to control boards, panel boards, pull boxes, splitters, switches, wall mounted switch gear, junction boxes, electrical cabinets, data control equipment, disconnect switches, fire alarm control equipment, lighting control equipment, sound/communication equipment and other similar devices.

.3 Provide 19 mm (3/4") thick exposed plywood backboard panels in one piece screw-fastened and securely mounted to wall surfaces by use of fire-retardant treated wood strapping.

.4 Ensure panel size and mounting height suit mechanical and electrical requirements and are acceptable to respective consultants. Apply to all surfaces and edges of plywood panels 1 coat of fire retardant wood preservative.

.14 Roof Carpentry:

.1 Install continuous wood nailers along roof control joints, building and roof expansion joints and around roof perimeters, curbs and roof openings at edges of insulation as shown on the Drawings.

.2 Use cadmium plated self tapping screws for securing wood to metal deck, and lead shields and cadmium plated lag screws for securing wood to concrete as indicated. Install cut cant strips and continuous nailers on copings and curbs as detailed.

.3 Secure using fasteners as specified herein.

.15 Temporary Wood Treads:

.1 Install and secure 50 mm x 250 mm (2" x 10") full length, temporary spruce treads and landings on steel stairs shown to receive concrete fill. Exposed stair components to have eased edges.

3.4 PROTECTION

.1 Protect installed Products and components from damage during construction.

.2 Repair damage to adjacent materials caused by rough carpentry installation.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide exterior gypsum sheathing work including but not limited to the following:

.1 exterior gypsum sheathing boards

.2 joint treatments

.3 auxiliary materials

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings indicating material characteristics, details of construction, in particular locations of construction joints, connections and relationship with adjacent construction. Take field measurements prior to preparation of Shop Drawings and fabrication to ensure proper fitting of work.

1.7 QUALITY ASSURANCE

.1 Applicator Qualifications: Provide work of this Section executed by competent installers with minimum of 5 years' experience in application of the Products, systems and assemblies specified herein.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 CertainTeed Gypsum Canada Inc.

.2 CGC Inc.

.3 Georgia-Pacific Canada, Inc.

.2 Substitution Limitations: Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent Products in Consultant's opinion and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 MATERIALS

.1 Exterior Gypsum Sheathing Board: 12.7 mm (1/2") or 15.9 mm (5/8") (Type X) thick (as noted on Drawings) glass mat reinforced, weather and sag resistant exterior gypsum ceiling panel conforming to ASTM C1177M with the following characteristics:

.1 Mold Resistance Rating: 10 with no mold growth after 4 weeks exposure in accordance with ASTM D3273.

.2 Fire-performance: non combustible according to CAN/ULC-S114; flame spread: 0, smoke developed: 0 in accordance with CAN/ULC-S102-M.

.3 Boards containing paper or other organic materials in their composition are not acceptable.

.4 Acceptable Products:

.1 "DensGlass Exterior Sheathing" by Georgia-Pacific Canada, Inc.

.2 "GlasRoc® Sheathing" by CertainTeed Gypsum, Canada Inc.

.3 "Securock Glass Mat Sheathing" by CGC Inc.

.4 of Equivalent to the above.

.2 Gypsum Exterior Soffit Board: 12.7 mm (1/2") or 15.9 mm (5/8") (Type X) thick (as noted on Drawings) glass mat reinforced, weather and sag resistant exterior gypsum ceiling panel conforming to ASTM C1177M with the following characteristics:

.1 Mold Resistance Rating: 10 with no mold growth after 4 weeks exposure in accordance with ASTM D3273.

.2 Fire-performance: non combustible according to CAN4-S114-M; flame spread: 0, smoke developed: 0 in accordance with CAN/ULC-S102-M.

.3 Boards containing paper or other organic materials in their composition are not acceptable.

.4 Acceptable Products:

.1 “DensGlass Exterior Sheathing” by Georgia-Pacific Canada, Inc.,

.2 “GlasRock® Sheathing” by CertainTeed Gypsum, Canada Inc.

.3 “Securock Glass Mat Sheathing” by CGC Inc.

.4 or Equivalent to the above.

.3 Joint Treatments

.1 Conforming to ASTM C475 and exterior gypsum sheathing board manufacturer’s recommendations. Confirm all Products with board manufacturer prior to application.

.2 Sheathing Tape: 50 mm (2") and 100 mm (4") wide fibreglass mesh tape as recommended by panel manufacturer with pressure sensitive adhesive on 1 side, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.

2.3 ACCESSORIES

.1 Provide auxiliary materials that comply with ASTM C1280.

.2 Provide fasteners of size and type indicated that comply with requirements specified in this Section for material and manufacture. For sheathing, Provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M or of Type 304 stainless steel.

.1 Provide steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.

.3 Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine substrate for compliance with applicable requirements, including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with the requirements of this Section and other conditions affecting performance.

.2 Do not proceed until unsatisfactory conditions have been corrected. Beginning of installation shall indicate acceptance of substrate conditions.

3.2 INSTALLATION

.1 Comply with requirements in ASTM C1280 that apply to application of exterior gypsum panel Products.

.1 Fasten gypsum sheathing to cold-formed metal framing with screws.

.2 Install boards with a 3/8-inch (9.5-mm) gap where non-load-bearing construction abuts structural elements.

.3 Install boards with a 1/4-inch (6.4-mm) gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

.2 Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

.3 Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

.4 Securely attach to substrate by fastening as indicated. Coordinate sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and in a manner that prevents exterior moisture from passing through completed assembly.

.5 Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

.6 Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecasted.

.7 Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.

.8 Space fasteners approximately 200 mm (8 inches) o.c. and set back a minimum of 9.5 mm (3/8 inch) from edges and ends of boards.

.9 Seal sheathing joints according to the sheathing manufacturer's written instructions.

.1 Apply glass-fiber sheathing tape to glass-mat gypsum sheathing joints and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

.2 Sealing and taping of joints may be omitted provided exterior sheathing boards have square edges and are installed tightly butted together (maximum 6 mm (1/4 inch)). Provide taping in locations where tight butting of joints cannot be achieved.

.3 Consultant reserves the right to request that joints be taped should the aforementioned quality control not be maintained.

3.3 CLEANING

.1 Cooperate and coordinate with the work of other Sections to obtain satisfactory exterior gypsum sheathing board finish work. Do all cutting, patching and Make Good as required by the installation requirements applicable to such work of other Sections.

.2 Clean droppings and similar items and remove surplus materials and rubbish on completion of the work in this Section and as directed.

END OF SECTION

Updated through ADD#10

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide architectural woodwork including but not limited to following:

.1 architectural cabinet casework.

.2 architectural cabinet casework drawers and doors.

.3 edgebanding for architectural cabinet casework and doors.

.4 edgebanding for architectural cabinet shelves on visible and semi-exposed edges.

.5 Countertops with integral sinks.

.6 architectural cabinet casework hardware.

.7 closet and utility shelving.

.8 trim and mouldings.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 In the context of architectural cabinetry, the following definitions apply (and shall be used in this Section) in accordance with North American Architectural Woodwork Standards (NAAWS), Section 10 and amended as follows:

.1 Exposed Surfaces: Defined as all surfaces exposed to view in open casework or behind transparent doors. These include:

.1 Surfaces visible when doors and drawers are closed, including knee spaces.
.2 Underside of cabinet bottoms over 1067 mm (62”) above finished floor level, including cabinet bottoms behind light valances and bottom edge of light valances.
.3 Cabinet tops under 2032 mm (80”) above finished floor, or if 2032 mm (80”) and over and visible from an upper building level or floor.
.4 Front edges of stretchers, ends, divisions, tops and bottoms.
.5 Sloping tops of cabinets that are visible.
.6 Shelves (including edgebanding).
.7 Divisions and partitions.

.8 Interior face of ends (sides), backs, and bottoms (including pull-outs). Also included are the interior surfaces of cabinet top members 914 mm (36") or more above the finished floor.
.9 Interior face of door and applied drawer fronts.

.2 Semi-Exposed Surfaces: Defined as those interior surfaces only exposed to view when doors or drawers are opened. These include:

.1 Tops and bottoms shelves, including front edgebanding (front edge is considered exposed).
.2 Divisions and partitions (front edge is considered exposed).
.3 Interior face of ends (sides), backs, and bottoms (including pull-outs). Also included are the interior surfaces of cabinet top members 914 mm (36") or more above the finished floor.
.4 Drawer sides, sub-fronts, backs, and bottoms.
.5 The underside of cabinet bottoms between 610 mm (24") and 1067 mm (42") above the finished floor.
.6 Security and dust panels or drawer stretchers.
.7 The faces of cabinet ends of adjoining units that butt together.

.3 Concealed Surfaces: Defined as those exterior or interior surfaces that are covered or not normally exposed to view. These include:

.1 Toe space unless otherwise specified.
.2 Sleepers, stretchers, and solid sub-tops.
.3 The underside of cabinet bottoms less than 610 mm (24") above the finished floor.
.4 The flat tops of cabinets 2032 mm (80") or more above the finished floor, except if visible from an upper floor or building level.
.5 The three non-visible edges of adjustable shelves.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Coordination:

.1 Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural woodwork and related items can be supported and installed as indicated.

.2 Perform pre-wiring and partial mounting of electrical and audio/visual equipment and concealed wiring required. Finalize location of outlets and similar items with the Consultant prior to installation.

.3 Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.

.4 Coordinate fabrication schedule with construction progress and the Construction Schedule to avoid delaying the Work.

.5 Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings indicating material characteristics, details of construction, connections and relationship with adjacent construction.

.2 Indicate locations and sizes of cutouts and holes for plumbing and electrical fixtures, lavatories and similar items required in architectural woodwork; coordinate with appropriate trades.

.3 Clearly indicate material being supplied and show connections, attachments, reinforcing, anchorage and location of exposed fastenings in accordance with NAAWS Section 1.

.4 Field Measurements: Take field measurements prior to preparation of Shop Drawings and fabrication to ensure proper fitting of work. Do not proceed with fabrication until Shop Drawings have been reviewed.

.4 Samples: Submit samples in accordance with Section 01 30 00 in following sizes:

.1 minimum 300 mm (12") long x 460 mm (18") wide x 25 mm (1") thick solid wood.

.2 minimum 300 mm (12") square and of specified thickness, plastic laminate or wood veneer as applicable, mounted on 19 mm (3/4") core and finished as specified. Submit samples for Consultant's approval prior to fabrication.

.1 For each colour of plastic laminate or wood veneer species selected (as applicable), submit manufacturer's standard 300 mm x 460 mm (12” x 18”) chips.

.3 minimum 300 mm (12") square x 13 mm (1/2”) thick countertop materials.

.4 each type of hardware.

~~.5 Certificates:~~

~~.1 Submit Architectural Woodwork Manufacturers Association of Canada (AWMAC) Guarantee Certificate which covers replacing, reworking and refinishing of defects due to faulty workmanship or defective materials which become apparent within 2 years following date of Substantial Performance of the Work.~~

~~.2 Submit final inspection report prepared by AWMAC inspection under Guarantee Inspection Service (GIS).~~

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years’ experience in the manufacture of such materials.

.2 Installers: Provide Work of this Section executed by competent installers with minimum 5 years' experience in the application of the Products, systems and assemblies specified and be a member of AWI/AWMAC in good standing for the previous 2 years.

.3 Metal Fabricator: Provide metal work of this Section performed by firm capable of producing the required Shop Drawings of quality levels that are necessary to meet the requirements specified herein. Ensure the retained fabricator possesses modern architectural metal fabricating equipment capable of doing cutting, fitting, bending and installing of steel and stainless steel finishes.

.4 Welders: Welding shall be performed by welders having minimum certification requirements of CSA W47.1 to suit the type of welding performed. Ensure welders are familiar with welding procedures for welding steel and aluminum.

.2 Single Source Responsibility: Engage a qualified woodworking firm to assume undivided responsibility for production and installation for the Work described in this Section.

~~.3 Guarantee and Inspection Service (GIS):~~

~~.1 Subject architectural wood work of this Section to inspection at plant and at Site by appointed inspector approved by local AWMAC Chapter. All costs attributable to GIS shall be included in the Contract Price.~~

~~.2 The GIS process non-exhaustively includes the following:~~

~~.1 review of Shop Drawings to determine methods and materials conform to specified standards;~~
~~.2 review of mock-ups to establish quality control standards;~~
~~.3 detailed inspection of manufactured components to verify their adherence to Shop Drawings, approved mock-ups and conformance to AWMAC - NAAWS.~~

.4 Mock-ups: Provide mock-ups in locations designated by the Consultant and as required to demonstrate quality of workmanship. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Approved mock-ups may become part of completed work if the mock-up remains undisturbed at the time of Substantial Performance of The Work. Provide mock-ups for following items:

.1 Basic cabinetry consisting of one base cabinet, one wall hung cabinet, and one countertop. Base cabinet to have minimum one drawer.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements:

.1 Do not deliver finished Products during rainy or damp weather.

.2 Do not deliver Work of this Section until the building and storage areas are sufficiently dry to ensure Products will not be damaged by changes in relative humidity and moisture content. Deliver, store and handle Products of this Section in accordance with NAAWS Section 2.

.3 Do not deliver and Install damaged Products. Replace damaged Products in accordance with requirements of this Section.

.4 Storage and Handling Requirements: Cover and protect finished surfaces with heavy Kraft paper and other acceptable means. Put in cartons for protection. Do not remove protective covers until immediately prior to final cleaning.

1.9 SITE CONDITIONS

.1 Ambient Conditions: Ensure conditions conform to requirements of NAAWS Section 2 and moisture contents of wood for interior locations at time of installation are at established Optimum Moisture Content and Optimum Indoor Relative Humidity as outlined in NAAWS Section 2.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for period of 3 years from the date of Substantial Performance of the Work against defects and deficiencies in accordance with General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: delamination of plastic laminate, opening of seams, warpage and extensive colour fading.

PART 2 - PRODUCTS

2.1 DESCRIPTION

.1 Regulatory Requirements:

.1 Provide work of this Section in accordance with North American Architectural Woodwork Standards (NAAWS), except as specified otherwise herein. Any reference in this Section to grades and any use of terminology that is capitalized herein but not otherwise defined in the Contract Documents shall have the definitions given to such grades and terminology in “NAAWS” (and such definitions are hereby, by reference, made a part of this Section). The requirements of this Section govern and modify NAAWS.

.2 Fire-Test-Response Characteristics:

.1 Where fire-retardant materials are indicated, Provide materials with specified fire-test-response characteristics as determined by a testing and inspecting agency acceptable to Authorities Having Jurisdiction.

.2 Identify materials with appropriate markings of applicable testing and inspecting agency on surfaces of materials that will be concealed from view after installation.

.3 Flame-spread index shall be in accordance with OBC requirements when tested according to CAN/ULC-S102.

.2 Design and Performance Requirements:

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Ensure millwork casework (e.g. countertops, wall cabinets, cabinet drawers and similar items) are capable of supporting structural loads without deflection in accordance with Casework Integrity Tests in Appendix A of AWMAC- NAAWS Standard Manual of the current edition as at the closing date and time of the Request for Tenders for the Contract.

.3 All composite wood Products and laminating adhesives used in millwork shall not contain added urea-formaldehyde resins.

~~.4~~ Adhesives shall be non-toxic, low VOC, non-solvent glue to comply with AWMAC Quality Standards Manual, ~~Canadian Eco-Logo' program, and LEED requirements.~~

.5 All cabinets shall be flush overlay construction.

.6 Design millwork so that no sharp edges are exposed. Provide minimum 25 mm radiused corner to countertops.

.7 All cabinets doors and drawers shall be provided with locks as indicated on the Drawings. Key in accordance with the requirements to be provided by the Owner to the Contractor.

.8 Incorporate all required mechanical, electrical and communication services into millwork so that wires and pipes are hidden from view. Provide access panels to all services to allow for future adjustment.

.9 Provide built-in valance lighting underneath all upper cupboards over counter tops.

.10 All architectural woodwork hardware shall be stainless steel of durable quality to meet standards of AINSI/BHMA grade 1 Cabinet Hardware.

.11 All door, drawer and other exposed millwork edges shall have applied appropriately sized PVC edge strip, heat applied.

.12 Plastic laminate-to-plastic laminate edges are not permitted.

.13 Provide marine-grade plywood to all bottoms of sink cabinet boxes and areas that may come into contact with water.

.14 Minimum nominal thickness and material for cabinet components and shelf deflection, type of materials, thicknesses, span width and total load distribution: In accordance with AWMAC-NAAWS Standard Manual Section 10, current edition.

.15 Minimum nominal thickness and material for cabinet components and shelf deflection, type of materials, thicknesses, span width and total load distribution: In accordance with NAAWS Section 10.

.3 Framing Lumber (Concealed Framing): Softwood or hardwood lumber as specified in this Section of uniform grain and colour, free from sap, shakes, knots, splits and other defects with grade marked by NLGA and meeting CAN/CSA O141 requirements as applicable. No cross grain permitted. Provide concealed wood of the most appropriate grade required to satisfy fabrication, utility and structural requirements.

.4 Architectural Lumber (Exposed framing, solid members and trim): Clear, straight, kiln dried, hardwood lumber as specified in this Section, of species indicated on Drawings. Provide lumber kiln-dried to moisture content recommended by AWS, free from blemishes that would be apparent after finish is applied. Where species are not indicated on the Drawings, provide:

.1 Transparent Finish: Maple, quarter sawn, Premium grade, matched for compatibility of grain and colour.

.2 Opaque Finish: Natural Birch, quarter sawn, Premium grade.

.5 Panel Products: Conform to the requirements of AWMAC AWS Section 4.

.1 Medium Density Fibreboard Core (MDF): All wood core substrates shall be MDF unless used in areas subject to moisture. Provide MDF Products manufactured from 100% recycled materials, without the use of added formaldehyde resins and with the following characteristics:

.1 Minimum density: 770 kg/m^3 (48 lb. /cu ft.)
.2 Surface characteristics: In accordance with ANSI/NPA A208.2
.3 Grade: Minimum 155.
.4 Finish and Texture: To match the Consultant's sample.
.5 Where indicated, Provide industrial grade MDF certified to meet Class 1 surface burning characteristics of CAN/ULC-S102 and UL 723 with maximum Flame Spread rating of 25 and maximum Smoke Developed of 200.

.6 Acceptable Products:

.1 Medium Density Fibreboard Core (MDF): Decorative panels, “Medite II®“ by Sierra Pine Ltd; or equivalent Products manufactured by Flakeboard Company Limited; Uniboard Canada Inc.; or Tafisa Canada and Company, Ltd.; (or Equivalent)

.2 Veneer Core (Plywood): Provide exterior grade, veneer core (plywood) at countertop cores and splashes where sinks are scheduled to be installed and at other locations as required to meet design requirements. Provide fire-retardant treatment as required to meet OBC stipulations. Conform to AWS Section 4.

.1 Softwood plywood (rough framing and rough carpentry only):

.1 Premium Grade, Douglas Fir plywood - CSA O121, or Western Softwood Plywood - CSA O151 or Poplar plywood - CSA O153-M. Provide Grade G2S where exposed on two sides and Grade G/Solid where exposed on one side. Consider fitment doors exposed on both sides.

.2 Hardwood Plywood (wood cores): Conforming to the requirements of ANSI/HPVA HP-1.

.1 Water-resistant plywood “PureBond™” by Columbia Forest Products; or “HyBrid Panel – SkyPly” by Rosenburg Forest Products; (or Equivalent).

.3 Provide veneer core (plywood) for following applications:

.1 millwork cores subject to moisture,
.2 cabinet bases in contact with floor, and
.3 countertop cores in other locations designated on the Drawings.

.6 Facings:

.1 Facing Adhesive: As recommended by the manufacturer and containing no added urea-formaldehyde. Provide water-resistant adhesive for areas subject to moisture.

.2 High Pressure, Paper Base, Decorative Laminates:

.1 Fire-Test Response Characteristics: Ensure decorative laminates meet flame spread requirements for Class A (Class I) rating in accordance with CAN/ULC S102.2. Flame spread index: < 25; Smoke developed Index: 0.

.2 Provide following types and thicknesses conforming to ANSI/NEMA LD3 and ANSI/NEMA LD3.1 and AWS Section 4:

.1 Horizontal General Purpose: HGS - 1.2 mm (0.048").
.2 Vertical General Purpose: VGS - 0.7 mm (0.028").
.3 Postforming Horizontal: HGP - 1.0 mm (0.039").
.4 Postforming Vertical: VGP - 0.7 mm (0.028").
.5 Backer Sheet: BKM - 1.0 mm (0.039").

.3 Plastic Laminate Types (PLAM):

.1 Products of the following manufacturers (or Equivalent manufacturers) are acceptable subject to conformance to the requirements of the Contract Documents:

.1 Arborite High Pressure Laminates;
.2 Pionite Decorative Laminates

.2 Colours and Finishes: To be selected by the Consultant at a later date from the manufacturer's full colour range including solid and woodgrain patterns, including cross-grain patterns and printed patterns in suede or matte finishes.

.1 Maximum Number of Colours, Finished and Patterns: 5.

.7 Architectural Woodwork Hardware and Accessories:

.1 Provide hardware meeting or exceeding the applicable ANSI/BHMA A156 Series (Grade 1) standards.

.2 Slides:

.1 Heavy Duty Drawer Slides – more than 610 mm (24") wide, Capacity: 68.04 kg (150 lbs)

.1 Side Mounted Telescoping Ball Bearing drawer slide with full extension and 25 mm (1") overtravel (length as required to suit the drawer size). Provide one of the following (or Equivalent):

.1 Model No. Accuride – 3640 by Hafele America Company
.2 Model No. 8505 by Knape & Vogt Canada Inc.
.3 Model No. KA 555 by Hettich Canada Ltd.

.3 Cabinet Door Hinges and Stays:

.1 Ensure cabinet hinge pin is not removable (tack weld or cap). Provide hinges complete with one-piece non-removable pin with tapered tips

.2 Wood Door Hinges:

.1 Frameless Concealed Hinges (European Type) – 165° to 170° opening: Self-closing concealed hinges with integrated soft close. Manufacturer's recommended number of hinges shall suit the door size and thickness. Provide one of the following:

.1 "Salice Concealed Wide Angle Hinges - No. 329.07 Series" by Hafele America Company.
.2 "Blum Concealed - Clip-Top Hinge" by Richelieu Hardware Ltd.
.3 "Intermat 9943" or "Intermat 9956" by Hettich Canada Ltd.
.4 or Equivalent to the above.

.2 Piano Hinges: Stainless steel. Provide hinges in the manufacturer's recommended size and length to suit door size and thickness.

.1 "Model No. 351.10 series" by Hafele America Company or Equivalent. Finish: AISI No. 4, Satin Finish.

.4 Door and Drawer Locks:

.1 Lock locations are noted Drawings. Provide locks in accordance with the Owner's keying requirements unless otherwise indicated in the Contract Documents**.**

.2 Wood Framed Doors and Drawers:

.1 Cylinder Locks: Provide adjustable locking system with lock throw, orientation and size to suit cabinet size. Provide one of the following:

.1 "Cylinder Module System; Model No. 232 Series" by Hafele America Company complete with cam locks or deadbolt locks and cores as required to suit applications indicated.

.2 "Disc Tumbler Furniture Locks - Removacore" by CompX International Inc. complete with cam locks or deadbolt locks and cores as required to suit applications indicated .

.5 Handles (Doors and Drawers):

.1 D-Pulls: Provide one of the following:

.1 “Model No. “Furniture Handle 10 mm 562.10.96” by Hewi or Equivalent.
.2 Finish: to be selected by Consultant at a later date.

.6 Recessed Shelf Pilasters, Standards and Clips:

.1 Provide required accessories to mount wood shelves. Provide one of the following:

.1 “KV255" pilaster and “KV256" adjustable clip supports by Knape & Vogt Canada Inc.
.2 “120-10 Series” pilasters and “1903-2G” clip supports by Richelieu Hardware Ltd.

.7 Door and Drawer Stops, Bumpers and Catches:

.1 Drawer and Hinged Door Bumpers: Provide two clear resilient, press-fit bumpers per door or drawer.
.2 Built-in Drawer Stops: Resilient type recommended by the manufacturer.
.3 Magnetic Door Catch: Holding Power: 3 kg to 4kg (6.6 lbs to 8.8 lbs) Finish: Heavy duty cast aluminum. Provide one of the following (or Equivalent):

.1 Model No. 246.26 Series by Hafele America Company
.2 Model No. 918 by Knape & Vogt Canada Inc.

.8 Spring Latch (workstation 155):

.1 Provide Steel and Nylon spring catch and strike where indicated on Drawings; “Spring Catch, 32 mm, Press-In Strike – 245.07.711” by Hafele (or Equivalent).

.8 Cable Management Grommets: Provide 54 mm (2-1/8”) diameter grommets in numbers indicated at locations shown on reviewed Shop Drawings. Finish: to be selected at a later date.

.1 "Flip Top Series", by Mockett;

.2 "Round Plastic Cable Grommets; Model No. 429.9 Series" by Hafele.

.3 or Equivalent to the above.

.9 Waste Receptacle Ring:

.1 Provide 200mm diameter, Stainless Steel surface mounted waste chute where indicated on drawings; “61436171” by Richelieu or TM1B – 6” Trash Grommet by Mockett (or Equivalent).

.10 Closet Coat Rods: “KV660" by Knape and Vogt Manufacturing Company (or Equivalent), 27 mm (1-1/16") od stainless steel rod complete with “KV734 – Full Circle" polished chrome flanges. Size rods to suit closet widths.

.11 Solid Polymer Surfacing (SPS): Section 06 61 16.

.12 Fastenings:

.1 Include the necessary fastenings, anchors and accessories required for fabrication and erection of the Work of this Section.

.2 Fastenings include non-exhaustively: anchor bolts, machine bolts, toggle bolts, male/female bolts, lag screws, expansion shields, sleeves, brackets, washers and nuts.

.3 Provide exposed fasteners, where approved and shown on reviewed Shop Drawings, of the same texture, colour and finish as the base material on which they occur unless otherwise shown or noted in the Contract Documents. Use only stainless steel fasteners with stainless steel components.

.4 Supply bolts complete with washers and nuts required for complete installation. Provide lock washers where vibration may loosen bolted fastenings.

.5 Ensure thread dimensions are such that nuts and bolts fit without rethreading or chasing threads.

.6 Bevelled hexagon head bolts: ASTM A307.

.7 Bonding Cements: Achieve with solvents or adhesives, suitable for use with Product and application.

2.2 COMPONENTS

.1 Casework and Frames Construction: Conforming to AWS Section 10 unless otherwise indicated in the Contract Documents. Provide Premium grade quality construction and finishing unless otherwise indicated in the Contract Documents.

.1 Standing and Running Trim:

.1 Species For Transparent Finishing: Maple
.2 Species For Opaque Finishing: Birch

.2 Provide Premium Grade quality construction and finishing unless otherwise indicated in the Contract Documents.

.3 Casework Construction Type: Type A – Frameless construction with edge banded front edges.

.4 Interface Style: Style 1 – Flush Overlay unless otherwise indicated in the Contract Documents.

.5 Exposed Surfaces Core: Medium Density Fiberboard Core (MDF) unless otherwise indicated in the Contract Documents.

.6 Semi-Exposed and Concealed Surfaces Core: Medium Density Fiberboard Core (MDF) unless otherwise indicated in the Contract Documents.

.7 Edge Banding: Minimum 0.5 mm (0.02”) thick ABS or PVC edgebanding, per AWS Section 10, Rule 4.4.26. Provide edgebanding for exposed (visible) and semi-exposed edges of the type specified in this Section.

.1 Case bodies: minimum 0.5 mm (0.0197”) thick.
.2 Doors, drawer fronts, and false fronts: minimum 3 mm (1/8”) thick.
.3 Pattern: wood grain to match door faces unless otherwise indicated in the Contract Documents.

.8 Facing: Plastic Laminate as specified in this Section.

.9 Plastic Laminates:

.1 Exposed Surfaces Finish: HGS for horizontal surfaces and VGS for vertical surfaces in accordance with AWS Section 4, Rule 4.2c.

.1 Finish: To be selected by Consultant from manufacturer’s full range at a later date.

.2 Semi-Exposed Surfaces Finish: Plastic laminate; HGS for horizontal surfaces and VGS for vertical surfaces in accordance with AWS Section 4, Rule 4.2c.

.1 Finish: Identical to exposed surfaces finish.

.3 Concealed Surfaces Finish: Backing sheet; Provide BKV at vertical locations and BKH at horizontal locations; unless otherwise indicated in the Contract Documents.

.2 Stainless Steel Countertops and Backsplashes: Refer to Section 12 35 71, Stainless Steel Casework.

2.3 FINISHES

.1 Factory Finishing: Defer only final touch up, cleaning, and polishing until after installation. As far as practical, ensure casework is factory finished unless otherwise indicated or unavoidable:

.1 Apply finishes in accordance with AWS Section 5.

.2 Transparent Wood Finishing:

.1 Exposed parts: AWS System – 5, Varnish, Conversion or System – 7, Vinyl, Catalyzed.
.2 Semi-Exposed parts: AWS System – 5, Varnish, Conversion or System – 7, Vinyl, Catalyzed.
.3 Staining: Match the Consultant's sample.
.4 Sheen: Satin in accordance with ASTM D523.

.3 Opaque Wood Finishing:

.1 Exposed parts: AWS System – 5, Varnish, Conversion.
.2 Semi-Exposed parts: AWS Exposed parts: AWS System – 5, Varnish, Conversion.
.3 Staining: Match the Consultant's sample.
.4 Sheen: Satin in accordance with ASTM D523.

.4 Field Touch-Up: Ensure that field touch-up is performed by the installing trade and that the architectural woodwork manufacturer will perform factory finishing. Field touch-up includes filling and touch-up of exposed job-made nail and screw holes, refinishing of raw surface resulting from job fitting, repair of job-inflicted scratches and mars and final cleaning up of finished surfaces.

2.4 FABRICATION

.1 Fabricate joints accurately fitted, coped where possible, and well glued up. Fabricate joints mitred to perfect fit and alignments carefully matched.

.2 Fabricate finished woodwork in one piece where possible. Fabricate running members in the longest lengths obtainable.

.3 Fabricate to conceal fastenings.

.4 Provide plastic laminate Work in shop in accordance with ANSI/NEMA LD3. Provide backer sheets to panels to ensure balance.

.5 Fabricate exposed gables to match the required exposed finishes.

.6 Exposed wood construction:

.1 Fabricate joints carefully matched for grain and colour.

.2 Fabricate millwork with slow fed machines free from sticker and/or sander markings, with sections and moulding work cut accurately to profiles.

.3 Sandpaper woodwork, smooth removing burrs, feathers, sleeves, raised grain and sharp arises and leave exposed surfaces perfectly clean and smooth ready for finishing.

.4 Provide edges noted to be solid, as minimum 6 mm (1/4") thick wood to match the exposed veneer to visible and semi-exposed edges, glued to the core prior to the application of face veneers. Provide plastic laminate or elastomeric edges to plastic laminate work visible or semi-visible edges.

.7 Countertops:

.1 Fabricate and assemble countertops and side and back splashes in shop to profiles and lengths required.

.2 Fabricate cutouts for services penetrations as required.

.3 Verify governing dimensions before fabricating items which abut wall surfaces.

.4 Provide cutouts required and round internal corners, chamfer edges and seal exposed core.

.5 Provide sidesplashes at abutting ends of counters and at adjoining walls, unless otherwise indicated on the Drawings.

.6 Provide a 6 mm (1/4") drip groove approximately 13 mm (1/2") in from the underside edge.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verification of Conditions: Verify actual Site dimensions and location of adjacent materials prior to commencing the Work. Notify the Consultant in writing of any conditions which would be detrimental to the installation.

.2 Evaluation and Assessment: The commencement of work constitutes the Contractor's acceptance of previously completed work.

3.2 PREPARATION

.1 Wood Surface Preparation for Finish:

.1 Verify and determine wood species, grain direction and structure, properties of finish, application method and exposure to elements. Check moisture content to avoid movement of wood caused by expansion and contraction due to changes in moisture content. Verify grain cut as it may interfere with adhesion of finish.

.1 Apply wood finishing Product in following order and as needed for specific appearance and application specified in this Section. Sanding sealer to control penetration of subsequent coats to create more uniform finish. Stain to colour wood and highlight grain for final finish. Filler to fill pores of wood and control penetration of subsequent coats. Apply filler across grain forcing it into pores followed with rubbing and sanding when dried. For staining requirements mix stain with filler before applying for uniform finish. Finish coats to Provide protection to wood.

.2 Woodwork for Clear Finish or Stain:

.1 Sand smooth all woodwork to be finished using 150 grit paper followed by a second sanding using 220 grit paper and clean surfaces free of dust using brush, compressed air or tack rags before applying first coat. Abrade surfaces with stiff brush to remove loose fibers and splinters. Fill nail holes, splits and scratches with non-shrinking filler tinted to match local grain condition after first coat is dry. Sand lightly between coats with No. 220 sandpaper and remove dust.

.3 Wood Surface Preparation for Opaque Coating:

.1 Seal knots and sapwood in surfaces to receive paint with alcohol-based primer-sealer. Seal door edges. Sand smooth rough surfaces of woodwork to be finished using 150 grit paper followed by a second sanding using 220 grit paper. Sand in the direction of the grain. Clean surfaces free of dust before applying the first coat using brush, compressed air or tack rags. Fill nail holes, splits and scratches with non-shrinking filler after the first coat is dry. Remove salt deposits that may appear on wood surfaces treated with fire retarder.

.2 Prepare plywood surface by removing dirt and debris. Fill screw and nail holes or minor imperfections with recommended filler and sand properly to receive finish coating. Plywood requiring stained or painted finish shall be primed with top quality alkyd primer. Use only penetrating quality stain over plywood.

.3 Woodwork for Clear Finish or Stain: Sand smooth all woodwork to be finished using 150 grit paper followed by a second sanding using 220 grit paper and clean surfaces free of dust using brush, compressed air or tack rags before applying first coat. Abrade surfaces with stiff brush to remove loose fibers and splinters. Fill nail holes, splits and scratches with non-shrinking filler tinted to match local grain condition after first coat is dry. Sand lightly between coats with No. 220 sandpaper and remove dust.

.4 Remove salt deposits that may appear on wood surfaces treated with fire retarder.

.5 Ensure resilient flooring under millwork cabinets are provided prior to proceeding with the Work of this Section.

3.3 INSTALLATION

.1 Install the Work of this Section in accordance with the corresponding Product section of the AWMAC AWS.

.2 Grade: Install woodwork to comply with requirements for grade specified in this Section for fabrication of type of woodwork involved.

.3 Assemble woodwork and complete fabrication at Site to comply with requirements for fabrication specified in this Section and to the extent that it was not completed in shop.

.4 Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 3 mm in 2400 mm (1/8" in 8'-0").

.5 Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

.6 Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated in the Contract Documents..

.7 Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to Provide unencumbered operation. Complete installation of hardware and accessory items as indicated in the Contract Documents.

.8 Install cabinets with no more than 3 mm in 2400 mm (1/8" in 8'-0") sag, bow, or other variation from a straight line.

.9 Maintain veneer sequence matching of cabinets with transparent finish.

.10 Fasten wall cabinets through back, near top and bottom, at ends and not more than 400 mm (16") o.c. with No. 10 wafer-head screws sized for 25 mm (1") penetration into wood framing, blocking, or hanging strips.

.11 Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop. Install countertops with a maximum of 3 mm in 2400 mm (1/8" in 8'-0") sag, bow, or other variation from a straight line.

.12 Align adjacent solid-surfacing-material countertops and form seams to comply with the manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean the entire surface.

.13 Secure backsplashes to tops with concealed metal brackets at 400 mm (16") o.c. and to walls with adhesive.

.14 Touch up finishing work specified in this Section after the installation of woodwork. Fill nail holes with matching filler where exposed.

.15 Install solid polymer counter top surfaces at locations indicated on the Drawings in accordance with the manufacturer's recommendations to meet design requirements.

.16 Provide the Work of this Section true and straight and securely fastened in place.

.17 Mitre exposed corners and butt joints.

.18 Provide plastic laminate countertops plumb and true, neatly scribed to adjoining surfaces.

.19 Thoroughly fix and anchor the Work of this Section into position.

.20 Mechanical and Electrical Fittings:

.1 Provide openings required to accommodate mechanical and electrical fittings as part of the Work of this Section and provide a core sealant to protect counter cores which are exposed to accommodate:

.1 mechanical services and fittings.
.2 washroom accessories.

.2 Locate and Install lenses where indicated on the Drawings. Carefully align lenses, shown in continuous lines, so that they appear as straight lines. Mount lenses perfectly level or plumb. Lenses shall fit tightly without showing space or light leak between frame and lenses. Remove improperly installed lenses and reinstall at no cost to the Owner.

.3 Mechanical and electrical fittings and services will be provided as part of the Work of Divisions 21, 22 23, 26, 27 and 28.

.21 Installation of Architectural Woodwork Hardware:

.1 Install architectural woodwork hardware in accordance with AWMAC, AWS and manufacturer's requirements and templates. Adjust architectural woodwork hardware to Provide smooth operation and ensure clearances are maintained. Repair damage to adjacent surfaces resulting from failure to conform with this requirement.

.2 Provide lubricants required and use in a manner to ensure smooth function of hardware consistent with the manufacturer's recommendations.

.3 Verify that fastening components are tightened securely. Align screws, bolts and similar fastenings such that relationship of screw head indentations, similar surfaces and slots are perpendicular to the matching vertical or horizontal position when on the same surface. Do not burr or otherwise mar edges of surfaces of hardware components. Repair the defects caused by the Work of this Section to the satisfaction of the Consultant.

.4 Conform to keying requirements specified in this Section.

3.4 FINISHING

.1 Prime unexposed surfaces including the backs of fitments against walls and underside of fitments.

.2 Before priming, treat knots and sap streaks, with a coat of shellac and then prime with a wood primer.

.3 Shop finish natural finished wood surfaces.

3.5 ADJUSTING AND CLEANING

.1 Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork.

.2 Adjust joinery for uniform appearance.

.3 Clean, lubricate, and adjust hardware.

.4 Clean woodwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide solid polymer fabrications including but not limited to following:

.1 window sills.

.2 millwork countertops with non-integral and integral sinks and cove backsplashes.

.3 auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Definitions:

.1 Solid Polymer Surface (SPS): Nonporous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 In particular, address the following items:

.1 Coordinate colours, patterns, and finishes; Provide materials and Products that result in colours of solid-surfacing material complying with Project requirements, either as indicated by manufacturer's designations or match approved sample or as selected later by Consultant from manufacturer's full range; one piece top with approved edges, approved backsplashes, place in position with manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing. Countertop with drilled holes for plumbing fittings, soap dispensers and integral sink bowls as specified.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings in accordance with Section 01 30 00, indicating material characteristics, details of construction, connections and relationship with adjacent construction.

.1 Indicate plans, sections, dimensions, component sizes, edge details, thermosetting requirements, fabrication details, attachment provisions, sizes of furring, blocking including concealed blocking, and coordination requirements with adjacent work. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacles and other items installed in solid polymer fabrications.

.2 Coordination Drawings: Submit coordination Drawings indicating plumbing and miscellaneous steel work indicating locations of wall (rated or non-rated), blocking requirements, recessed wall items and similar items.

.3 Field Measurements: Take field measurements prior to preparation of Shop Drawings and fabrication to ensure proper fitting of work. Do not fabricate work unless Shop Drawings have been reviewed.

.4 Samples: Submit minimum 150 mm x 150 mm (6" x 6") samples in accordance with Section 01 30 00. Cut sample and seam together for representation of inconspicuous seam. Indicate full range of colour and pattern variation.

.5 Test and Evaluation Reports:

.1 Submit flammability test reports confirming material compliance with requirements of, NFPA 255, UL 723 and CAN/ULC S102-M.

.2 Submit test reports confirming that the Product conforms to requirements of NSF/ANSI 51 for use in food preparation zones for all types of food.

1.7 MAINTENANCE MATERIALS SUBMITTALS

.1 Submit manufacturer's care and maintenance data, including repair and cleaning instructions. Provide commercial care and maintenance kit and video. Review maintenance procedures and warranty details with Owner upon completion. Include information in Project closeout documents.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials

.2 Installers: Provide Work of this Section executed by competent installers with minimum 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers. Ensure fabricator and installer are approved by the solid polymer manufacturer.

.2 Mock-ups:

.1 Prior to final approval of Shop Drawings, erect 1 full size mock-up of each component at the Project site demonstrating quality of materials and execution for the Consultant's review. Rework or remake rejected mock-ups until approval is granted. Remove rejected units from the Project site.

.2 Approved mock-up will be used as standard for acceptance of subsequent work and may remain as part of finished work if left undisturbed at the time of Substantial Performance of The Work.

.3 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements: Deliver no components to the Project site until areas are ready for installation. Store components indoors prior to installation.

.2 Storage and Handling Requirements: Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent physical damage or staining following installation for duration of Project.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for period of 10 years after Substantial Performance of the Work against defects and deficiencies in accordance with General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Solid Polymer Fabrications:

.1 Corian
.2 Wilsonart Canada
.3 LG Hausys

.2 Comparable Products from manufacturers listed herein will be considered provided they meet the requirements of this Specification, offering functionally, aesthetically equivalent Products in Consultant's opinion and subject to Consultant's review.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Ensure materials used comply with requirements of, NFPA 255, UL 723 and CAN/ULC S102-M as follows:

.1 Flame spread: <25
.2 Smoke developed: <25

.2 Ensure materials used comply with use in food preparation zones and conform to requirements of NSF/ANSI 51 for following food zones: all food types.

.2 Solid Polymer Surfaces Design and Performance Requirements:

.1 Provide cast, nonporous, filled polymer fabrications, not coated, laminated or of composite construction with through body colours meeting referenced standards herein and having minimum physical and performance properties as specified herein.

.2 Ensure surfaces do not prevent use of electronic devices that function with optical or tactile sensors.

.3 Ensure superficial damage to a depth of 0.25 mm (0.010") is repairable by sanding and polishing.

.4 Mechanical and Structural Properties:

.1 Tensile Strength: 6000 psi min. per ASTM D638

.2 Tensile Modulus: 1.5 x 10^{-6} psi min. per ASTM D638

.3 Flexural Strength: 10000 psi min. per ASTM D790

.4 Flexural Modulus: 1.2 x 10^{-6} psi min. per ASTM D790

.5 Elongation: 0.4% min. per ASTM D638

.6 Hardness: >85-Rockwell "M" scale min. per ASTM D785

.7 Thermal Expansion: 3.02 x 10^{-5} in/in/deg C. max. per ASTM D696

.8 Ball Impact Resistance Sheets:

.1 1/4" sheet: 36" min, 1/2 lb ball, no failure per NEMA LD3, Method 3.8

.2 1/2" sheet: 144" min, 1/2 lb ball, no failure per NEMA LD3, Method 3.8

.3 3/4" sheet: 200" min, 1/2 lb ball, no failure per NEMA LD3, Method 3.8

.9 Weatherability: E^*_{94}<5 in 1,000 hrs 1000 hours per ASTM G155

.10 Fungi and Bacteria Resistance: Does not support microbial growth per ASTM G21 & GREENGUARD, Microbial Resistance Program

2.3 MATERIALS

.1 Solid Polymer Fabrications: Homogeneous sheets composed of minimum 30% acrylic resin (Polymethyl Methacrylate) and +/- 70% blend of natural minerals meeting ANSI Z124.3 &.6, Type 4 and Fed. Spec. WW-P-541E/GEN. Solid polymer fabrications containing blends with polyester-based materials are not acceptable. Ensure material has minimum physical and performance properties as specified herein. Provide solid polymer fabrications complete with following materials as recommended by Product manufacturer:

.1 Joint Adhesive: Manufacturer's standard 2-part adhesive kit to create inconspicuous, non-porous joints, with a chemical bond.

.2 Panel Adhesive for Tub and Shower Systems: Manufacturer's recommended standard neoprene-based panel adhesive meeting ANSI A136.1. UL® listed, Greenguard Certified.

.3 Adhesive for Bonding to Other Products: One component silicone as recommended by Product manufacturer conforming to ASTM C920.

.4 Sealant: Manufacturer's standard mildew-resistant, FDA/UL® and NSF/ANSI 51 compliant, recognized silicone sealant in colour matching components or clear formulations.

.5 Sink/Bowl Mounting Hardware: Manufacturer's approved bowl clips, brass inserts and fasteners for attachment of undermount sinks/bowls, where applicable.

.6 Conductive Tape: Manufacturer’s standard aluminum foil tape, with required thickness, for use with cutouts near heat sources.

.7 Insulating Felt Tape: Manufacturer's standard for use with conductive tape in insulating solid polymer material from adjacent heat source.

.2 Integral Bowls: ADA compliant bowls manufactured from solid polymer material specified herein. Provide solid polymer solid surfacing bowls fabricated to desired profiles and sizes, having edge details as selected by Consultant.

.1 Mounting: Integral seamless molding.

.3 Solid Polymer Fabrication Cores and Supports: Provide structurally adequate, continuous perimeter support frames to ensure flatness and levelness of solid polymer fabrications. Ensure materials are capable of providing support to inside corners and across spans. Following substrates are acceptable (Refer to Section 06 40 00 for wood core and supports Specifications. Refer to Section 05 50 00 for metal frames and supports Specifications):

.1 Medium Density Fibreboard (MDF) or Solid Wood Lumber or Galvanized Metal Tubing: At all locations unless otherwise indicated. MDF to be minimum 19 mm (3/4") thick unless otherwise indicated.

.2 Veneer Core Plywood or Galvanized Metal Tubing: At locations scheduled to receive sinks or otherwise exposed to moisture.

.3 In addition:

.1 conform to Section 06 40 00 for wood core and supports Specifications.
.2 coordinate with Section 05 50 00 for Specifications for metal frames and supports.

2.4 COMPONENTS

.1 Window Sills (SPS): Surfaces of material adhesively joined with inconspicuous seams and edge details as indicated on Drawings.

.1 Vertical Thickness: minimum 12 mm (1/2") thick.

.2 Horizontal Thickness: minimum 12 mm (1/2") thick.

.3 Edge Details: waterfall.

.4 Colour: To be selected by Consultant at a later date from manufacturer's full colour range of Price Group 1.

.5 Finish: satin or matte as selected by Consultant at a later date.

.2 Countertops and Work Surfaces (SPS): Surfaces of material adhesively joined with inconspicuous seams fabricated to desired profiles and sizes having edge details, back splash and end splashes as indicated on Drawings.

.1 Vertical Thickness: minimum 12 mm (1/2") thick

.2 Horizontal Thickness: minimum 12 mm (1/2") thick

.3 Edge Details: waterfall

.4 Colour: To be selected by Consultant at a later date from manufacturer's full colour range of Price Group 1.

.1 Basis-of-Design: "Linen Corian"

.5 Finish: satin or matte as selected by Consultant at a later date.

.6 Backsplash: radius coved with inconspicuous seams

.7 Sidesplash: radius coved with inconspicuous seams

.3 Integral Sinks (SPS):

.1 Sinks: Provide ADA compliant sink “Rectangular Lavatory with Front to Back Slope Sink 8252 Lavatory” by Corian (or Equivalent)**.** Provide solid polymer solid surfacing sinks fabricated to desired profiles and sizes, having edge details as indicated on Drawings.

.2 Mounting: Integral molding as indicated on reviewed Shop Drawings.

.3 Colours: To be selected by Consultant at a later date from manufacturer’s full colour range of Price Group 1.

2.5 FABRICATION

.1 Fabricate components in shop to greatest extent practical to sizes and shapes indicated, in accordance with approved Shop Drawings and solid polymer manufacturer requirements. Form joints between components using manufacturer’s standard joint adhesive without conspicuous joints. Reinforce with strip of solid polymer material 50 mm (2") wide. Provide factory cutouts for plumbing fittings and bath accessories as indicated on Drawings.

.2 Inlays: Fabricate using manufacturer’s approved method. Route 3 mm (1/8") deep maximum groove for inlay to pattern indicated on Drawings. Fill groove using manufacturer’s recommended method avoiding air bubbles and/or voids. Overfill inlay areas and allow it to cure fully. Sand smooth without overheating inlay areas while sanding. Finish and touch up to uniform appearance.

.3 Thermoform corners and edges to shapes and sizes indicated on Drawings, prior to seaming and joining. Front faces shall have micro bevel edges. Cut components larger than finished dimensions and sand edges to remove nicks and scratches. Heat entire component uniformly prior to forming.

.4 Ensure no blistering, whitening and cracking of components during forming.

.5 Form backsplashes from solid surfacing material with radius cove where counter and backsplashes meet as indicated on Drawings.

.6 Form joints between components using manufacturer's standard joint adhesive. Ensure joints are inconspicuous in appearance and without voids. Attach 100 mm (4") wide reinforcing strip of solid polymer material under each joint.

.7 Provide holes and cutouts for plumbing and bath accessories as indicated on Drawings.

.8 Rout and finish component edges to a smooth, uniform finish. Rout cutouts, then sand edges smooth. Repair or reject defective or inaccurate Work.

.9 Finish: Provide surfaces with uniform finish:

.1 Matte: gloss rating of 5 - 20.

.2 Semi-gloss: gloss rating of 25 - 50.

.3 Polished: gloss rating of 55 - 80.

.10 Allowable Tolerances:

.1 Variation in Component Size: ± 3 mm (1/8").

.2 Location of Openings: ± 3 mm (1/8") from indicated location.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work. Proceed with installation only after unsatisfactory conditions have been corrected.

.2 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing Work.

.3 Examine cabinets upon which countertops are to be installed. Verify cabinets are level to within 3 mm in 3 m (1/8" in 10' - 0").

.4 Notify Consultant in writing of any conditions which would be detrimental to installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Install components plumb, level, rigid, scribed to adjacent finishes in accordance with reviewed Shop Drawings and Product installation details.

.2 Form field joints using manufacturer's recommended adhesive, with joints being inconspicuous in finished Work. Exposed joints/seams are not permitted. Keep components and hands clean when making joints. Reinforce field joints with solid polymer strips extending a minimum of 25 mm (1") on either side of seam with strip being same thickness as top. Cut and finish component edges with clean, sharp returns.

.3 Route radii and contours to template. Anchor securely to base component or other supports. Align adjacent components and form seams to comply with manufacturer’s written recommendations using adhesive in colour to match Work. Carefully dress joints smooth, remove surface scratches and clean entire surface.

.4 Install countertops with no more than 3 mm (1/8") sag, bow or other variation from a straight line.

.5 Mount sinks/bowls to countertops using manufacturer's recommended adhesive, mounting hardware or color-matched silicone sealant as applicable. Secure seam mounted bowls and sinks to countertops using colour matched joint adhesive.

.6 Seal joints between wall and components with joint sealant as specified herein and in Section 07 92 00, as applicable.

.7 Provide backsplashes and end-splashes as indicated on Drawings. Fabricate radius cove at intersection of counters with backsplashes to dimensions shown on reviewed Shop Drawings. Where indicated, Provide CNC-cut rebates for coved backsplashes and side-splashes at walls and adjacent millwork. Do not attach backsplashes and side splashes to countertops with sealants unless specifically noted herein.

.8 Fabricate radius cove at intersection of counters with backsplashes to dimensions shown on reviewed Shop Drawings. Adhere to countertops using manufacturer’s standard color-matched joint adhesive.

.9 Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Ensure components are clean and free of defects at Substantial Performance of The Work.

.10 Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Ensure components are clean and free of defects at Substantial Performance of The Work.

.11 Coordinate connections of plumbing fixtures with Division 22 and ensure fittings and accessories are provided by Division 22.

3.3 ADJUSTING AND CLEANING

.1 Replace damaged Work which cannot be repaired to Consultant's satisfaction. Repair minor imperfections and cracked seams and replace areas of severely damaged surfaces in accordance with manufacturer's instructions.

.2 Clean surfaces in accordance with manufacturer's care and maintenance instructions.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide general installations including but not limited to following:

.1 installation of pressed steel frames.

.2 installation of hollow metal doors.

.3 installation of flush wood core doors.

.4 continuous grouting of fire rated frames in concrete and concrete masonry walls.

.5 spot grouting of door frames in gypsum board partitions.

.6 installation of finish hardware.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data:

.1 Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00.

.2 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Inspection Reports: After installation of fire-rated assemblies, submit inspection reports from an approved independent inspection and testing agency specified in this Section, certifying fire-rated assemblies comply with requirements of Authorities Having Jurisdiction and applicable standards specified.

1.7 QUALITY ASSURANCE

.1 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

PART 2 - PRODUCTS

2.1 DESCRIPTION

.1 Regulatory Requirements:

.1 Ensure fire rated doors and frames are listed and labeled for ratings specified and noted by organization accredited by the Standard Council of Canada in conformance with CAN4-S104 and CAN4-S105, NFPA 80 and NFPA 252.

.2 Ensure doors and frames are labeled at manufacturing plant by means of metal tags or embossing. Site applied and stamped fire-labelling is not acceptable.

2.2 MATERIALS

.1 Doors, Frames and Hardware: Refer to the following Sections for Products to be installed as part of the Work of this Section:

.1 Section 08 11 13, Steel Doors and Frames.

.2 Section 08 14 16, Flush Wood Core Doors.

.3 Section 08 71 00, Finish Hardware.

.2 Spot Grout (Metal Stud Partitions): High density setting-type taping, low shrinkage type compound.

.1 Acceptable Products:

.1 "Durabond 90 Compound" by CGC Inc.,
.2 "High Density 90 - ProRoc" by CertainTeed Canada Inc., and
.3 or Equivalent to the above.

.3 Continuous Grout (Masonry Partitions): Non-shrink, non-metallic, cementitious grout, containing no chlorides, conforming to ASTM C1107 for Grade C type grouts;

.1 Acceptable Products:

.1 "Sika Grout 212" by Sika Canada Inc.,
.2 "CG-86 Construction Grout" by W.R. Meadows of Canada Ltd.,
.3 Equivalent by Euclid Admixture Canada Inc. or CPD Construction Products
.4 or Equivalent to the above.

.4 Batt Insulation: Preformed gall fibre or rockwool batt or roll insulation, conforming to CAN/ULC-S702, of type, minimum thickness, width to suit metal framing spacing and other miscellaneous spacings as indicated on the Drawings.

.1 Mineral Wool: CAN/ULC-S702, Type 1; ASTM C553 (Type VII) and non-combustible in accordance with requirements of CAN/ULC-S114. Acceptable Products:

.1 "ROXUL AFB" by Roxul Inc.
.2 “Thermafibre Sound Attenuation Blankets” by CGC Inc
.3 “MinWool Sound Attenuation Fire Batts” by Johns Manville.
.4 or Equivalent to the above.

.2 Mineral Glass Fibre: CAN/ULC-S702, Type 1; ASTM C553 (TYPE VII) and non-combustible in accordance with requirements of ULC CAN/ULC-S114. Acceptable Products:

.1 “EcoTouch™ QuietZone® PINK™ FiberGlas® Acoustical Batts” by Owens Corning Canada LP
.2 “NoiseReducer Sound Attenuation Batts” by CertainTeed.
.3 “Sound-Shield Formaldehyde-Free Fiber glass Insulation” by Johns Manville.
.4 Equivalent.

.5 Threshold Sealant: As recommended by the installer of the work of this Section and in accordance with the requirements of Section 07 92 00.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions: Verify actual Site dimensions and location of adjacent materials prior to commencing the Work of this Section. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

.2 Examine roughing-in, electrical power systems for embedded and built-in anchors to verify actual locations before frame installation.

.3 Prepare written report, endorsed by installer, listing conditions detrimental to performance of the Work.

.4 Proceed with installation only after unsatisfactory conditions have been corrected.

.5 Notify Consultant in writing of any conditions which would be detrimental to the installation the work of this Section. Commencement of work constitutes Contractor’s acceptance of previously completed work.

3.2 PREPARATION

.1 Hollow Metal Doors and Frames:

.1 Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

.2 Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist, and plumbness to the following tolerances:

.1 Squareness: +/- 1.6 mm (1/16”), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

.2 Alignment: +/- 1.6 mm (1/16") measured at jambs on a horizontal line parallel to plane of wall.
.3 Twist: +/- 1.6 mm (1/16"), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
.4 Plumbness: +/- 1.6 mm (1/16"), measured at jambs on a perpendicular line from head to floor.

.3 Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.3 GENERAL INSTALLATION REQUIREMENTS

.1 Install work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

.2 Fire-rated doors and frames:

.1 Install fire-rated labeled doors and frames in accordance with manufacturer's printed instructions and NFPA 80.

.2 Verify that labeled doors and frames are placed in their designated openings. Review, inspect and certify where required by Authorities Having Jurisdiction.

3.4 INSTALLATION OF HOLLOW METAL FRAMES

.1 Install hollow metal frames of size and profile indicated. Comply with HMMA 840 and manufacturer's instructions.

.2 Brace frames rigidly in position while being built in. Provide vertical supports and horizontal spreaders to prevent deflection and warping.

.3 Allow for deflection to prevent structural loads from being transmitted to frame.

.4 Provide batt insulation to completely fill pressed steel frames of exterior doors and adjacent cavities.

.5 Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

.1 At fire-protection-rated openings, Install frames according to NFPA 80.

.2 Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.

.3 Install frames with removable glazing stops located on secure side of opening.

.4 Install door silencers in frames before grouting.

.5 Remove temporary braces necessary for installation only after frames have been properly set and secured.

.6 Check plumbness, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

.7 Field apply bituminous coating to backs of frames that are filled with grout containing antifreezing agents.

.6 Secure anchorages and connections to adjacent construction:

.1 Locate each wall anchor immediately above or below each hinge reinforcement on hinge jamb and directly opposite on strike jamb.

.2 Provide two anchors for rebate opening heights up to and including 1500 mm (5') and one additional anchor for each additional 760 mm (30") of height or fraction thereof, unless otherwise indicated in Contract Documents.

.3 Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.

.7 Metal-Stud Partitions

.1 New construction:

.1 Solidly pack mineral-fiber insulation behind frames.

.2 Anchorages:

.1 Provide frame Products installed in steel stud and drywall partitions with 20 ga. steel snap-in or "Z" stud type anchors.

.2 Supply frame anchors to gypsum board installers with directions for installing steel door frames in gypsum board partitions.

.3 Locate anchor preparations and guides immediately above or below intermediate hinge reinforcing and directly opposite on strike jamb. Provide each preparation with 16 ga. anchor bolt guides.

.4 Provide anchor bolts and expansion shell anchors for above preparations by the Subcontractor responsible for installation.

.3 Spot Grout: Coordinate installation of frames with Section 09 21 16 to allow for spot grouting of frames.

.1 Provide spot grout to increase rigidity of frame and improve resistance to frame rotation caused by weight of door.

.2 Comply with manufacturer's recommendations for surface preparation, cleaning, forming, mixing, placement and curing of grout.

.3 Proportion spot grout as follows: 1 part hardwall plaster to not more than 2-1/2 parts perlite by weight, with enough water added for `hand pack' consistency and use.

.4 Provide spot grout at strike and hinge side jambs of frames set in gypsum board partitions. Do not use pumped slurry method to perform spot grouting.

.5 Provide spot grout at strike jambs after studs are installed but before gypsum boards are erected.

.6 After grouting is applied, immediately insert gypsum panels into jamb and attach to framing. Do not terminate gypsum board against trim.

.2 In-Place Gypsum Board Partitions: Secure frames in place with postinstalled expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

.8 Masonry and Concrete Walls:

.1 Masonry (new construction):

.1 Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.

.2 Provide frame Products for installation in new masonry walls with steel adjustable wall anchors of T-strap, stirrup or wire. Wire Gauge: 16 gauge minimum or 0.156" diameter wire. Provide corrugated or perforated straps not less than 50mm (2") x 254mm (10") in size.

.2 Concrete Walls (new construction): Solidly fill space between frames and concrete with grout. Take precautions, including bracing frames, to ensure that frames are not deformed or damaged by grout forces.

.3 In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

.1 For frames in previously placed concrete, masonry or structural steel; Provide anchors located not more than 150 mm (6") from top and bottom of each jamb and intermediate anchors at 660 mm (26") o.c. maximum.

.2 Punch and dimple jambs of frames in previously placed concrete, masonry or structural steel to accept machine bolt anchors, 6.4mm (0.25") diameter, located not more than 150 mm (6") from the top and bottom of each jamb.

.9 Ceiling Struts: Extend struts vertically from top of frame at each jamb to overhead structural supports or substrates above frame unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to Provide flush contact for securing to supporting construction. Provide adjustable wedged or bolted anchorage to frame jamb members.

.1 Provide channel extensions from top of frame assembly to underside of structure above on sidelights or windows exceeding 3m (9'-10") in width when installed in stud partitions. Fabricate extensions from 2.66 mm (12 ga) steel formed channels, mounting angles and adjusting brackets, with mounting angles welded to inside of frame head. Deliver loose formed adjusting brackets and fasteners. Connect channels mechanically to mounting angles and adjusting brackets with supplied fasteners, on Site, by the Subcontractor responsible for installation.

3.5 INSTALLATION OF HOLLOW METAL DOORS

.1 Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

.1 Non-Fire-Rated Standard Steel Doors:

.1 Jambs and Head: 3 mm (1/8”).
.2 Between Edges of Pairs of Doors: 3 mm (1/8).
.3 Door Bottom:

.1 maximum 19 mm (3/4") to unfinished floor
.2 maximum 16 mm (5/8") to finished floor unless indicated to be undercut.

.2 Fire-Rated Doors: Install doors with clearances according to NFPA 80. Provide maximum 6 mm (1/4") at door bottom and not more than 3 mm (1/8") at sides and top.

.3 Glazing: Comply with installation requirements in Section 08 80 00 and with hollow metal manufacturer's written instructions.

.1 Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 230 mm (9”) o.c. and not more than 50 mm (2”) o.c. from each corner.

3.6 INSTALLATION OF FLUSH WOOD CORE DOORS

.1 Install doors to comply with manufacturer's written instructions and as indicated.

.2 Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.

.3 Cut, drill and prepare doors to template to receive hardware.

.4 Drill pilot holes before installing hinges. Check and verify with screw manufacturers’ recommendations for size of pilot holes required.

.5 Clearances: Install in accordance with following clearances unless otherwise indicated:

.1 Between doors and frames at head and jambs: 3 mm (1/8") maximum.

.2 Between meeting edges of pairs of doors: 3 mm (1/8") maximum.

.3 At door bottom:

.1 Non rated doors: 19 mm (3/4") maximum to unfinished floor, 16 mm (5/8") maximum to finished floor unless indicated to be undercut;

.2 Fire-Rated Doors: Install doors with clearances according to NFPA 80. Provide maximum 6 mm (1/4") and not more than 3 mm (1/8") at the sides and top.

.4 Bevel:

.1 Bevel non-fire-rated doors 3 mm in 50 mm (1/8” in 2”) at lock and hinge edges.

.2 Bevel fire-rated doors 3 mm in 50 mm (1/8” in 2”) at lock edge; trim stiles and rails only to extent permitted by labeling agency.

.5 Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.7 FINISH HARDWARE

.1 Install hardware to doors and frames in accordance with manufacturer's packaged installation, template, and adjusting instructions.

.2 Preparation:

.1 Steel Doors and Frames: Comply with DHI A115 Series.

.2 Surface-Applied Door Hardware: Drill and tap doors and frames according to ANSI A250.6.

.3 Wood Doors: Comply with DHI A115-W Series.

.3 Adjust hardware to Provide smooth operation of doors and ensure clearances are maintained. Provide lubricants to allow smooth function of hardware consistent with manufacturer's recommendations.

.4 Tighten fastening components snugly. Do not burr or otherwise mar the edges of surfaces of hardware components. Repair defects resulting from work of this Section in accordance with the Consultant's review.

.5 Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to Install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 09 Sections. Do not Install surface-mounted items until finishes have been completed on substrates involved.

.1 Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.

.2 Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

.6 Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

.7 Boxed Power Supplies: Locate power supplies as indicated. Verify location with Consultant.

.1 Configuration: Provide the least number of power supplies required to adequately serve doors with electrified door hardware.

.8 Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant to prevent water and air intrusion beneath the sill and to comply with requirements specified in Section 07 92 00.

.9 Mounting Heights:

.1 Mount door hardware units at heights indicated as follows unless otherwise indicated on Drawings or required to comply with governing regulations and requirements of Authorities Having Jurisdictions.

.1 Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."

.2 Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

3.8 FIELD QUALITY CONTROL

.1 Owner reserves the right to inspect at random, edge finishing of field-cut flush wood core doors.

.1 Non-Conforming Work: Replace damaged work and/or non-conforming work which cannot be satisfactorily repaired, restored or cleaned, to the satisfaction of the Consultant at no cost to the Owner.

.2 Hardware:

.1 Provide services of an architectural hardware consultant (AHC) familiar with type of work being performed for preparation of hardware Shop Drawings (construction Finish Hardware Schedule), keying, coordination with other trades, consultation with Owner and Consultant and for performing on-site inspections

.1 AHC will inspect door hardware and state in each report whether installed work complies with or deviates from requirements, including whether door hardware is properly installed and adjusted.

.2 Verify hardware listed in Finish Hardware Schedule is of proper selection for its apparent function and required fire rating or submit alternative proposals.

.3 Ensure hardware for fire-rated openings complies with requirements of Authorities Having Jurisdiction, with door and frame manufacturer's tested and labeled assemblies and that hardware items bear certification labels.

.4 Ensure hardware for fire rated door and frame assemblies conforms to CAN/ULC S104-M, CAN/ULC S105-M and NFPA 80. Ensure electronic hardware such as magnetic locks, power supplies, key switches and alarm panic bolts is ULC labeled.

.5 Ensure hardware for doors in fire separations and exit doors are certified by a Canadian Certification Organization accredited by Standards Council of Canada.

.6 Ensure mortise locks, exit devices and door closers conform to both BMHA certified ANSI A156 Series Grade I classifications, conform to OBC, CAN/CSA B651, requirements and to ADA (*American Disabilities Act*) standards.

.7 Inspect to verify hardware has been properly installed and is functioning satisfactorily.

.8 Recommend adjustments.

.9 Replace defective hardware.

.10 Check door closers after installation to ensure adjustment such as backchecking degree has been properly made and if not, make such adjustments or instruct those installing hardware to make these adjustments.

.3 Installation Tolerances (Hollow Metal Frames): Adjust hollow metal door frames for squareness, alignment, twist, and plumb to the following tolerances:

.1 Squareness: +/- 1.6 mm (1/16”), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

.2 Alignment: +/- 1.6 mm (1/16”), measured at jambs on a horizontal line parallel to plane of wall.

.3 Twist: +/- 1.6 mm (1/16”), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.

.4 Plumbness: +/- 1.6 mm (1/16”), measured at jambs at floor.

3.9 ADJUSTING AND CLEANING

.1 Check and readjust operating hardware items immediately before final inspection, leaving doors and frames undamaged and in proper operating condition. Remove and replace defective work, including doors and frames that are warped, bowed, or otherwise unacceptable.

.2 Hardware:

.1 Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

.3 Clean grout and other bonding material off detention doors and frames immediately after installation. Carefully wipe clean doors of dust created due to work of this Project.

.4 Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

.5 Touch-ups:

.1 Immediately after erection clean and repair surfaces in accordance with manufacturer's written instructions

.2 Metallic-Coated Surfaces: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

.3 Touch up damaged finishes with compatible coating after sanding smooth.

3.10 DEMONSTRATION

.1 Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Refer to Section 01 77 00.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide dampproofing including but not limited to following:

.1 asphalt dampproofing and required primers.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 SUBMITTALS

.1 Product Data: Submit the manufacturer's literature and data sheets for each type of material provided under this Section in accordance with the requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

1.6 QUALITY ASSURANCE

.1 Installer’s Qualifications: The Work of this Section shall be performed by competent installers with a minimum of 5 years experience in the application of the Products, systems and assemblies specified herein, and with the approval and training of the Product manufacturers.

.2 Source Limitations for System: Obtain bituminous dampproofing materials, protection board, and molded-sheet drainage boards from single source from single manufacturer.

.3 Mockups: Build mockups to verify selections made under sample submittals and to set quality standards for installation.

.1 Build for each typical installation, including accessories, to demonstrate surface preparation, crack and joint treatment, corner treatment, and protection.

.1 Size: 9.3 sq. m (100 sq. ft.) in area.
.2 Description: Each type of wall installation.

.2 Approval of mockups does not constitute approval of deviations from Contract Documents contained in mockups unless Consultant specifically approves such deviations in writing.

.3 Reviewed mockups may become part of completed work if left undisturbed at time of Substantial Performance of the Work.

1.7 SITE CONDITIONS

.1 Environmental Requirements:

.1 Do not proceed with work when wind chill effect would tend to set bitumen before proper curing takes place.

.2 Proceed with application only when existing and forecasted weather conditions permit bituminous dampproofing to be performed according to manufacturers' written instructions.

.3 Do not apply dampproofing in wet weather.

1.8 WARRANTY

.1 Manufacturer's Warranty: provide the manufacturer's standard materials-only warranty in which the manufacturer agrees to supply replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.

.1 Warranty Period: Five years from date of Substantial Performance of the Work.

.2 Installer's Extended Warranty: Specified form, signed by the installer, covering the Work of this Section, for a warranty period of two years from the date of Substantial Performance of the Work.

.1 Warranty includes removing and reinstalling protection board, drainage boards, insulation, as required to perform repairs.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers are acceptable subject to conformance to the requirements of the Contract Documents:

.1 Henry Company Canada (Henry/Bakor)

.2 W.R.Meadows of Canada (W.R. Meadows)

.3 or Equivalent to the above.

2.2 DESCRIPTION

.1 Design and Performance Requirements:

.1 Extent of Bituminous Dampproofing:

.1 Provide bituminous dampproofing to footings and foundation walls, where indicated on Drawings and Schedules, applied from finished-grade line to top of footing; extend over top of footing and down a minimum of 150 mm (6 inches) over outside face of footing.

.2 Extend dampproofing 300 mm (12 inches) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when the Project is completed.
.3 Refer to Section 01 83 16 for additional performance and testing requirements pertaining to the work of this Section.

2.3 MATERIALS

.1 Dampproofing Membrane (WPM-1):

.1 Cold-Applied, Cut-Back-Asphalt Dampproofing

.1 CAN/CGSB 37.16-M89, liquid applied medium consistency, solvent type waterproofing and dampproofing compound of selected asphalts and fibres.

.1 Asphalt for temperature below 5 deg C (40 deg F)
.2 Basis-of-Design: “710-11 Dampproofing and Waterproofing Asphalt Coating” by Henry Company Canada or equivalent as follows:

.1 “501 Sealmastic” by W.R. Meadows Inc., Canada.
.2 or Equivalent to the above.

.2 Cold-Applied, Emulsified-Asphalt Dampproofing

.1 CAN/CGSB 37.2, Liquid applied, dampproofing emulsion composed of vacuum-reduced asphalt dispersed in a mineral colloid emulsifier.

.1 Asphalt for temperature at, or above 5 deg C (40 deg F)
.2 Basis-of-Design: “700-01” by Henry Company Canada Canada or equivalent as follows:

.1 “520 Sealmastic” by W.R. Meadows Inc., Canada.
.2 or Equivalent to the above.

2.4 AUXILIARY MATERIALS

.1 Supply auxiliary materials recommended in writing by bituminous dampproofing manufacturer for intended use and compatible with bituminous dampproofing.

.2 Asphalt Primer: As recommended by bituminous dampproofing manufacturer for dampproofing type.

.3 Drainage board: Composite subsurface drainage board consisting of studded, nonbiodegradable, molded-plastic-sheet drainage core; with nonwoven, needle-punched geotextile facing with apparent opening size not exceeding 0.21-mm (No. 70) sieve laminated to one side of core and a polymeric film bonded to the other side; and with a vertical flow rate of 112 to 188 L/min. per m (9 to 15 gpm per ft.).

.1 Acceptable Products:

.1 “DB 6200” by Henry Canada
.2 “CCW MiraDRAIN 6000” by Carlisle Coatings & Waterproofing Inc.
.3 “Hydroduct 220” by GCP Applied Technologies Inc.
.4 “Mel-Drain” by W.R Meadows
.5 “Sopradrain 10G” by Soprema Inc.
.6 “Delta-drain 6000” by Cosella-Dorken Products Inc.
.7 “Aquadrain 15 XP” by CETCO Building Materials Group
.8 or Equivalent to the above.

.4 Fabric Reinforcement: Open weave glass fabric consisting of glass fibre yarn saturated with synthetic resins, having the following physical properties:

.1 Mesh Size: 20/10

.2 Weight: 85 g/sq. m

.3 Tensile Strength (per 25mm width): MD 0.33 Kn; XMD 0.33 Kn

.4 Basis of Design Product:

.1 “990-06 Yellow Jacket” by Henry Company Canada or equivalent.

.5 Metal Termination Bars: Aluminum bars, approximately 25 by 3 mm (1 by 1/8 inch) thick, predrilled at 229-mm (9-inch) centers.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine substrates, areas, and conditions with applicator present, for compliance with requirements for surface smoothness, surface moisture, and other conditions affecting performance of bituminous dampproofing work.

.2 Proceed with application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

.1 Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.

.2 Clean substrates of projections and substances detrimental to the dampproofing work; fill voids, seal joints, and remove bond breakers if any, as recommended in writing by prime material manufacturer.

.3 Apply patching compound to patch and fill tie holes, honeycombs, reveals, and other imperfections; cover with asphalt-coated glass fabric.

3.3 APPLICATION

.1 Comply with manufacturer's written instructions for dampproofing application, cure time between coats, and drying time before backfilling unless more stringent requirements are indicated on Drawings and schedules.

.1 Apply dampproofing to provide continuous plane of protection.

.2 Apply additional coats if recommended in writing by manufacturer or to achieve a smooth surface and uninterrupted coverage.

3.4 COLD-APPLIED, EMULSIFIED-ASPHALT DAMPPROOFING

.1 Priming: Apply dampproof coating, diluted 20% by volume with clean water at rate of 0.5 l/sq. m and let dry, unless otherwise recommended by manufacturer.

.2 Waterproofing application:

.1 Apply fabric reinforcement into dampproof coating at not less than 1.0 l/sq. m (2.4 gal/100sq. ft.), unless otherwise recommended by manufacturer.

.2 Brush fabric reinforcement into place and eliminate wrinkles, air pockets or blisters and obtain full contact.

.3 Overlap fabric reinforcement at least 50mm (2”) at all joints.

.4 At all corners, angles and junctions, reinforce with two (2) extra coats of dampproof coating and fabric reinforcement, at least 100mm (4”) on each side of the junction.

.5 Apply a seal coat of dampproof coating over the entire area at not less than 1.0 l/sq. m (2.4 gal/100sq. ft.), unless otherwise recommended by manufacturer.

3.5 COLD-APPLIED, CUT-BACK-ASPHALT DAMPPROOFING

.1 Primer: Apply penetrating asphalt primer at a rate of approximately 2 to 8 l/sq. m and allow to cure.

.2 Waterproofing application:

.1 Apply fabric reinforcement into dampproof coating at not less than 1.0 l/sq. m (2.4 gal/100sq. ft.), unless otherwise recommended by manufacturer.

.2 Brush fabric reinforcement into place and eliminate wrinkles, air pockets or blisters and obtain full contact.

.3 Overlap fabric reinforcement at least 50mm (2 inches) at all joints.

.4 At all corners, angles and junctions, reinforce with two (2) extra coats of dampproof coating and fabric reinforcement, at least 100mm (4 inches) on each side of the junction.

.5 Apply a seal coat of dampproof coating over the entire area at not less than 1.0 l/sq. m (2.4 gal/100sq. ft.), unless otherwise recommended by manufacturer.

3.6 INSTALLATION OF INSULATION

.1 Coordinate with Section 07 21 00 for insulation materials.

3.7 CLEANING

.1 Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide underslab vapour retarder including but not limited to following:

.1 plastic underslab vapour retarder,

.2 pipe boots.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data:

.1 Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00.

.2 Ensure data sheets Provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

1.7 QUALITY ASSURANCE

.1 Installer's Qualifications: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials to the Site in manufacturer's, original, unopened containers, with labels and seals intact.

.1 Store materials in a clean dry area in accordance with manufacturer's instructions.

.2 Stack membrane on smooth ground or wood platform to eliminate warping.

.3 Protect materials during handling and application to prevent damage and/or contamination.

1.9 SITE CONDITIONS

.1 Ambient Conditions:

.1 Product is not intended for uses subject to abuse or permanent exposure to the elements.

.2 Do not apply on frozen ground

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 10 years following Substantial Performance of the Work against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: material failing to remain in position and maintain vapour retardance.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Carlisle Coatings & Waterproofing

.2 Grace Construction Products

.3 Stego Industries, LLC.

.4 W.R. Meadows of Canada

.2 Substitution Limitations: This Specification is based on W.R Meadow's Products. Comparable Products from manufacturers listed herein may be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Design and Performance Requirements:

.1 Refer to Section 01 83 16 for additional performance and testing requirements pertaining to the work of this Section.

2.3 MATERIALS

.1 Underslab Vapour Retarder (AVB-2): Sheet membrane, underslab vapour retarder, minimum 0.38 mm (15 mils) thick; complete with manufacturer's approved tape Product for joints.

.1 Ensure vapor retarder meets or exceeds all requirements of ASTM E1745, Class A and has following characteristics:

.1 Water vapour permeance (ASTM E96 or ASTM F1249): ≤0.01 perms.
.2 Puncture resistance (ASTM D1709): ≥2,200 grams.
.3 Tensile strength (ASTM E154): ≥68 lbs force/inch.

.2 Acceptable Products:

.1 "Perminator" by W. R. Meadows of Canada
.2 "Florprufe 120 Vapor Barrier" by Grace Construction Products
.3 "Blackline 400" by Carlisle Coatings and Waterproofing
.4 "Stego® Wrap" Vapor Barrier" by Stego Industries, LLC
.5 or Equivalent to the above.

.3 Seam Tape: High density, polyethylene tape with pressure sensitive adhesive for joints. Minimum width 100 mm (4"). Acceptable Products:

.1 Perminator Tape" by W.R. Meadows
.2 "Preprufe Tape" by Grace Construction Products
.3 "Monobond Tape" by Carlisle
.4 "Stego Tape" by Stego Industries, LLC
.5 or Equivalent to the above.

.2 Pipe Boots: Construct pipe boots from vapour barrier material and pressure sensitive tape, in accordance with manufacturer's instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Examine substrates designated to receive underslab vapour barrier membrane. Notify the Consultant if substrates are not acceptable to the installation of this work. Do not begin surface preparation or application until unacceptable substrates and/or conditions have been corrected.

.2 Evaluation and Assessment: Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Surface Preparation: Prepare substrates in accordance with the manufacturer's recommendations.

3.3 APPLICATION

.1 Installation shall be in accordance with manufacturer's recommendations, reviewed Shop Drawings and the requirements of ASTM E1643.

.2 Unroll membrane with the long dimension parallel with the direction of the concrete pour.

.3 Lap membrane over footings and seal to foundation walls.

.4 Overlap joints in membrane minimum 150 mm (6") and seal with tape.

.5 Seal all penetrations (including pipes) with pipe boots.

.6 No penetration of the membrane shall be permitted, except for reinforcing steel and permanent utilities. Repair damaged areas by cutting patches of membrane, overlapping damaged area minimum 150 mm (6") and taping all four sides.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the building insulation work specified herein. This includes, but is not necessarily limited, to:

.1 board, batt, and loose insulation throughout building, except as specified under other Sections.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

1.8 DELIVERY, STORAGE, AND HANDLING

.1 Delivery and Acceptance Requirements:

.1 Deliver materials to site in original wrappings with labels intact and store in dry areas.

.2 Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

.3 Storage and Handling Requirements:

.1 Store insulation on raised platforms and protect with waterproof covers. Prevent exposure of insulation to sun.

.2 Protect foam-plastic board insulation as follows:

.1 Do not expose to sunlight except to necessary extent for period of installation and concealment.

.2 Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.

.3 Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Extruded-polystyrene (XPS) board insulation (XPS)

.1 DuPont de Nemours Inc.

.2 Owens Corning.

.3 Soprema

.2 Expanded-Polystyrene Board Insulation (EPS):

.1 Plasti-Fab Expanded Polystyrene (EPS) Product Solutions

.2 DiversiFoam Products.

.3 Atlas Roofing Corporation

.3 Fibreglass Insulation:

.1 Johns Manville.

.2 Knauf Insulation.

.3 Owens Corning.

.4 CertainTeed

.4 Mineral-Wool Insulation

.1 Rockwool Inc.

.2 Thermafiber.

.3 Johns Manville.

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Provide insulation and related materials having surface-burning characteristics in accordance with Code requirements tested and inspected by agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

.2 Where combustible insulation or vapour barrier materials are specified herein, comply with applicable Code requirements including supply and installation of approved non-combustible backing and independently supported, non-combustible insulation covering except where these provisions are expressly specified as work of other Sections.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Refer to Drawings for thicknesses of insulation required. This Section establishes insulation and accessory Products and minimum performance criteria which apply to all board, batt, and loose insulation types used throughout this Project. Read and become familiar with insulation requirements of all Sections.

.2 Exterior envelope for this Project is based on design principle of "Rain Screen" as recommended by National Research Council of Canada. This principle requires that construction behind cladding act as an air barrier and vapour retarder to prevent passage of moisture laden air and diffusion of water vapour.

.3 It is part of responsibility of this Section to ensure continuity of the air barrier and vapour retarder system within construction specified herein and with adjacent construction.

.4 Material types (trade names), compatibility, sealing and adhesive qualities for each combination of insulation, adhesive, and substrate encountered in work shall be reviewed for compatibility and suitability prior to commencement of installation.

.5 Provide air sealing to supplement and provide continuity of primary air barrier/vapour retarder assembly including sealing and/or filling of perimeter of door and window openings, crevices, gaps, cracks in walls, roof/wall connections, mechanical and electrical penetrations in walls, floors, roofs, curtain wall mullions, beams, columns enclosures and other similar locations with polyurethane foam seal.

2.4 ACOUSTIC BATT AND SOUND ATTENUATION BLANKETS (INS-1)

.1 CAN/ULC-S702, Type 1 with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per CAN/ULC-S102/S102.2; passing CAN/ULC-S114 for combustion characteristics.

.1 Acceptable Products (Fiberglass):

.1 "EcoTouch™ QuietZone® PINK™ FiberGlas® Acoustical Batts" by Owens Corning Canada LP

.2 "NoiseReducer Sound Attenuation Batts" by CertainTeed.

.3 "Sound-Shield Formaldehyde-Free Fiber glass Insulation" by Johns Manville.

.2 Acceptable Products (Mineral Wool):

.1 "ROCKWOOL AFB evo" by Rockwool (a subsidiary of ROCKWOOL International A/S)

.2 Thermafiber® SAFB™ by Owens Corning/Thermafiber "MinWool Sound Attenuation Fire Batts" by Johns Manville.

.2 Locations: At STC-rated partitions as indicated on Drawings.

2.5 BELOW-GRADE POLYSTYRENE BOARD INSULATION (INS-2)

.1 Following types are acceptable:

.1 Extruded-polystyrene (XPS) board insulation complying with CAN/ULC-S701 Type 4 with following characteristics:

.1 Minimum compressive strength: 210 kPa (30 psi).

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.87 m^2 •°C/W (R5 ft^2 •h•°F/Btu)

.3 Edges: shiplapped (long edges); butt joints (short edges)

.4 Acceptable Products:

.1 "STYROFOAM™ SM" by DuPont de Nemours Inc.

.2 "Cel-Drain®" (drainage layer applications) by Owens Corning Canada LP

.3 Approved equivalent by Soprema.

.2 Graphite-enhanced expanded Polystyrene (EPS) Board Insulation complying with CAN/ULC- Type 3 with following characteristics:

.1 Minimum compressive strength: 210 kPa (30 psi).

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.82 m^2 •°C/W (R4.7 ft^2 •h•°F/Btu)

.3 Acceptable Products:

.1 "ThermalStar X-grade GX 30" by Atlas.

.2 "Ener-span 30" by Plasti-Fab.

.3 Approved equivalent.

.2 Location: At perimeter of foundation wall below grade as indicated on Drawings.

2.6 CONCRETE-FACED POLYSTYRENE BOARD INSULATION (INS-3)

.1 Extruded-polystyrene (XPS) board insulation complying with CAN/ULC-S701 Type 4 laminated to concrete facing with following characteristics:

.1 Insulation:

.1 Minimum compressive strength: 210 kPa (30 psi).

.2 Thermal Resistance per 25 mm (in.): not less than RSI 0.87 m^2 •°C/W (R5 ft^2 •h•°F/Btu)

.3 Edges: tongue and groove

.2 Facing: Minimum 8 mm (5/16 inch) thick glass-fiber-mesh-reinforced concrete panels

.1 Minimum Compressive Strength: 17.93 MPa (2600 psi)

.2 Minimum Flexural Strength: 10.34 MPa (1500 psi)

.3 Acceptable Products:

.1 "WallGuard" by T-Clear Corporation

.2 “Tech Crete Concrete Faced Insulated (CFI) Wall Panels" by Tech-Crete Processors Ltd.;

.3 approved equivalent

.2 Location: At perimeter of foundation wall above grade as indicated on Drawings.

2.7 HIGH DENSITY POLYSTYRENE BOARD INSULATION (INS-4)

.1 Following types are acceptable:

.1 Extruded-polystyrene (XPS) board insulation complying with CAN/ULC-S701 Type 4 with following characteristics:

.1 Minimum compressive strength: 276 kPa (40 psi).

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.87 m^2 •°C/W (R5 ft^2 •h•°F/Btu)

.3 Edges: shiplapped (long edges); butt joints (short edges)

.4 Acceptable Products:

.1 "HIGHLOAD 40" or "HIGHLOAD 60" or "HIGHLOAD 100" by DuPont de Nemours Inc. as required to carry stipulated loads.

.2 “Foamular® NGX C-400” or “Foamular® NGX C-600” or “Foamular® NGX C-1000” by Owens Corning Canada LP as required to carry stipulated loads.

.3 “Sopra-XPS40” or “Sopra-XPS60” by Soprema.

.2 Graphite-enhanced expanded Polystyrene (EPS) Board Insulation complying with CAN/ULC- Type 3 with following characteristics:

.1 Minimum compressive strength: 276 kPa (40 psi).

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.82 m^2 •°C/W (R4.7 ft^2 •h•°F/Btu)

.3 Acceptable Products:

.1 "ThermalStar X-grade GX 40" or "ThermalStar X-grade 60" by Atlas as required to carry stipulated live loads and dead loads.

.2 “Ener-span 40” or “Ener-span 60” by Plasti-Fab as required to carry stipulated live loads and dead loads.

.3 Approved equivalent.

.2 Location: Under slabs-on-grade and other locations as indicated on Drawings.

2.8 CAVITY BOARD INSULATION (INS-6)

.1 Mineral wool (rockwool or slag wool) insulation complying with CAN/ULC-S702 Type 1 or equivalent to ASTM C612; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per CAN/ULC-S102/S102.2; passing CAN/ULC-S114 for combustion characteristics.

.1 Nominal density: 64 kg/cu. m (4 lb/cu. ft.),

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.71 m^2 •°C/W (R4 ft^2 •h•°F/Btu)

.3 Acceptable Products:

.1 "CAVITYROCK" by Rockwool.

.2 "Thermafiber® RainBarrier™" by Owens Corning/Thermafiber

.3 "JM CladStone™ Water & Fire Block Insulation" by Johns Manville

.2 Location: At rain-screen cavity walls as indicated on Drawings.

2.9 CURTAIN WALL BACKPAN INSULATION (INS-7)

.1 Mineral wool (rockwool or slag wool) insulation complying with CAN/ULC-S702 Type 1 or equivalent to ASTM C612; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per CAN/ULC-S102/S102.2; passing CAN/ULC-S114 for combustion characteristics.

.1 Nominal density: 56 kg/cu. m (3.5 lb/cu. ft.),

.2 Thermal Resistance per 25 mm (1 inch): not less than RSI 0.71 m^2 •°C/W (R4 ft^2 •h•°F/Btu)

.3 Acceptable Products:

.1 "Curtainrock" by Rockwool.

.2 " MinWool Curtainwall" by Johns Manville

.3 Approved equivalent

.2 Location: At curtain wall back pans as indicated on Drawings.

2.10 ROOFING INSULATION (CONVENTIONAL) (INS-8)

.1 Refer to Roofing Specifications.

2.11 THERMAL BATT AND BLANKET INSULATION (INS-12)

.1 CAN/ULC-S702, Type 1 with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per CAN/ULC-S102/S102.2; passing CAN/ULC-S114 for combustion characteristics.

.1 Thermal Resistance per 25 mm (in.): not less than RSI 0.71 m^2 •°C/W (R4 ft^2 •h•°F/Btu)

.2 Acceptable Products (Fiberglass):

.1 "EcoTouch® PINK™ FiberGlas® Thermal Batts" by Owens Corning Canada LP. " by Owens Corning Canada LP

.2 "Unfaced Thermal & Sound Control Batts" by Johns Manville

.3 approved equivalent

.3 Acceptable Products (Mineral Wool):

.1 "ROCKWOOL® COMFORTBATT™" by Rockwool (a subsidiary of ROCKWOOL International A/S)

.2 "Thermafiber® UltraBatt™" by Owens Corning/Thermafiber

.3 “Johns Manville TEMPCONTROL” by Johns Manville

.2 Location: At parapets and exterior perimeter walls as indicated on Drawings.

2.12 ACCESSORIES

.1 Adhesive for Bonding Insulation: Product with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

.2 Foamed-in-Place Air Barriers Insulating Foam Sealants: Low expansion, semi-rigid single-component polyurethane sealant, to CAN/ULC-S710 and CAN/ULC-S711; and having the following properties:

.1 Minimum Thermal Resistance (ASTM C518): RSI 0.73 per 25 mm (R4.2 per inch)

.2 Core Density (ASTM D1622): minimum 24.03 kg/m^3 (1.5 pcf).

.3 Fire Resistance (CAN/ULC S102/S102.2): Flame spread < 15, Smoke Developed < 20.

.4 Primer: As recommended by sealant manufacturer.

.5 Acceptable Products:

.1 “Handi-Foam®” by Fomo Products, Inc.;

.2 "GREAT STUFF PRO™ Series" Foam Sealant by DuPont de Nemours Inc.

.3 “Exo LEF” or “ExoAir Flex Foam” by Tremco Incorporated, an RPM company

.3 Air Barrier/Vapour Retarders: As specified in Section 07 27 14.

.4 Insulation Fasteners: High density polyethylene (HDPE) 60 mm (2-3/8 inch) holding diameter washer, zinc plated heat treated carbon steel pins, gas fired direct fasten type, pin depth length to suit insulation thicknesses in accordance with selection chart indicated below.

.1 Acceptable Products: “Ramset T3 Insulfast System” by ITW Construction Products; or approved equivalent by Hilti Inc.

.2 Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated on Drawings and Schedules without damaging insulation, fasteners, and substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Clean substrates of substances harmful to insulation or air/vapor retarders, including removing projections capable of puncturing vapor retarders or of interfering with insulation attachment.

.2 Ensure surfaces to receive adhesive or insulation are dry, firm, straight, and free from loose material, projections, ice, frost, slick, grease, oil or other matter detrimental to bond of adhesive or uniform bedding of insulation.

.3 Maintain surface and ambient temperatures during application and curing of adhesive at temperature recommended by manufacturer of type of adhesive used.

3.3 INSTALLATION - GENERAL

.1 Install materials in accordance with manufacturer's instructions. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

.2 Install insulation to maintain continuity of thermal protection to building elements and spaces as indicated on Drawings. Extend insulation in thickness indicated to envelop entire area to be insulated. Ensure integrity and continuity of insulation at juncture with different types of materials and seal in acceptable manner.

.3 Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed at any time to ice, rain, and snow. Use only insulation panels free from ripped backs or chipped or broken edges.

.4 Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement. Butt joints tightly, offset vertical joints. Stagger joints in row.

.5 Fit insulation tight to electrical boxes, plumbing and heating pipes and ducts, around exterior doors and windows and other projections or openings.

.6 For preformed insulating units, provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

.7 Do not cover insulation and air barrier/vapour retarder installed under this Section or other Sections until it has been reviewed by Consultant.

.8 Leave insulation board joints unbonded over line of expansion and control joints. Bond a continuous 150 mm wide 0.15 mm modified bituminous membrane over expansion and control joints using compatible adhesive and primer before application of insulation.

.9 Provide flexible insulation of equivalent thickness and thermal insulation to fit areas where application of rigid insulation is not possible to provide continuous coverage.

3.4 INSTALLATION OF PERIMETER FOUNDATION INSULATION

.1 On vertical surfaces, set insulation units in adhesive applied according to manufacturer's written instructions. Use adhesive recommended by insulation manufacturer.

.2 Unless otherwise indicated on Drawings to extend to footings, extend insulation a minimum of 1200 mm (48 inches) below exterior grade line/finished floor.

.3 Protect below-grade insulation on vertical surfaces from damage during backfilling by using 6 mm (1/4") thick pressure treated plywood or fibre-reinforced cement flat panels with joints butted. Set in adhesive according to insulation manufacturer's written instructions.

3.5 INSTALLATION OF UNDER-SLAB INSULATION

.1 On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions, on level compacted fill.

.2 Unless otherwise indicated on Drawings to extend for entire surface of slabs, extend insulation a minimum of 1200 mm (48 inches) from foundation wall.

.3 Protect top surface of horizontal insulation from damage during concrete work by applying protection course with joints butted.

3.6 INSTALLATION OF CAVITY-WALL INSULATION:

.1 Foam-plastic board insulation:

.1 On units of foam-plastic board insulation, install pads of adhesive spaced approximately 24 inches (610 mm) o.c. both ways on inside face, and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates indicated.

.2 Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and as specified in Section 04 05 19.

.3 Seal joints between foam-plastic insulation units by applying adhesive, mastic, tape, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.

.2 Semi-rigid Mineral-fiber insulation:

.1 Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill cavity, provide lengths that will produce a snug fit between ends.

.2 Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.

.3 Maintain 76 mm (3 inch) clearance of insulation around recessed lighting fixtures.

.3 Spandrel Insulation:

.1 Retain insulation in place by metal clips and straps or integral pockets within frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place without touching spandrel glass. Maintain cavity width of dimension indicated between insulation and glass.

.2 Install insulation where it contacts perimeter fire-containment system to prevent insulation from bowing under pressure from perimeter fire-containment system.

3.7 BATT INSULATION

.1 Install batt or roll insulations where indicated on Drawings. Fit batt between framing and press firmly into place. Butt tightly at joints, free of gaps.

3.8 MISCELLANEOUS APPLICATIONS

.1 Stuff glass-fiber or mineral wool loose-fill insulation into miscellaneous voids and cavity spaces where shown. Compact to approximately 40% of normal maximum volume.

.2 Insulation Behind Electrical, Mechanical and Plumbing Items:

.1 Insulate behind pipes, ducts, electric conduits and outlets or junction boxes. Cut insulation to fit around and behind obstructions and non-standard spaces.

.2 Behind Convectors: Apply insulation boards on wall with adhesive and impale over 4 insulation clips per 600 mm x 1200 mm (2 feet x 4 feet) board.

.3 Ensure areas exposed to outside air are insulated.

.3 Foamed In Place Air Barrier Sealants:

.1 Apply foamed-in-place air barrier sealants in strict accordance with manufacturer's installation guidelines. Conform to CAN/ULC-S710.2.

.2 Use one-component foam for cracks or openings 6 mm (1/4 inch) to 50 mm (2 inch) wide. Use two- component foam sealant for gaps over 50 mm (2 inch) wide, and for voids in hidden cavities.

.3 Install air seal insulating foam sealants materials to OBC requirements in accordance with manufacturer's instructions and acceptable to authorities having jurisdiction and Consultant to provide required air seal.

.4 Apply sealants within recommended application temperature ranges. Consult manufacturer when sealants cannot be applied within specified ranges.

.5 Seal following areas to Provide continuity of air barrier/vapour retarder for this Project:

.1 At Penetrations.

.2 At roof/wall junctions

.3 At window perimeters (heads, jambs and sills) in walls, parapets and at columns as applicable.

.4 At exhaust vents and soffits.

.5 At roof scuppers and other mechanical equipment located on roof.

.6 At penetrations made vertically through floors or horizontally through walls.

.7 At Intervals in cavity walls to achieve compartmentalization.

.8 In masonry, curtain wall systems and at metal panel interface locations.

.9 At door heads, jambs and thresholds.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the impermeable air barriers work specified herein. This includes, but is not necessarily limited, to:

.1 self-adhering, vapour impermeable, sheet air barriers.

.2 fluid-applied, vapour impermeable membrane air barriers.

.3 auxiliary materials and accessories required for a complete air barrier assembly installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 Air barrier Material: A primary material that controls the movement of air into and out of a building.

.2 Air barrier Accessory: the materials or products which are used to connect different air barrier materials to form a continuous air barrier assembly.

.3 Air barrier Assembly: a collection of air barrier materials (ie. self-adhered sheet air barriers, liquid applied membranes, medium density sprayed polyurethane foam, mechanically fastened commercial building wraps and boardstock air barriers) and air barrier accessories (ie. sealants, tapes and transition membranes) assembled together to form a continuous barrier to air infiltration into the environmental separator.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Agenda: As a minimum, discuss the following:

.1 sequence of construction, coordination with substrate preparation, air barrier materials approved for use, compatibility of materials, coordination with installation

of adjacent and covering materials, air leakage and bond testing, protection of installed materials and details of construction.

.2 Sequencing:

.1 Sequence work to permit installation of materials in conjunction with related materials and seals.

.2 Do not install air barrier material before the roof assembly has been sufficiently installed to prevent a buildup of water in the interior of the building.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00. As a minimum, indicate the following:

.1 locations and extent of air barrier assemblies and details of all typical conditions,

.2 intersections with other envelope assemblies and materials,

.3 membrane counter-flashings,

.4 complete details showing how gaps in construction will be bridged, treatment of inside and outside corners, and sealing of miscellaneous penetrations such as conduits, pipes, electric boxes and similar items.

.5 Include details of interfaces with other materials that form part of air barrier.

.4 Product Certificates: Submit certificates from air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with air barrier.

.5 Manufacturer's Instructions: submit manufacturer's installation instructions and special handling criteria, installation sequence, and cleaning procedures.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.3 Manufacturer shall have a program of continuous quality management implemented conforming to the requirements of ISO 9001 or similar equivalent system. Submit proof of certification upon request.

.4 Ensure manufacturer has sufficient production capacity, organized quality control and testing procedures, and published written and illustrated installation manuals to produce and properly install assemblies required without causing delay in progress of the Work.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mockups: Build mockups to set quality standards for materials and execution and for preconstruction testing.

.1 Build integrated mockups of exterior wall assembly, 10 sq. m (100 sq. ft.) incorporating backup wall construction, cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, and sealing of gaps, terminations, and penetrations of air-barrier assembly.

.1 Coordinate construction of mockups to permit inspection by Owner's testing agency of air barrier before external insulation and cladding are installed.

.2 Include junction with roofing membrane, building corner condition, and foundation wall intersection.

.3 If Consultant determines mockups do not comply with requirements, reconstruct mockups and apply air barrier until mockups are approved.

.2 Review of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Consultant specifically approves such deviations in writing.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle materials in accordance with manufacturer's written instructions.

.2 Avoid spillage: immediately notify Consultant if spillage occurs and start clean up procedures.

.3 Clean spills and leave area as it was prior to spill.

.4 Remove and replace liquid materials that cannot be applied within their stated shelf life.

.5 Protect stored materials from direct sunlight.

1.9 FIELD CONDITIONS

.1 Environmental Limitations:

.1 Install air barrier within range of ambient and substrate temperatures, and moisture content recommended by material manufacturer.

.2 Protect substrates from environmental conditions that affect air barrier performance.

.3 Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

.4 Do not leave membrane exposed to sunlight/UV for more than 30 days, unless otherwise recommended by manufacturer.

.2 Maintain temperature and humidity recommended by materials manufactures before, during and after installation.

1.10 WARRANTY

.1 Material Warranty: Provide material manufacturer's standard product warranty, for a minimum of five years from date of Substantial Performance of the Work.

.2 Installation Warranty: Provide a five-year installation warranty from date of Substantial Performance of the Work, including all materials of the air barrier assembly, against failures including loss of airtight seal, loss of watertight seal, loss of attachment, loss of cohesion/adhesion and failure to cure properly.

.3 Warranty: include coverage of installed materials which fail to achieve airtight and watertight seal; exhibit loss of adhesion or cohesion.; or do not cure.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Self-adhering Sheet Air Barriers:

.1 3M Canada

.2 Carlisle Coatings & Waterproofing Inc.

.3 GCP Applied Technologies Inc.

.4 Henry Company

.5 IKO Industries Ltd

.6 Lexcor.

.7 Soprema Inc.

.8 Tremco Canada;

.9 W.R. Meadows Inc., Canada

.2 Fluid-Applied Air Barriers:

.1 GCP Applied Technologies Inc.

.2 Henry Company

.3 Soprema Inc.

.4 Tremco Canada;

.5 W.R. Meadows Inc., Canada

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Provide air-barrier assembly and seals with adjacent construction that can perform as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies must be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

.2 Air Leakage Criteria (system): air leakage of air barrier assembly must not to exceed 0.2 L/(s·m^2) under a pressure differential of 75 Pa (0.04 cfm/ft2 @ 1.57 psf) when tested in accordance with CAN/ULC S742 (Minimum A1).

.3 Unless specifically noted otherwise, air barrier materials specified herein must be impermeable and must have maximum water vapour transmission not exceeding 5.72 ng/s.m^2.Pa (0.10 perms) when tested in accordance with ASTM E96 (Method B).

.4 Ensure assembly can accommodate movements of building materials by providing expansion and control joints as required. Provide appropriate accessory materials to accommodate expansion / control joints, changes in substrate and perimeter conditions at such locations.

.5 Ensure air barrier assembly is capable of withstanding combined design wind, fan and stack pressures (positive and negative) on building envelope without damage or displacement, and transfer required loads to structure.

.6 Join air barrier assembly in airtight and flexible manner to the air barrier materials of adjacent assemblies, allowing for relative movement of assemblies due to thermal and moisture variations, creep, and anticipated seismic movement as applicable.

.7 Connections to Adjacent Materials: Provide air barrier accessory materials to prevent air leakage at the following locations:

.1 Foundation and walls, including penetrations, ties and anchors.

.2 Walls, windows, curtain walls, storefronts, louvers and doors.

.3 Different assemblies and fixed openings within those assemblies.

.4 Wall and roof connections.

.5 Floors over unconditioned space.

.6 Walls, floor and roof across construction, control and expansion joints.

.7 Walls, floors and roof to utility, pipe and duct penetrations.

.8 Seismic and expansion joints.

.9 All other potential air leakage pathways in the building envelope.

.8 Unless otherwise noted, it is responsibility of this Section to Provide and maintain continuity of air seal to adjacent dissimilar materials. Provide materials to ensure positive support and continuity of air barrier.

.9 Material Compatibility:

.1 Ensure compatibility between various types of air barriers and other interfacing materials. Select combination of base materials, transition, bridging and reinforcing membranes, adhesives and accessories from various materials specified in this Section, so that when cured, they are compatible and give bonding characteristics equivalent to shear strength of selected air barrier materials used.

.2 Do not allow air barrier materials to come in contact with chemically incompatible materials.

2.3 IMPERMEABLE AIR BARRIER (AVB-1)

.1 Self-adhering Type: Minimum 1.0-mm- (40-mil-) thick, self-adhering sheet consisting of rubberized asphalt laminated to cross-laminated polyethylene film with release liner on adhesive side and formulated for application with primer that complies with VOC limits of authorities having jurisdiction OR Minimum 0.25-mm- (10-mil-) thick, self-adhering sheet consisting of elastomeric air-barrier film and minimum 0.13-mm- (5-mil-) thick, acrylic adhesive with release liner on adhesive side.

.1 Physical and Performance Properties:

.1 Air Permeance: Maximum 0.02 L/s x sq. m of surface area at 75-Pa (0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft.) pressure difference; CAN/ULC S741.

.2 Resistance to Puncture: Minimum 180 N (40 lbf); ASTM E154.

.3 Tensile Strength: Minimum 3.5 N/mm (20 lbs/inch); ASTM D882.

.4 Water Resistance: Minimum 550 mm; AATC 127.

.5 Peel Strength: Minimum 0.875 N/mm (5 lbs/inch); ASTM D903.

.6 Lap Adhesion: Minimum 0.875 N/mm (5 lbs/inch); ASTM D1876.

.7 Pull Adhesion: Minimum 110 kPa (16 psi) or substrate failure; ASTM D4541.

.8 Tear Propagation: Minimum 40 N (8.9 lbf); ASTM D4073

.9 Self-Sealability: Pass; ASTM D1970

.10 Crack Bridging: Pass at -26 deg C (-14.8 deg F)

.11 Low Temperature Flexibility: Pass at -30 deg C (-22 deg F)

.12 Ultimate Elongation: Minimum 200 percent; ASTM D412, Die C.

.13 Water Absorption: Maximum 0.15 percent weight gain after 48-hour immersion at 21 deg C (70 deg F); ASTM D570.

.14 Vapour Permeance: Maximum 2.9 ng/Pa x s x sq. m (0.05 perm); ASTM E96/E 96M (Method B).

.2 Acceptable Products:

.1 “Blueskin SA” by Henry Company

.2 “AquaBarrier™ AVB AIR & VAPOUR BARRIER” by IKO Industries Ltd.

.3 “CCW-705” by Carlisle Coatings & Waterproofing Inc.

.4 “ExoAir 110/110LT” by Tremco Incorporated, an RPM company

.5 “Perm-A-Barrier Wall Membrane” by GCP Applied Technologies Inc.

.6 “Air-Shield” by W.R. Meadows Inc., Canada.

.7 “Sopraseal Stick 1100T” by Soprema Inc.

.3 Acceptable Primerless Products:

.1 “LexShield SA” by Lexcor.

.2 “Self-Adhered Air and Vapor Barrier Membrane 3015" by 3M Canada

.2 Fluid-Applied Type: Elastomeric, modified bituminous or synthetic polymer membrane.

.1 Physical and Performance Properties:

.1 Air Permeance: Maximum 0.02 L/s x sq. m of surface area at 75-Pa (0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft.) pressure difference; CAN/ULC S741.

.2 Water Resistance: Minimum 550 mm; AATC 127.

.3 Pull Adhesion: Minimum 110 kPa (16 psi) or substrate failure; ASTM D4541.

.4 Self-Sealability: Pass; ASTM D1970

.5 Crack Bridging: Pass at -26 deg C (-14.8 deg F)

.6 Vapour Permeance: Maximum 5.72 ng/Pa x s x sq. m (0.1 perm); ASTM E96/E 96M (Method B).

.7 Ultimate Elongation: Minimum 500 percent; ASTM D412, Die C.

.2 Acceptable Products:

.1 “Air-Bloc 06 WB or “Air-Bloc 32MR” by Henry Company

.2 “Air-Shield LM” by W.R. Meadows Inc., Canada

.3 “ExoAir 120SP/R” by Tremco Incorporated, an RPM company

.4 "Sopraseal LM203" by Soprema Inc.

.5 “Perm-A-Barrier NPL 10” by GCP Applied Technologies Inc.

2.4 ACCESSORY MATERIALS

.1 Accessory materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier membrane.

.2 Primer: Liquid waterborne or solvent-borne primer recommended for substrate by air-barrier material manufacturer.

.3 Counterflashing Strip (for metal flashings): Modified bituminous 1.0-mm- (40-mil-) thick, self-adhering sheet consisting of 0.8 mm (32 mils) of rubberized asphalt laminated to an 0.2-mm- (8-mil-) thick, cross-laminated polyethylene film with release liner backing.

.4 Butyl Strip (for termination at TPO with PVC, EPDM or non-compatible single ply roofing membranes): Vapour retarding, 0.76 to 1.0 mm (30 to 40 mils) thick, self-adhering; polyethylene-film-reinforced top surface laminated to layer of butyl adhesive, with release liner backing.

.5 Modified Bituminous Strip (for termination at compatible roofing membranes): Vapour retarding, 1.0 mm (40 mils) thick, smooth surfaced, self-adhering; consisting of 0.9 mm (36 mils) of rubberized asphalt laminated to a 0.1-mm- (4-mil-) thick, cross-laminated polyethylene film with release liner backing.

.6 Termination Mastic: Air-barrier manufacturer's standard cold fluid-applied elastomeric liquid; trowel grade.

.7 Substrate-Patching Membrane: Manufacturer's standard trowel-grade substrate filler.

.8 Adhesive and Tape: Air-barrier manufacturer's standard adhesive and pressure-sensitive adhesive tape.

.9 Stainless-Steel Sheet: ASTM A240/A 240M, Type 304, 0.5 mm (0.0187 inch) thick, and Series 300 stainless-steel fasteners.

.10 Sprayed Polyurethane Foam Sealant (for filling gaps, penetrations and openings): One- or two-component, foamed-in-place, polyurethane foam sealant, 24- to 32-kg/cu. m (1.5- to 2.0-lb/cu. ft.) density; flame-spread index of 25 or less according to ASTM E162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

.1 Acceptable Products:

.1 “Handi-Foam®” by Fomo Products, Inc.;

.2 "GREAT STUFF PRO™ Series" Foam Sealant by DuPont de Nemours Inc.

.3 “Exo LEF” or “ExoAir Flex Foam” by Tremco Incorporated, an RPM company

.11 Sealing and Termination Materials at Windows, Doors, Curtain Walls and Similar openings:

.1 Preformed Silicone-Sealant Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

.2 Basis-of-Design: “Proglaze ETA” by Tremco Canada or approved equivalent as follows:

.1 “DOWSIL STS Silicone Transition Strip and System” by Dow Chemical of Canada ULC

.2 “Sil-Span” by Pecora Corporation

.12 Joint Sealant: ASTM C920, single-component, neutral-curing silicone; Class 100/50 (low modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Section 07 92 00, Joint Sealants.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.

.3 Verify that concrete has cured and aged for minimum time period recommended by manufacturer.

.4 Verify that concrete is visibly dry and free of moisture.

.5 Verify that masonry joints are flush and completely filled with mortar.

.2 Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

.1 Clean, prepare, and treat substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

.2 Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

.3 Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

.4 Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

.5 Remove excess mortar from masonry ties, shelf angles, and other obstructions.

.6 Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.

.1 Install modified bituminous strips or other tapes approved by manufacturer and center over treated construction and contraction joints and cracks exceeding a width of 1.6 mm (1/16 inch).

.7 Bridge and cover isolation joints, expansion joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with overlapping modified bituminous strips or other tapes approved by manufacturer.

.8 At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

.9 Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 INSTALLATION – GENERAL

.1 Continuously connect, seal and tie primary air barrier material into vertical and horizontal planes of the following materials:

.1 roof air barrier,

.2 concrete below-grade structures,

.3 windows and exterior doors,

.4 curtain wall,

.5 storefront,

.6 louvers,

.7 exterior doors, and

.8 other intersection conditions.

3.4 INSTALLATION OF SELF-ADHERING SHEETS

.1 Install self-adhering sheets and accessory materials according to air-barrier manufacturer's written instructions and according to recommendations in ASTM D6135.

.1 When ambient and substrate temperatures range between minus 4 and plus 5 deg C (25 and 40 deg F), install self-adhering, modified bituminous air-barrier sheet produced for low-temperature application. Do not install low-temperature sheet if ambient or substrate temperature is higher than 16 deg C (60 deg F).

.2 Corners: Prepare, prime, and treat inside and outside corners according to ASTM D6135.

.1 Install modified bituminous strips or other flashing tapes approved by manufacturer centered over vertical inside corners. Install 19-mm (3/4-inch) fillets of termination mastic on horizontal inside corners.

.3 Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations with termination mastic and according to ASTM D6135.

.4 Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier sheet on same day. Reprime areas exposed for more than 24 hours.

.1 Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

.5 Apply and firmly adhere self-adhering sheets horizontally over area to receive air barrier. Accurately align sheets and maintain uniform lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure airtight installation.

.1 Apply membrane sheets such that they shed water naturally without interception by a sheet edge, unless edge is sealed with termination mastic as specified in this Section. Install successive courses of membrane and provide minimum following overlaps:

.1 End laps: minimum 150 mm (6 inches)

.2 Side laps: aligned at 75 mm (3 inches)

.3 Roll all membrane seams with roller.

.6 Apply continuous self-adhering sheets over modified bituminous strips or other flashing tapes approved by manufacturer bridging substrate cracks, construction, and contraction joints.

.7 Concrete Masonry Units: Install air-barrier sheet horizontally against the CMU beginning at base of wall. Align top edge of air-barrier sheet immediately below protruding masonry ties or joint reinforcement or ties, and firmly adhere in place.

.1 Overlap horizontally adjacent sheets a minimum of 50 mm (2 inches) and roll seams.

.2 Apply overlapping sheets with bottom edge slit to fit around masonry reinforcing or ties. Roll firmly into place.

.3 Seal around masonry reinforcing or ties and penetrations with termination mastic.

.4 Continue the membrane into all openings in the wall, such as doors and windows, and terminate at points to maintain an airtight barrier that is not visible from interior.

.8 Seal top of through-wall flashings to air-barrier sheet with an additional 150-mm- (6-inch-) wide, counterflashing strip.

.9 Seal exposed edges of sheet at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

.10 Install air-barrier sheet and accessory materials to form a seal with adjacent construction and to maintain a continuous air barrier.

.1 Coordinate air-barrier installation with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.

.2 Install compatible strip on roofing membrane or base flashing so that a minimum of 75 mm (3 inches) of coverage is achieved over each substrate.

.11 Connect and seal exterior wall air-barrier membrane continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

.12 Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply preformed silicone-sealant extrusion so that a minimum of 75 mm (3 inches) of coverage is achieved over each substrate. Maintain 75 mm (3 inches) of full contact over firm bearing to perimeter frames with not less than 25 mm (1 inch) of full contact.

.1 Preformed Silicone-Sealant Extrusion: Set in full bed of silicone sealant applied to walls, frame, and membrane.

.13 Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, doors, and miscellaneous penetrations of air-barrier membrane with foam sealant.

.14 At end of each working day, seal top edge of air-barrier material to substrate with termination mastic.

.15 Apply joint sealants forming part of air barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

.16 Repair punctures, voids, and deficient lapped seams in air barrier. Slit and flatten fishmouths and blisters. Patch with air-barrier sheet extending 150 mm (6 inches) beyond repaired areas in all directions.

.17 Install transition membranes where required by design or construction sequence.

.18 Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.5 FLUID-APPLIED MEMBRANE INSTALLATION

.1 Joint Treatment:

.1 Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D4258 before coating surfaces.

.1 Prime substrate and apply a single thickness of air-barrier manufacturer's recommended preparation coat extending a minimum of 75 mm (3 inches) along each side of joints and cracks. Apply a double thickness of fluid air-barrier material and embed a joint reinforcing strip in preparation coat.

.2 Gypsum Sheathing: Fill joints greater than 6 mm (1/4 inch) with sealant according to ASTM C1193 and air-barrier manufacturer's written instructions. Apply first layer of fluid air-barrier material at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air-barrier material over joint reinforcing strip.

.3 Transition Strips: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

.4 Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.

.5 Install termination strip on roofing membrane or base flashing so that a minimum of 75 mm (3 inches) of coverage is achieved over each substrate.

.6 Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.

.7 Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

.8 Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

.9 At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

.10 Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

.11 Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply preformed silicone-sealant extrusion so that a minimum of 75 mm (3 inches) of coverage is achieved over each substrate. Maintain 75 mm (3 inches) of full contact over firm bearing to perimeter frames with not less than 25 mm (1 inch) of full contact.

.1 Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.

.12 Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

.13 Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

.14 Seal top of through-wall flashings to air barrier with an additional 150-mm- (6-inch-) wide, termination strip.

.15 Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

.16 Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 150 mm (6 inches) beyond repaired areas in strip direction.

.2 Application:

.1 Apply fluid air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.

.2 Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.

.3 Apply a continuous unbroken air-barrier membrane to substrates in dry film thickness as recommended in writing by manufacturer to meet performance requirements, but not less than 1.0-mm (40-mil) dry film thickness, applied in one or more equal coats as recommended by manufacturer.

.4 Apply air-barrier membrane in full contact around protrusions such as masonry ties.

.5 Apply strip and transition strip over cured air-barrier material overlapping 75 mm (3 inches) onto each surface according to air-barrier manufacturer's written instructions.

.6 Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.6 CLEANING AND PROTECTION

.1 Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

.1 Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than 30 days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.

.2 Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

.2 Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

Deleted through ADD#8

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the preformed metal cladding system work specified herein. This includes, but is not necessarily limited, to:

.1 preformed metal panels for rooftop screens and enclosures

.2 miscellaneous framing components,

.3 related trims and extrusions, including but not limited to flashings, splicers, end caps, trims and closures,

.4 transitions and connections between air barrier/vapour retarder membranes.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Unless otherwise stipulated by a specific publication date in this Section or the Ontario Building Code, the latest published editions of reference standards in force as of the Bid Closing Deadline for the Project, including adopted amendments, are applicable.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Review methods and procedures related to preformed metal panel installation, including manufacturer's written instructions.

.3 Examine support conditions for compliance with requirements of Contract Documents, including alignment between and attachment to structural members.

.4 Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect preformed metal panels.

.5 Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

.6 Review temporary protection requirements for preformed metal panel assembly during and after installation.

.7 Review procedures for repair of panels damaged after installation.

.8 Document proceedings, including corrective measures and actions required, and Supply copy of record to each participant.

.2 Coordination:

.1 Coordinate metal panel assemblies with air barrier/vapour retarder, rain drainage work, flashing, trim, and construction of girts, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

.2 Coordinate with related trades to maintain continuity of building air barrier/vapour retarder system at locations including but not limited to roofing, cladding and building openings.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Ensure Shop Drawings show fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, supports and anchorages, attachment system, insulation type and thickness, trim, flashings, air seals, closures, and accessories; and special details including paths of pressure equalization and cavity drainage.

.2 Distinguish between factory, shop, and field-assembled work.

.3 Show provisions for structural and thermal movement between metal cladding and adjacent materials.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples:

.1 Manufacturer’s colour charts or chips illustrating full range of colours, finishes and textures.

.2 300 mm x 300 mm (12 inch x 12 inch) aluminum composite panel in thickness specified, including clips, anchors, supports, fasteners, closures and other panel accessories necessary for assembly.

.3 300 mm (12 inch) each of extruded and formed trims.

.5 Engineering Data:

.1 Submit engineering data substantiating that specified structural requirements of the metal cladding assembly meet minimum requirements of CSA S136.

.2 Submit design calculations signed and sealed by professional engineer registered in the province of Ontario, attesting to ability of preformed metal cladding system to withstand specified design loads including inward and outward pressures under fastenings to structure.

.6 Sample Warranties: Submit samples of extend warranties specified in this Section.

.7 Certificates:

.1 Submit written certification from manufacturer that the Products, systems, and assemblies have been installed in accordance with manufacturer's requirements.

.8 Maintenance Data:

.1 Provide maintenance data for cleaning and maintenance of aluminum finishes for incorporation into manual specified in Section.

.2 Submit instructions for touch-up, repair and removal of panels.

.9 Extra Materials: Submit sealed can of touch-up paint (minimum 1 l), properly identified for each panel colour provided.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Welding: Companies engaged in welding must be certified by Canadian Welding Bureau to CSA W47.1. Companies are to have welding procedures approved and welders qualified for base material types and thicknesses that are to be welded.

.4 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.1 Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship and displaying typical connections of the Project. Modify site mock-up detailing if necessary in accordance with Consultant's review.

.2 Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.3 Reviewed Mock-ups may form part of finished Work if left undisturbed at time of Substantial Performance of the Work

.5 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 **[Submit certificate validating seismic assessment and field review of this part of the Work].**

1.8 DELIVERY, STORAGE AND HANDLING

.1 Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.

.2 Protect finish and edges using a plastic film adhered to panel in accordance with panel manufacturer's recommendations. Retain strippable protective covering on preformed metal panels during installation.

.3 Deliver components, preformed metal panels, and other manufactured items so as not to be damaged or deformed. Package preformed metal panels for protection during transportation and handling.

.4 Unload, store, and erect preformed metal panels in a manner to prevent bending, warping, twisting, and surface damage.

.5 Stack preformed metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store preformed metal panels to ensure dryness, with positive slope for drainage of water. Do not store preformed metal panels in contact with other materials that might cause staining, denting, or other surface damage.

1.9 FIELD CONDITIONS

.1 Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of preformed metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 WARRANTY

.1 Warrant work of this Section against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

.1 Materials and Installation: for period of 5 years from date of Substantial Performance of the Work. Defects include but are not limited to; buckling, opening of seams, and structural failure.

.2 Panel Finish: for period of 30 years from date of Substantial Performance of the Work. Defects include but are not limited to: discoloration, finish peeling, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Agway Metals Inc.;

.2 Morin; a Kingspan Group company;

.3 Vicwest;

.4 West-Form Metals;

.2 Substitution Limitations: This Specification is based on Vicwest's Products.

.3 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 System Fire Propagation Characteristics: Provide preformed metal panel system tested in accordance with CAN/ULC-S134 by an independent testing organization and approved for use in non-combustible construction.

.2 Panel Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with CAN/ULC S102/S102.2 (subject to approval by Authorities Having Jurisdiction).

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Provide sheet steel cladding wall panels conforming to requirements of CSSBI 20M.

.3 Design, fabricate and install cladding system to prevent excessive condensation interior of wall when mechanical systems are functioning under designed operating conditions.

.4 Ensure systems provided include attachment, insulation, air barrier/vapour retarder systems, necessary framing and suspension systems to support and anchor panel systems from concrete and/or metal structural framework.

.5 Rain Screen Principle:

.1 Design exterior envelope cladding systems based on Rain Screen Principle advocated by NRCC and Provide for drainage of water entering building envelope wall systems.

.2 Design for compartments at corners to achieve appropriate pressure equalization in exterior cladding system.

.3 Provide gaskets, baffles, overlaps, seals and compartmentalization where required to achieve appropriate pressure equalization in exterior envelope cavity wall design. Maintain integrity of continuous air barrier/vapour retarder system with adjacent surrounding air barrier/vapour retarder.

.4 Incorporate means of draining moisture to exterior. Design drainage system to provide clear, internal paths of drainage of any trapped moisture within construction to exterior. Ensure weep water discharges in a manner that avoids staining of architectural finishes, collecting in puddles or formation of icicles.

.6 Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads in accordance with requirements of Ontario Building Code, and CAN/CSA-S136:

.1 Determine specified loads, principal and companion load factors, building importance category, and load distributions in accordance with requirements of Ontario Building Code.

.1 Wind Loads: Determined in accordance with OBC requirements for geographical location of project, with 1 in 50 year return probability, but not less than 0.9 kPA (20 psf) positive, and 0.5 kPA (12 psf) negative.

.2 Design steel cladding components to be adequately interconnected and adequately fastened to structural supports to sustain loads.

.3 Design expansion joints to accommodate movement in cladding and between cladding and structure to prevent permanent distortion or damage to the cladding.

.4 Design wall system to maintain the following erection tolerances.

.1 Maximum variation from plane or location shown on shop drawings: 20 mm in 10 m (3/4 inch in 30 feet).

.2 Maximum offset from true alignment between two adjacent members abutting end to end in line: 1 mm (0.04 inches).

.5 Deflection of sheet steel cladding components due to uniformly distributed specified loads (eg. wind, snow) shall not exceed L/180.

.6 Wherever structural framing permits, and subject to reasonable limitations for handling, design and fabricate cladding to span continuously over at least four structural supports (three spans).

.7 Design cladding to accommodate thermal movement caused by ambient temperature range in accordance with OBC requirements and to suit Project location, without causing noise, buckling, failure of joint sealants, undue stress on metal members and fasteners, of operating units, reduction of performance, and other detrimental effects.

.1 Thermal Movements: Provide assemblies that allow for thermal movements resulting from following maximum changes (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components and other detrimental effects:

.1 Temperature Change (range): 67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces.

.8 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of OBC and CAN/CSA S832.

2.4 MATERIALS

.1 Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet; minimum Grade 230 complying with ASTM A653/A 653M, Z275 (G90) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A 792M, Class AZM150 (Class AZ50) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A 755M.

2.5 PREFORMED METAL WALL PANELS - CONCEALED-FASTENERS (MP-#)

.1 Provide factory-formed metal panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.

.2 Provide flush-profile, concealed-fastener metal wall panels with following characteristics:

.1 Location: Rooftop Mechanical Screens and Equipment Enclosures

.2 Panel Coverage: 300 mm (11-13/16 inches)

.3 Panel Height: 40 mm (19/16 inch)

.4 Nominal Thickness: As determined by Project-specified loadings, not less than 0.86 mm (22 ga - 0.034 inch)

.5 Steel Structure Supports: Refer to Structural.

.6 Acceptable Products:

.1 "AD300R – Perforated" by Vicwest; or approved equivalent.

.2 "HF-12 (Ribbed)" by Agway Metals.

.3 Approved Equivalent.

.3 Exterior Finish: Siliconized Polyester system consisting of epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.005 mm (0.2 mil) for primer and 0.02 mm (0.8 mil) for topcoat.

.1 Basis-of-Design: "WeatherXL" by Vicwest or approved equivalent.

.2 Colour: Minimum of two colours to be selected by Consultant from manufacturer's full range.

2.6 AUXILIARY MATERIALS

.1 Miscellaneous Metal Subframing and Furring: Sub-Girts, Z-bars etc., ASTM C645, Manufacturer's standard C- or Z-shaped sections, conforming to ASTM A653M, Grade A Zinc coating to Z275 (G90) designation. Transfer grid may be hat bars, Z-bars, adjustable Z-bars or combination of clip and Z-bar.

.1 Minimum thickness: 1.219 mm (18 ga.).

.2 Material visible after assembly of panel shall be finished to match panels.

.2 Miscellaneous Steel Shapes including Plate and Hollow Sections: CSA G40.21, Grade 300W, or ASTM A36M complete with shop applied primer of either CPMA/CISC 1-73 or CGSB 1-GP-140M.

.3 Extrusions and extrusion clips for attaching panels to substructure: purpose made aluminum. Install a separator between extrusions and sub-girts.

.4 Thermally-Broken Sub-framing: Low-conductivity thermally-broken, intermittent structural attachment insulation clips designed maintain insulation effectiveness, with adjustable depth and suitable for vertical and horizontal sub-girts.

.1 Acceptable Products:

.1 "ISO Clip" by Northern Facades Ltd.

.2 "Cascadia Clip" by Cascadia Windows

.3 "TClip Thermally Broken Façade Substructure" by Engineered Assemblies

.4 "NVelope NV1 Cladding Attachment System" by SFS Group.

.5 Approved equivalent.

.5 Panel Accessories:

.1 Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of preformed metal panels unless otherwise indicated.

.2 Provide flashing and trim formed from same material as preformed metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent preformed metal panels.

.3 Match material, gauge thickness and finish of metal panels, unless otherwise indicated.

.6 Field Touch-Up Paint: of same colour as exterior panel and as recommended by manufacturer.

.7 Isolation Coating: Bituminous paint, alkali-resistant bituminous paint or epoxy resin solution to Provide dielectric separation which will dry to be tack-free and withstand high temperatures. Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

.8 Sealants: ASTM C920, conforming to Section 07 92 00 as recommend by manufacturer.

.9 Fasteners: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

.1 Exposed fasteners: Series 300 stainless steel and nylon colour coated head to match substrate colour.

.2 Concealed fasteners: stainless steel Type 304 screws in accordance with manufacturer's recommendations.

.10 Miscellaneous Splicers, End Caps, Trims and Closures:

.1 Provide components required for a complete metal panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items.

.2 Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers.

.3 Match material, gauge thickness and finish of metal wall panels, unless otherwise indicated.

.4 Ensure items are galvanized in accordance with ASTM A653/A653M with minimum Z275 (G90) coating.

2.7 FABRICATION

.1 Prior to commencement of fabrication, obtain Consultant's final approval of colours. Fabricate to manufacturer's standard assembly line production methods, incorporating unique conditions of this Project.

.2 Fabricate metal panels for designated façade and trim sections to profiles and patterns indicated. Manufacture panels from sufficiently thick material in combination with backing and/or reinforcing to produce metal cladding required to suit design requirements indicated on Drawings. Fabricate all components of system in factory and ready for field installation.

.3 Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

.4 Carry out complete fabrication including welding, grinding, punching and like to finish Work. Make welds clean, sound and solid, free from defects. Grind smooth, free from marks.

.5 Finished cladding shall be free from visible defects and accurately manufactured to dimensions of reviewed Shop Drawings.

.6 Fabricate metal panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.

.7 Make connections rigid and fail-safe wherever practicable, and make completely concealed.

.8 Fabricate all flashing pieces associated with and in contact with wall panel system. Use same sheet stock as exposed face sheets, pre-finished to match.

.9 Include cold rolled framing, furring, brackets, clips, hangers and incidental components as required for secure fastening and Provide weathertight installation including non-corrosive fasteners.

.10 Consider condensation and allow for inner wall drainage at sill members and other shapes which would otherwise tend to trap water.

2.8 FINISHES

.1 Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

.2 Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

.3 Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.013 mm (0.5 mil).

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by preformed metal wall panel manufacturer.

.3 Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by preformed metal wall panel manufacturer.

.4 Notify Consultant in writing of any conditions which would be detrimental to the installation.

.5 Coordinate and verify job site dimensions affecting this Work. Submit in writing dimensions or conditions which vary from those on reviewed Shop Drawings or detrimental to installation. Obtain corrective measures from Consultant prior to installation.

.6 Verify that air-barriers/vapour-retarders have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

.7 Examine roughing-in for components and assemblies penetrating preformed metal panels to verify actual locations of penetrations relative to seam locations of preformed metal panels before installation.

.8 Commencement of Work implies acceptance of previously completed Work.

3.2 PREPARATION

.1 Framing: Install subgirts, base angles, sills, furring, and other miscellaneous panel support members and anchorages according to reviewed Shop Drawings, erection drawings, and manufacturer's installation instructions.

.1 Secure sub-girt units to structural supports with stainless steel or galvanized self-tapping screws. Install Work rigidly and securely.

.2 Fasten thermally broken structural clips through air barrier/vapour retarder to supporting structure in accordance with manufacturer's installation details and instructions.

.3 Weld all connections, unless otherwise permitted. For hot dipped galvanized items and where not possible, bolt or secure connections in a manner acceptable to Consultant.

.4 Erect Work true to dimensions, square, plumb, level and free from distortion or defects detrimental to appearance and performance.

.2 Insulation

.1 Install insulation to maintain continuity of thermal protection to building elements and spaces. Extend insulation in thickness indicated to cover entire wall. Comply with installation requirements in Section 07 21 00.

.2 Install insulation with adhesive and/or stick clips as specified in Section 07 21 00 to prevent movement of insulation in finished wall.

.3 Butt each insulation board against adjacent boards with joints staggered. Fit neatly with tight joints around obstructions, openings and corners. Fill voids behind flashings and trim with loose mineral wool insulation.

3.3 INSTALLATION

.1 Install preformed metal panels, fasteners, trims and related items according to manufacturer's written instructions and reviewed Shop Drawings in orientation, sizes, and locations indicated on Drawings.

.2 Install panels perpendicular to girts and subgirts unless otherwise indicated. Bring each unit to bear evenly on framing. Ensure complete nesting of flange frames.

.3 Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.

.4 Shim or otherwise plumb substrates receiving metal wall panels.

.5 Prepare openings for louvers, doors, windows where applicable as detailed. Install necessary formed closures and trim as applicable at openings and penetrations. Make cut-outs neatly by saw cutting.

.6 Flash and seal metal wall panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air barrier/vapour retarder and flashings that will be concealed by metal wall panels are installed. Install flashing and trim as metal wall panel work proceeds.

.7 Install screw fasteners in predrilled holes.

.8 Locate and space fastenings in uniform vertical and horizontal alignment in accordance with manufacturer's instructions.

.9 Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.

.10 Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as indicated or, if not indicated, as necessary for waterproofing.

.11 Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.

.12 Provide weathertight escutcheons for pipe and conduit penetrating exterior.

.13 Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

.14 Joint sealing: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.

3.4 FIELD QUALITY CONTROL

.1 Manufacturer's Field Service: Engage a factory-authorized service representative to provide training and supervision of Contractor's personnel in installation of panel system at commencement of installation. Factory-authorized service representative must also:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect the installation and report unsatisfactory conditions to Consultant.

.4 attend final inspection and submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer's requirements.

3.5 CLEANING AND PROTECTION

.1 Remove temporary protective coverings and strippable films, if any, as preformed metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions.

.2 On completion of preformed metal panel installation, clean finished surfaces as recommended by preformed metal panel manufacturer. Maintain a clean condition during construction.

.3 After preformed metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

.4 Replace preformed metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SEE ADD#8
Q#269

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the solid phenolic composite wall panels work specified herein. This includes, but is not necessarily limited, to:

.1 solid phenolic composite panel system for walls and soffits,

.2 miscellaneous framing components,

.3 related trims and extrusions, including but not limited to flashings, splicers, end caps, trims and closures,

.4 transitions and connections between air barrier/vapour retarder membranes.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 Drained / back-ventilated rainscreen cladding (D/BV): System designed to drain off most of the rain water at the outermost surface of the wall. Joints are designed to protect against the kinetic energy of wind-driven rain. However, no specific attempt is made to minimize leakage through the effects of gravity or wind by means of pressure equalization.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Review methods and procedures related to solid phenolic composite panel installation, including manufacturer's written instructions.

.3 Examine support conditions for compliance with requirements of Contract Documents, including alignment between and attachment to structural members.

.4 Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect solid phenolic composite panels.

.5 Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

.6 Review temporary protection requirements for solid phenolic composite panel assembly during and after installation.

.7 Review procedures for repair of panels damaged after installation.

.8 Document proceedings, including corrective measures and actions required, and Supply copy of record to each participant.

.2 Coordination:

.1 Coordinate solid phenolic composite panel assemblies with air barrier/vapour retarder, rain drainage work, flashing, trim, and construction of girts, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

.2 Coordinate with related trades to maintain continuity of building air barrier/vapour retarder system at locations including but not limited to roofing, cladding and building openings.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Ensure Shop Drawings show fabrication and installation layouts of solid phenolic composite panels; details of edge conditions, joints, panel profiles, corners, supports and anchorages, attachment system, insulation type and thickness, trim, flashings, air seals, closures, and accessories; and special details including paths of pressure equalization and cavity drainage.

.2 Distinguish between factory, shop, and field-assembled work.

.3 Show provisions for structural and thermal movement between metal cladding and adjacent materials.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples:

.1 Manufacturer’s colour charts or chips illustrating full range of colours, finishes and textures.

.2 300 mm x 300 mm (12 inch x 12 inch) solid phenolic composite panel in thickness specified, including clips, anchors, supports, fasteners, closures and other panel accessories necessary for assembly.

.3 Include panel assembly sample not less than 300 mm x 300 mm (12 inch x 12 inch) showing 4-way joint system.

.4 300 mm (12 inch) each of extruded and formed trims.

.5 Engineering Data:

.1 Submit engineering data substantiating that specified structural requirements of the metal cladding assembly meet minimum requirements of CSA S136.

.2 Submit design calculations signed and sealed by professional engineer registered in the province of Ontario, attesting to ability of preformed metal cladding system to withstand specified design loads including inward and outward pressures under fastenings to structure.

.6 Sample Warranties: Submit samples of extend warranties specified in this Section.

.7 Certificates:

.1 Submit written certification from manufacturer that the Products, systems, and assemblies have been installed in accordance with manufacturer's requirements.

.8 Maintenance Data:

.1 Provide maintenance data for cleaning and maintenance of aluminum finishes for incorporation into manual specified in Section.

.2 Submit instructions for touch-up, repair and removal of panels.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.1 Use only manufacturer's trained and approved erectors who have experience in the installation of the metal cladding system specified.

.2 Welding: Companies engaged in welding must be certified by Canadian Welding Bureau to CSA W47.1. Companies are to have welding procedures approved and welders qualified for base material types and thicknesses that are to be welded.

.3 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.1 Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship and displaying typical connections of the Project. Modify site mock-up detailing if necessary in accordance with Consultant's review.

.2 Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.3 Reviewed Mock-ups may form part of finished Work if left undisturbed at time of Substantial Performance of the Work

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.

.2 Protect finish and edges using a plastic film adhered to panel in accordance with panel manufacturer's recommendations. Retain strippable protective covering on solid phenolic composite panels during installation.

.3 Deliver components, solid phenolic composite panels, and other manufactured items so as not to be damaged or deformed. Package solid phenolic composite panels for protection during transportation and handling.

.4 Unload, store, and erect solid phenolic composite panels in a manner to prevent bending, warping, twisting, and surface damage.

.5 Stack solid phenolic composite panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store solid phenolic composite panels to ensure dryness, with positive slope for drainage of water. Do not store solid phenolic composite panels in contact with other materials that might cause staining, denting, or other surface damage.

1.9 FIELD CONDITIONS

.1 Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of solid phenolic composite panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 WARRANTY

.1 Warrant work of this Section against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

.1 Materials and Installation:

.1 Structural failures including rupturing, cracking, or puncturing.

.2 Deterioration of materials beyond normal weathering.

.2 Warranty Period: Ten years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Panel Manufacturers:

.1 Abet Laminati;

.2 Fundermax c/o Façade Systems Inc;

.3 Trespa c/o Allied Technical Sales;

.4 Vivix by Formica Group c/o Engineered Assemblies;

.2 System Fabricators:

.1 Engineered Assemblies;

.2 Sobotec Ltd.;

.3 Thermal Systems KWC Ltd.;

.2 Substitution Limitations: This Specification is based on Trespa's Products.

.3 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 System Fire Propagation Characteristics: Provide solid phenolic composite panel system tested in accordance with CAN/ULC-S134 by an independent testing organization, and approved for use in non-combustible construction.

.2 Panel Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with CAN/ULC S102/S102.2 (subject to approval by Authorities Having Jurisdiction).

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Design, fabricate and install cladding system to prevent excessive condensation interior of wall when mechanical systems are functioning under designed operating conditions.

.3 Ensure systems provided include attachment, insulation, air barrier/vapour retarder systems, necessary framing and suspension systems to support and anchor panel systems from concrete and/or metal structural framework.

.4 Moisture Management:

.1 Design system as a "Drained / back-ventilated rainscreen cladding" system in accordance with AAMA 509. Provide minimum 25 mm (1 inch) air space behind panels unless indicated otherwise on Drawings.

.2 Provide gaskets, baffles, overlaps, seals and compartmentalization where required to achieve appropriate pressure equalization in exterior envelope cavity wall design. Maintain

integrity of continuous air barrier/vapour retarder system with adjacent surrounding air barrier/vapour retarder.

.3 Incorporate means of draining moisture to exterior. Design drainage system to provide clear, internal paths of drainage of any trapped moisture within construction to exterior. Ensure weep water discharges in a manner that avoids staining of architectural finishes, collecting in puddles or formation of icicles.

.4 Provide moisture barrier as specified in this Section to protect insulation, whether specifically noted on Drawings or not.

.5 Incorporate means of draining moisture to exterior. Design drainage system to provide clear, internal paths of drainage of any trapped moisture within construction to exterior. Ensure weep water discharges in a manner that avoids staining of architectural finishes, collecting in puddles or formation of icicles.

.5 Water Leakage:

.1 Static Water Penetration: No water penetration when tested in accordance with ASTM E331 at inward static pressure differential of not less than 300 Pa (6.24 psf) positive static air pressure difference for a 15 minute duration, with a water application rate of 5 gal/ft2/hr.

.2 Dynamic Water Penetration: No uncontrolled water penetration when tested in accordance with AAMA 501 at dynamic pressure differential of not less than 300 Pa (6.24 psf) for a 15-minute duration, with water application rate of 5 gal/ft2/hr.

.3 Water leakage does not include water controlled by flashing and gutters that is drained to exterior without damage to adjacent materials or finishes.

.6 Structural Performance: Provide solid phenolic composite panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E330:

.1 Wind Loads: As indicated on Structural Drawings, based on OBC requirements for minimum probability factor for Project location.

.2 Maximum Panel Deflection between supports: ≤ L/180

.3 Structural support deflection: ≤ L/360.

.4 Design cladding to accommodate thermal movement caused by ambient temperature range in accordance with OBC requirements and to suit Project location, without causing noise, buckling, failure of joint sealants, undue stress on metal members and fasteners, of operating units, reduction of performance, and other detrimental effects.

.5 Design building envelope assemblies, members and their connections to withstand, within acceptable deflection limitations, their own weight, loads imposed by motion of operable elements, and maximum design loads and combination of loads due to snow, rain, ice, the pressure and suction of wind and internal pressure.

.6 Design cladding support system in accordance with CAN/CSA S136 for Design of Cold Formed Steel Structural Members.

.7 Design structural supports and anchorage system to maintain profiles and cladding layout.

.8 Thermal Movements: Provide assemblies that allow for thermal movements resulting from following maximum changes (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components and other detrimental effects:

.1 Temperature Change (range): 67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces.

.7 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of OBC and CAN/CSA S832.

2.4 SOLID PHENOLIC COMPOSITE PANELS (MP-3)

.1 Provide BS EN 438-6, solid phenolic wall panels fabricated from composite of solid phenolic resins molded with a homogeneous core of organic fber reinforced phenolic and one or more integrally cured surfaces of compatible thermoset nonabsorbent resins. Include attachment assembly components, panel stiffeners, and accessories required for weathertight system.

.1 Panel Nominal Thickness:

.1 Wall Applications:

.1 Exposed Fastener: 8 mm (5/16 inch)

.2 Soffit Applications: 10 mm (3/8 inch)

.2 Nominal Joint Thickness: 10 mm (3/8 inch)

.3 Panel Dimensions: As indicated on Drawings.

.4 Exterior Finish: Manufacturer’s standard UV-resistant clear topcoat.

.5 Colours: to be selected by Consultant from manufacturer's full range.

.2 Attachment Assembly Components: Formed from material compatible with panel facing.

.3 Panel Fasteners: Manufacturer’s standard exposed fasteners assembly designed to withstand design loads and pull-out strengths required for Project. In conditions where exposed fasteners are acceptable to Consultant, ensure fasteners are colour-matched to panel face.

.4 Acceptable Products:

.1 “Meteon” by Trespa;

.2 “Vivix Formica” by Engineered Assemblies;

.3 “Fundermax Exterior” by Fundermax

2.5 AUXILIARY MATERIALS

.1 Air barrier/vapour retarder Membrane: Refer to Section 07 27 14.

.1 Transition and Through-wall flashing membrane: Minimum 1.0 mm (40-mil) thick, self-adhering sheet as recommended by primary membrane manufacturer and compatible with other components of the air barrier/vapour retarder assembly.

.2 Provide air barrier/vapour retarder membrane and transition at openings in cladding or at locations where continuity is required.

.2 Water Resistant Barrier (WRB): Conforming to ASTM E2556/E2556M, UV-Resistant, 3 layer tear-resistant spun-bonded polypropylene (PP) fabric thermally bonded to polymeric middle layer with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, when tested according to CAN/ULC S102/S102.2; and acceptable to authorities having jurisdiction. Product must be designed for mechanical attachment and for application with open-joint cladding systems.

.1 Physical and Performance Properties:

.1 Vapor Permeance: Not less than 572 ng/Pa x s x sq. m (10 perms); ASTM E96/E 96M, Desiccant Method (Procedure A).

.2 Tensile Strength: Minimum 3.5 N/mm (20 lbs/inch); ASTM D882.

.3 Water Resistance: No water penetration after 120minutes; AATC 127 or CCMC 07102.

.4 Pliability: No crack; ASTM E2556/E2556M

.5 UV-Resistance: Pass (> 90 % tensile retention after UV exposure); CCMC 07251003 (UV exposure according to ASTM G154) or DIN EN 13859.

.2 Acceptable Products:

.1 “SRP-AirOutShield UV” by SRP Canada.

.2 “DELTA®FASSADE S or DELTA®FASSADE S PLUS” by Dörken Systems, Inc.;

.3 Insulation: Refer to Section 07 21 00 for type. Thickness to suit design requirements to achieve thermal and sound attenuation requirements.

.4 Miscellaneous Metal Subframing and Furring: Sub-Girts, Z-bars etc., ASTM C645, Manufacturer's standard C- or Z-shaped sections, conforming to ASTM A653M, Grade A Zinc coating to Z275 (G90) designation. Transfer grid may be hat bars, Z-bars, adjustable Z-bars or combination of clip and Z-bar.

.1 Minimum thickness: 1.219 mm (18 ga.).

.2 Material visible after assembly of panel shall be finished to match panels.

.5 Miscellaneous Steel Shapes including Plate and Hollow Sections: CSA G40.21, Grade 300W, or ASTM A36M complete with shop applied primer of either CPMA/CISC 1-73 or CGSB 1-GP-140M.

.6 Extrusions and extrusion clips for attaching panels to substructure: purpose made aluminum. Install a separator between extrusions and sub-girts.

.7 Thermally-Broken Sub-framing: Low-conductivity thermally-broken, intermittent structural attachment insulation clips designed maintain insulation effectiveness, with adjustable depth and suitable for vertical and horizontal sub-girts.

.1 Acceptable Products:

.1 “ISO Clip” by Northern Facades Ltd.

.2 “Cascadia Clip” by Cascadia Windows

.3 “TClip Thermally Broken Façade Substructure” by Engineered Assemblies

.4 “NVelope NV1 Cladding Attachment System” by SFS Group.

.5 Approved equivalent.

.8 Panel Accessories:

.1 Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of solid phenolic composite panels unless otherwise indicated.

.2 Provide flashing and trim formed from aluminum colour-matched to solid phenolic composite panels and as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent solid phenolic composite panels.

.3 Match material and finish of solid phenolic composite panels, unless otherwise indicated.

.9 Field Touch-Up Paint: of same colour as exterior panel and as recommended by manufacturer.

.10 Isolation Coating: Bituminous paint, alkali-resistant bituminous paint or epoxy resin solution to Provide dielectric separation which will dry to be tack-free and withstand high temperatures. Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

.11 Sealants: ASTM C920, conforming to Section 07 92 00 as recommend by manufacturer.

.12 Fasteners: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

.1 Exposed fasteners: Series 300 stainless steel and nylon colour coated head to match substrate colour.

.2 Concealed fasteners: stainless steel Type 304 screws in accordance with manufacturer's recommendations.

2.6 FABRICATION

.1 Prior to commencement of fabrication, obtain Consultant's final approval of colours. Fabricate to manufacturer's standard assembly line production methods, incorporating unique conditions of this Project.

.2 Fabricate and finish solid phenolic composite panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

.3 Finished cladding shall be free from visible defects and accurately manufactured to dimensions of reviewed Shop Drawings.

.4 Fabricate all flashing pieces associated with and in contact with panel system from 1.57 mm (0.062”) minimum thickness aluminum sheet. Where exposed to view, finish to match adjacent panels. Use same sheet stock as exposed face sheets, pre-finished to match.

.5 Include cold rolled framing, furring, brackets, clips, hangers and incidental components as required for secure fastening and Provide weathertight installation including non-corrosive fasteners.

.6 Provide for condensation and inner wall drainage at sill members and other shapes which would otherwise tend to trap water.

2.7 FINISHES

.1 Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of Samples reviewed by Consultant. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of Samples reviewed by Consultant and are assembled or installed to minimize contrast.

.2 Painting: Concealed surfaces of aluminum and galvanized steel which would otherwise come in direct contact with structural steel, concrete, masonry shall be given a heavy coating of bituminous paint.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by solid phenolic composite panel manufacturer.

.3 Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by aluminum panel manufacturer.

.4 Notify Consultant in writing of any conditions which would be detrimental to the installation.

.5 Coordinate and verify job site dimensions affecting this Work. Submit in writing dimensions or conditions which vary from those on reviewed Shop Drawings or detrimental to installation. Obtain corrective measures from Consultant prior to installation.

.6 Verify that air-barriers/vapour-retarders have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

.7 Examine roughing-in for components and assemblies penetrating solid phenolic composite panels to verify actual locations of penetrations relative to seam locations of solid phenolic composite panels before installation.

.8 Commencement of Work implies acceptance of previously completed Work.

3.2 PREPARATION

.1 Framing: Install subgirts, base angles, sills, furring, and other miscellaneous panel support members and anchorages according to reviewed Shop Drawings, erection drawings, and manufacturer's installation instructions.

.1 Secure sub-girt units to structural supports with stainless steel or galvanized self-tapping screws. Install Work rigidly and securely.

.2 Fasten thermally broken structural clips through air barrier/vapour retarder to supporting structure in accordance with manufacturer's installation details and instructions.

.3 Weld all connections, unless otherwise permitted. For hot dipped galvanized items and where not possible, bolt or secure connections in a manner acceptable to Consultant.

.4 Erect Work true to dimensions, square, plumb, level and free from distortion or defects detrimental to appearance and performance.

.2 Insulation

.1 Install insulation to maintain continuity of thermal protection to building elements and spaces. Extend insulation in thickness indicated to cover entire wall. Comply with installation requirements in Section 07 21 00.

.2 Install insulation with adhesive and/or stick clips as specified in Section 07 21 00 to prevent movement of insulation in finished wall.

.3 Butt each insulation board against adjacent boards with joints staggered. Fit neatly with tight joints around obstructions, openings and corners. Fill voids behind flashings and trim with loose mineral wool insulation.

.3 Water Resistive Barrier (WRB):

.1 Cover exposed insulation with water-resistive barrier securely fastened to framing.

.2 Cut back barrier 13 mm (1/2 inch) on each side of the break in supporting members at expansion- or control-joint locations.

.3 Seal seams, edges, fasteners, and penetrations with manufacturer's recommended tape.

.4 Tape horizontal and vertical seams with manufacturer approved construction tape.

.5 Seal tears and cuts with manufacturer approved construction tape.

.6 Install primary cladding system as soon as possible after installation of WRB in accordance with system manufacturer's written instructions.

3.3 INSTALLATION

.1 Install solid phenolic composite panel system according to manufacturer's written instructions in orientation, sizes, and locations indicated on reviewed Shop Drawings. Conform to AAMA 509. Do not apply sealants to panel joints unless otherwise indicated.

.2 Install panels perpendicular to supports unless otherwise indicated. Anchor solid phenolic composite panels and other components of the Work securely in place, with provisions for thermal and structural movement.

.3 Following installation of insulation between "Z" girts, set panels in position and secure with stainless steel fasteners in accordance with Shop Drawing layout.

.4 Erect panels plumb, true, level and in alignment to established lines and elevations.

.5 Prepare openings for louvers, doors, windows where applicable, and as detailed. Install necessary formed closures and trim as applicable at openings and penetrations. Make cut-outs neatly by saw cutting.

.6 Flash and seal solid phenolic composite panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air barrier/vapour retarder and flashings that will be concealed by solid phenolic composite panels are installed.

.7 Where indicated on Drawings or as required to complete work of this Section, Supply and Install closures, caps, fascias, covers and trims with colour matching panel finish, where exposed.

.8 Install flashing to divert moisture to exterior.

.9 Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by solid phenolic composite panel manufacturer.

3.4 FIELD QUALITY CONTROL

.1 Manufacturer's Field Service: Engage a factory-authorized service representative to provide training and supervision of Contractor's personnel in installation of panel system at commencement of installation. Factory-authorized service representative must also:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect the installation and report unsatisfactory conditions to Consultant.

.4 attend final inspection and submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer's requirements.

3.5 ERECTION TOLERANCES

.1 Installation Tolerances: Install solid phenolic composite panel units within installed tolerance of 6 mm in 6 m (1/4 inch in 20 feet), non-accumulative, on level, plumb, and location lines as indicated, and within 5% offset of adjoining faces and of alignment of matching profiles.

3.6 CLEANING AND PROTECTION

.1 Remove temporary protective coverings and strippable films as solid phenolic composite panels are installed, unless otherwise indicated in manufacturer's written installation instructions.

.2 On completion of solid phenolic composite panel installation, clean finished surfaces as recommended by solid phenolic composite panel manufacturer. Maintain in a clean condition during construction.

.3 After solid phenolic composite panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

.4 Replace solid phenolic composite panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the aluminum composite panel system work specified herein. This includes, but is not necessarily limited, to:

.1 aluminum composite material panel system for walls and soffits,

.2 miscellaneous framing components,

.3 related trims and extrusions, including but not limited to flashings, splicers, end caps, trims and closures,

.4 transitions and connections between air barrier/vapour retarder membranes.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 ACM: aluminum composite material cladding formed by joining two thin metal skins to polyethylene or fire-retardant core and bonded under precise temperature, pressure, and tension.

.2 PER: Pressure equalized rainscreen system; rainscreen system designed for no water intrusion with equal pressure between interior system cavity and outside cladding barrier.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Review methods and procedures related to aluminum composite material panel installation, including manufacturer's written instructions.

.3 Examine support conditions for compliance with requirements of Contract Documents, including alignment between and attachment to structural members.

.4 Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect aluminum composite material panels.

.5 Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

.6 Review temporary protection requirements for aluminum composite material panel assembly during and after installation.

.7 Review procedures for repair of panels damaged after installation.

.8 Document proceedings, including corrective measures and actions required, and Supply copy of record to each participant.

.2 Coordination:

.1 Coordinate metal panel assemblies with air barrier/vapour retarder, rain drainage work, flashing, trim, and construction of girts, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

.2 Coordinate with related trades to maintain continuity of building air barrier/vapour retarder system at locations including but not limited to roofing, cladding and building openings.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Ensure Shop Drawings show fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, supports and anchorages, attachment system, insulation type and thickness, trim, flashings, air seals, closures, and accessories; and special details including paths of pressure equalization and cavity drainage.

.2 Distinguish between factory, shop, and field-assembled work.

.3 Show provisions for structural and thermal movement between metal cladding and adjacent materials.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples:

.1 Manufacturer’s colour charts or chips illustrating full range of colours, finishes and textures.

.2 300 mm x 300 mm (12 inch x 12 inch) aluminum composite panel in thickness specified, including clips, anchors, supports, fasteners, closures and other panel accessories necessary for assembly.

.3 300 mm (12 inch) each of extruded and formed trims.

.5 Engineering Data:

.1 Submit engineering data substantiating that specified structural requirements of the metal cladding assembly meet minimum requirements of CSA S136.

.2 Submit design calculations signed and sealed by professional engineer registered in the province of Ontario, attesting to ability of preformed metal cladding system to withstand specified design loads including inward and outward pressures under fastenings to structure.

.6 Sample Warranties: Submit samples of extend warranties specified in this Section.

.7 Certificates:

.1 Submit written certification from manufacturer that the Products, systems, and assemblies have been installed in accordance with manufacturer's requirements.

.8 Maintenance Data:

.1 Provide maintenance data for cleaning and maintenance of aluminum finishes for incorporation into manual specified in Section.

.2 Submit instructions for touch-up, repair and removal of panels.

.9 Extra Materials: Submit sealed can of touch-up paint (minimum 1 l), properly identified for each panel colour provided.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.1 Use only manufacturer's trained and approved erectors who have experience in the installation of the metal cladding system specified.

.2 Welding: Companies engaged in welding must be certified by Canadian Welding Bureau to CSA W47.1. Companies are to have welding procedures approved and welders qualified for base material types and thicknesses that are to be welded.

.3 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.1 Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship and displaying typical connections of the Project. Modify site mock-up detailing if necessary in accordance with Consultant's review.

.2 Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.3 Reviewed Mock-ups may form part of finished Work if left undisturbed at time of Substantial Performance of the Work

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.

.2 Protect finish and edges using a plastic film adhered to panel in accordance with panel manufacturer's recommendations. Retain strippable protective covering on aluminum composite material panels during installation.

.3 Deliver components, aluminum composite material panels, and other manufactured items so as not to be damaged or deformed. Package aluminum composite material panels for protection during transportation and handling.

.4 Unload, store, and erect aluminum composite material panels in a manner to prevent bending, warping, twisting, and surface damage.

.5 Stack aluminum composite material panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store aluminum composite material panels to ensure dryness, with positive slope for drainage of water. Do not store aluminum composite material panels in contact with other materials that might cause staining, denting, or other surface damage.

1.9 FIELD CONDITIONS

.1 Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of aluminum composite material panels to be performed according to manufacturers' written instructions and warranty requirements.

1.10 WARRANTY

.1 Warrant work of this Section against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

.1 Materials and Installation: for period of 5 years from date of Substantial Performance of the Work. Defects include but are not limited to; buckling, opening of seams, and structural failure.

.2 Panel Finish: for period of 30 years from date of Substantial Performance of the Work. Defects include but are not limited to: discoloration, finish peeling, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Aluminum Sheet Manufacturer:

.1 3A Composites USA Inc/Alucobond;

.2 Alcoa Inc./Reynobond;

.3 Alcotex, Inc.;

.4 ALPOLIC, Division of Mitsubishi Chemical America, Inc.;

.5 Alucoil/Larson;

.2 Panel Fabricators:

.1 Architectural Metals North America;

.2 Kanalco Ltd.;

.3 Northern Facades/Flynn Canada Ltd.;

.4 Ontario Panelization;

.5 Sobotec Ltd.;

.6 Vicwest;

.2 Substitution Limitations: This Specification is based on Northern Facades/Flynn Canada Ltd.'s Products.

.3 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 System Fire Propagation Characteristics: Provide aluminum composite material panel system tested in accordance with CAN/ULC-S134 by an independent testing organization, and approved for use in non-combustible construction.

.2 Panel Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with CAN/ULC S102/S102.2 (subject to approval by Authorities Having Jurisdiction).

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Design, fabricate and install cladding system to prevent excessive condensation interior of wall when mechanical systems are functioning under designed operating conditions.

.3 Ensure systems provided include attachment, insulation, air barrier/vapour retarder systems, necessary framing and suspension systems to support and anchor panel systems from concrete and/or metal structural framework.

.4 Rain Screen Principle:

.1 Ensure system is designated as a “pressure-equalized rainscreen” system based on testing according to AAMA 508.

.2 Design exterior envelope cladding systems based on Rain Screen Principle advocated by NRCC and Provide for drainage of water entering building envelope wall systems.

.3 Design for compartments at corners to achieve appropriate pressure equalization in exterior cladding system.

.4 Provide gaskets, baffles, overlaps, seals and compartmentalization where required to achieve appropriate pressure equalization in exterior envelope cavity wall design. Maintain integrity of continuous air barrier/vapour retarder system with adjacent surrounding air barrier/vapour retarder.

.5 Incorporate means of draining moisture to exterior. Design drainage system to provide clear, internal paths of drainage of any trapped moisture within construction to exterior. Ensure weep water discharges in a manner that avoids staining of architectural finishes, collecting in puddles or formation of icicles.

.5 Water Leakage:

.1 Static Water Penetration: No water penetration when tested in accordance with ASTM E331 at inward static pressure differential of not less than 300 Pa (6.24 psf) positive static air pressure difference for a 15 minute duration, with a water application rate of 5 gal/ft2/hr.

.2 Dynamic Water Penetration: No uncontrolled water penetration when tested in accordance with AAMA 501 at dynamic pressure differential of not less than 300 Pa (6.24 psf) for a 15-minute duration, with water application rate of 5 gal/ft2/hr.

.3 Water leakage does not include water controlled by flashing and gutters that is drained to exterior without damage to adjacent materials or finishes.

.6 Structural Performance: Provide aluminum composite material panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E330:

.1 Wind Loads: As indicated on Structural Drawings, based on OBC requirements for minimum probability factor for Project location.

.2 Maximum Panel Deflection between supports: ≤ L/180

.3 Maximum Deflection of Individual Panels: ≤ L/60.

.4 At connection points of framing members to anchors, anchor deflection in any direction shall not exceed 1.6 mm (1/16 inch).

.5 Ensure stress on panel skin does not exceed manufacturer’s recommended maximum value to avoid permanent deformation.

.6 Design cladding to accommodate thermal movement caused by ambient temperature range in accordance with OBC requirements and to suit Project location, without causing noise, buckling, failure of joint sealants, undue stress on metal members and fasteners, of operating units, reduction of performance, and other detrimental effects.

.7 Design building envelope assemblies, members and their connections to withstand, within acceptable deflection limitations, their own weight, loads imposed by motion of operable elements, and maximum design loads and combination of loads due to snow, rain, ice, the pressure and suction of wind and internal pressure.

.8 Design cladding support system in accordance with CAN/CSA S136 for Design of Cold Formed Steel Structural Members.

.9 Design structural supports and anchorage system to maintain profiles and cladding layout.

.10 Thermal Movements: Provide assemblies that allow for thermal movements resulting from following maximum changes (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components and other detrimental effects:

.1 Temperature Change (range): 67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces.

.7 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with requirements of OBC and CAN/CSA S832.

2.4 ALUMINUM COMPOSITE METAL PANELS (MP-2)

.1 Provide factory-formed and -assembled, aluminum composite material wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment assembly components, panel stiffeners, and accessories required for weathertight system.

.1 Panel Thickness: Not less than 4 mm (0.157 inch).

.2 Core: Fire retardant (FR).

.3 Exterior Finish: Three-coat fluoropolymer.

.4 Colours (MP-2A and MP-2B): Allow for 2 colours to be selected by Consultant from manufacturer's full range.

.2 Attachment Assembly Components: Formed from material compatible with panel facing.

.3 Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide concealed fasteners unless indicated otherwise. In conditions where exposed fasteners are acceptable to Consultant, ensure fasteners are obscured in panel joinery.

.4 Basis-of-Design: “Accumet” by Northern Facades/Flynn Canada Ltd. or approved equivalent as follows:

.1 “Alumitex™ AFS” by Ontario Panelization;

.2 “AM 2000” by Architectural Metals North America

.3 “Architectural Panel System #3” by Vicwest;

.4 “SL-2000” by Sobotec Ltd.;

.5 Approved equivalent by Kanalco Ltd.

2.5 AUXILIARY MATERIALS

.1 Air barrier/vapour retarder Membrane: Refer to Section 07 27 14.

.1 Transition and Through-wall flashing membrane: Minimum 1.0 mm (40-mil) thick, self-adhering sheet as recommended by primary membrane manufacturer and compatible with other components of the air barrier/vapour retarder assembly.

.2 Provide air barrier/vapour retarder membrane and transition at openings in cladding or at locations where continuity is required.

.2 Insulation: Refer to Section 07 21 00 for type. Thickness to suit design requirements to achieve thermal and sound attenuation requirements.

.3 Miscellaneous Metal Subframing and Furring: Sub-Girts, Z-bars etc., ASTM C645, Manufacturer's standard C- or Z-shaped sections, conforming to ASTM A653M, Grade A Zinc coating to Z275 (G90) designation. Transfer grid may be hat bars, Z-bars, adjustable Z-bars or combination of clip and Z-bar.

.1 Minimum thickness: 1.219 mm (18 ga.).

.2 Material visible after assembly of panel shall be finished to match panels.

.4 Miscellaneous Steel Shapes including Plate and Hollow Sections: CSA G40.21, Grade 300W, or ASTM A36M complete with shop applied primer of either CPMA/CISC 1-73 or CGSB 1-GP-140M.

.5 Extrusions and extrusion clips for attaching panels to substructure: purpose made aluminum. Install a separator between extrusions and sub-girts.

.6 Thermally-Broken Sub-framing: Low-conductivity thermally-broken, intermittent structural attachment insulation clips designed maintain insulation effectiveness, with adjustable depth and suitable for vertical and horizontal sub-girts.

.1 Acceptable Products:

.1 “ISO Clip” by Northern Facades Ltd.

.2 “Cascadia Clip” by Cascadia Windows

.3 “TClip Thermally Broken Façade Substructure” by Engineered Assemblies

.4 “NVelope NV1 Cladding Attachment System” by SFS Group.

.5 Approved equivalent.

.7 Panel Accessories:

.1 Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of aluminum composite material panels unless otherwise indicated.

.2 Provide flashing and trim formed from same material as aluminum composite material panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent aluminum composite material panels.

.3 Match material, gauge thickness and finish of metal panels, unless otherwise indicated.

.8 Field Touch-Up Paint: of same colour as exterior panel and as recommended by manufacturer.

.9 Isolation Coating: Bituminous paint, alkali-resistant bituminous paint or epoxy resin solution to Provide dielectric separation which will dry to be tack-free and withstand high temperatures. Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

.10 Sealants: ASTM C920, conforming to Section 07 92 00 as recommend by manufacturer.

.11 Fasteners: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

.1 Exposed fasteners: Series 300 stainless steel and nylon colour coated head to match substrate colour.

.2 Concealed fasteners: stainless steel Type 304 screws in accordance with manufacturer's recommendations.

2.6 FABRICATION

.1 Prior to commencement of fabrication, obtain Consultant's final approval of colours. Fabricate to manufacturer's standard assembly line production methods, incorporating unique conditions of this Project.

.2 Fabricate metal panels for designated façade and trim sections to profiles and patterns indicated. Manufacture panels from sufficiently thick material in combination with backing and/or reinforcing to produce metal cladding required to suit design requirements indicated on Drawings. Fabricate all components of system in factory and ready for field installation.

.3 Fabricate with straight lines, square corners and/or smooth bends, free from twists or warps, kinks, dents and other similar imperfections which may affect appearance and/or serviceability. Exposed edges and ends of metal shall be dressed smooth, free from sharp ends. Connections and joints exposed to element shall be constructed to exclude water.

.4 Finished cladding shall be free from visible defects and accurately manufactured to dimensions of reviewed Shop Drawings.

.5 Make connections rigid and fail-safe wherever practicable, and make completely concealed.

.6 Coordinate openings required by other trades and Provide openings in panels prior to finishing whenever possible. Reinforce perimeter of openings to meet design requirements and as recommended by manufacturer.

.7 Fabricate all flashing pieces associated with and in contact with panel system from 1.57 mm (0.062 inch) minimum thickness aluminum sheet. Where exposed to view, finish to match adjacent panels. Use same sheet stock as exposed face sheets, pre-finished to match.

.1 Panel Tolerances:

.1 Panel Bow: Not to exceed 0.8% of panel overall dimension in width or length.

.2 Length & Width: +0 mm, -3.2 mm (1/8 inch).

.3 Squareness: 1.3 mm per linear m (0.02 inch per ft).

.4 Panel fabrication tolerances for length or width: maximum of ± 1 mm (3/64 inch) and variation from theoretical diagonal dimensions of finished panel cannot exceed 3 mm (1/8 inch).

.5 Joints: to not vary more than 5% of their dimensioned width at any location along full joint length and to not be wavy, out of line, or of different width from panel to panel.

.6 Maximum deviation from vertical and horizontal alignment of erected panels: 6 mm (1/4 inch) in (20') non-accumulative

.8 Include cold rolled framing, furring, brackets, clips, hangers and incidental components as required for secure fastening and Provide weathertight installation including non-corrosive fasteners.

.9 Provide for condensation and inner wall drainage at sill members and other shapes which would otherwise tend to trap water.

.10 Prior to commencement of fabrication, obtain Consultant's final approval of colours. Fabricate to manufacturer's standard assembly line production methods, incorporating unique conditions of this Project.

2.7 FINISHES

.1 Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

.2 Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of Samples reviewed by Consultant. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of Samples reviewed by Consultant and are assembled or installed to minimize contrast.

.1 Colour variation: no more than 2E (CMC) when measured in accordance with AATCC 173, "CMC: Calculation of Small Colour Differences for Acceptability."

.2 Ensure entire project is manufactured from single color coil paint run to ensure color uniformity.

.3 Where metallic colours are used, ensure panel grain is maintained.

.3 Exposed Panel Finish: Three-Coat Fluoropolymer conforming to AAMA 2605 containing not less than 70 percent PVDF resin by weight in both colour coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

.1 Basis-of-Design: “Duranar XL” by PPG or approved equivalent by Sherwin Williams (formerly Valspar).

.4 Painting: Concealed surfaces of aluminum and galvanized steel which would otherwise come in direct contact with structural steel, concrete, masonry shall be given a heavy coating of bituminous paint.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by aluminum composite material wall panel manufacturer.

.3 Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by aluminum composite material wall panel manufacturer.

.4 Notify Consultant in writing of any conditions which would be detrimental to the installation.

.5 Coordinate and verify job site dimensions affecting this Work. Submit in writing dimensions or conditions which vary from those on reviewed Shop Drawings or detrimental to installation. Obtain corrective measures from Consultant prior to installation.

.6 Verify that air-barriers/vapour-retarders have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

.7 Examine roughing-in for components and assemblies penetrating aluminum composite material panels to verify actual locations of penetrations relative to seam locations of aluminum composite material panels before installation.

.8 Examine and verify structural components to ensure walls and openings are within specified tolerance and structure is plumb within 1:1000 of overall height.

.9 Commencement of Work implies acceptance of previously completed Work.

3.2 PREPARATION

.1 Framing: Install subgirts, base angles, sills, furring, and other miscellaneous panel support members and anchorages according to reviewed Shop Drawings, erection drawings, and manufacturer's installation instructions.

.1 Secure sub-girt units to structural supports with stainless steel or galvanized self-tapping screws. Install Work rigidly and securely.

.2 Fasten thermally broken structural clips through air barrier/vapour retarder to supporting structure in accordance with manufacturer's installation details and instructions.

.3 Weld all connections, unless otherwise permitted. For hot dipped galvanized items and where not possible, bolt or secure connections in a manner acceptable to Consultant.

.4 Erect Work true to dimensions, square, plumb, level and free from distortion or defects detrimental to appearance and performance.

.2 Insulation

.1 Install insulation to maintain continuity of thermal protection to building elements and spaces. Extend insulation in thickness indicated to cover entire wall. Comply with installation requirements in Section 07 21 00.

.2 Install insulation with adhesive and/or stick clips as specified in Section 07 21 00 to prevent movement of insulation in finished wall.

.3 Butt each insulation board against adjacent boards with joints staggered. Fit neatly with tight joints around obstructions, openings and corners. Fill voids behind flashings and trim with loose mineral wool insulation.

3.3 INSTALLATION

.1 Install aluminum composite material panels according to manufacturer's written instructions and AAMA 508 in orientation, sizes, and locations indicated on reviewed Shop Drawings.

.2 Install panels perpendicular to supports unless otherwise indicated. Anchor aluminum composite material panels and other components of the Work securely in place, with provisions for thermal and structural movement.

.3 Following installation of insulation between "Z" girts, set panels in position and secure with stainless steel fasteners in accordance with Shop Drawing layout.

.4 Erect panels plumb, true, level and in alignment to established lines and elevations.

.5 Use concealed fastenings only, except where exposed fastenings are specifically permitted by Consultant in writing.

.6 Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

.7 Locate and space fastenings in uniform vertical and horizontal alignment in accordance with manufacturer’s instructions.

.8 Shim or otherwise plumb substrates receiving metal panels.

.9 Prepare openings for louvers, doors, windows where applicable, and as detailed. Install necessary formed closures and trim as applicable at openings and penetrations. Make cut-outs neatly by saw cutting.

.10 Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air barrier/vapour retarder and flashings that will be concealed by metal panels are installed.

.11 Where indicated on Drawings or as required to complete work of this Section, Supply and Install closures, caps, fascias, covers and trims with colour matching panel finish, where exposed.

.12 Install flashing to divert moisture to exterior.

.13 Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by aluminum composite material panel manufacturer.

3.4 FIELD QUALITY CONTROL

.1 Manufacturer's Field Service: Engage a factory-authorized service representative to provide training and supervision of Contractor's personnel in installation of panel system at commencement of installation. Factory-authorized service representative must also:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect the installation and report unsatisfactory conditions to Consultant.

.4 attend final inspection and submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer's requirements.

3.5 ERECTION TOLERANCES

.1 Installation Tolerances: Shim and align aluminum composite material wall panel units within installed tolerance of 1:1000 (1 inch in 80 feet), non-accumulative, on level, plumb, and location lines as indicated, and within 5% offset of adjoining faces and of alignment of matching profiles.

3.6 CLEANING AND PROTECTION

.1 Remove temporary protective coverings and strippable films as aluminum composite material panels are installed, unless otherwise indicated in manufacturer's written installation instructions.

.2 On completion of aluminum composite material panel installation, clean finished surfaces as recommended by aluminum composite material panel manufacturer. Maintain in a clean condition during construction.

.3 After aluminum composite material panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

.4 Replace aluminum composite material panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract .

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the Insulated-Core Metal Wall Panels work specified herein. This includes, but is not necessarily limited, to:

.1 Preformed pre-insulated composite soffit cladding system complete with prefinished steel faced factory insulated core.

.2 Structural steel framing members required for support of preformed pre-insulated composite cladding system not shown on Drawings.

.3 Sealants as required between metal panel components and between panels and adjoining construction.

.4 Metal flashing and trims are required for insulated composite cladding system.

.5 Miscellaneous ancillary items such as feature strips, sills, drips and similar components.

.6 Auxiliary materials required for complete construction.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Review methods and procedures related to insulated-core metal wall panels installation, including manufacturer's written instructions.

.3 Examine support conditions for compliance with requirements of Contract Documents, including alignment between and attachment to structural members.

.4 Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect insulated-core metal wall panels.

.5 Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.

.6 Review temporary protection requirements for insulated-core metal wall panel assembly during and after installation.

.7 Review procedures for repair of panels damaged after installation.

.8 Document proceedings, including corrective measures and actions required, and Supply copy of record to each participant.

.2 Coordination:

.1 Coordinate metal panel assemblies with air barrier/vapour retarder, rain drainage work, flashing, trim, and construction of girts, soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

.2 Coordinate with related trades to maintain continuity of building air barrier/vapour retarder system at locations including but not limited to roofing, cladding and building openings.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Ensure Shop Drawings show fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, supports and anchorages, attachment system, insulation type and thickness, trim, flashings, air seals, closures, and accessories; and special details including paths of pressure equalization and cavity drainage.

.2 Distinguish between factory, shop, and field-assembled work.

.3 Show provisions for structural and thermal movement between metal cladding and adjacent materials.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples:

.1 Manufacturer’s colour charts or chips illustrating full range of colours, finishes and textures.

.2 300 mm x 300 mm (12 inch x 12 inch) aluminum plate in thickness specified, including clips, anchors, supports, fasteners, closures and other panel accessories necessary for assembly.

.3 Include panel assembly sample not less than 300 mm x 300 mm (12 inch x 12 inch) showing 4-way joint system.

.4 300 mm (12 inch) each of extruded and formed trims.

.5 Sample Warranties: Submit samples of extend warranties specified in this Section.

.6 Maintenance Data:

.1 Provide maintenance data for cleaning and maintenance of aluminum finishes for incorporation into manual specified in Section.

.2 Submit instructions for touch-up, repair and removal of panels.

.7 Evaluation and Testing Reports:

.1 Submit manufacturer's certified and approved performance requirements conforming to Code requirements and authorities having jurisdiction.

.2 Submit comprehensive test reports performed by qualified testing agency for following criteria:

.1 Fire test response characteristics;

.2 Structural Design Compliance;

.3 Air Leakage;

.4 Vapour permeance;

.5 Water Penetration

.6 Acoustics.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.1 Use only manufacturer's trained and approved erectors who have experience in the installation of the metal cladding system specified.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Welding of structural components: performed by fabricator having minimum certification of Division 1 of W47.1 and CSA W59.

.4 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.1 Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship and displaying typical connections of the Project. Modify site mock-up detailing if necessary in accordance with Consultant's review.

.2 Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.3 Reviewed Mock-ups may form part of finished Work if left undisturbed at time of Substantial Performance of the Work

.5 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of *Shop Drawings*,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 *Provide* site administration and inspection of this part of the *Work*.

.8 Submit certificate validating seismic assessment and field review of this part of the *Work*.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.

.2 Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact. Package composite wall panels for protection against transportation damage. Provide markings to identify components consistently with Drawings.

.3 Protect finish and edges using a plastic film adhered to panel in accordance with panel manufacturer's recommendations.

.4 Exercise care in unloading, storing and installing panels to prevent bending, warping, twisting and surface damage.

.5 Store components and materials in accordance with panel manufacturer's recommendations. Store components off ground to prevent twisting, bending and defacement. Slope to shed moisture.

1.9 WARRANTY

.1 Warrant work of this Section against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

.1 Materials and Installation: for period of 5 years from Substantial Performance of the Work. Defects include but are not limited to; buckling, opening of seams, and structural failure.

.2 Panel Finish: for period of 30 years from Substantial Performance of the Work. Defects include but are not limited to: discoloration, finish peeling, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Kingspan Insulated Panels Ltd.

.2 Metl-Span

.3 Norbec Panels

.4 Vicwest

.5 Zero-Lock Enterprises Ltd.

.2 Substitution Limitations: This Specification is based on Kingspan's Products.

.3 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 System Fire Propagation Characteristics: Provide insulated-core metal wall panel system tested in accordance with CAN/ULC-S134 by an independent testing organization, and approved for use in non-combustible construction.

.2 Panel Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with CAN/ULC S102/S102.2 (subject to approval by Authorities Having Jurisdiction).

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Architectural Drawings and details are diagrammatic and are only intended to show design concept, aesthetics, interfacing requirements, configuration, components and arrangements. They are not intended to identify or solve completely problems of thermal and structural movements, assembly framing, engineering design, fixings and anchorages.

.2 Design, fabricate and install cladding system to prevent excessive condensation interior of wall when mechanical systems are functioning under designed operating conditions.

.3 Ensure systems provided include attachment, insulation, air barrier/vapour retarder systems, necessary framing and suspension systems to support and anchor panel systems from concrete and/or metal structural framework.

.4 Rain Screen Principle:

.1 Design exterior envelope cladding systems based on Rain Screen Principle advocated by NRCC and Provide for drainage of water entering building envelope wall systems.

.2 Incorporate means of draining moisture to exterior. Design drainage system to provide clear, internal paths of drainage of any trapped moisture within construction to exterior. Ensure weep water discharges in a manner that avoids staining of architectural finishes, collecting in puddles or formation of icicles.

.5 Structural Requirements: Design structural supports and anchorage system to maintain profiles, panel layouts, live loads and dead load requirements.

.1 Design to accommodate thermal movement of materials.

.2 Design to allow for sufficient tolerances to accommodate building tolerances and deflections.

.3 Design load/deflection criteria and fastening pattern shall be verified by tests in accordance with ASTM E72 requirements.

.1 Panel Deflection: L/180 max.

.2 Structural Framing Wind Load Deflection: L/240 max and not greater than 19 mm (3/4 inch)

.3 Structural Framing Vertical Deflection: L/720 max and not greater than 13 mm (½ inch)

.4 Loads: In accordance with requirements of OBC including wind, snow and build up snow loads

.5 Fatigue Test: Ensure there is no evidence of metal/insulation interface delamination when the panel is tested by simulated wind loads (positive and negative loads), when applied for 2,000,000 alternate cycles of L/180 deflection.

.4 Anchors: Designed for supporting 1.5 times design loads, minimum

.6 Design corner pieces, trim, flashing and caps symmetrical with cladding panel lines and overall design.

.7 Thermal and Moisture Performance:

.1 Thermal Resistance: Minimum R value to meet or exceed design requirements; but not less than RSI 1.32 per 25 mm (R7.5 per inch) when tested in accordance with requirements of ASTM C1363 and ASTM C518.

.2 Maximum Air Leakage Rate (ASTM E283): 0.001 cfm/ft2 at air pressure differential of 0.96 kPA (20.0 psf)

.8 Water Penetration: Static Water Penetration: no uncontrolled water penetration through the panel joints at a static pressure of 0.96 kPA (20.0 psf) when tested per ASTM E331.

.9 Acoustic Requirements Test: Minimum STC 25 when tested in accordance ASTM E90.

.10 Humidity Test: Panels shall exhibit no delamination or metal interface corrosion when subjected to +140°F (+60°C) temperature and 100% relative humidity for a total of 1200 hours (50 days).

2.4 MATERIALS

.1 Pre-insulated composite cladding - Non-rated applications (MP-1): Panels composed of exterior and interior steel faces with insulating core meeting following requirements:

.1 Insulating Core: foamed in place multi-component 95% closed cell polyisocyanurate insulation conforming to ASTM C1289, having following physical properties:

.1 Minimum density: 35 to 45 kg/m3 (2.2 to 2.8 pcf) per ASTM D1622

.2 Compressive strength: 0.16 MPa (23 psi) per ASTM D1621

.3 Minimum RSI (R) Value: 1.32 per 25 mm (7.5 per 1 inch) in accordance with ASTM C518

.4 Surface Burning Characteristics: Flame Spread ≤ 25, Smoke Developed ≤ 250 per CAN/ULC S102/S102.2.

.2 Exterior and Interior Panel Faces:

.1 Steel coil material: ASTM A755, Grade 33, G90 galvanized steel in accordance with ASTM A653 and ASTM A924 or AZ50 Galvalume/ Zincalume (55% aluminum, 45% zinc) in accordance with ASTM A792.

.2 Steel Thickness: Minimum 0.759 mm (22 ga) with orange peel texture.

.3 Panel Thickness: 100 mm (4 inch) – R30.

.4 Colours: to be selected by Consultant from manufacturer's full range.

.5 Basis-of-design: “KS Series Micro Rib – with Quadcore Technology Insulated Panel” by Kingspan or approved equal.

2.5 ACCESSORIES

.1 Fasteners:

.1 Cadmium plated steel self-drilling fasteners with neoprene washer, as recommended by manufacturer.

.2 Size: As recommended by manufacturer.

.2 Perimeter Trims: Required trim and metal flashing to be steel with same coating, color, and gauge as exterior face of insulated metal wall panel.

.1 Extruded perimeter trim: Shall be extruded aluminum 6063-T5 alloy with spray applied PVF coating in same color as exterior face of insulated metal wall panel.

.3 Sealants: Factory applied butyl, non-skinning/curing type as recommended by manufacturer.

.1 Preformed Sealant (where required): Expanding foam sealant; size expanding sealant at 25% uncompressed dimension to suit joint openings and to create an effective air and moisture barrier. Provide factory applied adhesive on preformed sealant faces.

.4 Panel Edges: Tongue and groove.

.5 Butyl Tape: As recommended by manufacturer.

.6 Flexible Membrane and Fastening Bars:

.1 Provide minimum 1.0 mm (0.004 inch) thick, reinforced, continuous self-adhesive compatible SBS Modified bitumen flexible membrane air seal closures recommended by manufacturer.

.2 Fastening Bars: Provide minimum 6 mm x 25 mm (1/4 inch x 1 inch) hot dip galvanized steel, continuous fastening bars.

2.6 FABRICATION

.1 Fabricate components of system in factory and ready for field installation. Radius-formed components shall be bent to true circular curve. Fabricate metal panels for designated facade complete with trims to profiles and finish required to meet design requirements. Form panel lines, breaks and angles sharp, true with adjacent surfaces and free from warp and buckle. Fabricate sharply cut edges with no displacement of sheet or protrusion of core.

.2 Fabricate with straight lines, square corners and/or smooth bends, free from twists or warps, kinks, dents and other similar imperfections which may affect appearance and/or serviceability. Exposed edges and ends of metal shall be dressed smooth, free from sharp ends. Connections and joints exposed to element shall be constructed to exclude water.

.3 Carry out complete fabrication including welding, grinding, punching and like to finish work. Make welds clean, sound and solid, free from defects. Grind smooth, free from marks.

.4 Finished cladding shall be free from visible defects and accurately manufactured.

.5 Make connections rigid and fail-safe wherever practicable, and make completely concealed.

.6 Coordinate openings required by other trades and Provide openings in panels prior to finishing whenever possible. Reinforce perimeter of openings to meet design requirements and as recommended by manufacturer.

.7 Fabricate all flashing pieces associated with and in contact with wall panel system. Use same sheet stock as exposed face sheets, pre-finished to match.

.8 Include cold rolled framing, furring, brackets, clips, hangers and incidental components as required for secure fastening and Provide weathertight installation including non-corrosive fasteners.

.9 Provide for condensation and inner wall drainage at sill members and other shapes which would otherwise tend to trap water.

2.7 FINISHES

.1 Exterior and Interior Finish System:

.1 Exterior Facing Finish: Fluropolymer (PVDF) Two Coat system, 0.8 mil primer with 0.8 mil Kynar 500 (70%) or Hylar 5000 colour top coat ; Minimum Coating thickness: 1.6 mil.

.2 Interior Facing Finish: Manufacturer's standard white polyester.

.3 Strippable Coating: applied prior to roll forming and embossing as recommended by manufacturer.

.4 Colour: to be selected by Consultant at later date from the manufacturer’s standard range.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine all structural steel before beginning installation to ensure that all supporting members are straight, level, plumb, properly braced and satisfactory for panel installation.

.3 Do not begin installation until unsatisfactory conditions are corrected.

.4 Start of installation shall signify structure and adjacent conditions as being proper and acceptable.

.2 Wall framing alignment:

.1 Ensure proper alignment of wall framing members to assure proper fit up of overall construction.

.2 Wall panels installed over misaligned intermediate wall framing members will cause deflection (bending) of panels. Deflected panels will have bending stress which may cause panel face rippling or buckling when combined with conditions of thermal stress and wind stress.

.3 Prior to starting panel installation, check wall framing for straightness and alignment, and also check to verify that wall panels can be installed without interference.

.4 Conform to specified wall framing alignment tolerance. Intermediate framing members may require more critical alignment tolerances then specified tolerances.

.5 Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Provide framing, supports and cast-in anchorage plates, as necessary, to support prefinished preformed composite wall panel.

.2 Provide the work of this Section in accordance with panel manufacturer's instructions

.3 Provide the work of this Section set in alignment, plumb, straight to true planes.

.4 Remove strippable coatings.

.5 Provide a 10 mm (3/8 inch) wide x 25 mm (1 inch) deep perimeter joint at the interface of adjacent, dissimilar materials / construction for caulking. Coordinate with Section 07 92 00.

.6 **[Metal Soffits:**

.1 Provide metal soffits constructed from metal panels as indicated.

.2 **Provide a complete suspension system as required to support and anchor the metal soffits.]**

.7 Butyl Weather Barrier Sealant:

.1 Apply non-skinning butyl sealant as shown on shop drawings and manufacturer's installation instructions as necessary to establish the vapor barrier for the panels.

.2 Use non-skinning butyl tube sealant only for tight metal-to-metal contact.

.3 Do not use non-skinning butyl tube sealant to bridge gaps.

.8 Sealant For Exposed Joints:

.1 Clean and prime surfaces to receive exterior exposed sealants in accordance with sealant manufacturer's recommendations.

.2 sealant manufacturer's recommendations for joint width-to-depth ratio, application temperature range, size and type of backer rod, and compatibility of materials for adhesion.

.3 Direct contact between butyl and silicone sealants is not permitted.

.9 Flexible Membrane and Fastening Bars:

.1 Provide flexible membrane air seal closures to complete the air seal system from the work of this Section to adjacent parts of the Work.

.2 Provide flexible membrane laps with adhesive overlap seal minimum 150 mm (6 inch) in width.

.3 Provide fastening bars to securely clamp the flexible membrane and to seal it against the air seal sheet and panel lap sealants of the insulated metal panels.

.10 Panel Trim and Panel Flashings:

.1 Place trim and trim fasteners only as indicated per details on reviewed shop drawings.

.2 Include panel trim in continuous air seal system of insulated metal panel system.

.3 Field drill weep holes where appropriate in horizontal trim where indicated on shop drawings.

.4 Place continuous strip of butyl tape or butyl sealant on closure trims for the length of the panel to be covered as indicated on shop drawings.

.11 Place panel fasteners through pre-punched holes in attachment clips, concealed within the joint of the panel. Secure units to the structural supports. Space clips as recommended by manufacturer or otherwise indicated on the approved shop drawings.

3.3 CLEANING AND CARE

.1 After completing panel installation, strip protective film as designated, Panel surfaces shall be free of deleterious material including dirt;

.2 Wipe finishes surfaces of filling caused by drilling or cutting to prevent any discolouration or rust stains resulting from installation process.

3.4 FIELD QUALITY CONTROL

.1 Manufacturer's Field Service: Engage a factory-authorized service representative to provide training and supervision of Contractor's personnel in installation of panel system at commencement of installation. Factory-authorized service representative must also:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect the installation and report unsatisfactory conditions to Consultant.

.4 attend final inspection and submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer's requirements.

.2 **[Testing Requirements:**

.1 Testing Agency: Engage independent testing and inspection agency acceptable to the Consultant to perform field tests and inspections and to prepare reports of findings.

.1 **Field Water Test: After completing portion of metal wall panel assembly including accessories and trim, test a 2-bay area selected by the Consultant for water penetration in accordance with AAMA 501.2.]**

.3 Manufacturer’s Field Services:

.1 Ensure manufacturer’s representative carries out regular inspections of system during installation.

.2 Ensure walls and openings are within +3 mm (+ 1/8 inch) and structure is plumb within 1:1000 of overall height.

.3 Have manufacturer’s representative and Contractor carry out final inspection and approval of completed work.

3.5 CLEANING AND PROTECTION

.1 Remove temporary protective coverings and strippable films as insulated-core metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions.

.2 On completion of insulated-core metal wall panel installation, clean finished surfaces as recommended by insulated-core metal wall panel manufacturer. Maintain in a clean condition during construction.

.3 Replace insulated-core metal wall panel that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SEE ADD#4 Q#99

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 The General Conditions and Supplementary Conditions of the Contract as amended in the Contract Documents.

.2 Division 01 requirements and any additional documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the modified bituminous membrane roofing work specified herein. This includes, but is not necessarily limited, to:

.1 Styrene-butadiene-styrene (SBS) modified bituminous membrane roofing.

.2 Cap-sheet materials

.3 Base-sheet materials

.4 Flashing sheet materials

.5 Roof Sheathing Boards and insulation overlay boards.

.6 Vapour retarders

.7 Roof insulation.

.8 Auxiliary roofing membrane materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Unless otherwise stipulated by a specific publication date in this Section or the Ontario Building Code, the latest published editions of reference standards in force as of the Bid Closing Deadline for the Project, including adopted amendments, are applicable.

.2 Definitions:

.1 Roofing Terminology: Refer to CRCA and NRCA Roofing Specifications Manuals and ASTM D1079 for definition of terms related to roofing work in this Section.

.2 Roof System: the organization and securement of various interacting materials (apart from the supporting deck structure), designed and installed to prevent the transmission of water through the system into the conditioned space of a building (adapted from ASTM D6630)

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Meet with Owner, Consultant, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

.3 Review methods and procedures related to roofing installation, including manufacturer's written instructions.

.4 Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

.5 Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.

.6 Review structural loading limitations of roof deck during and after roofing.

.7 Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.

.8 Review governing regulations and requirements for insurance and certificates if applicable.

.9 Review temporary protection requirements for roofing system during and after installation.

.10 Review roof observation and repair procedures after roofing installation.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00 for roofing system. Include plans, elevations, sections, details, and attachments to other work.

.1 Base flashings and membrane terminations.

.2 Tapered insulation, including slopes.

.3 Crickets, saddles, and tapered edge strips, including slopes.

.4 Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

.4 Samples: Submit samples in accordance with Section 01 30 00 for the following:

.1 Coloured cap sheet (other than black).

.2 Flashing sheet, colour required.

.3 Walkway pads or rolls, of colour required.

.5 Manufacturer's Certificate:

.1 Submit letter signed by manufacturer certifying that products meet or exceed specified requirements. Submit evidence of meeting performance requirements by submitting additional test and evaluation reports as well as conformance to applicable listings.

.2 Compatibility: Compatibility between components of roofing system is essential. Provide written declaration to Consultant stating that materials and components, as assembled in system, meet this requirement.

.6 Warranties: Submit copies of warranties specified in this Section for Consultant's review.

.7 System Test Reports: Submit reports substantiating conformance with requirements of CSA A123.21 based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for components of membrane roofing system.

.8 Wind Uplift Resistance Calculations: Provide calculations or reports sealed by a Professional Engineer, licensed to practice in Province of Ontario, demonstrating that roof assembly design meets wind uplift requirements specified in this Section. Alternatively, wind uplift calculations prepared by roofer or roof manufacturer determined using NRC's Wind-RCI calculators or equivalent tools demonstrating compliance will be deemed acceptable.

1.7 CLOSEOUT SUBMITTALS

.1 Maintenance Data: Submit in accordance with Section 01 70 00 for roofing system to include in maintenance manuals.

.1 As a minimum include following: Project name, project location, dated and executed copy of manufacturer's warranty, name, address and phone number of nearest manufacturer's representative.

.2 Include recommendations for periodic inspections, care and maintenance. Identify common causes of damage with instructions for temporary patching until permanent repair can be made.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.1 Manufacturer shall employ trained technical service representatives, independent of sales.

.2 Manufacturer shall be an ISO 9001 registered company (or equivalent quality assurance system) and provide a 'Quality Compliance Certificate (QCC)' for reporting/confirming tested values of modified bitumen membrane materials upon request.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.1 Ensure roofer is qualified and approved by membrane manufacturer and is a member in good standing in OIRCA or CRCA or local provincial roofing contractor's association.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.1 Mixing Products across from various manufacturers without manufacturer's or Consultant's written permission is not permitted.

.3 Mock-ups:

.1 Construct mock-up 10 m² (100 sq ft.) minimum size showing typical lap joint, one inside corner and one outside corner.

.2 Reviewed mock-up may form part of complete work if undisturbed at time of Substantial Performance of the Work.

.3 Allow 24 hours for inspection of mock-up by Consultant before proceeding with roofing work.

1.9 DELIVERY, STORAGE, AND HANDLING

.1 Comply with manufacturer's written instructions for handling, storing, and protecting during installation as well as any specific Consultant's instructions.

.2 Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

.3 Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

.1 Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

.4 Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

.5 Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

.6 Fire Protection:

.1 Respect safety measures described in manufacturer's literature as well as requirements of authorities having jurisdiction.

.2 Store combustible materials away from heat and open flames. Protect and store materials in dry, ventilated area away from welding flame, spark or other combustible materials.

.3 Keep two dry chemical or foam-type fire extinguishers acceptable to authorities having jurisdiction, fully charged and in operable condition within easy access of torching applications and at every location where open flames are used.

.4 Verify no vent pipes venting flammable fumes (e.g. fuel storage tanks) are located in area of work.

.5 Protect against self-starting fires at end of daily roofing operations. Use a heat detector gun to spot smoldering or concealed fires. Examine roof for hot spots one hour after completion of roofing operations, especially at flashings and around roof penetrations. Maintain fire watch for one hour after each day's roofing operations cease.

1.10 PROJECT CONDITIONS

.1 Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

.1 Do not apply any part of roofing system over damp materials, or during a period of damp weather.

.2 Install roofing on dry deck, free of snow and ice. Use only dry materials and apply only during weather conditions that will not promote the intrusion of moisture into roofing system.

1.11 WARRANTY

.1 Extended Warranty: Manufacturer's standard or modified form, total system, non-pro-rated, "No-Dollar-Limit", transferrable warranty in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period. Failure includes roof leaks resulting from manufacturing and/or workmanship defects or deficiencies.

.1 Warranty Period: 20 years from date of Substantial Performance of the Work.

.2 Installer Warranty: Submit roofing Installer's warranty, on OIRCA or CRCA standard warranty form, signed by Installer, covering the Work of this Section, including all components of membrane roofing system such as membrane roofing, base flashing, roof insulation, fasteners, insulation overlay boards, Roof Sheathing Boards, vapour retarders, and walkway products, for the following:

.3 .1 Warranty Period: Two years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Henry Company

.2 IKO.

.3 Johns Manville.

.4 Siplast, Inc.

.5 Soprema Inc.

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant’s opinion, and subject to Consultant’s review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Exterior Fire-Test Exposure: CAN/ULC-S107, Class A, unless otherwise required by authorities having jurisdiction; for application and roof slopes indicated on Drawings and Schedules, as determined by testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Roof arrangements and configurations provided in Contract Documents are indicative and are intended to convey design intent only. Final roof assemblies must be determined in consultation with manufacturer based on wind uplift criteria specified herein and manufacturer's standard tested assemblies. Indicate all variations and deviations from specified assemblies to Consultant clearly during Shop Drawing review and seek acceptance prior to commencing construction activities.

.2 Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.

.3 Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

.4 Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to requirements of Ontario Building Code:

.1 Corner Uplift Pressure: Refer to Structural Drawings.

.2 Perimeter Uplift Pressure: Refer to Structural Drawings.

.3 Field-of-Roof Uplift Pressure: Refer to Structural Drawings.

.5 CSA Listings: Provide roofing membrane, base flashings, and component materials that comply with requirements of CSA A123.21.

2.4 BASE SHEET ROOFING MEMBRANE (TORCHED APPLICATION)

.1 Composite-Reinforced Base Sheet Roofing Membrane: SBS-modified asphalt sheet (reinforced with composite glass/polyester); smooth surfaced; suitable for application method specified.

.1 CGSB 37-GP-56M; Classification: Type 2 – Covered Roofing, Class P - plain surfaced, Grade 2 - heavy duty service or equivalent to CSA A123.23; Type C.

.2 Reinforcement: combination of polyester and glass fibres to ASTM D6162, having nominal weight of 160 g/m²

.3 Top/bottom surfaces: Manufacturer’s standard suitable for application indicated.

.4 Application: Torched

.5 Acceptable Products:

.1 “Sopraply Base 520” by Soprema Inc

.2 "Torchflex TP-HD-FF-BASE" by IKO

.3 “DynaPly® HW” T1 by Johns Manville.

.4 “Paradiene 20 TG” by Siplast

2.5 CAP SHEET ROOFING MEMBRANE (TORCHED APPLICATION)

.1 High SRI Composite-Reinforced Field Cap Sheet Roofing Membrane: SBS-modified asphalt sheet (reinforced with composite glass/polyester); granule surfaced; suitable for application method specified.

.1 CGSB 37-GP-56M; Classification: Type 2 – Exposed roofing, Class G – Granule surface, Grade 2 – Heavy-duty or equivalent to CSA A123.23; Type B.

.2 Reinforcement: combination of polyester and glass fibres to ASTM D6162, having nominal weight of 160 g/m²

.3 Top/bottom surfaces: Manufacturer’s standard suitable for application indicated.

.4 Solar Reflectance Index (SRI): As specified in this Section.

.5 Granule colour: Bright white.

.6 Application: Torched.

.7 Acceptable Products:

.1 "SOPRASTAR FLAM HD GR" by Soprema Inc

.2 "DynaWeld FR CR (coated)" by Johns Manville

.3 "Armourcool Granular TP-HD " by IKO

.4 "Parafor 30 TG BW" by Siplast

.5 "modifiedPLUS® NP250gT4 with Solarflex Coating" by Henry Company

2.6 BASE SHEET FLASHING MEMBRANE

.1 Flashing Base Sheet Roofing Membrane: SBS-modified asphalt sheet (reinforced with polyester fabric or composite glass fibre/polyester); smooth surfaced; suitable for application method specified.

.1 CGSB 37-GP-56M; Classification: Type 2 – Covered Roofing, Class P - plain surfaced, Grade 2 - heavy duty service or equivalent to CSA A123.23; Type B or C.

.2 Reinforcement: nonwoven polyester fibres to ASTM D6164, having nominal weight of 180 g/m² or combination of polyester and glass fibres to ASTM D6162, having nominal weight of 160 g/m²

.3 Top/bottom surfaces: Manufacturer's standard suitable for application indicated.

.4 Application: Cold-applied/Self-Adhesive

.5 Acceptable Products: as recommended by manufacturer.

2.7 CAP SHEET FLASHING MEMBRANE

.1 Identical to field roofing cap sheet membrane.

2.8 ROOF SHEATHING BOARDS

.1 Provide roof sheathing board as specified in this Section and conforming to the following characteristics:

.1 Combustibility: non-combustible in accordance with ULC CAN4-S114-M.

.2 Fire-test response characteristics (CAN/ULC-S102/S102.2-M):

.1 Flame spread: 0,

.2 smoke developed: 0

.3 Mould Resistance: Rating of 10, no mould growth after four weeks exposure when tested in accordance with ASTM D3273.

.4 Material to act as thermal barrier in accordance with UL 1256/ CAN/ULC-S126-M.

.5 Maximum size: 1220 mm x 1220 mm (84' x 84').

.2 Following types are acceptable:

.1 Glass-Mat Roof Sheathing Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate, Type X, 16 mm (5/8 inch) thick, factory primed.

.1 Application: as recommended by manufacturer.

.2 Acceptable Products:

.1 "DensDeck Prime with EONIC Technology" by Georgia-Pacific LLC.

.2 Approved equivalent by CGC Inc.

.2 Fibre-Reinforced Roof Sheathing Board: ASTM C 1278/C 1278M, cellulosic-fibre-reinforced, water-resistant gypsum substrate, Type X, 16 mm (5/8 inch) thick.

.1 Application: as recommended by manufacturer.

.2 Acceptable Products:

.1 "Securock® - Brand Gypsum-Fiber Roof Board" by CGC Inc.

.2 Approved equivalent.

.3 Fasteners: Factory-coated steel fasteners and metal plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof sheathing board to roof deck.

2.9 VAPOUR RETARDER (AVB-3)

.1 Self-Adhering-Sheet Vapour Retarder: Tri-laminate woven polyethylene film laminated to layer of SBS-modified bitumen, minimum 0.80- mm (31.5-mil) total thickness; maximum permeance rating of 6 ng/Pa x s x sq. m (0.1 perm); self-adhered, with slip-resisting surface and release film backing. Provide primer when recommended by vapour retarder manufacturer.

.1 Acceptable Products:

.1 "Sopravap'r" by Soprema Inc.

.2 "JM Vapor Barrier SA" by Johns Manville.

.3 "IKO M.V.P" by IKO Industries.

.4 "Vapor Block SA" by Henry Company

.5 Approved equivalent by Siplast

2.10 ROOF INSULATION (INS-8)

.1 Provide preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.

.2 Polyisocyanurate Board Insulation: CAN/ULC-S704, Type 3, Class 3 and ASTM C 1289, Type II, Class 2, Grade 2 inorganic glass-fibre mat facer on both major surfaces.

.1 Compressive strength: minimum 138 kPA (20 psi).

.2 Minimum RSI (R) Value: 1.0 per 25 mm (5.7 per 1 inch) in accordance with CAN/ULC-S770 based on Long Term Thermal Resistance (LTTR) R-value.

.3 Thickness: As indicated on Drawings

.4 Application: Cold-Adhered.

.5 Acceptable Products:

.1 "Sopra-ISO Plus" by Soprema Inc.

.2 "ENRGY 3® CGF" Johns Manville.

.3 "IKOTherm III" by IKO Industries Inc.

.4 "Paratherm Poly ISO" by Siplast

.5 Approved equivalent by Atlas Roofing Corporation.

.3 Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of not less than 1:48 (1/4 inch per 12 inches) unless otherwise indicated. Refer to Drawings for specific slopes. Tapered insulation to be of identical composition as roof insulation board.

.4 Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.11 INSULATION OVERLAY BOARD

.1 Provide insulation overlay board as specified in this Section and conforming to the following characteristics:

.1 Combustibility: non-combustible in accordance with ULC CAN4-S114-M.

.2 Fire-test response characteristics (CAN/ULC-S102/S102.2-M):

.1 Flame spread: 0,

.2 smoke developed: 0

.3 Mould Resistance: Rating of 10, no mould growth after four weeks exposure when tested in accordance with ASTM D3273.

.4 Maximum size: 1220 mm x 1220 mm (4’ x 4’).

.2 Following types are acceptable:

.1 Mineral fortified, asphaltic roof insulation overlay board with glass fibre facers.

.1 Application: Cold-Adhered.

.2 Thickness: 6 mm (1/4 inch

.3 Acceptable Products:

.1 “Sopraboard” by Soprema Inc.

.2 “Protectoboard” by IKO Industries.

.3 “Protecto Board” or “HAL Board” by Siplast

.2 Laminated Overlay Board: System consisting of non-woven reinforced SBS modified bitumen membrane base ply factory laminated to 13 mm (1/2 inch) thick high density (HD) polyisocyanurate board as acceptable in lieu of separate insulation overlay boards.

.1 Application: Fully-adhered.

.2 Basis-of-Design: “2-1Soprasmart ISO HD” by Soprema Inc. or Equivalent.

2.12 WALKWAYS

.1 Walkway Pads: Polyester reinforced SBS modified bitumen pads with slip-resisting mineral-granule surface, manufactured as a traffic pad for foot traffic and acceptable to roofing system manufacturer, 5 mm (3/16 inch) thick, minimum.

.1 Acceptable Products:

.1 “Soprawalk” by Soprema Inc. or approved equivalent.

.2 “DynaTred” by Johns Manville.

.3 “Paratread” by Siplast

.4 “Torchflex TP-250-Cap” by IKO

.5 Approved Equivalent.

.2 Pad Size: Manufacturer's standard type.

.3 Granule Colour: Contrasting colour as selected by Consultant at a later date.

.2 Roof Pavers: CSA A23.1/A23.2 Heavyweight, hydraulically pressed, concrete units, square edged manufactured for use as plaza deck pavers; minimum average cube compressive strength 50 MPa (7250 psi), with no individual unit less than 45 MPa (6525 psi).

.1 Size: 610 mm x 610 mm x 45 mm (24 inch x 24 inch x 1-3/4 inch)

.2 Finish: non-slip finish – shot blast.

.3 Colour: As selected by Consultant from manufacturer's full range.

.1 Colour Pigment Material Standard: Comply with ASTM C 979.

.4 Freeze/Thaw Deicing Salt Resistance: Required.

.5 Water Absorption: not greater than 5 percent.

.6 SRI: Provide Products having minimum Solar Reflective Index (SRI) values as follows:

.1 Initial: Not less than 80

.2 3-year test results: Not less than 78.

.7 Acceptable Products: "Solar Reflective Slabs" by Brooklin Concrete Products or approved equivalent.

.8 Provide pavers at traffic concentration points (i.e. roof hatches, access doors, rooftop ladders, etc.), regardless of traffic frequency or whether or not these are explicitly indicated on Drawings.

.3 Paver Supports:

.1 Paver manufacturer's standard SBR rubber, high-density polyethylene, or polyurethane paver support assembly, including fixed-height, adjustable or stackable pedestals, shims, and spacer tabs for flush joint spacing sufficient to allow for expansion and contraction while avoiding tripping hazards.

.1 Acceptable Manufacturers:

.1 "Paver Pedestals" by Soprema Inc.

.2 Approved equivalent by Bison Innovative Products

.3 Approved Equivalent.

.2 Polystyrene: Extruded polystyrene insulation as fabricated with both sides having a matrix of drainage, size as required to support pavers.

.1 Grooves: 13 mm x 13 mm (½ inch x ½ inch); staggered

2.13 ASSOCIATED ROOFING WORKS

.1 Provide required associated roofing accessories and supports as necessary to provide complete roofing work and support roof equipment shown on Drawings. This includes but is not limited to supports for:

.1 Mechanical equipment, electrical equipment, pipes, guy wire, stack vents, relief vents, fall restraint anchors and similar components.

.2 Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

.3 Provide seismically reinforced supports where required by Authorities Having Jurisdiction.

.4 Acceptable Manufacturers: Thaler Metal Industries Ltd. Or approved equivalent.

2.14 ACCESSORIES

.1 Provide roof accessories recommended by insulation manufacturer for intended use and compatibility with roofing.

.2 Insultation Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

.3 Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:

.1 Bead-applied, low-rise, multicomponent urethane adhesive.

.2 Full-spread spray-applied, low-rise, two-component urethane adhesive.

.3 Acceptable Product:

.1 “Duotack” by Soprema Inc.;

.2 “Millenium Adhesive” by IKO Industries;

.3 “MJM Green 2-Part UIA Canister” by Johns Manville.

.4 Approved equivalent

.4 Insulation Cant Strips: ASTM C 208, Type II, Grade 1, cellulosic-fibre insulation board.

.1 Acceptable Products:

.1 “FesCant Plus” by Johns Manville.

.2 Approved Equivalent by SOPREMA.

.3 Approved Equivalent by IKO Industries.

.5 Wood Nailer Strips: Comply with requirements in Section 06 10 00.

.6 Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fibre insulation board.

.7 Low-VOC Primer: water-based polymer emulsion primer

.1 Acceptable Products:

.1 “Elastocol Stick Zero” or “Elastocol H2O” by Soprema Inc.;

.2 “SAM LVC” by IKO Industries

.3 “TA 119” by Siplast

.4 “Blueskin LVC Primer” by Henry Company

.5 Approved equivalent

.8 Adhesive for membranes: one-part, asbestos-free, low-VOC, low-odour, cold-applied, elastomeric adhesive compatible with roofing membrane and base flashings.

.1 Acceptable Products:

.1 “Colply EF Adhesive” and “Colply EF Flashing Adhesive” by Soprema Inc.

.2 "Cold Gold Field Adhesive" and “Cold Gold Flashing Adhesive” by IKO Industries.

.3 “MBR Cold Adhesive” by Johns Manville.

.4 “SFT Flashing Cement” by Siplast

.5 "MB 80-11 Flashing Adhesive" by Henry Company.

.6 Approved Equivalent.

.9 Liquid-Applied Flashing: Low-VOC resin-based, seamless, reinforced waterproofing system flashing that is compatible with adjacent materials.

.1 Provide at all flashing details including, but not limited to, mechanical equipment, roof/wall penetrations and similar locations.

.2 Acceptable Products:

.1 "Alsan Flashing" by Soprema Inc.

.2 "MS Detail" by IKO Industries.

.3 "PermaFlash" by Johns Manville.

.10 Mastic Sealant: CAN/CGSB-37.29, Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, non-skinning, and nondrying.

.11 Board Fasteners: Factory-coated steel fasteners and metal plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:

.1 Verify that roof openings and penetrations are in place and curbs are set and braced and that roof drain bodies are securely clamped in place.

.2 Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

.3 Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 05 31 00, Steel Decking.

.4 Verify that deck is securely fastened with no projecting fasteners.

.3 Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

.1 Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

.2 Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

.3 Prime surface of concrete deck with approved primer and allow primer to dry. Refer to product data sheet for coverage and application information.

3.3 INSTALLATION, GENERAL

.1 Install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in CRCA's roofing specifications.

.2 Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.

.3 Coordinate installing roofing system so components of the roofing membrane system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

.1 Provide tie-offs at end of each day's work to cover exposed roofing membrane sheets with a course of coated felt set in roofing cement or hot roofing asphalt with joints and edges sealed.

.2 Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system.

.3 Remove and discard temporary seals before beginning work on adjoining roofing.

.4 Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

3.4 ROOF SHEATHING BOARD INSTALLATION

.1 Install Roof Sheathing Board with long joints in continuous straight lines, perpendicular to roof slopes with end joints staggered between rows. Tightly butt Roof Sheathing Boards together.

.1 Fasten Roof Sheathing Board to top flanges of steel deck according to recommendations in FM Approvals' "RoofNav" and FM Global Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification.

.2 Fasten Roof Sheathing Board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to membrane roofing system manufacturers' written instructions.

3.5 VAPOUR RETARDER INSTALLATION

.1 Self-Adhering Sheet Vapour Retarder: Prime substrate if required by manufacturer. Install self-adhering sheet vapour retarder, side and end lapping each sheet a minimum of 100 mm (4 inches) and 150 mm (6 inches), respectively. Seal laps by rolling.

.2 Completely seal vapour retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

3.6 INSULATION INSTALLATION

.1 Comply with roofing system manufacturer's written instructions for installing roof insulation.

.2 Mechanically fasten base layer to substrate according to roofing system manufacturer's written instructions.

.3 Nailer Strips: Mechanically fasten 89-mm actual- (4-inch nominal-) width wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:

.1 4.88 m (16 feet) apart for roof slopes steeper than 1:12 (1 inch per 12 inches) but less than 3:12 (3 inches per 12 inches).

.2 1220 mm (48 inches)] apart for roof slopes steeper than 3:12 (3 inches per 12 inches).

.4 Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing membrane system with vertical surfaces or angle changes more than 45 degrees.

.5 Install tapered insulation under area of roofing to conform to slopes indicated on Drawings and Schedules.

.6 Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 6 mm (1/4 inch) with insulation.

.1 Cut and fit insulation within 6 mm (1/4 inch) of nailers, projections, and penetrations.

.7 Install insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 75 mm (3 inches) or more, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 150 mm (6 inches) in each direction.

.8 Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

.9 Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

.10 Adhered Insulation: Install each layer of insulation and adhere to substrate as follows:

.1 Set each layer of insulation in a solid mopping of hot roofing asphalt.

.2 Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

[Mechanically Fastened Insulation: Install each layer of insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

.3 Fasten insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.

.11 Mechanically Fastened and Adhered Insulation: Install first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

.1 Fasten first layer of insulation according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.

.2 Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.

.3 Set each subsequent layer of insulation in a solid mopping of hot roofing asphalt.

.4 Set each subsequent layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

.12 Install insulation overlay boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints a minimum of 150 mm (6 inches) in each direction from joints of insulation below. Loosely butt insulation overlay boards together. Tape joints if required by roofing system manufacturer.

.1 Fasten insulation overlay boards according to requirements in FM Approvals' "RoofNav" for specified Windstorm Resistance Classification.

.2 Apply hot roofing asphalt to underside, and immediately bond insulation overlay board to substrate.

.13 Install laminated insulation overlay boards in a shingle fashion (to prevent back water laps) over insulation/substrate with long joints in continuous straight lines with end joints butted and aligned

with the 1-inch membrane overlapped onto the adjacent board. Fasten insulation overlay board in accordance to test approval, the letter of intent to warrant and project specification. Seal side laps and install manufacturer's recommended lapping tape, centered over the aligned end joints.

3.7 ROOFING MEMBRANE INSTALLATION, GENERAL

.1 Install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in CRCA's Roofing Specification Manual.

.2 Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.

.3 Where roof slope exceeds 1:12 (1 inch per 12 inches), install roofing membrane sheets parallel with slope. Refer to manufacturers steep slope installation requirements.

.1 Backnail roofing membrane sheets to substrate according to roofing system manufacturer's written instructions.

.4 Cooperate with testing agencies engaged or required to perform services for installing roofing system.

.5 Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

.1 Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation.

.2 Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.

.3 Remove and discard temporary seals before beginning work on adjoining roofing.

3.8 SBS-MODIFIED BITUMINOUS BASE-PLY MEMBRANE INSTALLATION

.1 Install modified bituminous roofing base ply sheet according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, when applicable, installing as follows:

.1 Heat Welded (Torched): Torch apply to substrate.

.2 Unroll roofing sheets and allow them to relax.

.2 Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.

.1 Repair tears and voids in laps and lapped seams not completely sealed.

3.9 SBS-MODIFIED BITUMINOUS CAP SHEET MEMBRANE INSTALLATION

.1 Install modified bituminous roofing cap sheet according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, when applicable.

.1 Heat Welded (Torched): Torch apply to substrate.

.2 Unroll cap sheet and allow them to relax.

.3 Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Completely bond and seal laps, leaving no voids.

.1 Repair tears and voids in laps and lapped seams not completely sealed.

.2 Apply roofing granules to cover exuded bead at laps while bead is hot.

.4 Install roofing sheets so side and end laps shed water.

3.10 MEMBRANE FLASHING INSTALLATION

.1 Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof; secure to substrates according to roofing system manufacturer's written instructions, and as follows:

.1 Prime substrates with asphalt primer.

.2 Backer-Sheet Application: Mechanically fasten backer sheet to walls or parapets.

.3 Flashing-Sheet Application: As specified by manufacturer for membrane application method.

.2 Extend base flashing up walls or parapets a minimum of 200 mm (8 inches) above roofing membrane and 100 mm (4 inches) onto field of roofing membrane.

.3 Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

.1 Seal top termination of base flashing.

.4 Install roofing membrane cap-sheet flashing where metal flanges and edgings are set on membrane roofing according to roofing system manufacturer's written instructions.

.5 Roof Drains: Coordinate with Division 22, Plumbing. Cover metal flashing with roofing membrane cap-sheet stripping and extend a minimum of 150 mm (6 inches) beyond edge of metal flashing onto field of roofing membrane. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring. Install stripping according to roofing system manufacturer's written instructions.

3.11 WALKWAY INSTALLATION

.1 Walkway Pads: Install walkway pads using units of size indicated on Drawings and Schedules or, if not indicated, of manufacturer's standard size according to walkway pad manufacturer's written instructions.

.1 Set walkway pads in cold-applied adhesive.

.2 Set walkway pads in flashing cement.

.3 Torch apply walkway pads.

3.12 FIELD QUALITY CONTROL

.1 Testing Agency: Owner may engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to supply reports to Consultant.

.2 Manufacturer's Field Services:

.1 Arrange for roofing system manufacturer's technical personnel to visit Project site on day roofing is commenced and at regular agreed-upon intervals until completion.

.2 Upon completion of work of this Section, arrange for roofing system manufacturer's technical personnel to inspect roof and verify quality of work.

.3 Submit detailed field report prepared by manufacturer's representative to inform Consultant, Contractor and Subcontractor after inspection and issue manufacturer's warranty if roofing installation is satisfactory.

.4 Notify Consultant and Owner 48 hours in advance of date and time of inspection.

.3 Roofing system will be considered defective if it does not pass tests and inspections.

.1 Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.13 PROTECTING AND CLEANING

.1 Protect roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Consultant and Owner.

.2 Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Performance of the Work and according to warranty requirements.

.3 Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, Products, equipment and services to complete the TPO membrane roofing work specified herein. This includes, but is not necessarily limited, to:

.1 Conventional roof assembly system consisting of fully adhered single ply TPO sheet materials, flashing membrane materials, and support boards.

.2 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 Roofing Terminology: Refer to CRCA Specifications Manuals and ASTM D1079 for the definition of terms related to roofing work in this Section.

.2 Reference Standards: Unless otherwise stipulated by a specific publication date in this Section or the Ontario Building Code, the latest published editions of reference standards in force as of the Bid Closing Deadline for the Project, including adopted amendments, are applicable.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Schedule and hold a pre-installation meeting at the Project site at least one week before beginning work on this Section to coordinate activities with related Subcontractors.

.1 Required Attendance: Subcontractor performing work of this Section, representatives from manufacturers and fabricators involved in or affected by installation.

.2 Notification: Notify Consultant and Owner of scheduled meeting dates in advance; minimum 72 hour notice required.

.3 Agenda:

.1 Review progress of related construction activities and preparations for particular activity under consideration.

.2 Make note of required sequencing and coordination with materials and activities that have preceded or will follow.

.3 Review and finalize construction schedule and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.

.4 Review methods and procedures for roofing installation, including manufacturer's instructions.

.5 Review structural loading limitations of roof deck during and after roofing.

.6 Examine supports, deck, and alignment and attachment to structural members.

.7 Review flashing, details, penetrations, openings, and conditions of other elements that may affect roofing system installation.

.8 Discuss governing regulations, insurance, certificates, tests, and inspections as applicable.

.9 Review temporary protection requirements for roofing system before, during and after installation.

.10 Discuss roof observation and repair procedures after roofing installation.

.3 Reporting: Record significant discussions, agreements, and disagreements, including required corrective measures and actions.

.4 Distribution: Distribute minutes of the meeting to each party present and to other parties requiring information not more than 72 hours after meeting.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 33 00.

.2 Product Data: Submit manufacturer's product characteristics, catalogue cuts, installation instructions and other relevant information for each material and product used for TPO membrane roofing work specified in this Section.

.3 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.4 Shop Drawings: Submit Shop Drawings indicating material layouts, details of construction, connections, and relationship with adjacent construction. As a minimum indicate following:

.1 Include plans, elevations, sections and details as applicable.

.2 Illustrate tapered insulation, roof cricket infill, setting plan layout, and details.

.3 Provide membrane layout on detailed roof plan, complete with full assembly section, vertical parapet details, joint or termination detail conditions, and conditions of interface with other materials.

.5 Wind Uplift Resistance Calculations: Provide calculations or reports sealed by a Professional Engineer, licensed to practice in Province of Ontario, demonstrating that roof assembly design meets wind uplift requirements specified in this Section. Alternatively, wind uplift calculations prepared by roofer or roof manufacturer determined using NRC's Wind-RCI calculators or equivalent tools that demonstrate compliance with requirements of Contract Documents will be deemed acceptable.

.6 Manufacturer's Certificate:

.1 Submit letter signed by manufacturer certifying that products meet or exceed specified wind uplift requirements. Submit evidence of meeting performance requirements by submitting additional test and evaluation reports as well as conformance to applicable listings.

.2 Compatibility: Compatibility between components of roofing system is essential. Provide written declaration to Consultant stating that materials and components, as assembled in system, meet this requirement.

.7 Samples: Submit selection and verification samples for Products requiring colour, texture, or design selection. Submit manufacturer's list of finishes or colour swatches for Consultant's selection.

.1 As a minimum submit samples of the following:

.1 Roof membrane selection: minimum 300 mm square.

.2 Typical flashing: minimum 300 mm.

.8 Warranties: Submit copies of warranties specified in this Section for Consultant's review.

1.7 CLOSEOUT SUBMITTALS

.1 Closeout Submittals, generally: in accordance with Section 01 78 00, Closeout Submittals.

.2 Operating and Maintenance Data: Submit care and maintenance instructions for TPO membrane roofing to be included in building operation and maintenance manual.

.3 Warranty Documentation: Submit a copy of extended warranties specified in this Section.

1.8 QUALITY ASSURANCE

.1 Manufacturer Qualifications: Provide Products for work of this Section by manufacturer with at least 10 years' experience manufacturing such materials.

.1 The manufacturer shall employ trained technical service representatives, independent of sales.

.2 The manufacturer shall be an ISO 9001 registered company and provide a 'Quality Compliance Certificate (QCC)' for reporting/confirming tested values of TPO membrane materials upon request.

.2 Installer Qualifications: A qualified firm that is approved, authorized, or licensed by membrane roofing system manufacturer to install manufacturer's product and that is eligible to obtain manufacturer's extended warranty specified in this Section.

.1 The installer must be approved by manufacturer for installing roof system and to authenticate warranties.

.3 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.1 Mixing Products across from various manufacturers without manufacturer's or Consultant's written permission is not permitted.

.4 Mock-Ups / First Installation Review: Construct mock-ups to verify selections made under submittals, demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

.1 Location: In-situ (i.e. first installation), as directed on site by Consultant.

.2 Construct mock-up 10 m² (100 sq ft.) minimum size showing typical lap joint, one inside corner and one outside corner.

.3 Purpose: To set benchmarks for installation and to judge subsequent work. Maintain Mock-ups during construction in undisturbed condition.

.4 Reviewed mock-ups: May become part of the completed work if undisturbed at the time of Substantial Performance of The work, provided they are undisturbed, and comply with requirements outlined in Contract Documents.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle TPO membrane roofing materials in accordance with manufacturer's written instructions.

.2 Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

.3 Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

.1 Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

.4 Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

.5 Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.10 SITE CONDITIONS

.1 Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements. Do not install roofing system during inclement weather that may affect adhesion, curing or sealing of membranes or components.

1.11 WARRANTY

.1 Extended warranty: Submit for Owner's review and acceptance, manufacturer's extended warranty in which manufacturer commits to repair or replace components of TPO membrane roofing that fail within specified warranty period. Manufacturer's extended warranty is in addition to, and does not supersede, any other rights that Owner may have under Contract Documents.

.1 Warranty Period: Not less than 20 years from date of Substantial Performance of The work.

.2 Installer Warranty: Submit roofing Installer's warranty, on OIRCA or CRCA standard warranty form, signed by Installer, covering the Work of this Section, including all components of membrane roofing system such as membrane roofing, base flashing, roof insulation, fasteners, insulation overlay boards, Roof Sheathing Boards, vapour retarders, and walkway products, for the following warranty period:

.1 Warranty Period: Two years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Carlisle Syntec

.2 GAF

.3 Holcim Elevate (previously Firestone)

.4 Johns Manville

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 General Performance: installed membrane roofing and flashing system must remain watertight and withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defects in manufacture, fabrication, installation, or construction.

.2 Wind Uplift Design Criteria: Roofing system must have undergone testing by a qualified testing and inspection agency to resist uplift pressure based on Ontario Building Code and CAN/CSA A123.21 requirements as follows:

.1 Corner Uplift Pressure: Refer to Structural

.2 Perimeter Uplift Pressure: Refer to Structural

.3 Field-of-Roof Uplift Pressure: Refer to Structural

.3 Roof Fire Covering Classification: Conforming to CAN/ULC S107 with Class A, Class B or Class C classification and conforming to Ontario Building Code 3.1.15.2.

.1 Provide Class A roof coverings per CAN/ULC S107 in all wood-framed and other buildings consisting of combustible construction as defined by Ontario Building Code.

.4 Material Compatibility: Ensure compatibility between roofing system components and interfacing materials. Roof system must not adversely affect adjacent materials.

2.3 TPO SHEET MEMBRANE

.1 TPO Sheet: uniform, flexible TPO sheet.

.1 Compliance: ASTM D6578/ASTM D6878, internally fabric or scrim reinforced.

.2 Accelerated Weathering: Must withstand 2000 hours in accordance with ASTM G152, ASTM G154, or ASTM G155.

.3 Impact Resistance: Must resist impact in accordance with ASTM D3746, ASTM D4272, or FM Approvals 4470 Foot Traffic Test.

.4 Application: fully adhered

.5 Thickness: Not less than 1.5 mm (60 mils), nominal.

.6 Exposed Face Color: White.

.7 Basis-of-Design: "Sure-Weld® TPO" by Carlisle Syntec or approved equivalent.

2.4 ROOF INSULATION (INS-8)

.1 Polyisocyanurate foam insulation board:

.1 Classification: CAN/ULC S704, Type 2 and ASTM C1289, Type II, Class 2, Grade 2 inorganic glass-fibre mat facer on both major surfaces. Organic facers are not permitted.

.2 Compressive strength: minimum 138 kPA (20 psi).

.3 Minimum RSI (R) Value: 1.0 per 25 mm (5.7 per 1") based on LTTR testing per CAN/ULC S770.

.4 Thickness: As indicated on Drawings and required to provide specified R-values.

.2 Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

.3 Insultation Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer for wind uplift criteria specified.

2.5 ROOF VAPOUR RETARDER (AVB-3)

.1 Self-Adhering Vapor Retarder

.1 Compliance: to ASTM D1970 or CAN/CGSB-51.33

.2 Material: Slip-resistant, cold-applied polyethylene film with rubberized asphalt or butyl rubber adhesive, and release paper backing as standard with manufacturer.

.3 Thickness: Not less than 1.0 mm (40 mils) for rubberized asphalt; minimum 0.76 mm (30 mils) for butyl rubber type.

.4 Permeance: Maximum 6 ng/Pa·s·m² (0.1 perm)

.2 Primer: Low-VOC, water-based polymer emulsion primer as recommended by roofing membrane manufacturer.

2.6 SUBSTRATE BOARDS

.1 Fire Response:

.1 Combustibility: non-combustible in accordance with CAN/ULC S114.

.2 Surface Burning Characteristics: Flame spread: 0 / Smoke developed: 0 in accordance with CAN/ULC S102.

.2 Mould Resistance (ASTM D3273): Minimum 10 rating (no mould growth after four week).

.3 Maximum Board Size: 1220 mm x 1220 mm (4 ft x 4 ft).

.4 Thickness:

.1 Sheathing board (over deck): Not less than 16 mm (5/8 in) thick.

.2 Cover board (over insulation): Not less than 13 mm (1/2 in) thick.

.5 Following types are acceptable:

.1 Glass-Mat Roof Sheathing Board: to ASTM C1177/ASTM C1177M, glass-mat, water-resistant gypsum substrate, factory primed.

.1 Moisture Absorption Rate: 5% or less by weight.

.2 Surface Moisture Absorption: 1 gram or less.

.2 Fibre-Reinforced Roof Sheathing Board: ASTM C1278/ASTM C1278M, cellulosic-fibre-reinforced, water-resistant gypsum substrate.

.6 Board Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof board to substrate, and acceptable to roofing system manufacturer for wind uplift criteria.

2.7 AUXILIARY COMPONENTS

.1 Provide auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing. Provide pourable sealers, preformed cone/vent sheet flashings, moulded pipe boot flashings, preformed corner sheet flashings, reinforced TPO securement strips, T-joint covers, in-seam sealants, termination reglets, cover strips, and other elements required for a complete installation.

.2 Sheet Flashing: Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and colour as TPO sheet membrane; minimum 1.5 mm (60 mils) thick.

.3 Bonding Adhesive: manufacturer's standard water-based type.

.4 Seaming Material: butyl splicing adhesive with splice cleaner, or synthetic-rubber polymer primer with butyl splice tape (minimum width of 75 mm) with release film; as recommended by manufacturer to authenticate warranties.

.5 Lap Sealant: Standard manufacturer's single-component, color matched to roofing membrane.

.6 Water Cutoff Mastic: Manufacturer’s standard butyl mastic sealant.

.7 Metal Termination Bars: manufacturer's standard, predrilled, stainless steel or aluminum, types; approx. 25 x 3 mm (1 x 1/8 inch), with anchors.

.8 Fasteners: Corrosion-resistant, factory-coated steel with metal or plastic plates, complying with FM Global 4470, for securing membrane to substrate; and approved by roofing system manufacturer.

2.8 PAVERS, BALLAST AND WALKWAYS

.1 Pavers: Pre-formed concrete roof pavers. Minimum size: 610 x 610 mm (24 x 24 inches). Maximum weight: 50 kg/m2. Must be square, free from chips, spalls, or cracks.

.2 Paver Pedestals: Manufacturer’s standard paver pedestals complete with levelling plates for smooth, level walkways.

.1 Basis-of-Design: Pave-El Pedestals.

.3 Wood Nailers: New, #2 grade or better, rot-resistant treated wood. Creosote or asphalt treatments are not acceptable. Install at roof edges or gravel stops; install flush with membrane underlayment top, ± 6 mm (1/4 inch).

.4 Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resistant, textured walkway pads or rolls. Thickness approximately 5 mm (3/16 inch) and approved by roofing system manufacturer.

.1 Size: Approximately 914 x 1524 mm (36 x 60 inches).

.2 Color: Contrast with roof membrane

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Inspect materials for defects before installation.

.3 Comply with safety regulations of authority having jurisdiction.

.4 Roof Openings and Penetrations:

.1 Ensure roof openings, penetrations are in place, curbs are set and braced.

.2 Ensure roof drain bodies are securely clamped in place.

.5 Wood Cants, Blocking, Curbs, and Nailers:

.1 Ensure wood cants, blocking, curbs, nailers and similar components are securely anchored to roof deck at penetrations and terminations.

3.2 PREPARATION

.1 Design and selection of materials for temporary roofing are responsibilities of Contractor.

.2 Clean substrate of dust, debris, moisture, and substances detrimental to roofing installation in accordance with manufacturer's written instructions. Remove sharp projections.

.3 Prevent materials from entering and clogging roof drains and conductors.

.4 Avoid spillage or migration of materials onto surfaces of other construction.

.5 Remove roof-drain plugs when work is not in progress or when rain is forecast.

3.3 INSTALLATION, GENERALLY

.1 Installation Compliance: Install roofing membrane system in accordance with roofing system manufacturer's written instructions, reviewed Shop Drawings and applicable recommendations in CRCA’s Roofing Specification Manual.

.2 Supplement manufacturer's installation instructions with additional installation requirements specified in this Section to produce specified work results.

3.4 ROOF SHEATHING INSTALLATION

.1 Mechanically Fastened Roof Sheathing:

.1 Fasten panels to steel deck with fasteners and plates as recommended by membrane manufacturer.

.2 For steel decks, ensure fasteners engage top rib and penetrate through deck by at least 19 mm (3/4 inch). Align long edge of board parallel to and on top rib for continuous support.

.3 Adhere to membrane manufacturer’s guidelines for fasteners' number and spacing.

.4 Stagger end joints of adjacent boards; ensure butt joints are moderately contacting.

.5 Cut boards cleanly where slopes change, do not break boards to fit deck.

.6 Concrete fasteners and anchors must penetrate a minimum of 32 mm (1 1/4 inch), as approved by membrane manufacturer.

3.5 VAPOUR RETARDER INSTALLATION

.1 Panel Selection: Only use roof sheathing panels approved by the vapor retarder manufacturer.

.2 Primer Application: On glass-faced gypsum board panels, apply primer in accordance with gypsum board and vapor retarder manufacturers' instructions.

.3 Surface Preparation: Ensure primed surfaces are clean and free of dust to facilitate effective adhesion. Cover substrates with vapor retarder as soon as they are ready.

.4 Steel Deck Alignment: When applying directly to steel deck, align roll parallel to deck flutes. Vapor retarder overlaps must sit on top ribs of deck, ensuring full-length support.

.5 Initial Placement: Roll out vapor retarder on substrate for alignment; do not remove release sheet immediately.

.6 Overlap and Staggering: Overlap sheets by 75 mm (3 inches) at sides and 150 mm (6 inches) at ends. Stagger end laps by minimum of 300 mm (12 inches).

.7 Adhesion Technique: Start by peeling back and adhering one end of release sheet to substrate. Gradually remove remaining sheet at a 45-degree angle to minimize wrinkles.

.8 Realignment: If misalignment occurs, do not readjust. Instead, cut roll, start new section to ensure correct alignment, and overlap over misaligned piece by 150 mm (6 inches).

.9 Final Rolling: Use a 34 kg (75 lb) roller for application. Align roller edge with side laps' lower end and roll up membrane. Avoid cutting membrane for air bubble removal; push out bubbles by rolling them towards the lap edges.

.10 Completely seal vapour retarder at terminations, obstructions, and penetrations to prevent air infiltration into roofing system.

3.6 INSULATION INSTALLATION

.1 Follow manufacturer's instructions for insulation installation. Do not install insulation boards displaying signs of moisture damage.

.2 Install insulation using staggered layers to minimize thermal bridging.

.3 Install insulation with long joints in a continuous straight line. Stagger end joints between rows.

.4 Ensure that edges and ends between boards abut each other. Fill gaps exceeding 6 mm (1/4 inch) with insulation. Cut and fit insulation within 6 mm (1/4 inch) of nailers, projections, and penetrations.

.5 Secure preformed 45-degree insulation cant strips at junctures of roofing membrane systems with vertical surfaces or angle changes exceeding 45 degrees.

.6 Install tapered insulation under roofing to match slopes indicated on Drawings. Install insulation under roofing membrane to reach required thickness.

.7 Provide two or more layers when overall insulation thickness is 75 mm (3 inches) or more.

.8 Stagger joints of each succeeding layer at least 150 mm (6 inches) in each direction from joints of previous layer.

.9 Trim surface of insulation as needed at roof drains. Ensure completed surface is flush and does not impede flow of water.

.10 Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

3.7 COVER BOARD INSTALLATION

.1 Install cover board over insulation to protect insulation from roof traffic. Ensure tight, staggered joints. Use adhesive specified in roof assembly's CSA A123.21 wind uplift test report.

3.8 ROOFING MEMBRANE INSTALLATION

.1 Presence of Technical Personnel: Begin installation of roofing membrane only in the presence of roofing system manufacturer's technical personnel. Cooperate with Owner's inspection and testing agencies as needed.

.2 Temporary Protection:

.1 Coordinate roofing system installation to ensure insulation and other non-permanent components are protected against precipitation and are not left uncovered at end of workday or when rain is anticipated.

.2 Provide tie-offs at the end of each day of work to cover exposed roofing sheets and insulation.

.3 Complete terminations and base flashings; provide temporary seals to prevent water ingress into completed sections of roofing system.

.4 Remove and discard temporary seals before starting work on adjoining roofing areas.

3.9 INSTALLATION OF ROOFING MEMBRANE

.1 Unroll membrane roofing and allow to relax before installation.

.2 Accurately align roofing and maintain uniform side and end laps in accordance with manufacturer's requirements. Stagger end laps.

Adhesive Application: Apply bonding adhesive to substrate and underside of roofing at the manufacturer-specified rate. Allow to partially dry before installation. Avoid application to splice area.

.3 Terminations, Penetrations, and Perimeters: Securely fasten or adhere roofing at such areas.

.4 Shingling: Install roofing with side laps shingled with slope of roof deck.

.5 Welding Process: Use manufacturer's recommended hot air welding machine for welding seams. Immediately after welding, roll all splice intersections with roller to ensure continuous hot air welded seams. For membranes 60-mil thick or thicker, overlay all splice intersections with manufacturer's standard non-reinforced flashing or TPO T-Joint covers.

.6 Seam Inspection: Probe all seams after hot air welds cool down. Repair seam deficiencies on same day they are identified. Verify field strength of seams a minimum of twice daily, and repair seam areas.

.7 Edge Sealing: After seam inspection, seam probing, apply edge sealant on all cut edges of reinforced membrane where scrim reinforcement is visible.

.8 Repairs: Address and repair tears, voids, and lapped seams that do not meet requirements.

3.10 MEMBRANE FLASHING INSTALLATION

.1 Install membrane flashing at roof penetrations, walls, and intersections.

.2 Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof. Secure to substrates according to roofing system manufacturer's written instructions.

.3 Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow to partially dry. Do not apply to seam area of flashing.

.4 Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

.5 Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.

.6 Terminate and seal top of sheet flashings.

3.11 INSTALLATION OF WALKWAYS

.1 Flexible Walkways: Install walkway products in locations indicated. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions. Flexible Walkways: Install flexible walkways at the following locations:

.1 Perimeter of each rooftop unit.

.2 Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.

.3 Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.

.4 Top and bottom of each roof access ladder.

.5 Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.

.6 Locations indicated on Drawings.

.7 As required by roof membrane manufacturer's warranty requirements.

.8 Provide 6-inch (76-mm) clearance between adjoining pads.

.9 Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

.2 Roof-Paver Walkways: Install walkway roof pavers according to manufacturer's written instructions in locations indicated, to form walkways. Leave 75 mm (3 inches) of space between adjacent roof pavers.

3.12 FIELD QUALITY CONTROL

.1 Roof Inspection: Contractor must have roof system manufacturer's technical personnel to inspect roofing during installation and on completion to confirm substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to supply reports to Consultant.

.2 Roofing system will be considered defective if it does not pass tests and inspections.

.3 Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.13 PROTECTION

.1 Protect TPO membrane roofing from damage, soiling and contaminating substances resulting from construction activities or caused by work of other trades.

.2 Promptly replace TPO membrane roofing work damaged during construction that cannot be satisfactorily repaired.

3.14 CLEANING AND WASTE MANAGEMENT

.1 Cleaning: Maintain clean construction area at the end of each day. When the activities of this Section are complete, remove materials, tools, equipment and rubbish.

.2 Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

.3 Waste Management and Disposal: sort waste for reuse, recycling, or disposal, as specified. Remove recycling bins and containers from site and dispose of contents at the appropriate waste disposal facilities.

END OF SECTION

GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide sheet metal flashing and trim including but not limited to following:

.1 site-fabricated flashings concealed from view

.2 site-fabricated flashings exposed to view

.3 related flashing accessories.

.4 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.1 review installation procedures and coordination required with related work including roofing requirements for interfacing with roof accessories and roof mounted equipment.

.2 review fire hazard assessment of work prior to commencement of torch application.

.3 review and finalize construction schedule and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.

.4 review structural loading limitations of roof deck during roofing.

.5 review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs and condition of other construction that will affect roofing system.

.6 review temporary protection requirements for roofing system during and after installation.

.7 review flashing repair procedures after installation.

.2 Coordination:

.1 Coordinate installation of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and noncorrosive installation.

.2 Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00.

.1 Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving, and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00.

.1 Submit fully detailed Shop Drawings showing proposed method of shaping, forming, jointing, fastening and application of sheet metal work, in accordance with the Contract Documents. Submit lists of materials to be used to Consultant.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit samples for each type of sheet metal flashing, trim, and accessory exposed to view indicated with factory-applied colour finishes. Submit in sizes indicated below.

.1 Sheet Metal Flashing: 300 mm (12 inches) long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.

.2 Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 300 mm (12 inches) long and in required profile. Include fasteners and other exposed accessories.

.3 Accessories and Miscellaneous Materials: Full-size Sample.

.4 Submit a representative sample section of prepainted metal flashing illustrating "S" lock jointing, minimum 600 mm (24 inch) long, method to accommodate thermal movement, cleats and fasteners. Submit sample well in advance of material fabrication.

.5 Wind Uplift Resistance Calculations: Provide calculations or reports sealed by a Professional Engineer, licensed to practice in Province of Ontario, demonstrating that roof assembly design meets wind uplift requirements specified in this Section. Alternatively, wind uplift calculations prepared by roofer or roof manufacturer determined using NRC's Wind-RCI calculators or equivalent tools demonstrating compliance will be deemed acceptable.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.3 Sealant Compatibility and Adhesion Testing: Use sealant manufacturer's standard test methods to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Mock-ups: Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Coordinate with adjacent building envelope material mock-ups including roofing, cladding, insulation and air barrier work

1.8 DELIVERY, STORAGE AND HANDLING

.1 Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

.2 Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

.3 Replace damaged work which cannot be satisfactorily repaired, restored or cleaned at no cost to Owner.

1.9 WARRANTY

.1 Warrant work of this Section including finish for period of 5 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

PART 2 - PRODUCTS

2.1 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Design sheet metal flashing and trim assemblies to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction in accordance with requirements of authorities having jurisdiction.

.2 As minimum ensure flashing system comply with requirements CRCA's "Roofing Specifications FL Series" details and SMACNA's "Architectural Sheet Metal Manual".

.3 Ensure completed sheet metal flashing and trim do not rattle, leak, or loosen, and remain watertight.

.4 Select appropriate type of flashings on basis of compatibility when incorporated into roofing system and in a rigid manner in finished roofing system.

.5 Design exterior envelope system to minimize thermal bridging using proven installation methods and details consisting of a combination of low conductivity materials, thermal breaks, and insulation to minimize heat loss and enhance assemblies' effective R-values.

.6 Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

.1 Temperature Change: 67 deg C (120 deg F), for ambient temperature; 100 deg C (180 deg F), for material surfaces.

2.2 PREFINISHED SHEET METALS

.1 Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

.2 Galvanized Steel Sheet: Provide zinc-coated (galvanized) steel sheet in accordance with ASTM A653/A653M, Z275 (G90) coating designation; prepainted by coil-coating process to comply with ASTM A755/A755M.

.1 Surface: Smooth, flat.

.2 Minimum thickness: 0.61 mm (24 ga) thickness.

.3 Exposed Finish:

.1 Siliconized Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with dry film thickness of not less than 0.005 mm (0.2 mil) for primer and 0.02 mm (0.8 mil) for topcoat.

.2 Colour: As selected by Consultant from manufacturer's full range.

.3 Basis-of-Design: “WeatherXL” by Sherwin Wiliams (previously Valspar) or approved equivalent by PPG.

.3 Aluminum Sheet: ASTM B209M (ASTM B209), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required.

.1 Surface: Smooth, flat.

.2 Minimum thickness: 2 mm (0.08 inch) thickness.

.3 Exposed Finish:

.1 Clear Anodic Finish, Coil Coated: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

.2 Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both colour coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

.1 Basis-of-Design: “Duranar XL” by PPG or approved equivalent by Sherwin Williams (previously Valspar).

.3 Colour: As selected by Consultant from manufacturer's full range.

.4 Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.013 mm (0.5 mil).

2.3 UNDERLAYMENT MATERIALS (AVB-4)

.1 Self-Adhering, High-Temperature Sheet Underlayment: Minimum 0.76 mm (30 mils) thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to

withstand high metal temperatures beneath metal roofing. Provide primer in accordance with underlayment manufacturer's written instructions.

.1 Thermal Stability: ASTM D1970 or equivalent to CAN/CGSB-51.33; stable after testing at 116 deg C (240 deg F) or higher.

.2 Low-Temperature Flexibility: ASTM D1970 or equivalent to CAN/CGSB-51.33; passes after testing at minus 29 deg C (20 deg F) or lower.

.3 Basis-of-Design: “Blueskin PE200 HT” by Henry Company or approved equivalent as follows:

.1 “Grace Ultra” by GCP Applied Technologies.

.2 “Lastobond Shield HT” by Soprema

2.4 FLEXIBLE FLASHING

.1 Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 1.0 mm (0.039 inch)

.1 Acceptable Products:

.1 “CCW-705-TWF Thru-Wall Flashing” by Carlisle Coatings & Waterproofing

.2 “Perm-A-Barrier Wall Flashing” by GCP Applied Technologies.

.3 “Blok Lok Airtight 40 Self Adhered Air and Vapour Barrier” by Hohmann & Barnard, Inc.

.4 “Air-Shield Thru-Wall Flashing” by W.R. Meadows Inc., Canada

.5 “Blueskin TWF” by Henry Company

.6 “AquaBarrier™ TWF” by IKO Industries Ltd.

.7 “ExoAir TWF” by Tremco Incorporated, an RPM company

.8 “Sopraseal WFM” by Soprema Inc.

.2 Primer: as per manufacturer’s recommendation.

.3 Mechanical fasteners: recommended by flashing manufacturer to suit project requirements.

2.5 LIQUID FLASHING MATERIALS

.1 Liquid-Applied Flashing: Low-VOC resin-based, seamless, reinforced waterproofing system flashing that is compatible with adjacent materials.

.1 Provide waterproofing of atypical flashing details including, but not limited to, mechanical equipment, roof/wall penetrations and similar locations.

.2 Acceptable Products:

.1 “Alsan Flashing” by Soprema Inc.

.2 “MS Detail” by IKO Industries.

.3 “PermaFlash” by Johns Manville.

2.6 ACCESSORIES

.1 Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and recommended by manufacturer of primary sheet metal unless otherwise indicated.

.2 Isolation coating: conforming to ASTM D1187, alkali resistant bituminous paint or epoxy resin solution to provide dielectric separation which will dry to be tack-free and withstand high temperatures.

.3 Roof Drainage Sheet Metal Fabrications: Fabricate hanging gutters, downspouts, parapet scuppers, splash pans and similar fabrications in conformity to CRCA, Roofing Practices Manual, designed and sized to withstand design loads in accordance with applicable building code and referenced standards.

.4 Sealants: conforming to ASTM C920 or CAN/CGSB-19.13-M, in accordance with requirements of Section 07 92 00. Confirm compatibility with adjacent materials.

.5 Bedding Compound: Rubber-asphalt type.

.6 Sealing Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.

.7 Starter Strips: Of same material as flashing used, 1.2 mm (18 ga), minimum 50 mm (2 inch) wide, interlocked with metal flashing.

.8 Flashing Cleats, Starter Strips, Skirts, Clips and Backup Plates: Same as specified sheet metal, unless indicated otherwise, make cleats 50 mm (2 inch) wide and interlocked with metal flashing.

.9 Fasteners: Use fasteners designed and sized to withstand design loads in accordance with applicable building code and referenced standards.

.1 Exposed Fasteners: Heads matching colour of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.

.2 Blind Fasteners: High-strength stainless-steel rivets suitable for metal being fastened.

.3 Use fasteners manufactured from Series 300 stainless steel with and finish as flashing metal or material compatible with material being fastened with respect to galvanic reaction. Size and type to suit applicable conditions. Use stainless steel where connecting directly to concrete.

.4 Nails, screws, bolts and other fastening devices: CSA B111, Table 12, finished to match metal being fastened where exposed to view by means of plastic caps or factory-applied coating.

.5 Conceal fasteners and expansion provisions where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.

2.7 FABRICATION

.1 Fabricate copings, parapet vertical flashings, flashings, curb counter flashing starter clips, strips, downspouts, parapet scuppers, and miscellaneous flashings in accordance with CRCA recommendations and to detail indicated.

.2 Form sections true to shape, accurate in size, square, and free from distortion or defects. Equally space joints in any one run of flashing to suit building module or window spacing and locate in consultation with Consultant before installation commences.

.3 Fabricate flashings meeting the Project requirements for roof mounted equipment. Provide seismic bracing as required.

.4 Fabricate cleats and starter strips of same material as sheet, minimum 50 mm (2 inch) wide, interlockable with sheet.

.5 Form pieces in longest practical lengths. Make joints to permit thermal movement. Make flashing surfaces free from building, warp, wave, dents, oil canning or other defects.

.6 Hem exposed edges on underside 13 mm (1/2 inch); mitre and seam corners.

.7 Form material with standing seam where applicable.

.8 Fabricate corners from one piece with minimum 450 mm (18 inch) long legs; seam for rigidity, seal with sealant. Make corners square and surfaces straight and in true planes.

.9 Fabricate vertical faces with bottom edge formed outward 6 mm (1/4 inch) and hemmed to form drip.

.10 Fabricate flashings to allow toe to extend 50 mm (2 inch) over roofing as applicable. Return and brake edges.

.11 Form sheet metal pans 150 mm (6 inch) nominal size, with 75 mm (3 inch) upstand, and 100 mm (4 inch) flanges. Fill pans watertight with liquid flashing as specified in this Section.

2.8 FINISHES

.1 Shop prepare and prime exposed ferrous metal surfaces.

.2 Concealed metal surfaces to receive one coat of bituminous paint, minimum 0.4 mm (1/64 inch) thickness.

.3 Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, cant strips and reglets in place and nailing strips located.

.3 Verify membrane termination and base flashings are in place, sealed and secure.

.4 Notify Consultant of any unsatisfactory conditions. Do not proceed with this work until conditions have been corrected.

.5 Commencement of work shall imply acceptance of conditions and substrates.

3.2 PREPARATION

.1 Field measure site conditions prior to fabricating work.

.2 Install starter, edge strips and cleats before starting installation.

.3 Install surface mounted reglets true to lines and levels. Seal top of reglets with sealant.

.4 Insert flashings into reglets to form tight fit. Secure in place with plastic wedges. Seal flashings into reglets with sealant.

.5 Secure flashings in place using concealed fasteners. Use exposed fasteners only in locations accepted by Consultant.

.6 Apply plastic cement compound between metal flashings and felt flashings.

.7 Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

.8 Provide and maintain continuity of air/vapour barrier to adjacent dissimilar materials. Seal to form weathertight seal between flashing and adjoining surfaces and between flashing and other work.

3.3 INSTALLATION

.1 Conform to drawing details included in CRCA manuals (FL series details) as applicable. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

.2 Install copings, curb coverings, starter strips, (back-up plates), pipe collars and other flashings to details shown on Drawings.

.3 Exposed fastenings will not be permitted in the Work.

.4 Install starter strips where indicated or required to present a true, non-waving, leading edge. Anchor to back-up to provide rigid, secure installation.

.5 Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.

.6 Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.

3.4 UNDERLAYMENT INSTALLATION

.1 Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 150 mm (6 inches) staggered 600 mm (24 inches) between courses. Overlap side edges not less than 90 mm (3-1/2 inches). Roll laps and edges with roller. Cover underlayment within 14 days.

3.5 SHEET STEEL FLASHINGS

.1 End joints where adjacent lengths of metal flashing meet shall be made using an "S-lock" joint as detailed on Drawings. Execute by inserting the end of 1 coping length in a 25 mm (1 inch) deep "S" lock formed in the end of the adjacent length. Extend concealed portion of the "S" lock 25 mm (1 inch) outwards and nail to substrate. Face nailing of joints will not be permitted.

3.6 ALUMINUM FLASHINGS

.1 Make end joints where adjacent lengths of metal flashing meet, using a 300 mm (12 inch) long back-up flashing secured in place before installing flashing. Apply beads of caulking compound on face of back-up plate to seal ends of metal flashing. Leave 13 mm (1/2 inch) wide space between ends of adjacent lengths of metal flashing. Fabricate back-up plates of same material and finish as metal flashing with which it is being used. Make back-up plate profile of flashing allowing for metal thickness.

.2 Separate dissimilar metals with a bituminous coating or polymer-modified, bituminous sheet underlayment.

3.7 SEALING

.1 Use sealant-filled joints unless otherwise indicated. Seal as required to form weathertight seal between flashing and adjoining surfaces and between flashing and other work of this Section.

.2 Provide bedding between members where possible and with neatly formed caulking bead where exposed.

.3 Provide non expansion, but movable, joints in metal to accommodate elastomeric sealant. Form joints to completely conceal sealant.

3.8 CLEANING AND PROTECTION

.1 Clean off excess sealants.

.2 Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

.3 Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide firestopping and smoke seals systems in accordance with the OBC requirements, including but not limited to the following:

.1 Penetrations through fire-resistance-rated floor requiring protected openings including empty openings and openings that contain penetrations.

.2 Penetrations through fire-resistance-rated wall assemblies including empty openings and openings that contain penetrations.

.3 Membrane penetrations in fire-resistance-rated wall assemblies where items penetrate one side of the barrier.

.4 Joints in fire-resistance-rated assemblies to allow independent movement.

.5 Perimeter of the horizontal fire resistance rated assembly and exterior wall between a rated floor/roof and an exterior wall assembly.

.6 Joints, through penetrations and membrane penetrations in assemblies such as smoke barriers, smoke partitions and those assemblies required to limit, restrict or retard the passage of smoke.

.7 Openings and penetrations in fire-rated partitions or walls containing fire doors.

.8 Openings around structural members which penetrate floors or walls.

.9 Auxiliary tested accessories such as sealants, insulation, damming materials, boards, primers, collars required to complete firestopping work, excluding those inside sealed mechanical and electrical assemblies.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Coordination:

.1 Coordinate construction of openings and penetrating items to ensure that through-firestopping and smoke seals are installed according to requirements specified in this Section.

.2 Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration firestop systems.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Material Safety Data Sheets: Submit MSDS for inclusion in operation and maintenance manual without limitations for adhesives, sealants and any other material later designated by the Consultant.

.3 Firestopping Manual: Submit to the Consultant a firestopping manual complete with applicable product data sheets prepared by the Product manufacturer that indicates Products proposed for use for each assembly and installation required in the Work.

.4 Shop Drawings:

.1 Submit Shop Drawings in accordance with the submittal requirements of Section 01 30 00.

.2 Ensure Shop Drawings indicate material characteristics, details of construction, connections and relationship with adjacent construction. Submit complete and detailed Shop Drawings indicating ULC and/or cUL assembly number certification and material safety data sheets. In addition to the minimum requirements, indicate the following:

.1 Required temperature, hose stream and flame ratings,
.2 Material thicknesses,
.3 Installation methods,
.4 Primers, and
.5 Damming materials as applicable.

.3 Coordinate and ensure Shop Drawings for fire stopping and smoke seals inside sealed mechanical and electrical assemblies are reviewed by Divisions 21, 22, 23 and 26 respectively.

.5 Samples: Submit samples of various types of firestopping and smoke seal materials as requested and in accordance with the submittal requirements of Section 01 30 00.

.6 Field Reports: Submit manufacturer’s field report upon completion of firestopping work certifying that firestopping and smoke seals have been properly installed and adjusted in accordance with the manufacturer’s recommendations.

1.7 QUALITY ASSURANCE

.1 Manufacturer Qualifications: Company specializing in manufacturing Products of this Section with a minimum of 5 years documented experience.

.2 Installer Qualifications: Provide work of this Section executed by competent installers experienced trained, licensed and approved by material or system manufacturer for the application of the materials and systems being used; having a minimum of 5 years' experience in application of the Products, systems and assemblies specified herein and shown to have successfully completed not less than 5 projects of a comparable scale to this Project. Acceptable installer firms shall be:

.1 Firestop Contractors International Association Contractor Member in good standing,

.2 FM Approved in accordance with FM Standard 4991 – Approval of Firestop Contractors, ULC Qualified Firestop Contractor,

.3 Specialty applicator licensed and approved by the manufacturer.

.4 Licensed by the local authority where applicable.

.3 Mock-ups: Provide mock-ups in locations designated by the Consultant and as required to demonstrate the quality of workmanship. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Provide a mock-up of typical firestopping system as shown on reviewed Shop Drawings.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers to the greatest extent possible.

.1 Materials from different manufacturers than those allowed by the tested and listed system shall not be intermixed in the same firestop system or opening.

.2 Tested and listed, classified firestop systems are to be used. If another manufacturer has a tested and listed system, then that system shall be used prior to an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA).

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials to the Site in the manufacturer's sealed and labeled containers intact and legible at the time of use.

.2 Deliver materials to the Site with legible date of manufacture; lot number; shelf life (if applicable); qualified testing and inspection agency's classification marking; and mixing instructions for multi-component materials.

.3 Handle and store materials in accordance with the manufacturer's instructions with proper precautions to ensure fitness of material when installed.

.4 Do not use damaged or adulterated materials and materials exceeding their expiry dates.

1.9 PROJECTCONDITIONS

.1 Ambient Conditions: Comply with the manufacturer's recommended requirements for temperature, relative humidity, ventilation and substrate conditions during application and curing of materials.

.2 Do not Install firestopping Products when substrates are wet due to rain, frost, condensation, or other causes.

.3 Do not use materials that contain flammable solvents.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 5 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with General

Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to cracking, breakdown of bond, failure to stay in place of bleeding and any other defect which affect firestopping.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers are acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 3M Fire Protection;

.2 A/D Fire Protection Systems Inc.

.3 Hilti (Canada) Limitedw

.4 Specified Technologies Inc.

.5 Tremco (Canada) Limited.

.2 Substitution Limitations: This Specification is based on Hilti's Products and Systems.

.3 Comparable Products from manufacturers listed herein will be considered provided they meet the requirements of this Specification, offering functionally, aesthetically equivalent Products in Consultant's opinion and subject to Consultant's review.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Conform to the OBC, ULC, cUL UL, WH, FM listings, CAN/ULC-S115, ASTM E2307, ASTM E814 and ASTM E1966 fire test standards to achieve required fire protection rating in accordance with requirements of Authorities Having Jurisdiction.

.2 All materials shall be asbestos free and compatible with substrate. Materials shall allow for movement caused by thermal cycles, prevent transmission of vibrations from pipe, conduit or duct to structure and structure to pipe, conduits or duct. Materials shall comply with local VOC regulations.

.3 If required, hazardous disposal of firestop materials shall be strictly observed as noted on MSDS.

.2 Design and Performance Requirements:

.1 Provide and Install complete penetration firestopping systems that have been tested and approved by a nationally recognized third party testing agency (i.e. ULC, FM, Intertek or ULI listed in ULC Guide No. 40 U19.) performing testing and follow-up inspection services for firestop materials acceptable to Authorities Having Jurisdiction.

.2 Provide and Install firestopping Products that, once installed to the tested and listed system or engineering judgment, become firestop systems that resist the spread of fire and the passage of smoke and other gases according to requirements indicated herein, including but not limited to the following:

.1 F - Rated Through-Penetration Firestop Systems: Provide through-penetration firestop systems with F and H ratings indicated, as determined in accordance with ULC S115, but not less than one hour or the fire-resistance rating of the construction being penetrated.

.2 T - Rated Through-Penetration Firestop Systems: Provide firestop systems with T ratings, in addition to F ratings, as determined in accordance with ULC S115 where indicated or required by Authorities Having Jurisdiction.

.3 L – Rated Through-Penetration Firestop Systems: Provide firestop systems with L ratings of less than 5 cfm per sq. ft, in addition to F and T ratings, as determined in accordance with ULC S115, for all penetrations in smoke barriers, and where indicated or required by Authorities Having Jurisdiction.

.4 W – Rated Through-Penetration Firestop Systems: Provide firestop systems with W Water Resistance ratings (minimum Class 1), in addition to F, T and L ratings, as determined in accordance with ULC S115, where indicated or required by Authorities Having Jurisdiction.

.5 Perimeter Fire Containment Systems: Provide interior perimeter fire containment systems with fire-resistance ratings indicated, as determined in accordance with ASTM E2307, but not less than the fire-resistance rating of the floor construction.

.6 Fire-Resistive Joints: Provide joint systems with fire-resistance ratings indicated, as determined in accordance with ULC S115, but not less than the fire-resistance rating of the construction in which the joint occurs.

.7 For firestopping exposed to view, traffic, moisture, and physical damage, Provide firestop systems for these conditions that meet conditions expected.

.8 Where there is no specific third party tested and listed, classified firestop system available for a particular firestop configuration from any manufacturer, the firestopping Contractor shall obtain from the firestop manufacturer, an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA) for submittal in accordance with requirements set forth by the International Firestop Council.

.3 Generally, firestopping and smoke seal ratings shall be provided as follows:

Element	Rating
Vertical fire-rated separations and locations as required by Authorities Having Jurisdiction	"F" and “L" as specified herein
Firewalls, horizontal fire-rated separations and locations as required by Authorities Having Jurisdiction	"F", "T" and "L" as specified herein
Mechanical rooms, laboratories, operating rooms and locations where water leakage may occur and as required by Authorities Having Jurisdiction	"F", "T", "L" and "W" as specified herein

.4 Perimeter Fire Containment Systems: Provide interior perimeter fire containment systems with fire-resistance ratings indicated, as determined in accordance with ASTM E2307, but not less than the fire-resistance rating of the floor construction.

.5 Fire-Resistive Joints: Provide joint systems with fire-resistance ratings indicated, as determined in accordance with ULC S115, but not less than the fire-resistance rating of the construction in which the joint occurs.

.6 For firestopping exposed to view, traffic, moisture, and physical damage, Provide firestop systems for these conditions that meet conditions expected.

.7 Where there is no specific third party tested and listed, classified firestop system available for a particular firestop configuration from any manufacturer, the firestopping Contractor shall obtain from the firestop manufacturer, an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA) for submittal in accordance with requirements set forth by the International Firestop Council.

.8 Compatibility:

.1 Provide firestop systems that are compatible with one another, with the substrates forming openings, and with the items, if any, penetrating firestop systems, under conditions of service and application, as demonstrated by the firestop system manufacturer based on testing and field experience.

.2 Ensure firestop materials coming directly in contact with plastic pipe or plastic coated wire have undergone firestop material compatibility testing by the systems manufacturer or pipe and wire manufacturer.

.3 All firestop systems coming into contact with chlorinated polyvinyl chloride (CPVC) piping (direct or indirect) shall be FBC system compatible (This includes spray applied to firestop materials as overspray onto CPVC pipe).

.4 Ensure materials and Products provided do not cause stresses, chemical or physical reactions, or other damages to penetrating items or adjacent materials.

.5 Ensure compatibility of firestop system components with abutting dissimilar membranes, architectural coatings, finishes at floors, walls and ceilings. Check with manufacturer requirements of materials being installed.

.6 Ensure firestop system exposed to ambient conditions do not deteriorate after curing during and after completion of construction.

.7 Ensure firestopping systems do not affect structural integrity of load bearing walls and assemblies. Coordinate with the Consultant prior to penetrating any load bearing assembly.

.8 Ensure firestopping systems do not affect acoustical performance of acoustical assemblies.

.9 Provide firestopping capable of achieving a Class 1 rating when tested in accordance with ASTM G21 for antibacterial and antifungal properties to inhibit growth of bacteria, mould, mildew and fungi.

2.3 MATERIALS

.1 Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer plastic sleeve lined with an intumescent strip, a radial or square extended flange attached to one end of the sleeve for fastening to concrete formwork.

.2 Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.

.3 Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

.4 Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.

.5 Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

.6 Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

.7 Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at the Project site to form a nonshrinking, homogeneous mortar.

.8 Firestop Block: Ready-to-use, non-curing, reusable solution intumescent flexible block designed to seal medium to large size openings

.9 Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

.10 Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of the grades indicated below:

.1 Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.

.2 Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.

.3 Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.

.11 Firestop Joint Spray: sprayable fire rated mastic for construction joint; maximum flexibility in accordance with ASTM E1966 and UL 2079; containing no halogens, solvents or asbestos; water based, paintable.

.12 Cementitious matrices: Capable of providing minimum 2758 kPa (400 psi) compressive strength when cured, to retard cable tray warping within firestop seal.

.13 Primers: As required by the firestopping manufacturer and compatible with the selected system and contiguous materials.

.14 Water: Potable

.15 Pipe and duct insulation and wrappings: compatible with firestopping systems.

.16 Intumescent pads: Permanently pliable type.

.17 Intumescent composite sheet: Composite sheet, strip or precut shapes.

.18 Re-penetrable Sealants: Non-curing, re-penetrable intumescent sealants, caulking or putty materials for use with flexible cable or cable bundles.

.19 Accessories: Provide miscellaneous components needed to Install fill materials and to maintain ratings required. Use only components specified by the penetration firestopping manufacturer and approved by a qualified testing and inspecting agency. Accessories include, but are not limited to, the following items:

.1 Permanent forming/damming/backing materials in accordance with manufacturer's recommendations, including the following:

.1 Slag-/rock-wool-fiber insulation.
.2 Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
.3 Fire-rated form board.
.4 Fillers for sealants.

.2 Temporary forming materials.

.3 Substrate primers.

.4 Collars.

.20 Gypsum Products: The use of gypsum Products for through-penetration firestopping is strictly prohibited.

2.4 MIXING

.1 For those Products requiring mixing before application, comply with the through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce Products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify the Consultant in writing of any conditions which would be detrimental to the installation.

.2 Examine substrates, openings, voids, adjoining construction and conditions under which firestop is to be installed. Confirm compatibility of surfaces. Verify penetrating items are securely fixed and properly located with proper space allowance between penetrations and surfaces of openings.

.3 Confirm locations of exposed/non-exposed firestopping/smoke seal surfaces prior to application. Provide movement capability at movement joints in accordance with design requirements for movement joint.

.4 Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Ensure surfaces to receive firestopping are free of dirt, dust, grease, oil, rust, loose materials, release agents, frost, moisture or any other matter which would impair bond of firestopping material to substrate of penetrating items.

.2 Prime substrates in accordance with the manufacturer’s written instructions.

.3 Do not apply firestopping and smoke seals to surfaces previously painted or treated with sealers, curing compounds, water repellents or other coatings unless tests have been performed to ensure compatibility of materials. Remove coatings as required.

.4 Ensure that anchoring devices, back-up materials, clips, sleeves, supports and other related materials used in actual fire tests are provided.

.5 Mask where necessary to prevent firestopping materials from contacting adjoining surfaces that will remain exposed upon completion of work. Remove tape as soon as it is possible to do so without damaging firestop material or substrate.

3.3 INSTALLATION

.1 Comply with UL, ULC, cUL, ITS or FM Listings and manufacturer’s instructions for the type of material and condition of opening in each case. Consult with the manufacturer to determine the proper procedure for conditions not fully covered by printed instructions. Record in writing any oral instructions received, with a copy provided to the manufacturer.

.2 Provide firestopping to all penetrations passing through fire resistance rated wall and floor assemblies and other locations as indicated on the Drawings.

.3 Remove excess firestopping material promptly as work progresses and upon completion. Provide leak-proof dams as required to seal openings and contain firestop until cured. Install damming in accordance with test design and manufacturer's instructions.

.4 Provide an easily read label to firestop seals stating following: "THIS IS A FIRESTOP INSTALLED BY **[ ]** AND INSPECTED BY **[ ]** AND DATE INSTALLED COMPLETE WITH LISTED SYSTEM, TYPE AND THICKNESS. DO NOT REMOVE OR ALTER UNLESS IT IS IMMEDIATELY REPAIRED. TO REPAIR OR RETROFIT, USE ONLY COMPATIBLE FIRESTOP PRODUCTION IN ORDER TO MAINTAIN SYSTEM CLASSIFICATION"

3.4 FIELD QUALITY CONTROL

.1 Manufacturer's Services: Provide manufacturer's field services consisting of Product use recommendations and periodic site visits for inspection of Product installation in accordance with manufacturer's instructions.

.1 Report any inconsistencies from the manufacturer's recommendations immediately to the Consultant.

.2 Schedule site visits to review work at stages listed below:

.1 During initial installation of firestop systems to train appropriate Contractor personnel in proper selection and installation procedures.

.2 Upon completion of Work, after cleaning is carried out.

.3 Obtain field reports within three Days of review and submit immediately to the Consultant.

.2 The Owner may appoint an independent inspection and testing company to carry out additional inspection and testing as directed by the Consultant. Cooperate, coordinate, and arrange for inspections by the independent inspection and testing company at the required time. Third party testing should be carried out in accordance with ASTM E2174 and ASTM E2393.

.3 Following field inspections, Provide repair as required to ensure compliance with the Contract Documents.

3.5 CLEANING AND PROTECTION

.1 Upon completion of this work, remove all materials, equipment and debris from the Site. Leave work areas and adjacent surfaces in a condition acceptable to the Consultant.

3.6 FIRESTOPPING SCHEDULE

.1 Provide UL, ULC, cUL, ITS or FM listed firestop and smoke seal systems at:

.1 Penetrations through fire-resistance rated masonry, concrete, and gypsum board partitions and walls.

.2 Edge of floor slabs at curtain wall and precast concrete panels.

.3 Top of fire-resistance rated masonry and gypsum board partitions.

.4 Intersection of fire-resistance rated masonry and gypsum board partitions.

.5 Control and sway joints in fire-resistance rated masonry and gypsum board partitions and walls.

.6 Penetrations through fire-resistance rated floor slabs, ceilings and roofs.

.7 Openings and sleeves installed for future use through fire separations.

.8 Around mechanical and electrical assemblies penetrating fire separations.

.9 At expansion joints between fire-rated walls and other assemblies.

.10 Openings around structural support members that penetrate floors/walls.

.11 Openings and penetrations in fire rated walls or partitions containing fire doors.

.12 Penetrations made through fire-resistant rated assemblies in existing buildings for, but not necessarily limited to, mechanical and electrical services.

.2 Firestopping and smoke seals at openings where reinstallation occurs: UL or FM listed, Elastomeric or re-useable cementitious matrix or putty seal; do not use permanent cementitious seal at such locations.

.3 Firestopping and smoke seals at openings around penetrations for electrical bus ducts, pipes, ductwork and other electrical and mechanical items requiring sound and vibration control or allowance for expansion, contraction and other movement: UL or FM listed, Elastomeric seal; do not use a cementitious or rigid seal at such locations.

.4 Firestopping and smoke seals at joints and spaces designed and required to allow movement (building movement joints, deflection spaces, control joints, expansion joints, and similar locations): UL or FM listed, flexible, elastomeric seal suitable to withstand required movement and capable of returning to original configuration without damage to seal and without adhesive or cohesive failure; do not use a cementitious or rigid seal at such locations.

Firestop Schedule for Through-Penetration Systems.

TYPE OF PENETRANT	F-RATING (HR)	CONCRETE FLOORS	CONCRETE OR BLOCK WALLS	GYPSUM WALLS

** CONTACT MANUFACTURER FOR CURRENT UL-CLASSIFIED SYSTEM OR ENGINEERING JUDGMENT

NOTES:

1. Jobsite conditions of each through-penetration firestop system must meet ALL details of the UL-Classified System selected.
2. If jobsite conditions do not match any UL-classified systems in the schedules above, contact Manufacturer for alternative systems or Engineering Judgment
3. Where more than one applicable UL-Classified System is listed in the schedules, choose the UL System which is most suited for each through-penetration firestop system.
4. Coordinate this work with the work being performed by other trades to ensure that penetration opening sizes are appropriate for penetrant locations, and vice versa.

Schedule of Joint Firestop Systems.

* SEE NOTE 3
** Contact manufacturer for current UL/cUL-classified system or engineering judgment
NOTES:

1. Classified systems for 2" - 6" wide joints may be used for joints 2" wide and less.
2. Confirm that movement capabilities of the selected UL/cUL system meets or exceeds the specified movement range of the particular joint.
3. Systems marked with an asterisk (*) are suitable for top-of-wall joints where the fluted metal deck has sprayed-on fireproofing. Verify with manufacturer prior to application.
4. Verify allowable joint width on specific UL/cUL system Drawings.

END OF SECTION

Updated through ADD#10

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide joints sealants including but not limited to the following:

.1 Exterior joints in vertical surfaces and nontraffic horizontal surfaces

.2 Exterior joints horizontal traffic surfaces

.3 Interior joints vertical surfaces and horizontal nontraffic surfaces

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 In the context of general purpose joint sealants, the following definitions apply in accordance with ASTM C920 for performance characteristics and are used accordingly in this Section:

.1 Sealant types:

.1 Type S: Single component sealant;
.2 Type M: Multi-component sealant;

.2 Rheological Properties:

.1 Grade P: Pourable or self-leveling sealant;
.2 Grade NS: Non-sag sealant

.3 Movement:

.1 Class 100/50: Sealant which can withstand an increase of at least 100% and a decrease of at least 50% of the joint width as measured at the time of applications
.2 Class 50: a sealant which can withstand an increase and a decrease of at least 50% of the joint width as measured at the time of applications
.3 Class 35: a sealant which can without an increase and a decrease of at least 35% of the joint width as measured at the time of applications
.4 Class 25: a sealant which can withstand an increase and a decrease of at least 25% of the joint width as measured at the time of applications

.5 Class 12 ½: a sealant which can withstand an increase and a decrease of at least 12.5% of the joint width as measured at the time of applications

.4 Usage:

.1 Use T: a sealant designed for use in joints in pedestrian and vehicular traffic areas such as walkways, plazas, decks and parking garages
.2 Use NT: a sealant designed for use in joints in nontraffic areas
.3 Use I: sealant designed for use in joints which are submerged continuously in a liquid
.4 Use M: a sealant that meets the requirements of ASTM C920 when tested on mortar specimens for adhesion and cohesion after cyclic movement requirements of ASTM C719 and adhesion in peel requirements of ASTM C794
.5 Use G: a sealant that meets the health, safety, emergency response hospital procedure and policy requirements of ASTM C920 and this Specification when tested on glass specimens or adhesion and cohesion after cyclic movement requirements of ASTM C719 and adhesion in peel requirements after ultraviolet exposure through glass of ASTM C794
.6 Use A: a sealant that meets the requirements of ASTM C920 when tested on aluminum specimens in accordance with for adhesion and cohesion after cyclic movement requirements of ASTM C719 and adhesion in peel requirements of ASTM C794
.7 Use O: a sealant that meets the requirements of ASTM C920 when tested on substrates other than the standard substrates in accordance with for adhesion and cohesion after cyclic movement requirements of ASTM C719 and adhesion in peel requirements of ASTM C794

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Material Safety Data Sheets: Submit MSDS for inclusion in operation and maintenance manual without limitations for adhesives, sealants and any other material later designated by Consultant.

.3 Compatibility Testing Report: Prior to Supply or installation, test exterior sealant materials for compatibility with joint substrates. Test for staining and adhesion of materials including substrates treated with sealers, curing compounds and water repellants and materials which

may contact sealant. Submit written report of test results to the Consultant in accordance with Section 01 30 00.

.4 Colours:

.1 Colour Hierarchy: Submit sealant colours for acceptance in accordance with the following general colour hierarchy. Between 2 dissimilar materials, colour the sealant to match the material with the higher relative position on the colour hierarchy scale (highest is at ".1"):

.1 Concrete.
.2 Masonry.
.3 Metal extrusions.
.4 Metal (formed).

.2 For fully concealed joints, Provide the manufacturer's standard color of sealant which has the best overall performance characteristics for the application shown.

.5 Samples: Submit samples in accordance with Section 01 30 00. Provide cured, colour samples of the manufacturer's standard range of colours in each type of sealant and caulking compound for colour selection by the Consultant. Submit samples of primer, bond breaker tape and joint backing material, if requested.

1.7 QUALITY ASSURANCE

.1 Installer Qualifications: Provide work of this Section executed by competent installers who have a membership in good standing in the Sealant and Waterproofing Association and with a minimum of 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers. Include lists of completed projects with the projects' names, the names of the consultants on the projects and contact persons.

.2 Testing Agency Qualifications: Retain an independent testing agency qualified in accordance with ASTM C1021 to conduct the testing indicated, as documented according to the sealant manufacturer's recommendations. Ensure materials are verified for suitability in accordance with ASTM C719 and ASTM C661.

.3 Preconstruction Testing:

.1 Test elastmeric joint sealants for compliance with requirements of ASTM C920 and, where applicable, to other standard test methods.

.2 Test elastomeric joint sealants for compliance with requirements of ASTM C920 for adhesion and cohesion under cyclic movement, adhesion-in peel and indentation hardness.

.3 Test other joint sealants for compliance with the requirements indicated in this Section by referencing standard specifications and test methods.

.4 Prior to commencement of sealing, arrange for the sealant manufacturer's technical representative to visit the Place of the Work and inspect the surfaces and joints to be sealed.

.5 Test for compatibility of sealant and accessory Products with joint substrates. Test results and written recommendations for primers and substrate preparation required for proper adhesion. For materials failing tests, obtain the joint sealant manufacturer's written instructions for corrective measures, including the use of specialty formulated primers.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Mock-ups:

.1 Conform to requirements of Section 01 40 00. At the Site, in area(s) designated by the Consultant, erect sample panels 1 m (39"") long for determined type(s) of sealant joint design, showing location, size, shape and depth of joint complete with backup materials, primer, caulking and sealant, bond, colour and quality of installation work.

.2 If requested, conduct a field test for joints designated. Construct additional mock-ups if required to obtain approval. Do no sealant work until mock-ups have been approved. Approved mock-ups become the standard of comparison for sealant and caulking work on site and may become part of the finished installation if left undisturbed at the time of Substantial Performance of The Work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver caulking and sealant materials to the Site in original, unopened containers with manufacturers' labels and seals intact. Labels shall identify manufacturer's name, brand name of Product, grade and type, application directions and shelf life or expiry date of Product.

.2 Handle and store materials in accordance with manufacturer's printed directions. Store flammable materials in safe, approved containers to eliminate fire hazards.

.3 Do not use caulking and sealant materials that have been stored for period of time exceeding maximum recommended shelf life of materials.

1.9 PROJECT CONDITIONS

.1 Environmental Requirements: Do not apply any sealant under adverse weather conditions, when joints to be sealed are damp, wet or frozen or when at ambient temperatures below 5 deg C (40 deg F). Maintain minimum temperature of application during application and for 8 hours after application. Consult the manufacturer for specific instructions before proceeding; obtain the Consultant's approval.

.2 Do not proceed with installation of joint sealants where joint widths are less than those allowed by the joint sealant manufacturer for applications indicated, and until contaminants capable of interfering with adhesion are removed from joint substrates.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for period of 5 years from Substantial Performance of the Work against defects and deficiencies in accordance with General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: cracking, crumbling, melting, shrinkage, sag, adhesion or cohesion failure, reversion, air and moisture leakage, marbling or streaking due to improper mixing, discolouration due to dirt pick-up during curing and staining of adjacent materials.

1.11 MANUFACTURER'S GUARANTEE (EXTERIOR SEALANTS)

.1 Provide sealant manufacturer's non-stain guarantee naming the Owner as beneficiary and covering defects and deficiencies and weather tightness of complete membrane and flashings for 20 years from Substantial Performance of the Work.

.2 Provide a guarantee covering the materials described in this Section. The guarantee shall include the furnishing, repair and replacement of such materials at the manufacturer's expense

and to the extent required for the work of this Section which does not comply with performance and other requirements specified herein.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers are acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 BASF Inc.

.2 CPD Construction Products;

.3 Dow Corning

.4 Euclid Chemical Canada Ltd.

.5 Momentive Performance Materials;

.6 Hilti (Canada) Limited

.7 Pecora Corporation

.8 Sika Canada Inc.

.9 Tremco Canada

.10 W. R. Meadows

.11 or Equivalent to the above.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Ensure sealants comply with ~~LEED and~~ requirements of Authorities Having Jurisdiction with regards VOC emission.

.2 Performance Requirements:

.1 Provide exterior and interior elastomeric joint sealants establishing and maintaining water tight, water resistant and air tight continuous joint seals without staining or deteriorating joint substrates.

.2 Ensure elastomeric sealants provided comply with ASTM C920 and other standards specified herein for type, grade, class and uses.

.3 Provide Products with capability, when tested for adhesion and cohesion under maximum cyclic movement in accordance with ASTM C719, to withstand required percentage change in joint width existing at the time of installation and remain in compliance with other requirements of ASTM C920 for uses indicated.

.4 Provide elastomeric sealants that are non-staining and have undergone testing in accordance with ASTM C1248 for joint substrates indicated for the Project.

2.1 EXTERIOR JOINT SEALANTS

.1 Single component, nonsag, neutral curing silicone sealant, ASTM C920, Type S, Grade NS, Class 100/50 or Class 50 as required for applications and joint design, for Use NT or nonstaining silicone sealant according to ASTM C 1248.

.1 Exterior joints in vertical surfaces and horizontal non-traffic surfaces as follows:

.1 Construction joints in cast-in-place concrete.
.2 Control and expansion joints in unit masonry.
.3 Joints between different materials listed above.
.4 Perimeter joints between materials listed above and frames of doors, windows and louvers.
.5 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products:

.1 "Dowsil 790" or "Dowsil 795" or "Dowsil CCS" by Dow Chemical of Canada ULC
.2 "Spectrem 1" or "Spectrem 2" by Tremco Incorporated
.3 "Sikasil WS-290" or "Sikasil WS-295" by Sika Canada Inc.
.4 "Silpruf SCS2000" or "Silpruf LM SCS2700" by GE Silicones (Momentive Performance Materials)
.5 "890NST" or "864NST" by Pecora Corporation
.6 Approved equivalent.

.2 Single component, nonsag, low dirt pick-up, non-staining, neutral curing silicone sealant, ASTM C920, Type S, Grade NS, Class 100/50 or Class 50 as required for applications and joint design, for Use NT.

.1 Exterior joints in vertical surfaces and horizontal non-traffic surfaces as follows:

.1 Joints between plant-precast architectural concrete units.
.2 Joints in stone masonry and cladding.
.3 Joints in metal panel substrates.
.4 Joints between different materials listed above.
.5 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products:

.1 "Spectrem 3" or "Spectrem 4 TS" by Tremco Incorporated
.2 "Dowsil 756 SMS" by Dow Chemical of Canada ULC
.3 "Silpruf NB SCS9000" by GE Silicones (Momentive Performance Materials)
.4 "Sikasil WS-290" or "Sikasil WS-295" by Sika Canada Inc
.5 Approved equivalent.

.3 Single-Component, Nonsag, Traffic-Grade, Neutral-Curing Silicone Joint Sealant, ASTM C920, Type S, Grade NS, Class 100/50, for Use T.

.1 Exterior joints in horizontal traffic surfaces as follows:

.1 Control and expansion joints in brick pavers.
.2 Isolation and contraction joints in cast-in-place concrete slabs.
.3 Joints between plant-precast architectural concrete paving units.
.4 Joints in stone paving units, including steps.
.5 Tile control and expansion joints.
.6 Joints between different materials listed above.
.7 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products:

.1 "Dowsil 790" or "Dowsil NS Parking Structure Sealant" by Dow Chemical of Canada ULC
.2 "Spectrem 800/900SL" by Tremco Incorporated
.3 "Sikasil -728 SL" or "Sikasil -728 NS" by Sika Canada Inc.
.4 "301 NS" or "311 NS" by Pecora Corporation

.5 Approved equivalent.

.4 Single-Component or Multicomponent, Pourable, Traffic-Grade, Urethane Joint Sealant, ASTM C920, Type S or Type M, Grade P, Class 25 or Class 50 as required by joint design, for Use T.

.1 Exterior joints in horizontal traffic surfaces subject to water immersion as follows:

.1 Joints in pedestrian plazas.
.2 Joints in swimming pool decks.
.3 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products:

.1 “TH901” or “Vulkem 45 SSL” by Tremco Incorporated
.2 “MasterSeal SL1 or MasterSeal SL 2” by Master Builders Solutions“
.3 “Urexpan NR-201” by Pecora Corporation
.4 “Sikaflex - 1CSL”or “Sikaflex 2C SL ” by Sika Canada Inc.
.5 Approved equivalent.

2.2 INTERIOR JOINT SEALANTS

.1 Single component, nonsag, neutral curing silicone or urethane sealant, ASTM C920, Type S or Type M, Grade NS, Class 50, Class 35 or Class 25 as required for applications and joint design, for Use NT.

.1 Interior joints in vertical surfaces and horizontal nontraffic surfaces as follows:

.1 Control and expansion joints on exposed interior surfaces of exterior walls.
.2 Perimeter joints of exterior openings.
.3 Tile control and expansion joints.
.4 Vertical joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
.5 Joints on underside of plant-precast structural concrete beams and planks.
.6 Perimeter joints between interior wall surfaces and frames of interior doors, windows and elevator entrances.
.7 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products:

.1 “Dowsil 791” or “Dowsil 795” or “Dowsil CWS” by Dow Chemical of Canada ULC
.2 “Spectrem 2” or “Spectrem 3” or “Dymonic” or “Dymonic FC” by Tremco Incorporated
.3 ”SilPruf LM SCS2700” by GE Silicones (Momentive Performance Materials)
.4 “890NST” or “890FTS” or “864NST” or “PCS” or “DnyaTrol I-XL” or “DynaTrol II” by Pecora Corporation
.5 “SikaSil WS-295” by Sika Canada Inc.
.6 Approved equivalent.

.2 Mildew-Resistant, Single-Component, Nonsag, Silicone Joint Sealant, ASTM C920, Type S, Grade NS, Class 25, for Use NT

.1 Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces as follows:

.1 Joints between plumbing fixtures and adjoining walls, floors, and counters.
.2 Tile control and expansion joints.
.3 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products: Mildew-Resistant, Single-Component, Acid-Curing or Neutral Curing Silicone Joint Sealant, ASTM C920, Type S, Grade NS, Class 25, for Use NT.

.1 "Dowsil 786 Mildew Resistant" or "Dowsil Tub/Ceramic/Tile" by Dow Corning Corporation
.2 "Silicones; Sanitary SCS1700" by GE Silicones (Momentive Performance Materials)
.3 "Tremsil 200 Sanitary" by Tremco Incorporated
.4 "Sikasil GP/GP HT" by Sika Canada Inc.
.5 "898 NST" by Pecora Corporation

.3 Nonsag, paintable, nonstaining latex complying with ASTM C834 or butyl rubber sealant complying with ASTM C1311.

.1 Surface Burning Characteristics: Flame spread, and smoke developed indexes not greater than 25 and 450, respectively.

.2 Interior acoustical joints in vertical surfaces and horizontal nontraffic surfaces as follows:

.1 Acoustical joints at top and bottom of gypsum board partitions; at top of masonry walls and through non fire-rated penetrations in gypsum and masonry walls.
.2 Other joints as indicated on Drawings and Schedules.

.3 Acceptable Products:

.1 "AC-20 FTR" or "AIS-919" by Pecora Corporation
.2 "SHEETROCK Acoustical Sealant" by CGC Inc.
.3 "QuietZone Acoustic Sealant" by Owens-Corning Canada Inc.
.4 "Tremco Acoustical Sealant" by Tremco Ltd.
.5 "QuietSeal" or "QuietSeal 350" by Serious Materials.
.6 "CP506 – Smoke and Acoustic Sealant" by Hilti
.7 "RCS20" by GE Silicones (Momentive Performance Materials)
.8 "MasterSeal NP520" by Master Builders Solutions

.4 Single-Component or Multicomponent, Traffic-Grade, Silicone or Urethane Joint Sealant, ASTM C920, Type S or Type M, Class 25 or Class 50 as required by joint design, for Use T

.1 Interior traffic joints as follows:

.1 Isolation joints in cast-in-place concrete slabs. Refer to Section 03 35 00 for filling of contraction joints.
.2 Acceptable Products:

.1 "Dowsil 790" by Dow Corning Corporation
.2 "301 NS" or "311 NS" "300 SL" or "310 SL" by Pecora Corporation
.3 "Spectrem 800/900SL" by Tremco Incorporated
.4 "Sikaflex - 1CSL or Sikaflex 2C SL" by Sika Canada Inc.
.5 "MasterSeal SL1" or "MasterSeal SL2" by Master Builders Solutions

.5 Single-Component or Multicomponent, Traffic-Grade, Silicone or Urethane Joint Sealant, ASTM C920, Type S or Type M, Class 25 or Class 50 as required by joint design, for Use T

.1 Interior traffic joints as follows:

.1 Control and expansion joints in stone flooring.
.2 Control and expansion joints in tile flooring.
.3 Other joints as indicated on Drawings and Schedules.

.2 Acceptable Products: As recommended by flooring manufacturer and conforming to TTMAC guidelines.

.6 Single-Component Silicone complying with ASTM C920, Grade NS, Class 25 or butyl rubber sealant complying with ASTM C1311.

.1 Interior traffic joints as follows:

.1 Concealed sealants for bedding thresholds and sills.

.2 Acceptable Products:

.1 “Dowsil 758” by Dow Corning Corporation
.2 “Tremco Butyl Sealant” by Tremco Incorporated
.3 “BC-158” or “BA-98” by Pecora Corporation
.4 “MasterSeal NP1” by Master Builders Solutions

.7 Silicone glazing sealant, ASTM C920, Type S, Grade NS, Class 25, Use NT.

.1 Glazing applications as follows:

.1 Non-structural sealing for butt-glazing in interior applications and other non-moving glazing joints.

.2 Acceptable Products:

.1 “Dowsil 799” or “Dowsil Glazing” by Dow Chemical of Canada ULC
.2 “UltraGlaze SSG4000” or “UltraGlaze SSG4000AC” by GE Silicones (Momentive Performance Materials)
.3 “Tremsil 200” by Tremco Incorporated
.4 “Sikasil - N Plus” by Sika Canada Inc.

.8 Single-Component, Nonsag, Urethane Tamper-resistant Security Joint Sealant, ASTM C920, Type S or Type M, Grade NS, Class 12.5, for Use NT, Shore A hardness 40 +/- 5 in accordance with ASTM C661.

.1 Interior tamper-resistant security joints as follows:

.1 Moving (e.g. perimeters of exterior openings) and non-moving (e.g. fixture joints) in public and supervised locations such as [day rooms,] [exercise rooms,] [cafeterias,] and similar locations.

.2 Acceptable Products:

.1 “Pecora Dynaflex™ SC” by Pecora Corporation
.2 “Masterseal CR195” by Master Builders Solutions.
.3 “DOWSIL™ 995 Silicone Structural Sealant” by Dow Chemical of Canada ULC
.4 “Sikaflex 11FC” or “Sika Construction Adhesive”

2.3 COMPONENTS

.1 Joint Backing: Preformed, compressible, resilient, non-waxing, non-extruding, non-staining strips of closed cell polyethylene or urethane foam, compatible with joint substrates and are approved by the sealant manufacturer based on field experience and laboratory test. Sizes and shapes to suit various conditions, diameter 25% greater than joint width. Backing shall be compatible with sealant, primer and substrate.

.2 Bond Breaker Tape: As recommended by the sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

.3 Joint Primer: Non-staining, suitable for substrate surfaces, compatible with joint forming materials and as recommended by the sealant manufacturer for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

.4 Masking Tape: Provide non-staining, non-absorbent tapes and sheets which effectively mask sealant without leaving an adhesive residue compatible with joint sealants and surfaces adjacent to joints.

.5 Cleaning Material: Non-corrosive, non-staining, solvent type, xylol, methyl-ethyl-ketone (MEK), toluol, isopropyl alcohol (IPA) or as recommended by the sealant manufacturer and acceptable to the material or finish manufacturers for surfaces adjacent to sealed areas free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way and formulated to promote optimum adhesion of sealants with joint substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine joints for compliance with requirements for joint configuration, installation tolerances and other conditions affecting joint sealant performance. Ensure joints are suitable to accept and receive sealants.

.2 Verify that joint surfaces are clean, sound, free of defects and that dimensions are within the sealant manufacturer's size requirements.

.3 Proceed with installation only after unsatisfactory conditions have been corrected. Commencement of work implies acceptance of surfaces and conditions.

.4 Do not apply sealant to masonry until mortar has cured.

.5 Before any sealing work is commenced, test materials for indications of staining or poor adhesion.

.6 Notify the Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

.2 Clean joints and spaces which are to be sealed and ensure they are dry and free of dust, loose mortar, oil, grease, oxidation, coatings, form release agents, sealers and other foreign material.

.3 Clean porous surfaces such as concrete, masonry or stone by wire brushing, grinding or blast cleaning, mechanical abrading or combination of these methods as required to obtain clean and sound surfaces.

.4 Remove laitance by grinding or mechanical abrading.

.5 Remove oils by sandblast cleaning.

.6 Remove loose particles present or resulting from grinding, abrading or sandblast cleaning by thorough brushing.

.7 Clean ferrous metals of rust, mill scale and foreign materials by wire brushing, grinding or sanding.

.8 Wipe non-porous surfaces such as metal and glass to be sealed, except pre-coated metals, with cellulose sponges or clean rags soaked with solvent recommended by manufacturer and

wipe dry with clean cloth. Where joints are to be sealed with silicone based sealants clean joint with methyl-ethyl-ketone (MEK) or xylol. Do not allow solvent to air-dry without wiping. Clean pre-coated metals with solutions or compounds which will not injure finish and which are compatible with joint primer and sealant. Check ferrous metal surfaces are painted before applying sealant.

.9 Examine joint sizes and where depth of joint exceed required depth of sealant correct to achieve proper following width/depth ratio:

.1 Maintain 2:1 width/depth ratio: minimum joint size to be 6 mm (1/4") x 6 mm (1/4"), maximum depth of sealant to be 13 mm (1/2").

.10 Install joint backing material to achieve correct, uniform joint profile and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

.11 Do not leave gap between ends of sealant backing; do not stretch, twist, puncture, or tear sealant backings; remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

.12 Where joint design or depth of joint prevents use of joint backing material, apply bond breaker tape to prevent 3-sided adhesion.

.13 Do not stretch, twist, puncture or tear joint backing. Butt joint backing at intersections. Install bond breaker tape at back of joint where joint backing is not required or cannot be installed.

.14 On horizontal traffic surfaces, support joint filler against vertical movement which might result from traffic loads, including foot traffic.

.15 Where surfaces adjacent to joints are likely to become coated with sealant during application, mask them prior to priming and sealing.

.16 Do not exceed shelf life and pot life of materials and installation times, as stated by the manufacturer.

.17 Be familiar with work life of sealant to be used. Do not mix multiple component materials until required for use.

.18 Use materials as received from the manufacturer, without additions, deletions and adulterations of materials.

.19 Mix multiple component sealants and bulks sealants using mechanical mixer capable of mixing without mixing air into material, in accordance with the manufacturer’s directions and recommendations. Continue mixing until material is homogeneously blended, uniform in colour and free from streaks of unmixed material. Install compound prior to start of hardening or curing cycle.

.20 Seal joints in surfaces to be painted before surfaces are painted. Where surfaces to be sealed are prime painted in shop before sealing, check to make sure the prime paint is compatible with primer and sealant. If they are incompatible, inform the Consultant and change primer and sealant to compatible types approved by the Consultant.

.21 Where irregular surface or sensitive joint border exists, apply masking tape at edge of joint to ensure joint neatness and protection.

.22 Prime sides of joints for type of surface being sealed prior to application of joint backing, bond breaker or sealant as recommended by sealant manufacturer.

3.3 APPLICATION

.1 Apply in accordance with the manufacturer's directions and recommendations unless more stringent requirements apply.

.2 Apply sealant by proven techniques using hand operated guns or pressure equipment fitted with suitable nozzle size and equipment approved by sealant manufacturer.

.3 Force sealant into joint and against sides of joints to obtain uniform adhesion. Use sufficient pressure to completely fill all voids in joint regardless of variation in joint widths and to proper joint depth as prepared. Ensure full firm contact with interfaces of joint. Superficial pointing with skin bead is not acceptable.

.4 Finish face of compound to form smooth, uniform beads. At recesses in angular surfaces, finish compound with flat face, flush with face of materials at each side. At recesses in flush surfaces, finish compound with concave face flush with face of materials at each side.

.5 Compound may be tooled, provided such tooling does not damage seal or tear compound. Avoid pulling of sealant from sides.

.6 Tool surfaces as soon as possible after sealant application or before any skin formation has occurred, particularly when using silicone sealants.

.7 Ensure joint surfaces are straight, neatly finished, free from ridges, wrinkles, sags, dirt, stains, air pockets and embedded foreign matter or other defacement and be uniform in colour, free from marbling and/or colour streaking due to improper mixing or use of out of shelf life Products.

.8 Do not use solvent curing sealants indoors.

3.4 SEALANT LOCATIONS

.1 Use 1 of the sealants specified for each type in locations indicated in the sealant schedules below. Ensure the sealant chosen for each location is recommended by the manufacturer for use for the conditions encountered.

.2 Joint designation and application in the following tables and the fact that Drawings do not show all locations to be sealed does not limit the Contractor’s responsibility under this Section to seal all locations (except those indicated in other Sections of work) required to create and ensure continuous enclosure.

.3 Firestopping and Smoke Seal: Sealants part of firestopping systems and smoke seals provided within fire rated assemblies shall be part of the work of Section 07 84 10 and shall be carried out under supervision of those performing the work under this Section.

3.5 FIELD QUALITY CONTROL

.1 An independent inspection and testing company may be appointed and paid for by the Owner to carry out inspection and testing as directed by the Consultant.

.2 Inspect joints for complete fill, for absence of voids and for joint configuration complying with requirements specified herein. Record results in a manner acceptable to the Consultant.

.3 Tests may include sampling of installed Product where adhesion, cohesion or reversion failure is suspected.

.4 Where work or materials fail to meet requirements specified herein, as indicated by the test results, pay the costs of additional inspection and testing required for new replacement work or materials.

.5 Manufacturer’s Services:

.1 Confirm in writing that the manufacturer’s representative will be on site throughout the construction period work to inspect the application of sealant and surface preparation.

.2 Consult with the manufacturer's technical representative about the following items:

.1 weather conditions under which work will be done.
.2 anticipated frequency of joint movement.
.3 shape factor of the joint.
.4 durometer hardness, slump and curing characteristics of materials specified.
.5 joint characteristics as built.
.6 installation procedures to be adopted.
.7 mixing procedures to be adopted.
.8 conditions under which the Work will be done, in order that any alternative recommendations may be made should adverse conditions exist.

3.6 CLEANING

.1 Immediately clean adjacent surfaces which have been soiled and leave work in neat, clean condition. Remove excess materials, compounds smears or other soiling resulting from application of sealants. Use recommended cleaners and solvents. Leave finished work in neat, clean condition with no evidence of spillovers onto adjacent surfaces.

3.7 PROTECTION

.1 Provide approved, non-staining means of protection for completed joint sealant installations where required to protect work from mechanical, thermal, chemical and other damage by construction operations and traffic.

.2 Maintain protection securely in place until completion of Work. Remove protection when so directed by the Consultant.

.3 Repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work included: Provide labour, materials, products, equipment and services to complete the steel doors and frames work specified herein. This includes, but is not necessarily limited, to:

.1 Interior hollow-metal doors and pressed steel frames

.2 Exterior hollow-metal doors and pressed steel frames

.3 Pressed steel frames for borrowed lites and screens.

.4 Frame anchors, glass mouldings and stops, inserts, in-fill panels and other auxiliary materials required for complete installation.

.5 Preparation of steel doors and frames for CSA approved wiring system and conduits for electronic hardware and automatic door operators.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions:

.1 Minimum base steel thicknesses for gauges: in accordance with Appendix 1 of CSDMA “Recommended Specifications for Commercial Steel Door and Frame Products”. Steel sheet thicknesses specified herein are base metal thicknesses prior to galvanizing.

.2 CSDMA: Canadian Steel Door Manufacturers Association

.3 NAAMM: National Association of Architectural Metal Manufacturers

.4 HMMA: Hollow Metal Manufacturer’s Association.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 DEFINITIONS

.1 Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.6 ADMINISTRATIVE REQUIREMENTS

.1 Pre-installation Meetings: Schedule, and conduct pre-installation meeting at Project Site, in order to coordinate work of this Section, with work of related Subcontractors.

.1 Ensure attendance of Subcontractor performing work of this Section and representatives of manufacturers and fabricators involved in, or affected by, installation and coordination with other materials and installations that have preceded or will follow. Advise Consultant and Owner in advance of scheduled meeting dates.

.2 Agenda: Review progress of other construction activities and preparations for the particular activity under consideration.

.3 Record significant discussions, agreements, and disagreements, including required corrective measures and actions.

.4 Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.

.2 Coordination

.1 Coordinate anchorage installation for pressed steel frames. Supply setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.7 ACTION SUBMITTALS

.1 Product Data: Submit product data in accordance with Division 01 for the following:

.1 Submit manufacturer's instructions, printed product literature and data sheets for the steel doors and frames work and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.

.2 Shop Drawings: Submit Shop Drawings in accordance with Division 01. Include the following:

.1 Indicate each type of door, frame, steel, construction and core clearly demonstrating the following:

.1 Show dimensioned door and frame product elevations and sections.

.2 Show listing of opening descriptions including locations, material thickness, and anchors.

.3 Show location and details of openings.

.4 Provide manufacturer's recommended installation instructions and procedures.

.2 Indicate material thickness, mortises, reinforcements, anchorages, locations of exposed fasteners, openings (glazed, paneled or louvered) and arrangement of standard hardware.

.3 Include schedule identifying each unit, with door marks and numbers relating to Consultant’s numbering on Drawings and Door Schedule.

.3 Samples:

.1 When requested by Consultant, submit fabrication Samples approximately 203 by 254 mm (8 by 10 inches) to demonstrate compliance with requirements for quality of materials and construction:

.1 Doors: Show vertical-edge, top, and bottom construction; core construction; and hinge and other applied hardware reinforcement. Include separate section showing glazing if applicable.

.2 Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.

.3 Samples submitted must represent, in all respects, the minimum quality of work to be supplied by the manufacturer. Do not fabricate any work represented by samples until the samples are reviewed. Deviation of fabrication quality, compared to reviewed samples, will be cause for rejection of work.

.4 Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.8 INFORMATIONAL SUBMITTALS

.1 Product Test Reports: Submit product test reports in accordance with Division 01 for each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency. As a minimum, submit the following test reports:

.1 Confirmation of Physical Endurance Test to ANSI/SDI A250.4, "Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, and Frame Anchors" to minimum Level A - 1,000,000 cycles.

.2 Confirmation that insulated doors supplied in exterior openings meet specified thermal resistance rating.

.3 Ensure reports include name of testing authority, date of test, location of test facility, descriptions of test specimens, procedures used in testing and indicate compliance with acceptance criteria of test.

1.9 QUALITY ASSURANCE

.1 Manufacturer Qualifications: Execute work in this Section by a manufacturer who is a member of CSDMA.

.1 Ensure product is manufactured by a firm experienced in design and production of standard and custom commercial steel door and frame assemblies, integration of builders' or electronic hardware and glazing assemblies, and other items affecting work.

.2 Supplier Qualifications: Ensure Product Supplier has Architectural Hardware Consultant (AHC) or person of equivalent experience, available at reasonable times to consult with Consultant, Contractor and Owner.

.3 Installer Qualifications:

.1 Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of Product manufacturers.

.2 Ensure retained installers are familiar with Product manufacturers specified herein and with ANSI/NFPA 80 requirements for installation of labeled fire rated steel doors, frames and hardware.

.4 Welding:

.1 Provide welding in accordance with CSA W59-M performed by a fabricator and mechanics fully approved by the Canadian Welding Bureau as specified herein.

.2 Ensure fabricator is fully certified by Canadian Welding Bureau for fusion welding of steel structures to CSA W47.1 and for fusion welding of aluminum to CSA W47.2.

.5 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.10 DELIVERY, STORAGE, AND HANDLING

.1 Delivery and Acceptance Requirements:

.1 Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

.2 Provide additional protection to prevent damage to factory-finished units.

.3 Deliver welded frames with two temporary shipping spreader bars across bottom of frames, tack welded to jambs and mullions. Temporary spreader bars are intended for shipping and handling purposes only, and must not be used for installation purposes.

.2 Storage and Handling Requirements:

.1 Provide site storage and protection of materials in accordance with NAAMM-HMMA 840. Store items in dry, secure location on planks or dunnage.

.2 Store Door and frame Products in vertical position, spaced with blocking. Cover materials to protect them from damage but in such a manner as to permit air circulation.

.3 Immediately Make Good any damage acquired during shipping or handling. Clean scratches and touch up with rust-inhibitive primer. Replace damaged work which cannot be repaired, restored or cleaned.

.4 For welded frames, weld in two temporary jamb spreaders per door opening to maintain proper alignment during shipment and handling. Do not use temporary jamb spreaders for installation.

1.11 FIELD CONDITIONS

.1 Verify actual opening sizes and field conditions by field measurement before fabrication. Submittal drawings must reflect measurements and conditions provided, and product manufactured accordingly. Coordinate field measurements with fabrication and construction schedules to avoid delays.

.2 Verify that substrate conditions, whether existing or otherwise, are as detailed on Drawings, and are acceptable for product installation in accordance with manufacturer's instructions.

.3 Do not proceed with fabrication without receipt of reviewed Shop Drawings and reviewed construction hardware schedule.

1.12 WARRANTY

.1 Extended Rust-perforation Warranty: manufacturer’s standard form in which manufacturer agrees to repair finishes or replace doors that show evidence of excessive rusting within specified warranty period.

.2 Warranty Period: 5 years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Artek Door Limited;

.2 Baron Hollow Metal;

.3 Daybar Industries Limited;

.4 Fleming Door Products; an Assa Abloy Group company;

.5 Gensteel Doors;

.6 LMT Group inc.;

.2 Substitution Limitations: This Specification is based on Products by Fleming Door Products.

.3 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Labelling requirements:

.1 Provide label of recognized testing agency having factory inspection service and constructed as listed or classified for labeling in accordance with NFPA 80, listing authority's policies and label materials.

.2 Listing must identify manufacturer.

.3 Construct fire-rated doors and frames as listed for labeling in "Follow-Up Service Procedures/Factory Inspection Manuals" issued by listing agency.

.2 Fire-Rated Door Assemblies:

.1 Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits indicated on Drawings and Schedules, based on testing according to CAN4-S104.

.3 Fire-Rated, Frame Assemblies:

.1 Complying with NFPA 80 and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings and Schedules, based on testing according to CAN4-S104 (Frames, transom and sidelight assemblies) and CAN4-S106 (window assemblies).

.4 Smoke- and Draft-Control Assemblies:

.1 Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

.5 Temperature Rise Rated Assemblies: Provide fire and temperature rise rated steel doors for those openings as determined and scheduled by Consultant.

.1 As a minimum, Provide fire and temperature rise rated steel doors and frames at following locations and as indicated on Drawings and schedules:

.1 between dead end corridor and adjacent occupied spaces;

.2 between exit enclosures (stairs) and remainder of floor areas;

.3 in firewalls and other specific locations noted on Drawings or Schedules.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Unless otherwise indicated, construct doors to be minimum 44.5 mm (1-3/4 inches) thick.

.2 Construct doors to meet requirements of NAAMM-HMMA 861 and CSDMA specifications. Ensure door and frame Products are fabricated in strict accordance with reviewed Shop Drawings. Ensure steel is free of scale, pitting, coil breaks, surface blemishes, buckles, waves and other defects.

.3 Doors must meet ANSI/SDI A250.4, for Level A performance (1,000,000 cycles).

.4 Facilitate installation of electrical components complete with arrangement so conduits and wiring can be readily removed and replaced.

.5 Ensure exterior door assemblies can meet the following performance requirements as a minimum:

.1 Thermal resistance (R-Value)

.1 Nominal: Not less than RSI 1.94 K x sq. m/W (R11 deg F x h x sq. ft./Btu) in accordance with ASTM C518.

.2 Actual: Not less than RSI 0.6 K x sq. m/W (R3.4 deg F x h x sq. ft./Btu) in accordance with ASTM C1363.

.2 Thermal transmittance (U value):

.1 Nominal: Not more than 0.5 W/(sq.m· K) (0.09 BTU/(sq.ft · deg F) in accordance with ASTM C518.

.2 Actual: Not more than 3.45 W/(sq.m· K) (0.29 BTU/(sq.ft · deg F) in accordance with ASTM C1363.

.3 Air Infiltration: Maximum air leakage of 0.20 L/s per sq. m (0.04 cfm/sq. ft.) at a static-air-pressure differential of 75 Pa (1.57 lbf/sq. ft.).

2.4 MATERIALS

.1 Galvanized Steel Sheet: ASTM A653/A 653M, Commercial Steel (CS), Type B.

.1 Interior doors and frames unless indicated otherwise: Comply with A 653/A 653M, Designation ZF 120 (A40)

.2 Exterior doors and frames: Comply with ASTM A653, Designation Z275 (G90).

.2 Frame Anchors: ASTM A879/A 879M, Commercial Steel (CS), 12G (04Z) coating designation; mill phosphatized.

.1 For anchors built into exterior walls, steel sheet complying with ASTM A1008/A 1008M or ASTM A1011/A 1011M, hot-dip galvanized according to ASTM A153/A 153M, Class B.

.3 Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A153/A 153M.

.4 Grout: ASTM C476, except with a maximum slump of 102 mm (4 inches), as measured according to ASTM C143/C 143M.

.5 Mineral-Fiber Insulation: CAN/ULC S702 or equivalent to ASTM C665 (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing CAN/ULC-S114 for combustion characteristics.

.6 Glazing: Comply with requirements in Section 08 80 00, Glazing.

.7 Bituminous Coating: Cold-applied asphalt mastic, compounded for 0.4-mm (15-mil) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 COMPONENTS

.1 Door Core Materials:

.1 Honeycomb: Structural small cell 25.4 mm (1 inch) maximum kraft paper 'honeycomb'. Weight: 36.3 kg (80 lb.) per ream minimum, density: 16.5 kg/m3 (1.03 pcf) minimum, sanded to required thickness.

.2 Polystyrene: Rigid extruded, fire retardant, closed cell board, Type 1 with a minimum density of 16 kg/m3 (1.0 lbs/cu ft) and minimum R-value of RSI 1.05 (R6.0).

.3 Polyurethane: CAN/ULC-S704, Rigid, polyurethane, board with a density of 32 kg/m3 (2.0 lbs/cu ft) and minimum thermal resistance rating of RSI 1.92 (R11)

.4 Steel stiffened core: Continuous vertically formed steel sections, full thickness of interior space between door faces.

.1 Stiffeners: Minimum thickness 0.6 mm (22 ga. - 0.026 in) spaced 152 mm (6 in) apart and securely fastened to both face sheets by industrial glue or spot welded spaced a maximum of 127 mm (5 in) o. c. vertically.

.2 Fill spaces between stiffeners with fiberglass core (interior locations) or polyurethane core (exterior locations) as specified herein.

.5 Fire Door Cores: As required to provide fire-protection and temperature-rise ratings indicated on Drawings and Schedules.

.1 Temperature Rise Rated (TRR) Core: Where TRR cores are required, ensure core composition provides fire protection rating and limits temperature rise on unexposed side of door to 121 deg C (250 deg F) above ambient temperature after 30 minutes and 250 deg C (421 deg F) after 60 minutes, as determined by OBC requirements in accordance with testing per CAN/ULC-S104-M or equivalent to NFPA 252.

2.6 INTERIOR DOORS AND FRAMES

.1 Construct interior doors and frames to comply with the standards indicated in this Section for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

.2 Standard-Duty Doors and Frames:

.1 Doors:

.1 Materials: Galvanized steel sheet, minimum 1.06 mm (18 ga - 0.042 inch); galvannealed as specified herein.

.2 Edge Construction: Following constructions are acceptable:

.1 Full Flush; Mechanically interlocked, adhesive assisted and tack welded at top and bottom of door, 150 mm (6 inch) on centre and above and below each edge cutout, filled with metal filler and ground smooth with no visible seams.

.2 Seamless; continuously welded and ground smooth with no visible seams.

.3 Core: Kraft-paper honeycomb.

.4 Basis-of-Design: “D-Series” by Fleming or approved equivalent.

.2 Frames:

.1 Materials: Galvanized steel sheet, minimum 1.34 mm (16 ga - 0.053 inch); galvannealed as specified herein.

.2 Construction: Face welded or full profile welded unless indicated otherwise.

.3 Basis-of-Design:

.1 "M Series" by Fleming or approved equivalent for frames occurring in masonry construction.

.2 "DW Series" by Fleming or approved equivalent for frames occurring in gypsum board construction.

.3 "EXP Series" by Fleming or approved equivalent for frames occurring in existing partitions.

.3 Exposed Finish: Factory-primed for site finishing.

.4 Locations: Service Closets (mechanical, plumbing, electrical etc.)

.3 Heavy-Duty Doors and Frames:

.1 Doors:

.1 Materials: Galvanized steel sheet, minimum 1.34 mm (16 ga - 0.053 inch); galvannealed as specified herein.

.2 Edge Construction: Seamless; continuously welded and ground smooth with no visible seams.

.3 Core: Polystyrene.

.4 Basis-of-Design: "CW-Series" by Fleming or approved equivalent.

.2 Frames:

.1 Materials: Galvanized steel sheet, minimum 1.34 mm (16 ga - 0.053 inch); galvannealed as specified herein.

.2 Construction: Face welded unless indicated otherwise.

.3 Basis-of-Design:

.1 "M Series" by Fleming or approved equivalent for frames occurring in masonry construction.

.2 "DW Series" by Fleming or approved equivalent for frames occurring in gypsum board construction.

.3 "EXP Series" by Fleming or approved equivalent for frames occurring in existing partitions.

.3 Exposed Finish: Factory-primed for site finishing.

.4 Locations: Typical doors unless indicated otherwise.

.4 Extra Heavy-Duty Doors and Frames:

.1 Doors:

.1 Materials: Galvanized steel sheet, minimum 1.34 mm (16 ga - 0.053 inch); galvannealed as specified herein.

.2 Edge Construction: Seamless; continuously welded and ground smooth with no visible seams.

.3 Core: Vertical steel stiffened

.4 Basis-of-Design: “H-Series” by Fleming or approved equivalent.

.2 Frames:

.1 Materials: Galvanized steel sheet, minimum 1.70 mm (14 ga - 0.067 inch); galvannealed as specified herein.

.2 Construction: Face welded or full profile welded unless indicated otherwise.

.3 Basis-of-Design:

.1 “M Series” by Fleming or approved equivalent for frames occurring in masonry construction.

.2 “DW Series” by Fleming or approved equivalent for frames occurring in gypsum board construction.

.3 “EXP Series” by Fleming or approved equivalent for frames occurring in existing partitions.

.3 Exposed Finish: Factory-primed for site finishing.

.4 Locations: Public stairwells, cross corridors, public washrooms, emergency exit doors, exams rooms, exit-only-function doors and similar locations.

2.7 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

.1 Construct exterior doors and frames to comply with the standards indicated in this Section for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

.2 Heavy-Duty Doors and Frames:

.1 Physical Performance: Level A according to ANSI/SDI A250.4.

.2 Doors:

.1 Materials: Galvanized steel sheet, minimum 1.34 mm (16 ga - 0.053 inch); galvanized as specified herein.

.2 Edge Construction: Seamless; continuously welded and ground smooth with no visible seams.

.3 Core: Polyurethane insulated, vertical steel stiffened.

.4 Basis-of-Design: “TRIO E-Series” by Fleming or approved equivalent.

.3 Frames:

.1 Materials: Galvanized steel sheet, minimum 1.70 mm (14 ga - 0.067 inch); galvannealed as specified herein.

.2 Construction: Thermally-broken unless indicated otherwise.

.3 Basis-of-Design: “TB Series” by Fleming or approved equivalent for frames occurring in masonry construction.

.4 Exposed Finish: Factory-primed for site finishing.

.5 Locations: Exterior openings indicated to receive hollow metal doors and pressed steel frames unless indicated otherwise

2.8 HOLLOW-METAL PANELS

.1 Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

2.9 FABRICATION

.1 Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

.1 Provide factory-preparation and reinforcements for doors and frames including mortising, blanking, drilling and tapping for templated hardware only, in accordance with the reviewed hardware schedule and templates provided by hardware supplier.

.2 Reinforce doors and frames in factory only where required, for surface-mounted hardware, anchor hinges, thrust pivots, pivot reinforced hinges, or non-templated hardware. Perform drilling and tapping on site, at time of installation.

.3 Prior to shipment, mark each door and frame with identification number as shown on approved Shop Drawings.

.2 Hollow-Metal Doors:

.1 Holes 12.7 mm (0.5 inch) diameter and larger must be factory-prepared, except mounting and through-bolt holes, which are made on site, at time of hardware installation. Holes less than 12.7 mm (0.5 inch) diameter will be factory-prepared only when required for device (for knob, lever, cylinder, thumb or turn pieces) or when holes overlap function holes.

.2 Vertical Edges for Single-Acting Doors: Bevel edges 3 mm in 50 mm (1/8 inch in 2 inches) unless otherwise required to suit finish hardware or door swings.

.3 Top Edge Closures:

.1 Exterior Locations: Sealed, flush PVC closures.

.2 Interior locations (commercial buildings): Inverted steel closures.

.4 Bottom Edge Closures: Close bottom edges of door with end closures or channels of same material as face sheets.

.1 Exterior Locations: Sealed, flush PVC closures. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.

.2 Interior locations (commercial buildings): Inverted steel closures.

.5 Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated on Drawings and Schedules. Extend minimum 19 mm (3/4 inch) beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

.3 Pressed Steel Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.

.1 Protect mortised cutouts in frames with steel guard boxes.

.2 Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.

.3 Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

.4 Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.

.5 Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.

.6 Jamb Anchors: Provide anchorage appropriate to floor, wall and frame construction. Locate each anchor immediately above or below each hinge reinforcement on hinge jamb and directly opposite strike jamb.

.1 Provide number and spacing of anchors as follows:

.1 Two anchors per jamb up to 1520 mm (60 inches) high.

.2 Provide additional anchor for each additional 760 mm (30 inches) of height or frac-tion thereof up to 3050 mm (120 inches) high.

.3 Provide four anchors per jamb plus one additional anchor per jamb for each 610 mm (24 inches) or fraction thereof above 3050 mm (120 inches) high.

.2 Frames in previously placed concrete, masonry or structural steel: Locate anchors not more than 150 mm (6 inches) from the top and bottom of each jamb, and intermediate anchors at 660 mm (26 inches) o.c. maximum.

.3 Frames in stud-Wall Type: Locate anchors not more than 457 mm (18 inches) from top and bottom of frame, and intermediate anchors at 813 mm (32 inches) o.c. maximum.

.4 Where frame product is installed prior to adjacent partition, securely attach floor anchor to the inside of each jamb profile.

.1 Provide each floor anchor with two (2) holes for securing to floor. For conditions that do not permit the use of floor anchors, provide additional wall anchor, located within 150 mm (6 inches) of base of jamb.

.7 Door Silencers: Except on weather-stripped and gasketed frames, drill stops to receive door silencers as follows. Keep holes clear during construction.

.1 Single-Door Frames: Drill stop in strike jamb to receive three door silencers.

.2 Double-Door Frames: Drill stop in head jamb to receive two door silencers.

.3 Exterior Door Frames: Thermally broken.

.8 Thermally-broken Frames (exterior locations)

.1 Fabricate thermally broken door frames in accordance with Shop Drawings. Fabricate thermally broken exterior door frames with two piece steel core sections separated with closed cell PVC thermal breaks to separate interior and exterior frame sections.

.2 Provide wall and floor anchors suitable for installation conditions. Anchoring devices must not permit thermal conductivity from exterior frames to interior frame sections.

.3 Ensure welds do not cause thermal transfers between interior and exterior surfaces of frame sections. Separate interior and exterior sections of thermally broken frames by continuous thermal break.

.4 Do not assemble thermally broken sections by means of screws, grommets or other fasteners.

.5 Insulate closed sections such as mullions or center rails in shop with specified insulation. Install Insulation of open sections such as jambs, heads and sills.

.6 Incorporate head drips of same gauge material as frame and plug weld at 150 mm (6 inch) on center. Fill and sand smooth.

.9 Welded Type Frames (interior locations as noted herein):

.1 Frame products must be accurately mitered or mechanically jointed.

.2 Full Profile welded: punch-mitered - continuously welded on profile faces, rabbets, returns and soffit intersections, or saw-mitered - continuously welded on the profile faces, rabbets, returns, stops and soffit intersections.

.1 Punch or saw-mitered, at the manufacturer's discretion.

.2 All profile welded frame product exposed faces must be filled and ground to a smooth, uniform, seamless surface.

.3 Face welded: continuously welded on the profile faces, with exposed faces filled and ground to a smooth, uniform, seamless surface.

.4 Joints at mullions, sills and center rails:

.1 Must be coped accurately, butted and tightly fitted.

.2 At intersecting flush profile faces, be securely welded, filled and ground to a smooth, uniform, seamless surface.

.3 At intersecting recessed profile faces, be securely welded to concealed reinforcements, with exposed hairline face seams.

.4 At all other intersecting profile elements, have exposed hairline face seams.

.5 Glazing stops must be formed steel channels, minimum 16 mm (0.625 inch) height, accurately fitted, butted at corners and fastened to frame sections with counter-sunk oval head sheet metal screws.

.4 Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, CSDMA Specifications, Door Hardware Schedule, and templates. Refer to Section 08 71 00 for additional requirements:

.1 Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

.2 Steel thickness for hardware reinforcements to be manufacturer's standard as required to adequately support the door and hardware, but not less than the following:

.1 Lock and Strike Reinforcements:

.1 Typical: 1.34 mm

.2 Heavy-duty (or stronger) doors and frames: 2.36 mm.

.2 Hinge Reinforcements:

.1 Typical: 2.36 mm

.2 Heavy-duty (or stronger) doors and frames: 3.12 mm

.3 Flush Bolt Reinforcements:

.1 Typical: 1.34 mm

.2 Heavy-duty (or stronger) doors and frames: 2.36 mm

.4 Reinforcements for Surface Applied Hardware:

.1 Typical: 1.06 mm

.2 Heavy-duty (or stronger) doors and frames: 1.34 mm

.5 Top and Bottom Channels: 1.06 mm

.6 Steel Top Caps: 0.81 mm

.7 Mortar Guard Boxes: 0.66 mm

.8 Floor Anchors: 1.34 mm

.9 Wall Anchors:

.1 Masonry Strap Type: 1.06 mm

.2 Masonry Wire Type: 4.0 mm (0.156 inch) dia.

.3 Masonry Stirrup-Strap Type: 1.34 mm

.4 Steel/Wood Stud Type: 0.81 mm

.5 Existing Masonry /Concrete Wall Type: 0.81 mm

.6 Jamb Spreaders: 0.81 mm

.3 Where electrified hardware is specified on Hardware Schedule, Provide CSA-approved system consisting of CSA-approved conduit, junction boxes and wire harnesses complete with modular plugs for coordinated connection directly to electrified hardware.

.5 Stops and Mouldings for Glazing: Provide accurately fitted stops and mouldings around glazed lites and louvers where indicated on Drawings and Schedules. Form corners of stops and mouldings with butted hairline joints.

.1 Single Glazed Lites: Provide fixed stops and mouldings welded on secure side of hollow-metal work.

.2 Multiple Glazed Lites: Provide fixed and removable stops and mouldings so that each glazed lite is capable of being removed independently.

.3 Provide fixed frame mouldings on outside of exterior and on secure side of interior doors and frames.

.4 Provide loose stops and mouldings on inside of hollow-metal work.

.5 Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated on Drawings and Schedules.

.6 Glass Trim (Screw Fixed or Snap-In Types): 0.81 mm (20 ga - 0.032 inch)

.1 For glazing up to 8 mm (5/16 inch) thick: steel glazing trim and snap-in glazing stops as specified herein.

.2 For glazing thicker than 8 mm (5/16 inch): steel glazing trim and screwed-in glazing stops as specified herein. Screws must be #6 x 1-1/4 inch oval head self-drilling type at 300 mm (12 inch) o.c. maximum.

2.10 STEEL FINISHES

.1 Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

.1 Provide factory-applied touch up primer at areas where zinc coating has been removed during fabrication.

PART 3 - EXECUTION

3.1 EXAMINATION:

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Supply steel doors and frames to Section 06 90 00 for installation.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the flush wood core doors work specified herein. This includes, but is not necessarily limited, to:

.1 interior wood doors.

.2 auxiliary materials required for complete installation.

.3 preparation of doors for security system including CSA-approved wiring, conduit and junction boxes for electronic hardware.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's instructions, printed product literature and data sheets for the flush wood doors work and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Indicate the following:

.1 Elevations of each door type.

.2 Details of doors, including door cores, cut outs, undercuts, openings, fire-ratings, vertical- and horizontal-edge details.

.3 For each door and frame scheduled for electrical hardware, show following items in addition to minimum requirements:

.1 location and size of junction boxes and conduit for electrical hardware and wiring.

.2 conduit cutouts.

.3 other information related to electrical hardware or interrelated systems such as fire alarm and security systems/controls.

.4 Submit product schedule for steel doors and frames, prepared by, or under the supervision of, door supplier, using same reference numbers as those on indicated Drawings. Coordinate with final door hardware schedule.

.4 Samples: Submit samples of actual door face materials (plastic-laminate or wood veneer), approximately 150 mm (6 inches) square, for each material and finish.

.1 For wood veneers, submit set of three samples showing typical range of colour and grain to be expected in finished Work.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials

.2 Manufacturers: Execute work of this Section by a manufacturer who is a member of WDMA or AWMAC and can supply Products meeting quality standards set by these Specifications.

.3 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from one source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Comply with requirements of referenced standard and manufacturer's written instructions.

.2 Do not deliver finished Products during rainy or damp weather.

.3 Do not deliver work of this Section until the building and storage areas are sufficiently dry so Products will not be damaged by excessive changes in moisture content.

.4 Do not deliver and install damaged Products. Replace in accordance with the requirements of this Section.

.5 Package doors individually in cardboard cartons and wrap bundles of doors in plastic sheeting.

.6 Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.9 SITE CONDITIONS

.1 Ambient Conditions: Ensure products are stored in climate-controlled areas with functional HVAC system and relative humidity and moisture content values that fall within the following range:

.1 Unless indicated otherwise:

.1 Moisture Content: 5-10%, Relative Humidity: 25-55%

.2 New Brunswick, Prince Edward Island, Nova Scotia, Newfoundland and Labrador:

.1 Moisture Content: 8-13%, Relative Humidity: 43-70%

.3 Alberta, Saskatchewan, and Manitoba:

.1 Moisture Content: 4-9%, Relative Humidity: 20-50%

1.10 WARRANTY

.1 Provide manufacturer's standard lifetime warranty for this Section from Substantial Performance of the Work against bubbling, delamination of faces, or edges, warp, twist bow exceeding 6 mm (1/4 inch) and telegraphing of core in accordance with General Conditions of the Contract.

.2 Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Baillargeon Doors, a Masonite Company;

.2 Lambton Doors;

.3 Lynden Door Inc,

.4 Marshfield Door Systems, Inc.;

.5 VT Industries.;

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings and temperature-rise limits (if applicable) indicated on Drawings and Schedules, based on testing according to the following:

.1 Fire-rated door assemblies: CAN/ULC-S104.

.2 Fire-rated frame assemblies: to CAN/ULC-S104 (Frames, transom and sidelight assemblies) and CAN/ULC-S106 (window assemblies)

.2 Smoke- and Draft-Control Assemblies: Provide assemblies with gaskets listed and labeled for smoke and draft control by a qualified testing agency, based on testing according to UL 1784 and installed in compliance with NFPA 105.

.3 Labelling requirements: Provide label of a recognized testing agency having factory inspection service, and constructed as listed or classified for labeling in accordance with NFPA 80, listing authority's policies and label materials. Listing must identify manufacturer.

.4 Composite Wood: Composite wood must be documented to have low formaldehyde emissions which meet the California Air Resources Board ATCM for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins or no added formaldehyde (NAF) resins.

2.3 INTERIOR FLUSH WOOD CORE DOORS

.1 Provide solid-core, 45 mm (1-3/4 inch) thick flush wood doors unless indicated otherwise.

.2 Where STC-rated assemblies are indicated on Drawings or Schedules, provide fully operable units tested in accordance with requirements of ASTM E90 and ASTM E413.

.3 Construct doors to meet requirements of ANSI/WDMA I.S. 1A, Extra Heavy Duty and CSA O132.2 and as follows:

.1 Construction: 5-ply unless indicated otherwise. Provide 3-ply construction where doors are faced with medium density overlay (MDO)

.2 Core (non-fire-rated doors): ANSI A208.1, LD-1 minimum 448 kg/m3 (28 pcf) density solid particleboard core bonded to stiles and rails. Glued wood stave or WDMA I.S. 10 structural composite lumber cores are also acceptable.

.3 Core for Fire-Rated Doors: As required to achieve fire-protection rating indicated on Drawings and Schedules.

.4 Stiles: Minimum 30 mm (1-3/16 inch) wide hardwood with minimum 22 mm (7/8 inch) Maple or Birch edge strips or SCL. Provide fire-retardant types for fire-rated doors.

.5 Rails: Minimum 30 mm (1-3/16 inch) wide softwood or SCL. Provide fire-retardant types for fire-rated doors.

.6 Adhesives: Type I, waterproof (urea-formaldehyde free)

.7 Crossbands: Minimum 1.6 mm (1/16 inch) thick composite complete with veneer. Provide fire-retardant types for fire-rated doors.

.8 Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.

.9 Exposed Vertical Edges: Matching-edge (ME) or Compatible Edge (CE) complying with North American Architectural Woodwork Standards (NAAWS) edge Type A. Plastic laminate edges are not acceptable.

.4 Acceptable Products:

.1 “Model No. 8500-CE” or "Model No. 8500-CE-AF" (Agrifibre Core) by Baillargeon Doors

.2 "5-PC-CE" by Lambton

.3 Approved equivalent.

2.4 DOOR FACES

.1 Provide door faces as noted on Drawings and Schedules and meeting following requirements.

.2 High Pressure Decorative Laminate (PLAM): to NEMA LD-3 or ISO 4586, type HGP, minimum 1.0 mm thick.

.1 At fire-rated locations, provide materials flame-spread and smoke developed indices of 25 and 55 respectively in accordance with CAN/ULC S102/S102.2.

.2 Colours and Finishes: Allow consultant to select up to 5 colours at a later date from manufacturer’s full colour range (including solid, and wood look), texture and finish.

.3 Acceptable Manufacturers:

.1 Formica Inc.;

.2 Nevamar Company, LLC;

.3 Wilsonart Canada;

2.5 AUXILIARY MATERIALS

.1 Astragal for Fire-Rated Pairs of Doors: Steel T-shaped astragal overlapping and recessed at face edge designed specifically for pairs of doors.

.2 Vision Framing: ULC labeled, prime painted metal framing or fire rated wooden molding kit to match door faces.

.3 Hardware: Coordinate location of interior blocking with work of Section 08 71 00.

2.6 FABRICATION

.1 Fabricate doors in accordance with Section 09 of NAAWS except as specified herein.

.2 Comply with NFPA 80 requirements for fire-rated doors.

.3 Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.

.4 Hardware:

.1 Factory machine doors for finish hardware in accordance with hardware requirements and dimensions.

.2 Locate hardware to comply with DHI-WDHS-3.

.3 Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA-156.115-W, and hardware templates.

.4 Coordinate with hardware mortises in metal frames, to verify dimensions and alignment before factory machining.

.5 For doors scheduled to receive electrified locksets, provide factory-installed raceway and wiring to accommodate specified hardware.

.5 Openings: Factory cut and trim openings through doors.

.1 Light Openings: Trim openings with moldings of material and profile indicated.

.2 Provide hardwood glass stops, finished to match face veneer, for vision panels in unrated doors.

.3 Provide metal glass stops for vision panels in fire-rated labelled doors.

.4 Maximum opening sizes must conform to OBC requirements.

.6 Fabricate flush wood core doors with necessary interior blocking to suit hardware installation.

.7 Bevels: 3 degrees unless otherwise indicated by hardware of fire-rating requirements.

.8 Fabricate flush wood core doors with following edge clearances:

.1 3 mm (1/8 inch) clearance at top and sides.

.2 6 mm (1/4 inch) clearance at bottom to top of carpets and thresholds unless doors are indicated in the Door Schedule to be undercut.

.3 As required by NFPA 80 for fire rated doors.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Installation of flush wood core doors and door hardware forms part of the work of Section 06 90 00.

END OF SECTION

SEE ADD#2 Q#09

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, Products, equipment and services to complete the hangar doors work specified herein. This includes, but not limited to following:

.1 Bi-fold hangar doors.

.2 Auxiliary materials required for a complete installation .

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Required Attendance: Subcontractor performing work of this Section, representatives from manufacturers and fabricators involved in or affected by installation.

.3 Notification: Notify Consultant and Owner of scheduled meeting dates in advance; minimum 72 hour notice required.

.4 Agenda:

.1 Review progress of related construction activities and preparations for particular activity under consideration.

.2 Make note of required sequencing and coordination with materials and activities that have preceded or will follow.

.5 Reporting: Record significant discussions, agreements, and disagreements, including required corrective measures and actions.

.6 Distribution: Distribute minutes of the meeting to each party present and to other parties requiring information not more than 72 hours after meeting.

.2 Coordination:

.1 Coordinate installation of doors with framing provided under other Sections to ensure proper allowance is provided in header to accommodate deflections and support door in all positions. Reinforce door opening to carry required loads.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for Project in accordance with requirements of Section 01 30 00. Submit manufacturer’s product characteristics, catalogue cuts, installation instructions and other relevant information for each material and product used for hangar doors work specified in this Section.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings indicating material layouts, details of construction, connections, and relationship with adjacent construction. As a minimum indicate following:

.1 Include equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

.2 Include points of attachment and their corresponding static and dynamic loads imposed on structure.

.3 Include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.

.4 Include plans, elevations, sections and details as applicable.

.5 Indicate field-measured dimensions on Shop Drawings.

.6 Wiring Diagrams: Submit for power, signal, and control wiring.

.4 Delegated Design Submittals:

.1 Engineering design completion of hangar doors work is delegated to Contractor based on structural design criteria indicated in Contract Documents.

.2 Submit Shop Drawings for work of this Section that bear the stamp of a Professional Engineer registered in Province of Ontario.

.3 Submit copy of structural calculations upon request by Consultant.

.5 Samples: Submit selection and verification samples for Products requiring colour, texture, or design selection. Submit manufacturer’s list of finishes or colour swatches for Consultant's selection.

.6 Welding Certificate: Submit certification for welding firms and welders to verify compliance with welding qualifications specified in this section.

1.7 CLOSEOUT SUBMITTALS

.1 Closeout Submittals, generally: in accordance with Section 01 70 00, Closeout Submittals.

.2 Operating and Maintenance Data: Submit care and maintenance instructions for hangar doors to be included in building operation and maintenance manual.

.3 Warranty Documentation: Submit a copy of extended warranties specified in this Section.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience installing, erecting, or assembling work similar in material, design, and extent to that shown on Drawings and Schedules, and whose work has resulted in construction with a track record of successful in-service performance.

.1 Certifications: Installer must be approved and certified by manufacturer. Submit proof of certification upon request.

.2 Welding Qualifications: Qualify procedures and personnel in accordance with the following:

.1 Steel: to CSA W47.1 and CSA W59

.2 Aluminum: to CSA W47.2 and CSA W59.2

.3 Stainless Steel: to CSA W47.1 (Annex K) and CSA W59.

.3 Professional Engineer's Qualifications: Employ Professional Engineer licensed to practice in Province of Ontario who carries professional liability insurance and has at least five years' experience providing engineering services of similar kind, scope, and complexity.

.1 Professional Engineer's Responsibility:

.1 production and review of Shop Drawings,

.2 design and certification of hangar doors, including attachments for building construction, in accordance with applicable codes and regulations,

.3 stamping and signing of each Shop Drawing and associated calculations.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Mock-ups/ First Installation Review: Construct mock-ups to verify selections made under submittals, demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

.1 Location: In-situ (i.e. first installation), as directed on site by Consultant.

.2 Purpose: To set benchmarks for installation and to judge subsequent work. Maintain Mock-ups during construction in undisturbed condition.

.3 Reviewed mock-ups: May become part of the completed work if undisturbed at the time of Substantial Performance of The work, provided they are undisturbed, and comply with requirements outlined in Contract Documents.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Deliver, store and handle hangar doors materials in accordance with manufacturer's written instructions.

.2 Deliver materials to site in original factory packaging, labelled with manufacturer's name and address.

.3 Store materials off-ground, in clean, dry, well-ventilated area.

.4 Replace defective or damaged materials with new.

1.10 FIELD CONDITIONS

.1 Field Measurements: Verify actual dimensions of construction contiguous with hangar doors by field measurements before fabrication.

1.11 WARRANTY

.1 Extended warranty: Submit for Owner's review and acceptance, manufacturer's extended warranty in which manufacturer commits to repair or replace components of hangar doors that fail within specified warranty period. Manufacturer's extended warranty is in addition to, and does not supersede, any other rights that Owner may have under Contract Documents.

.2 Warranty Period: Not less than 2 years from date of Substantial Performance of The work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Schweiss Doors,

.2 Equivalent.

2.2 REGULATORY REQUIREMENTS

.1 Accessibility Standard: Comply with applicable provisions in CSA B651, the Ontario Building Code and the AODA .

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Provide lift-strap bifold hangar door suitable for aircraft hangar applications. Hydraulic door systems are not acceptable.

.2 Doors must operate smoothly, efficiently, and safely under all anticipated load conditions.

.3 Provide complete system including door panels, operating mechanism, electrical controls, safety features, and necessary accessories.

.4 Engineer door to resist anticipated loads without sagging, bowing, or structural failure.

.5 Water Management: Design doors with slopes in open position to direct water away from building. Provide solid footing with sill to prevent water flow under door.

.6 Ensure door frame and components can handle operational stresses and vibrations without deformation or damage. Provide 5:1 safety factor for all lift straps and drive components.

.7 Seismic Performance: Bi-fold hangar doors shall withstand the effects of earthquake motions determined according to the requirements of the Ontario Building Code and CAN/CSA S832.

.8 Electrical Components, Devices, and Accessories: Listed and labeled as defined in CSA C22 Series, by a qualified testing agency, and marked for intended location and application.

.9 Air Infiltration: Maximum rate of 5 L/s per sq. m (1 cfm/sq. ft.) at 75 Pa when tested according to ASTM E283 or DASMA 105.

2.4 BI-FOLD HANGAR DOORS

.1 **[Material Tag: This item is noted as "OHD-#" on Drawings and Schedules.]**

.2 Description: electrically operated bifold canopy doors.

.1 Size: As noted on Drawings.

.2 Insulation: Provide insulated core filled with CFC-free closed-cell urethane foam insulation having flame spread of 25 or less when measured in accordance with CAN/ULC S102.

.1 R-value: Not less than adjacent panels.

.3 Operation: Door opens horizontally at top and center, opening by moving frame out and up. Align top hinges with building truss members.

.4 Ensure the door is self-contained with top hinges, bottom door rollers, and column followers/wind rails.

.5 Construct door framing from jig-welded steel tube sections engineered to resist loads without sagging or bowing.

.6 Steel: ASTM A500 Grade B square structural welded steel tubing for door framing members.

.7 Door Cladding: to match building panels specified in Section 07 42 46 - Insulated-Core Metal Wall Panels (non-fire-rated) ~~[XX XX XX]~~ in all respects. Preform hangar exterior wall from siding panels over rigid insulation boards, assembled in accordance with cladding manufacturer's standard specifications. Provide panels with factory finish; AAMA 2605 PVDF fluoropolymer finish.

.1 Flashing: Provide manufacturer's standard sheet metal flashings, trim molding, closure strips, caps, subgirts and other similar sheet metal accessories used in conjunction with preformed panels in same material and finish as panels. Flashing metal to be of thickness not less than that used for the panels.

~~.8 Liner Panels: Galvanized steel sheets conforming to ASTM A653/A653M, coating designation Z275 (G90), with flush interior face, and thickness to meet design loads and purlin spacing, but not less than 22 ga.~~

~~.9~~.8 Weld shop connections; bolt or weld field connections as applicable.

.3 Structural Performance: Ensure exterior Bi-fold hangar doors can withstand wind loads, gravity effects, and stresses in accordance with requirements of Ontario Building Code, within conditions and limits indicated on Drawings and Schedules.

.1 Wind Loads: to be determined in accordance with geographical location of project, but not less than uniform pressure of 0.96 kPa (20 lbf/sq. ft.), acting inward and outward. Bi-fold hangar doors must remain functional under design wind loads.

.2 Deflection Limits: Bi-fold hangar doors must resist design wind load without permanent deformation or component disengagement. Engineer doors to resist loads without sagging or bowing.

.4 Motorized Door Operation: CSA or UL listed and labeled, Provide manufacturer's standard warning devices.

.1 Standard Service: 120, 208 or 600~~208, 240, 480 or 575~~ VAC, 60 Hz three-phase, 4-wire service; Coordinate with Division 26. Use totally enclosed motors, size as recommended by manufacturer.

.2 Gear Motor: Equip gear motor with electric brake to stop and hold door in any position. Provide high starting torque, reversible, continuous duty, class A insulated electric motors complying with NEMA MG 1, with overload protection. Ensure operator design allows motor removal without disturbing limit switch adjustment or affecting emergency auxiliary operator.

.3 Motor Exposure: Exterior, wet, and humid. Provide operator cover to protect operator from weather.

.4 Explosion Resistance: Motor must be certified for use in hazardous locations, in accordance with UL 1203 and dust-ignition classification.

.5 Horsepower: Variable, to be determined by door manufacturer based on door size and operational requirements, but not less than 1/3 hp.

.5 Control Stations Provide two-button constant hold control station for opening and closing bifold door, with “dead man switch” that stops door immediately when operator releases the button.

.1 Additional Access Control: Refer to Division 28 for additional requirements regarding access control and interlocking with vehicle detection mechanisms.

.2 Ensure the door stops immediately when operator releases remote control transmitter.

.6 Electrical Disconnect: Provide electrical disconnect to disable door for service, maintenance, and emergency backup operations. Mount disconnect for floor-level accessibility.

.7 Warning Lights: Provide warning lights and horns to alert area when door is opening or closing.

.1 Emergency Operation:

.1 Manual Chain Hoist: For manual override in case of power or operational failure. Provide automatic engagement/disengagement feature with motor activation for models designed for continuous and explosion-proof use.

.2 Battery Backup: For doors intended for use in emergency situations, provide battery backup with programmable logic for minimum 10 operational cycles and extended standby.

.2 Obstruction-Detection Device: to UL325.

.1 Photo Eye: Provide electric photo eye sensors at floor level to stop and reverse door when an obstruction breaks detection beam.

.3 Limit Switches: Provide heavy-duty weatherproof limit switch box with adjustable switches interlocked with motor controls to stop door at fully opened and closed positions.

.4 Safety Switches: Install top limit override safety switches to disconnect power if upper limit fails or is overridden.

.5 Interlock Switch (motorized doors): provide interlock switch to prevent operation when lock is engaged to prevent damage.

.8 Basis-of-Design: “Designer Bifold Doors” by Schweiss or approved equivalent.

2.5 DOOR COMPONENTS

.1 Top Driveshaft / Lift Drums: solid steel driveshaft with lift drums on subframe, running continuously along door width. Attach driveshaft to subframe with greaseable bearing mounts at each strap drum location. Engineer solid driveshaft and lift drums with minimum 5:1 safety factor.

.2 Bottom Driveshaft / Lift Drums: solid steel driveshaft with lift drums on bottom cord of door, running continuously along door width. Attach driveshaft to door frame with greaseable bearing mounts at each strap drum location. Engineer solid driveshaft and lift drums with minimum 5:1 safety factor.

.3 Hinges: heavy duty steel hinges complete, with each set 267 mm (10.50 inches) wide, pins 17.5 mm (11/16 inch) diameter minimum.

.4 Door Truss: standard internal truss, with extra heavy-duty center truss on interior side and truss at door base.

.5 Side Rollers: Heavy-duty, minimum 76 mm (3 inches) guide rollers with sealed bearings on door bottom at jamb location.

.6 Column Followers / Wind Rails: Provide system to hold door base securely against building when closed, with solid square columns for wind rails.

.7 Wind Pins

.1 Manual Wind Pins: 25 mm (1 inch) diameter minimum.

.1 Automatic Wind Pins: Center wind pins 25 mm (1 inch) diameter minimum with automatic side latches.

.8 Latching System: Provide automatic latch system on both sides, unlocking and locking door before opening and after closing.

.9 Top and Bottom Rubber Seals: Provide standard seal continuous at top and bottom of each door. Equip door with neoprene weather stripping at heads and jambs. Ensure sills have fabric-reinforced high-grade rubber astragal. Ensure door perimeter is weather-tight.

.10 Weather Seal Kit: Seal sides and center of each bifold door with weather stripping. Include self-sticking foam cushion seal at center. Ensure the door perimeter is weather-tight.

~~.11 Walk-In Doors: Provide insulated walk-in door minimum dimensions of 914 mm x 1829 mm (36 inches x 72 inches).~~

~~.1 Locations and Quantity: As noted on Drawing.~~

~~.2 Color: to match adjacent building color.~~

~~.3 Equip door with cylindrical lock, master keyed to building keying system. Coordinate with Section 08 71 00. Provide safety interlock switch to prevent operation when door is open or ajar.~~

.11 Windows: Provide window frames and vision glazing (VG1) in bi-folding doors in sizes and locations as indicated on Drawings.

.12 Fasteners: Hot dipped galvanized.

2.6 GENERAL FINISH REQUIREMENTS

.1 Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

.2 Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

.3 Concealed Steel Finish: galvanized Z275 (G90) coating to ASTM A653/A653M.

.4 Exposed Steel Finish: Manufacturer's standard factory-applied PVDF fluoropolymer coating meeting AAMA 2605.

.1 Colour: to be selected by Consultant at a later date

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Examine locations of electrical connections.

3.2 INSTALLATION

.1 Installation, generally: Install work of this Section in strict accordance with manufacturer's written installation instructions and reviewed Shop Drawings. Supplement manufacturer's installation instructions with additional installation requirements specified in this Section to produce specified work results.

.2 Install door, track, and operating equip support necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's instructions, and as specified.

.3 Provide sway bracing, diagonal bracing, and reinforcement for rigid installation of track, hinges, and door-operating equipment.

.4 Do not exceed manufacturer's recommended clear opening setting for each bifold door.

.5 Door Cladding - Metal Building Panels: Coordinate with pre-engineered metal building erector to install exterior wall panels on bifold doors to match panels used on remainder of building. Use trims recommended by manufacturer.

.6 Accessibility: Install hangar doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

.7 Motorized Doors: Install according to UL 325.

.8 Apply proper markings for potentially hazardous locations related to door operation. Fasten warning labels to bifold door frame and operator's station according to manufacturer's instructions.

3.3 STARTUP SERVICE

.1 Engage a factory-authorized service representative to perform startup service.

.1 Perform installation and startup checks according to manufacturer's written instructions.

.2 Test and adjust controls and safety. Replace damaged and malfunctioning controls and equipment.

.3 Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.

.2 Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.

.3 Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

3.4 ADJUSTING

.1 Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.

.2 Lubricate bearings and sliding parts as recommended by manufacturer.

.3 Adjust seals to provide weathertight fit around entire perimeter.

3.5 DEMONSTRATION

.1 Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain hangar doors.

3.6 PROTECTION

.1 Protect hangar doors from damage, soiling and contaminating substances resulting from construction activities or caused by work of other trades.

.2 Where soiling or spills have occurred, remove spills and soiling from adjacent surfaces using cleaning procedures recommended in writing by the affected material's manufacturer. Do not use materials or processes that can damage finishes, surfaces, or construction.

.3 Promptly replace hangar doors work damaged during construction that cannot be satisfactorily repaired.

3.7 CLEANING AND WASTE MANAGEMENT

.1 Cleaning: Maintain clean construction area at the end of each day. When the activities of this Section are complete, remove materials, tools, equipment and rubbish.

.2 Waste Management and Disposal: sort waste for reuse, recycling, or disposal, as specified. Remove recycling bins and containers from site and dispose of contents at the appropriate waste disposal facilities.

END OF SECTION

SEE ADD#3
Q#72

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide sectional overhead doors including but not limited to the following:

.1 insulated sectional overhead doors.

.2 door guides, tracks and accessories.

.3 counterweight and counterweight enclosures.

.4 fender guards for overhead door tracks.

.5 supplementary steel supports required for installation.

.6 operators, motors, control panels, loop detectors, photo-electric devices, remote controls for vehicles, operation and activation devices, and electrical work as specified.

.7 shop priming.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Conform to requirements of Division 01 for administrative requirements.

.2 Sequencing: Coordinate installation with the work to be performed under other related Sections.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature, data sheets for each type of material provided under this Section for the Project. Data sheets shall Provide all required information. Submit 3 copies of detailed instructions for maintaining, preserving and keeping materials in clean and safe conditions and give adequate warning of maintenance practices or materials detrimental to specified materials. Submit the manufacturer’s installation instructions.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings for the Work of this Section in accordance with Division 01.

.2 Clearly show and describe, in detail, detailed door assemblies and adjacent construction, including elevations, sections and details of door, track, hardware and operating components, dimensions, gauges, finishes and of relationship of door, frames, track, hardware and operating components to adjacent construction. The Shop Drawing submission shall include detailed descriptions and catalog cuts of specified door controls.

.3 Submit complete electrical schematics with Shop Drawings.

.4 Submit complete engineering design data for doors to confirm doors have been designed to meet design requirements specified in the Contract Documents. Ensure design calculations are prepared by a registered Professional Engineer experienced in industrial steel door design and registered to practice in the Place of the Work. Ensure Shop Drawings bear the Professional Engineer’s seal.

.4 Samples: Submit selection and verification samples for Products requiring colour, texture, or design selection. Submit manufacturer’s list of finishes or colour swatches for Consultant's selection.

.5 Operation and Maintenance Data:

.1 Submit printed operation instructions and maintenance data for the doors, as follows:

.1 Wiring Diagrams: "As built" straight line wiring diagrams showing electrical connections and control circuitry.
.2 Instructions explaining operation.
.3 Lubrication chart indicating lubrication points and type of lubricant recommended for equipment.

1.7 QUALITY ASSURANCE

.1 Qualifications: Provide the work of this Section executed by competent installers with a minimum of 5 years’ experience in the application of the Products, systems and assemblies specified herein and with the approval and training of Product manufacturers.

.2 Licensed Professionals: Employ a structural Professional Engineer registered in the Province of Ontario, carrying a minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance,

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with OBC and standards referenced in this Section.

.4 be responsible for production and review of Shop Drawings,

.5 inspect the Work of this Section during fabrication and erection,

.6 stamp and sign each Shop Drawing, and

.7 provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.3 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials in sequence to meet the Construction Schedule and arrange ahead for off-the-ground, undercover storage locations.

.2 Handle components with care. Protect against damage, dirt, disfigurement and weather.

.3 Protect other work adjacent to the work of this Section. Replace work which cannot be satisfactorily repaired or re-stored at no cost to the Owner.

1.9 WARRANTY

.1 The Contractor warrants the work of this Section for period of 3 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with the General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: buckling, opening of seams, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers are acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 “596 Series Thermacore” by Overhead Door Corporation of Toronto;

.2 “Therm-O-Dor TD-134" by Steel-Craft Door Products Ltd.

.3 “Thermalex ®2000, Polyurethane Insulated Steel Door” by Upwardor Corporation

.4 “Garaga Industrial G-5000 Series” Garaga Inc.

.5 Substitution Limitations: This Specification is based on “Thermalex ®2000 – Thermalex TX500-20, Polyurethane Insulated Steel Door” by Upwardor Corp. Comparable Products from manufacturers listed herein will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Ensure electrical components conform to requirements of Canadian Standards Association, CSA C22.1 and Electrical Safety Authority (ESA).

.2 Design and Performance Requirements:

.1 Design exterior doors to withstand horizontal wind loads in closed position of 0.95 kN/m^2 (20 psf) positive, 0.57 kN/m^2 (12 psf) negative, with operators to function against 0.383 kPa (8 psf) wind load. Maximum deflection under full design load shall be 1/240 of the span.

.2 Calculate properties of steel sections and allowable stresses used in determination of structural performance in accordance with CSA S136.

.3 Operational Life: Design components to operate for not less than 20,000 cycles and for 10 cycles per Day.

.4 Electrical Components, Devices, and Accessories: Design electrical components for doors in accordance with CSA C22.1

.5 Refer to Section 01 83 16 for additional performance and testing requirements pertaining to the work of this Section.

.3 Seismic Performance: Design work of this Section to withstand seismic motions determined in accordance with the requirements of the OBC and CAN/CSA S832.

2.3 MATERIALS

.1 Structural Shapes, Plates, and framing members: New material conforming to CSA G40.20 and CSA G40.21, Grade 300W.

.2 Galvanized Sheet Steel: Supply 0.91 mm (20 ga) exposed face and End Stiles/ 0.45 mm (26 ga) concealed face, core thickness commercial quality to ASTM A653/A653M, CS Type A, with Z275 zinc coating designation to ASTM A653/A653M.

.3 Steel Supports: Design, fabricate and Install the following to carry the overhead doors and tracks:

.1 Galvanized steel jamb and head supports

.2 Miscellaneous framing, not shown on structural Drawings, to support operators and tracks (e.g. centre spring mount and motor anchorage plates).

.4 Overhead Sectional Doors:

.1 Insulated Sections Description:

.1 Core: R-18.4 polyurethane
.2 Outer Face Sheet: Flush Stucco Embossed Textured, Z275 galvanized sheet steel or Galvalume.
.3 Finish: 1 prime coat and 1 white finish coat
.4 Inner Face Sheet:

.1 Finish: White primer
.2 Weight: 2.25lbs/sq.ft. + 40 lbs for the track

.5 Tongue and groove complete with bubble weather seal section joints.

.2 Provide air and weather seals in the following locations:

.1 between door sections.
.2 at jambs and head.
.3 on the bottom sections.

.5 Track Description:

.1 Material: Roll formed galvanized steel – reverse angle track.

.2 Depth: 75 mm (3")

.3 Curve Radius: Minimum 400 mm (16").

.4 Thickness: 3 mm (1/8") core minimum

.5 Overlap jambs and head minimum 25 mm (1").

.6 Steel Framing, Supports, Hangers, Stiffeners and Bracing: Z275 galvanized steel minimized spangle.

.7 Verify the track design and clearances and Provide suitable highlift, standard or low headroom track if necessary.

.8 Provide sub-framing to support track hangers between the bottom chords of the roof trusses.

.9 Provide diagonal and sufficient stiffeners to prevent distortion and sagging.

.10 Provide continuous track mounting angles along tracks.

.11 Provide double bar latch cylinder locks with electrical interlock.

.6 Rollers:

.1 Bearings: Full floating, hardened steel

.2 Provide industrial grade galvanized steel roller brackets and hinges.

.7 Lifting Cables: Galvanized multi-strand aircraft type, with an 8:1 safety factor.

.8 Electrical Components:

.1 Provide CSA and ULC approved electrical components.

.2 Provide time delay timers adjustable from 0.5 to 180 seconds.

.9 Safety Edge System:

.1 Provide a door bottom safety edge to stop downward travel of door when it comes into contact with an obstruction.

.2 Provide a reversing time delay on the safety edge system operation.

.10 Electric Operators (Drawbar or Jack Shaft Side Mount):

.1 Drawbar

.1 3/4 H.P. suitable for 208V / 3 phase/60-cycle power.
.2 Provide drawbar arm so it is in the vertical position when the door is fully closed.
.3 Provide operators complete with magnetic brake, instant reversing motors and thermal overload.
.4 Provide 1 to 2 second delay timers in the reversing circuit and 1 to 5 minute timers in the close circuit.
.5 100,000 cycle oil tempered torsion springs counter balancing mechanism mounted on a 25 mm (1") keyed solid steel shaft.

.2 Jack Shaft Side Mount:

.1 3/4 H.P. suitable for 208V / 3 phase/60-cycle power.
.2 Provide operators complete with magnetic brake, instant reversing motors and thermal overload.
.3 Provide 1 to 2 second delay timers in the reversing circuit and 1 to 5 minute timers in the close circuit.
.4 100,000 cycle oil tempered torsion springs counter balancing mechanism mounted on a 25 mm (1") keyed solid steel shaft.

.11 Push Button Controls: Provide an EEMAC 1 - 3 position push button control - momentary contact - "open-close-stop" located on the interior of each opening.

.12 Exterior Weatherproof Key Switch: Provide an exterior weatherproof key switch to be located by the Consultant.

2.4 FINISHES

.1 Steel Finish: Manufacturer's standard powder coating. Colour and gloss to be selected from manufacturer's standard colors at a later date.

PART 3 - EXECUTION

3.1 INSTALLATION

.1 Employ the manufacturers' qualified representatives to Install overhead doors in accordance with the manufacturers' printed installation instructions.

.2 Provide wiring and electric metallic tube (EMT) conduit from the disconnect switch at each jamb to the operators and controls.

.3 Provide watertight operators, push buttons and wiring on the interior.

.4 Provide and connect photo cell units.

.5 On completion, adjust and lubricate moving parts in accordance with the manufacturer's recommendations, check controls and demonstrate operation and controls of doors to the Owner.

3.2 CONTROLS

.1 Provide 1 set of the following for each door:

.1 Controls.

.2 Adjustable timer.

.3 Automatic/Back-up switch.

.2 Provide following entrance controls:

.1 Automatic Activator: Buried loop push button opens door and sets timer.

.2 Safety Control: Photo switch at opening verifies opening is clear and resets timer.

.3 Back-Up Control (Non-Timed): Push buttons located at the door jamb or alternatively the emergency chain operator.

3.3 ADJUSTING AND CLEANING

.1 Lubrication:

.1 Upon completion of erection of units and operating equipment, lubricate moving parts before operation.

.2 Grease sprockets, bearings, cables, link chains and guides. Use lubricant recommended by the manufacturer.

.2 Adjust operating components to ensure smooth opening and closing.

.3 Keep guides clean of dirt, particularly in the area of bottom of guide pocket where dust and dirt can accumulate.

3.4 DEMONSTRATION

.1 Test operate new doors and demonstrate operation of same to the satisfaction of the Consultant at the time of acceptance of the completed work.

.2 Demonstrate door operation for the Owner's personnel in accordance with the requirements of Division 01.

END OF SECTION

SEE ADD#6 Q#146

Updated through ADD#8

GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Pre-finished, thermally broken, aluminum glazed curtain wall and cladding systems complete with vision units and entrances ~~and spandrel panels~~ including but not limited to the following:

.1 4-sided structural sealant glazed curtain wall systems ~~with aluminum perimeter caps.~~ and entrances.

.2 materials related to work of this Section which are to be installed by those performing the work of other Sections including but not limited to:

.1 inserts, anchors and support items required for connection or support of assemblies specified in this Section

.2 entrance doors and framing, including hardware, stripping and thresholds

.3 automatic door operator components installed in door and frame openings

.4 sealing joints within work of this Section and at abutting joints of this work and work of adjacent trades.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Sequencing: Coordinate installation required herein with the installation and work required to be performed under related Sections that are referenced herein.

.1 Pre-construction Site Meeting:

.1 Prior to the start of the work, arrange for a Project site meeting of the parties associated with work of this Section, including without limitation, the Subcontractor(s) performing the work of this Section, testing company's representative and other contractors and consultants of disciplines applicable to this Section. The Consultant may attend.

.2 Review the Contract Documents to ensure the work specified in this Section can proceed, and ensure complete understanding of requirements and responsibilities relative to:

.1 work included,
.2 materials to be used,
.3 storage and handling of materials,
.4 installation of materials,
.5 sequence and quality control,
.6 Project staffing, and
.7 restrictions on areas of work and other matters affecting construction.

.2 Coordination:

.1 Notify relevant and concerned trades of items required to be incorporated into the work of other Sections. Certain components specified under this Section include items which are closely integrated with air barrier/vapour retarder transitions, entrances, glazing components, flashing pieces, and architectural metalwork specified under separate Sections, and consequently require close coordination with such allied trades. Perform total coordination required to ensure correct installation procedures and results.

.2 Coordinate and cooperate with trades providing metal panel systems by installing closures and trims supplied by such trades to be installed directly into the curtain wall system.

.3 Scheduling:

.1 Prior to commencing work of this Section, arrange for the manufacturer's technical representative to review, with the Contractor and Consultant, procedures to be adopted and conditions under which the work shall be performed. Inspect surfaces to determine adequacy of existing and proposed conditions.

.2 Cooperate fully with other Subcontractors performing the Work and promptly proceed with the work of this Section as rapidly as job conditions permit.

.3 Cooperate with those performing work of other Sections for application of all miscellaneous specialties.

.4 Supply items to be built-in in ample time to be incorporated into the work of Subcontractors performing work of other Sections, together with measurements and other information required for the location of such items.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Section 01 30 00. In addition to the minimum requirements indicate the following:

.1 Indicate with plans, sections, elevations and sufficient full size details to indicate all components and methods of assembly, materials and their characteristics relative to their purpose and all other fabrication information.

.2 Indicate details of field connections, anchorage, and the relationship of the work under this Section to the work required to be performed under other Sections so as to facilitate the coordination with such scopes of work.

.3 Ensure Shop Drawings are stamped by Professional Engineer registered in Province of Ontario as specified herein.

.4 Do not fabricate Work until Shop Drawings have been reviewed by the Consultant for fabrication.

.5 Field Measurements: Verify dimensions of supporting structure by field measurements before fabrication so that the curtain wall work will be accurately designed, fabricated and fitted to the structure. Indicate measurements on Shop Drawings. Coordinate the fabrication schedule with construction progress to avoid delaying the Work.

.4 Design Calculations:

.1 Submit for information only, and under seal, calculations prepared by a structural Professional Engineer registered in the Province of Ontario, providing design assumptions regarding loadings related to the OBC, standards referenced in this Section and requirements of Authorities Having Jurisdiction.

.5 Test and Evaluation Reports:

.1 Prior to fabrication of curtain wall, submit recent certified test data performed by an independent laboratory approved by Standards Council of Canada or AAMA displaying results of testing program carried out on typical curtain wall systems proposed for this Project.

.2 Submit test reports for insulating glass units indicating compliance with requirements of CAN/CGSB-12.8.

.6 Samples: Submit samples in accordance with Section 01 30 00.

.1 Submit two 75 mm x 140 mm (3" x 5-1/2") samples for each exposed metal finish required (extrusion and sheet.).

.1 Ensure samples are of specified alloy, temper, and thickness of metal required for the Work. Where finishes involve colour and texture variations, include sample sets showing full range of variations expected.

.2 Mark direction of metal grain and rolling and paint application on back of control samples.

.7 Closeout Submittals:

.1 Maintenance Instructions: Submit copies of the manufacturer's written instructions in accordance with Section 01 70 00 for adjustment, operation and maintenance of operating components forming part of curtain wall system.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturer Qualifications: firm producing and executing work of this Section must have a minimum of ten (10) consecutive years experience in work of similar scope and nature to that specified herein.

.2 Insulating glass unit fabricators: membership and certification in the Insulating Glass Manufacturer's Alliance (IGMA). IGMA members must participate in the certification program and successfully pass a Compliance Audit within the last 6 months.

.2 Licensed Professionals: Employ a full time structural Professional Engineer registered in the Province of Ontario, carrying a minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance,

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with OBC and standards referenced in this Section,

.4 be responsible for the production and review of Shop Drawings,

.5 inspect the Work of this Section during fabrication and erection,

.6 stamp and sign each Shop Drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 submit certificate validating seismic assessment and field review of this part of the Work

.3 Field Mock-Ups:

.1 Provide Mock-ups, minimum 1 bay in width, and of sufficient height to include 2 vision panels and 1 spandrel panel, in locations designated by the Consultant and as required to demonstrate quality of workmanship.

.2 Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Adjust non-compliant mock-ups at no extra cost to Owner as required to obtain acceptance. Once accepted, mock-up becomes part of completed ork, and becomes the standard for the remainder of the work under this Section.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements: Comply with the applicable provisions of AAMA "Curtain Wall Manual #10" for the care and handling of curtain wall work from shop to site.

1.9 WARRANTY

.1 The Contractor warrants the following work of this Section against defects and/or deficiencies in accordance with General Conditions of Contract. Promptly correct any defects or deficiencies which become apparent within the warranty period, to the satisfaction of the Consultant and at no expense to the Owner.

.1 Curtain Wall System:

.1 Warranty Period: 10 years from the date of Substantial Performance of The Work.

.2 Aluminum Finishes:

.1 Warranty Period: 20 years from the date of Substantial Performance of The Work.

.3 Factory Sealed Insulating Units:

.1 Warranty Period: 10 years from the date of Substantial Performance of The Work.

.4 Sealants:

.1 Guarantee Period: 20 years from the date of Substantial Performance of The Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Curtain Wall: Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Alumicor Limited

.2 Kawneer Canada Limited

.3 Oldcastle Building Envelope

.4 Wicona,

.5 Windspec

.2 Substitution Limitations:

.1 Design for work of this Section is based on “ThermaWall 2600” with “Thermaporte 7700 Entrance” by Alumicor Limited with glazing units as fabricated by Guardian Industries as specified herein. Equivalent Products from manufacturers listed herein offering functionally, aesthetically equivalent Products in the Consultant’s opinion and subject to the Consultant’s review will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Regulatory Requirements

.1 Comply with the more stringent requirements of the OBC, applicable laws, bylaws, fire regulations, health and safety regulations, and requirements of Authorities Having Jurisdiction or requirements of this Specification. The standards specified herein to be used for the work of this Section are considered a minimum.

.2 Design and Performance Requirements:

.1 Drawings and details are diagrammatic and are intended to show design concept, configuration, components and arrangements; they are not intended to identify nor solve completely problems of thermal and structural movements, air pressure equalization, air and vapour barriers, assembly framing, fixings and anchorages, moisture disposal, water penetration and problems at the glass line associated with glazing installation, movements, pressure fracture or thermal shock and weather seal.

.2 Glass thicknesses and heat treatments indicated are minimum requirements. Glazing details shown are for convenience of detailing only and are to be confirmed by relative to cited standards and final framing details. Confirm glass thicknesses and heat treatments, verified by analysis and engineering design, as required to meet performance and testing requirements specified in this Section. Increase glazing thicknesses as required to meet project-specific loadings.

.3 Utilize Limit States Design in sizing of glass and employ a safety factor for glass to statistical probability of failure of 8 glass lites per 1000. Comply with requirements of CAN/CGSB-12.20-M and ASTM E1300 for design of glass. Design units to accommodate live, dead, lateral, wind, handling, transportation and erection loads.

.4 Structural Performance: Ensure aluminum system has passed testing in accordance with ASTM E330. Design building envelope assemblies, members and their connections to withstand, within acceptable deflection limitations as specified, their own weight, loads imposed by the motion of operable elements, and the maximum design loads and combination of loads due to snow, rain, ice, seismic loads, the pressure and suction of wind and internal pressure.

.1 Wind loads:

.1 Design glazed assembly to withstand, without detrimental effects to appearance and performance, wind loads and temperature ranges expected in the geographical location of this Project based on the OBC requirements, based on a minimum 50 year probability factor for the Project location.

.2 Loads on guards: In locations where glazed curtain wall assemblies are acting as guards pursuant to the requirements of the OBC Article 3.3.1.17, assemblies must be designed in accordance with minimum interior load impact as required for guards (Loads on Guards, and Loads for Walls Acting as Guards) under the OBC and the requirements of the CSA A500. Provide internal mullion reinforcing if required.

.3 Seismic Performance: Design the work of this Section to withstand seismic motions determined in accordance with the requirements of the OBC.

.4 Deflection of framing members:

.1 Deflection Limits:

.1 Limit deflection of framing members normal to wall plane to 1/175 of clear span or an amount that restricts edge deflection of individual glazing lites to 19 mm (3/4”), whichever is less.

.2 Limit deflection of framing members parallel to glazing plane to L/360 of clear span or 3 mm (1/8”), whichever is smaller.

.3 Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to 2 times length of cantilevered member, divided by 175.

.2 Do not include glass, sealants and interior finishes to contribute to framing member strength, stiffness or lateral stability.

.3 Do not permit permanent deformation (set) in metal framing work. Ensure permanent deformation, fastener, weld, or gasket failure, component breakage or disengagement does not occur under wind loading equal to 1.5 times design wind loads (positive or negative). Permanent deformation to be taken as deflection without recovery exceeding 1/1000 times span.

.5 Design light gauge aluminum structural members in accordance with CSA S157/S157.1

.6 Design light gauge steel structural members in accordance with CAN/CSA S136-07 and CSA S136.1-07 under direct supervision of a Professional Engineer experienced in design of this work and licensed in Ontario.

.7 Design anchors, fasteners, bracing and framing fastened directly to structure in accordance with requirements of CSA S16 using Limit States Design. Design structural details and connections not shown on Drawings in accordance with CAN/CSA S16 and CSA S 136.1.

.8 Design expansion joints within assemblies to be permanently watertight and airtight under all conditions.

.9 Provide curtain wall systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

.1 Thermal Expansion Allowance: Ensure system is able to withstand temperature differential of 85 deg C for materials and surfaces without putting

stresses on members or sealants. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

.5 Thermal Design and Performance:

.1 Energy Performance: Structural-sealant-glazed curtain walls must have certified and labeled energy performance ratings according to NFRC.

.1 Thermal Transmittance (U-Factor for entire assemblies): Fixed glazing and framing areas shall have U-factor of not more than 1.30 W/sq. m x K (0.23 Btu/sq. ft. x h x deg F) as determined according to NFRC 100.

.2 Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a Solar Heat Gain Coefficient (SHGC) of no greater than 0.35 as determined according to NFRC 200.

.3 Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.2 L/s per sq. m (0.04 cfm/sq. ft.) of fixed wall area as determined according to ASTM E283 at a minimum static-air-pressure differential of 300 Pa (6.24 lbf/sq. ft.).

.4 Provide thermal breaks between exterior and interior components and sufficient metal on interior side of glass to provide total absence of condensation on interior metal surfaces under specified design conditions. Avoid thermal bridges while securing system with concealed fastening devices.

.2 Condensation Resistance: Design fixed glazing and framing areas to prevent accumulation of condensation on interior side of curtain wall framing with condensation resistance rating of no less than 66_{frame} and 60_{glass} in accordance with AAMA 1503 under winter design conditions ~~indicated herein~~ for location of Project.

.3 Maximum Water Leakage:

.1 No evidence of water penetration through fixed glazing and framing areas when tested according to ASTM E331 at a minimum static-air-pressure differential of 20% of positive wind-load design pressure, but not less than 730 Pa (15.2 lbf/sq. ft.) and when tested in accordance with AAMA 501.1 for dynamic pressure.

.2 No uncontrolled water penetrating curtain or water appearing on systems' normally exposed interior surfaces from sources other than condensation is permitted. Water leakage does not include water controlled by flashing and gutters that is drained to exterior and water that cannot damage adjacent materials or finishes.

.4 Rain Screen Design Requirements:

.1 Design aluminium framing system based on NRC recommended “Rain Screen” principle with provisions for pressure equalization and draining. Maintain integrity of continuous air barrier/vapour retarder system with adjacent surrounding air barrier/vapour retarder.

.6 Acoustic Performance:

.1 Ensure no vibration harmonics, wind whistles, noises caused by thermal movement, loosening, weakening or fracturing of attachments or components of system occur after system has been installed.

.7 Sealants Performance:

.1 Provide all glazing sealants and seals from a single manufacturer.

.2 Ensure sealants are non-bleeding, non-staining and capable of supporting their own weight and capable of supporting specified loads associated with glazing systems.

.3 Ensure materials used for edge seals are compatible with other materials they come in contact within glazing system. If required, perform compatibility tests to ASTM C510, ASTM C794 and ASTM C1087, or others as applicable.

.4 Use sealants and other materials in glazing system which are unaffected by long term UV light exposure.

2.3 MATERIALS

.1 Aluminum extrusions, channels, bars, rods, and wire: ASTM B211 and ANSI H35.1/H35 AA6063 alloy, T6 temper.

.2 Aluminum sheet and panels: ASTM B209-07 and ANSI H35.1/H35.1M-06 AA I 100 aluminum alloy, H 14 temper, minimum 3 mm for formed sheet cladding and soffit panels, 1.5 mm thick for formed window panning. Exposed sheet: machine flattened free of distortions.

.3 Light Gauge Sheet Metal: Commercial quality galvanized sheet steel to ASTM A653M, Designation Z275 unless otherwise specified in Contract Documents.

.4 Miscellaneous and Sub-Frame Steel: CSA G40.21, Grade 300W, hot dipped galvanized after fabrication to ASTM A123/A123M, with additional zinc chromate coating to CAN/CGSB-1.132-M after fabrication. Provide internal reinforcing steel channel minimum 6 mm (1/4") thick nested in curtain wall mullions where required to meet design requirements.

.5 Gaskets and Sealants: Ensure compatibility with edge seal of glazing units and other adjacent materials.

.6 Glass: Conforming to requirements of Section 08 80 00.

.1 Tempered Glass: conforming to ASTM C1048, Kind FT or Equivalent to CAN/CGSB-12.1 and meeting requirements of ANSI Z97.1. Ensure surface compression is equal to or greater than 69 MPa (10 000 psi).

~~.2~~ Unless indicated otherwise, Provide ~~heat strengthened glass. Provide~~ fully tempered glass. ~~where safety glazing is required for code compliance and where heat strengthened glass is verified as inadequate to resist local peak wind loads or interior guard loads.~~

.3 Edges of glass to be straight cut, free from nicks and other imperfections conducive to breakage, arrissed where visible, without metal edge banding.

2.4 COMPONENTS

.1 Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads and to suit design requirements.

.2 Factory-Sealed Insulated Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E2190, IGCC or equivalent to CAN/CGSB-12.8, and complying with other requirements specified in this Section.

.1 Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary.

.2 Ensure low ‘E’ coating is edge-deleted over depth of primary and secondary edge seal at units where glass edges are visible.

.3 Edge spacer core to be straight and evenly set into glass units with maximum variation in line of spacer core of +/- 2 mm (0.08 inch) and ensure primary seal does not extend past inside edge of spacer core by more than 1.5 mm (1/16 inch).

.4 All units to have IGMA certification.

.5 Spacer: Plastic-covered stainless steel in colour selected by Consultant.

.6 Low Emissivity Glass Coating (Low 'E'): Provide triple silver sputtered vacuum deposited Low 'E' coating to surfaces of sealed insulating glass unit to meet criteria specified herein. Uniformly apply Low 'E' coating to glass.

.1 Ensure low 'E' coating is edge-deleted over depth of primary and secondary edge seal at units where glass edges are visible.

.2 Clear Units, and unless indicated otherwise:

.1 Basis-of-Design: "SunGuard® SN 68" or equivalent meeting aesthetic and performance criteria by one of the following:

.1 Vitro Architectural Glass (formerly PPG)
.2 AGC Glass Industries
.3 Cardinal Glass Industries
.4 Viracon

.7 Safety / Security Window Film (FILM-S) - at all exterior glazing units up to 3 m above grade: Optically clear microlayered polyester film, with abrasion-resistant acrylic coating over one surface and a pressure sensitive adhesive on the other. Apply to surface no. 6 of triple glazed units and surface no. 4 of double glazed units.

.1 Colour: Clear.

.2 Thickness: Minimum 0.2 mm (8 mils)

.3 Impact Resistance:

.1 complying with testing requirements in ANSI Z97.1, Class A and 16 CFR 1201 for Category II.
.2 Complying with testing requirements in ASTM E1996 for "Large-Missile Test" when tested at +/- 3.6 kPA (75 psf) according to ASTM E1886; with film applied to 6.0 mm (1/4 inch) thick tempered glass.

.4 Accessories: Provide manufacturer's recommended weatherable, UV-resistant, structural sealant attachment system "3M Impact Protection Film Attachment System" by 3M Canada or Equivalent.

.5 Basis-of-Design: "3M Scotchshield Ultra S800 Safety and Security Window Film" by 3M Canada or equivalent.

2.5 ASSEMBLIES

.1 Curtain Wall Systems:

.1 ~~SSG system :~~ Provide prefinished ~~structural sealant~~ full capped glazed aluminum framed curtain wall system complete vision units, spandrel panels, metal air barrier/vapour retarders, seals, perimeter trims, stools, accessories, shims, anchors and miscellaneous framing components meeting or exceeding performance requirements indicated herein.

.1 Glazing System: ~~Retained with structural sealant on two sides with perimeter caps. Refer to Drawings for locations.~~ Retained on 4 sides.

.2 Mullion depth: as indicated on Drawings.

.3 Finish: Clear anodized

.4 Fabrication Method: Factory-fabricated system

.5 Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

.6 Steel Reinforcement: As required by manufacturer.

.7 Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

.8 Basis-of-Design: “Thermawall 2600” by Alumicor or equivalent.

.2 Glazing Units:

~~.1 Vision Glass - Type VG1: Low-E-coated, clear triple insulating glass. [TBD]~~

~~.1 Overall Unit Thickness: 44 mm (1-3/4 inch)~~

~~.2 Outdoor Lite: 6 mm thick clear tempered glass.~~

~~.3 Glazing cavity 1 - Content: 90% Argon; 10% Air~~

~~.4 Glazing Cavity 1 - Thickness: 13 mm (1/2 inch)~~

~~.5 Middle Lite: 6 mm thick clear heat-strengthened glass~~

~~.6 Glazing cavity 2 - Content: 90% Argon; 10% Air~~

~~.7 Glazing Cavity 2 - Thickness: 13 mm (1/2 inch)~~

~~.8 Indoor Lite: 6 mm thick clear tempered glass.~~

~~.9 Low-E Coating: triple-silver as specified in this Section, sputtered on surfaces no. 2 and no. 5.~~

~~.10 Bird-friendly frit: Provide ceramic frit applied by acid etching on surface no. 1 of glazing.~~

~~.1 Pattern: Provide 6 mm (1/4 inch) diameter dots at 100 mm (4 inches) on center spacing, applied to glass units, with 100% coverage of glass unit.~~
~~.2 Basis-of-Design: Walker Glass or approved Equivalent.~~

~~.11 Performance Requirements:~~

~~.1 Winter U-Value: 0.13 Maximum~~
~~.2 SHGC: 0.33 Maximum~~
~~.3 Visible Light Transmittance (VLT): Not less than 52%.~~

.2 Vision Glass - Type VG12: Low-E-coated, clear double insulating glass. ~~[TBD]~~

.1 Overall Unit Thickness: 25 mm (1 inch)

.2 Outdoor Lite: 6 mm thick clear tempered glass.

.3 Glazing cavity: 90% Argon; 10% Air

.4 Indoor Lite: 6 mm thick clear tempered glass.

.5 Low-E Coating: triple-silver as specified in this Section, sputtered on surfaces no. 2

.6 Bird-friendly frit: Provide ceramic frit applied by acid etching on surface no. 1 of glazing.

.1 Pattern: Provide 6 mm (1/4 inch) diameter dots at 100 mm (4 inches) on center spacing, applied to glass units, with 100% coverage of glass unit.
.2 Basis-of-Design: Walker Glass or approved Equivalent.

.7 Performance Requirements:

.1 Winter U-Value: 0.25 Maximum
.2 SHGC: 0.37 Maximum
.3 Visible Light Transmittance (VLT): Not less than 60%.

.3 Operable Aluminum Swing Doors and Entrances

.1 Manufacturer's standard glazed entrance doors for manual-swing operation.

.2 Door Construction: 57.2-mm (2-1/4-inch) overall thickness, with minimum 3.2-mm- (0.125-inch-) thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.

.3 Thermally-Broken Construction: High-performance plastic connectors separate aluminum members exposed to exterior from members exposed to interior.

.4 Door Design: As indicated on Drawings.

.5 Glazing for Doors:

.1 At exterior doors forming part of the building envelope, Provide glazing matching curtain wall in every respect (VG-~~2~~ 1) as noted on Drawings.

.2 At interior vestibule doors, single fully tempered glazing (TGL) as specified in Section 08 80 00 is acceptable.

.6 Glazing Stops and Gaskets: Beveled or square, snap-on, extruded-aluminum stops and preformed gaskets.

.7 Provide nonremovable glazing stops on outside of door.

.8 Door Hardware: Provide entrance door hardware and entrance door hardware sets indicated in Door And Frame Schedule for each entrance door to comply with requirements in this Section.

.9 Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.

.10 Opening-Force Requirements:

.1 Egress Doors: Not more than 67 N (15 lbf) to release the latch and not more than 133 N (30 lbf)to set the door in motion.

.2 Accessible Interior Doors: Not more than 22.2 N (5 lbf) to fully open door.

.11 Weather Stripping: Manufacturer's standard replaceable components.

.12 Compression Type: Made of ASTM D2000, molded neoprene, or ASTM D2287, molded PVC.

.13 Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

.14 Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.

.15 Basis-of-Design: “ThermaPorte 7700” by Alumicor or equivalent.

2.6 FABRICATION

.1 Curtain Wall:

.1 Fabricate glazed aluminum framing systems for curtain wall to designs, shapes, and sizes shown using materials specified and shown to produce assemblies which meet or exceed performance requirements. To greatest extent possible complete fabrication, assembly, finishing, hardware applications and other work before shipment to Project site.

.2 Ensure exposed work is carefully fitted and matched to produce continuity of line and design, with joints, being accurately fitted for hairline contact and rigidly secured. Where additional rigidity or strength is required to satisfy performance requirements reinforce aluminum framing system components with aluminum or carbon steel shapes, bars, and plates.

.3 Provide vents, weepholes and internal water passages in glazing framing recesses as recommended by respective glass and framing manufacturers to conduct infiltrating water to exterior, and to avoid condensation at unit air spaces. Provide weep baffles secured to inside of frame behind vents and weepholes. Make provisions for reglazing from interior for vision glass.

.4 Brace frames to maintain squareness and rigidity during shipment and installation. Galvanize steel clips and reinforcement with 380 g/m^2 zinc coating to ASTM A123/A123M

.5 Ensure aluminum framing system frames are installed with factory or site installed air and vapour barrier for sealing to building air and vapour barrier. Ensure compatibility with air and vapour barrier materials of building envelope assembly. Ensure materials provide required air tightness and vapour diffusion seal to building.

.6 Flashing and Trim:

.1 Provide metal flashing members, trim and accessories in contact with framing members. Fabricate exposed, concealed or semi-concealed flashing and closure sections from finish-matching 3 mm (1/8") thick aluminum from stock as previously specified.

2.7 FINISHES

.1 Finish of Exposed Aluminum Components: in accordance with the appropriate AAMA voluntary guide specification as follows:

.2 Building Exterior: AA M10 C21 or C22 A41; AAMA 611 Class I Clear Anodizing

.3 Building Interior: AA M10 C21 or C22 A31; AAMA 611 Class II Clear Anodizing

.4 Finishes on exposed metal parts of windows and doors specified in this Section or adjacent to work of this Section, excluding hardware, must be same finish as that specified for the curtain wall framing.

.5 Finish of Unexposed Aluminum Components: provided with pre-treatment, flash anodize or organic paint finish to improve sealant adhesion.

.6 Dissimilar Material Protection: Where aluminum or carbon steel surfaces are to be in contact with each other or in contact with dissimilar materials such as masonry or concrete, and where hot dip galvanizing of carbon steel is incompatible with component parts because of galvanic action or component fabrication tolerances provide one of the following:

.1 Bituminous Paint: Cold-applied, non-sagging, asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos. Apply in two coats for an overall minimum dry film thickness of 25 mils.

.2 Zinc Rich Primer: Organic zinc-rich primer, complying with SSPC-Paint 20.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Before commencing installation, examine the work of other Sections to which work of this Section will be attached.

.2 Report immediately in writing to the Consultant all discrepancies in accuracy and suitability which will adversely affect the work of this Section. Report surfaces left unacceptable by other trades to the Consultant before commencing installation.

.3 Ensure that openings and recesses to receive work of this Section are within acceptable tolerances.

.4 Commencement of installation shall indicate acceptance of work of other Sections upon which work of this Section depends.

3.2 PREPARATION

.1 Supply anchorage devices and inserts to appropriate trades where required for building in or casting-in-place and instruct such trades as to the proper location and position.

.2 Ensure that masonry and concrete surfaces to receive adhesives and sealants are dry, firm, sound, smooth, suitable for bond, and free from loose material, projections, ice, frost, slick, grease, oil and other matter detrimental to bond.

.3 Remove dust and other loose material from openings.

.4 Preconstruction Adhesion and Compatibility Testing: Submit to the structural glazing sealant manufacturer, for testing indicated below, samples of each glazing material type, tape sealant, gasket, glazing accessory, and glass-framing member that is in close proximity to or is touching the structural or nonstructural sealants of a structural glazed system.

3.3 INSTALLATION

.1 Erect all work plumb and true and in proper alignment and relationship to established lines and grades. Comply with manufacturer's written instructions.

.2 Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints.

.3 Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints. Weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding. Seal joints watertight, unless otherwise indicated.

.4 Ensure devices for anchoring frame assemblies have sufficient adjustment to permit correct and accurate alignment. After alignment, positively secure anchorage devices to prevent movement other than those designed for expansion and contraction. Take into consideration climatic conditions prevailing at the time of installation.

.5 Site located fixings shall be subject to the Consultant's review. Perform welding and drilling of steel and drilling of concrete as required to Install fixings. Repair concrete chipped by drilling or fixing operations.

.6 Install aluminium framing system (complete with fixed and operable panes) in accordance with manufacturer’s instructions. Install materials with continuous thermal breaks located on exterior side of glazing as designed. Fill frame extrusion on warm side of thermal break with insulation.

.7 Isolate metal surfaces in contact with incompatible materials, including wood, by painting contact surfaces with bituminous coating or primer, or by applying sealant or tape recommended by the manufacturer.

.8 Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.

.9 Set continuous sill members and flashing in full sealant bed as specified in Section 07 92 00 to produce weathertight installation.

.10 Erection Tolerances:

.1 Limit variations from plumb, level or dimensioned angle to the following:

.1 3mm (1/8") maximum deviation in storey height, or in 3m (10') vertical run, or in 6m (20') horizontal run.

.2 6mm (1/4") maximum deviation in 12m (40') in any direction.

.2 Limit variations from location (theoretical calculated positions in plan or evaluation based on established floor lines and column lines), including variations from plumb and level, to following:

.1 9mm (3/8") total maximum deviation for member at any location.

.2 3mm (1/8") maximum change in deviation for member for 3m (10') run, any direction.

.3 Limit offsets in end-to-end and edge-to-edge alignment of adjoining and consecutive members, which form planes, continuous runs and profiles to 1.5mm (1/16") maximum offset in flush alignment, including those which are to be 13mm (½") or less out-of-flush, and including those which are separated 50mm (2") or less by a reveal or protrusion in plane or wall.

.11 Ensure a uniform, continuous thermal and vapour barrier effect. Where adjacent insulation and vapour barriers are to be provided under other Sections, coordinate the work such that thermal and vapour barrier continuity is achieved.

.12 Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.

.13 Install glazing as specified in Section 08 80 00. Prepare surfaces that will contact structural sealant according to the sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

.14 Install weatherseal sealant according to Section 07 92 00 and according to the sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind the sealant as recommended by the sealant manufacturer.

3.4 SITE QUALITY CONTROL

.1 Site Tests and Inspections:

.1 Curtain wall systems will be subject to tests to confirm performance criteria specified herein and in Sections 01 45 00 and Section 01 83 16. The Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

.2 Before concealing window and curtain wall work obtain required inspections from an independent testing and inspection agency. As a minimum, the following tests will be required:

.1 Water Leakage Tests: ASTM E1105 at a minimum cyclic static-air-pressure differential as specified in Section 01 83 16, and shall not evidence water penetration.

.3 In event that the curtain wall system does not pass tests performed by the inspection and testing company, take remedial action, approved by the Consultant, as necessary to correct deficiencies observed as a result of tests. Perform retesting at own expense until tests indicate satisfactory results.

3.5 CLEANING

.1 Clean work of this Section in accordance with "Cleaning Procedure" as recommended by Aluminum Company of Canada in publication D.I. 650, 1962 "Care During Construction" and as recommended by the finish applicator.

.2 Clean and polish glass on exterior and interior and remove markings indicating presence of glass.

END OF SECTION

Added through
SEE ADD#6, Q#142

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide fiberglass windows and window wall assemblies including but not limited to the following:

.1 fixed fiberglass windows.

.2 glass and glazing in work of this Section.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated herein.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Preinstallation Conference: Conduct conference at Project site at which the Contractor shall, among other things:

.1 Review and finalize Construction Schedule and verify availability of materials, installer's personnel, equipment, and facilities needed to make progress and avoid delays.

.2 Review, discuss, and coordinate the interrelationship of fiberglass windows with other exterior wall components. Include provisions for anchoring, flashing, weeping, sealing perimeters, and protecting finishes.

.3 Review and discuss the sequence of work required to construct a watertight and weathertight exterior building envelope.

.4 Inspect and discuss the condition of substrate and other preparatory work performed by trades performing the work of other Sections.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as

well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Material Safety Data Sheets: Submit MSDS for inclusion in operation and maintenance manual without limitations for adhesives, sealants and as other materials designated later by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings of fiberglass windows and window wall assemblies, components and accessories in accordance with Division 01.

.2 Indicate head, jamb and sill, profiles of components, (interior and exterior trim), junction between combination units, elevations of unit and description of related components. Indicate relation to adjoining work and location, construction and back-up, joint sealant, location of isolation coating, interior structure and/or details of reinforcements, glazing modules, head and frame details, mullions and details, glazing and glass stop details, thermal break sections and vinyl or neoprene mouldings (in 1/2 size), details of connections, anchorage, interfacing with adjacent work and assembly fixings. Clearly indicate materials used for every component on Shop Drawings.

.3 Clearly indicate how thermal expansion and contraction are to be accommodated and to what degree. Show connections to adjacent construction and provision made for structural deflections, contractions, expansion and other normal movement.

.4 Submit Shop Drawings bearing the stamp of a Professional Engineer registered in the Province of Ontario and experienced in this type of work. Show where anchors and shims are placed, type of anchors, shim thicknesses, widths, number of fasteners and edge clearances for fasteners.

.4 Insulating Glass Manufacturer's Association of Canada (IGMAC) Compliance Audit:

.1 Submit in accordance with Division 01.

.2 Submit written certification of successful completion of a compliance audit within the last 6 months.

.5 Samples: Submit samples in accordance with Division 01. Submit following samples in the sizes indicated:

.1 Submit 1 complete full size sample of each window type to the Consultant for approval of general appearance and quality of the work.

.2 Submit sample sections of component parts of windows and window wall assemblies including frame, sash, sill, glazing and waterproofing method, surface and finish hardware, and glass finished in specified colours. Samples of extruded shapes shall be 300 mm (12") long; samples of each type of glass shall be 300 mm (12") square.

.6 Test Reports:

.1 Submit report from an independent testing laboratory completed within the last 3 years, indicating windows and window wall assemblies meet or exceed performance requirements of CAN/CSA-A440-M with respect to air infiltration, wind load resistance, water tightness, condensation resistance, thermal performance, ease of operation, load tests on screens, forced entry resistance and mullion deflection (for combined and composite windows and window wall assemblies).

.7 Maintenance Data and Operating Instructions:

.1 Submit maintenance instructions in accordance with Division 01.

.2 Provide a demonstration with window manufacturer for building maintenance staff dealing with operation of windows and window wall assemblies, insert removal, re-glazing, cleaning and general maintenance.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Designers, fabricators and installers of the work of this Section: minimum of 10 years experience in the application of the Products, systems and assemblies specified herein. Installer shall be acceptable to the fiberglass window manufacturer for installation of units required for this Project.

.2 Insulating glass unit fabricators: membership and certification in the IGMAC.

.1 IGMAC members must participate in the certification program and successfully pass a compliance audit within the last 6 months.

.2 Structural Design and Inspection: Employ a structural Professional Engineer, that carries a minimum $2,000,000.00 professional liability insurance and is registered in the Province of Ontario, to:

.1 design components for work of this Section requiring structural performance.

.2 be responsible for determining sizes, joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations.

.3 be responsible for production and review of Shop Drawings.

.4 inspect work of this Section during fabrication and erection.

.5 stamp and sign each Shop Drawing.

.6 Provide site administration and inspection of this part of the Work.

.3 Mock-Ups:

.1 Build mock-ups in building envelope wall in locations directed by Consultant:

.1 Minimum Size: 450 mm x 450 mm x 450 mm (18" x 18" x 18").
.2 Maximum Size: 600 mm x 600 mm x 600 mm (24" x 24" x 24").
.3 Include: Glazing and demonstrate airseal and anchorage systems.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Transport materials to site storage in a manner to prevent in-transit damage. These measures include, but are not limited to, crating, polyethylene wrapping system and similar protective packaging.

.2 Store in a dry, protected area on site, in original undamaged containers with manufacturer's labels and seals intact.

.3 Brace frames to maintain squareness and rigidity during shipment and installation.

.4 Provide glass units with interlayer protection between lites. Keep glass and interleaving dry and store cases in clean, cool, dry areas with temperatures above dewpoint. Circulation of cool, dry air in storage areas is essential. Open cases and inspect units periodically for moisture accumulation. Do not store glass in direct sunlight without an opaque protective covering over same.

.5 Remove damaged or unsatisfactory materials from the site and replace with new materials to satisfaction of the Consultant at no cost to the Owner.

.6 Protect the work of this Section from damage. Protect work of other trades adjacent to work of this Section.

.7 Provide at factory, strippable coatings on exposed surfaces of fiberglass windows and window wall assemblies. This coating and protective wrappings shall remain on the surfaces through the period that the work of other Sections proceeds on the building and shall be removed by those performing the work under this Section upon completion of the building.

.8 Comply with unpacking procedures as recommended by the framing and glass manufacturers.

.9 Make Good damaged work caused by failure to Provide adequate protection. Remove unsatisfactory work and replace at no expense to the Owner.

1.9 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 10 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with the General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: buckling, opening of seams, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers are acceptable subject to conformance to the requirements of the Drawings, schedules and Specifications:

.1 Cascadia Windows;

.2 Duxton Windows:

.3 Fibertec Windows and Doors Manufacturing;

.4 Inline Fibreglass Ltd;

.2 Substitution Limitations: This Specification is based on “400 Series Windows” by Inline Fibreglass Ltd. Comparable equivalent Products from manufacturers listed herein offering functionally and aesthetically equivalent Products, as judged solely by Consultant, will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Design and Performance Requirements:

.1 Fiberglass window design is established in details on Drawings and performance requirements in Specifications. Design requirements are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sight lines, to one another, and to adjoining construction.

.2 Performance characteristics and design criteria specified are subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance. Do not modify intended architectural design effects except with the Consultant's approval.

.3 Furnish labor, materials and other services to complete the fabrication of new fiberglass windows, including all materials required for the supply and installation of the units in the manner, direction and performance shown on the design drawings and specified herein.

.4 Fiberglass window framing to incorporate a drained and vented system with complete air, vapor and moisture seals, allowing water entering the framing to drain to the exterior.

.5 Fiberglass inswing windows and doors to be glazed with an interior air seal using a continuous silicone heel bead from the IGU to the sash frame.

.6 Fiberglass inswing windows and doors to incorporate a concealed hinge system with a continuous interior air seal, uninterrupted by any hardware.

.7 Design fixed windows and window wall assemblies and operating units meeting or exceeding performance requirements of CAN/CSA A440/A440.1 with respect to air infiltration, wind load resistance, water tightness, condensation resistance, thermal performance, ease of operation, load tests on screens, forced entry resistance and mullion deflection as follows:

.1 Air Leakage (infiltration and exfiltration):

.1 Operable windows and window wall assemblies: maximum air leakage rate: 0.06 L/s-m^2 (0.01 cfm/ft^2)

.2 Fixed windows and window wall assemblies: 0.00 cfm/ft^2 (0.00 L/s.m^2).

.2 Water Leakage: There shall be no water infiltration at a static air pressure differential as follows when tested in accordance with AAMA 101 and ASTM E331.

.1 Water penetration resistance test pressure for all vent types, including: Fixed windows, casement, awning, tilt & turn, hopper, inswing doors, and outswing doors: 15 psf (720 Pa).

.3 Structural Performance:

.1 Performance Grade (PG) and Class of all windows and doors shall be as required to meet wind load of geographical location of the Work, but not less than the following:

.1 For fixed windows, CW-95 or higher

.2 For operable window (inswing or outswing), CW-45 or higher

.4 Resistance to Forced Entry: F20 per CAN/CSA A440/A440.1 or Grade 10 per according to ASTM F588.

.8 Thermal Requirements: Thermal Transmittance U-Value shall be certified in accordance with the National Fenestration Rating Council (NFRC).

.1 Overall U-values: Not more than 0.15 (Imperial) / 0.85 (Metric)

.9 Condensation Resistance Test (CRF): When tested in accordance with AAMA Specification 1503 and CAN/CSA-A440, the condensation resistance factor (CFR) shall not be less than: 64 (50.2 I-frame).

.10 Have work of this Section designed by a Professional Engineer licensed to design structures in the Province of Ontario.

.11 Comply with requirements of the OBC and regulations of Authorities Having Jurisdiction, which shall be a minimum, except where more stringent requirements are specified herein.

.12 Design glazing systems and framing to prevent thermal shock and fracture damage to glass. Design glass and glazing to meet CAN/CGSB-12.20. Comply with published recommendations of glass manufacturers and Glass Association of North America (GANA)'s "Glazing Manual" unless more stringent requirements are indicated.

.13 Design glazing and spanning window frame members, including any required reinforcing, in accordance with AAMA/WDMA/CSA 101/I.S.2/A440-11. There shall be no deflection in excess of L/175 of the span of any framing member.

.14 Design fiberglass work as shown on the Drawings to Provide free and noiseless movement of all components of assembly without buckling of any component and/or transmitting of stresses to any members.

.15 Design fiberglass window system to accommodate and interface with work of other Sections as applicable.

.16 Locate sealants, gaskets, air/vapour seals, thermal separations, drainage slots and holes as shown or specified in this Section as required to obtain design requirements. Ensure components and assemblies exterior to the air barrier drain to the building exterior.

.17 Design, assemble and secure work in a manner that will keep any stresses on sealants within the sealant manufacturer's recommended working range within factors of safety specified in AAMA/WDMA/CSA 101/I.S.2/A440-11.

.18 Accurately shape members at intersecting joints to obtain hairline joints, just wide enough to permit thermal expansion and contraction.

.19 Conceal securement devices unless otherwise indicated in the Contract Documents.

.20 Design attachments which will permit replacement of individual units during construction or in subsequent usage of building without dismantling or disturbance to adjoining components or units. In addition, accomplish such replacement without use of extra fasteners, splices, covers and like that alter original design features.

.21 Provide accessories, closures, and trims required and necessary to complete the work.

.22 Design window system on NRC recommended rain screen principles with pressure equalized and draining provisions. Maintain integrity of continuous air barrier/vapour retarder system with adjacent surrounding air barrier/vapour retarder.

.23 Design and detail controlled drainage path to actively discharge water, which may enter into or form within aluminum work, to exterior; prevent accumulation or storage of water within aluminum work. Prevent water from entering interior when tested in accordance with ASTM E331.

.24 Fire Performance: Where required by building type, classification, occupancy, height or building size, Provide a cladding system tested in accordance with CAN/ULC-S134 by an independent testing organization, and approved for use in non-combustible construction.

.25 Refer to Section 01 83 16 for additional performance and testing requirements pertaining to the work of this Section.

2.3 MATERIALS

.1 Basic Material: All frames and sash profiles shall be made from Pultruded Fiberglass, having a minimum thickness of 2.3mm (0.090") with minimum glass content of 60%. Non-structural accessory members are permitted to be in aluminum and are identified as such on Drawings.

.1 Frames and Sashes: Pultruded fiberglass complying with AAMA/WDMA/CSA 101/I.S.2/A440 and with exposed exterior fiberglass surfaces finished with manufacturer's standard enamel coating complying with AAMA 613 or AAMA 623.

.2 Exterior Colour: As selected by Consultant from manufacturer's full range.

.3 Interior Finish: As selected by Consultant from manufacturer's full range.

.2 Aluminum Components: ASTM B209M, size accurately formed as shown on Drawings, extruded aluminum alloy AA-6063-T5 for all aluminum except surfaces receiving anodizing which shall be AA-6061-T6. Surfaces shall be free from defects impairing appearance, strength and durability.

.3 Screws, Bolts and Fasteners: Exposed stainless steel, ASTM A167, Series Type 304 or Type 300 or hardened aluminum.

.4 Miscellaneous and Sub-Frame Steel: CSA G40.21, Grade 300W, hot dipped galvanized after fabrication to CAN/CSA-G164-M, with additional zinc chromate coating to CAN/CGSB-1.132-M after fabrication. Steel reinforcements and anchors shall conform to Section 05 50 00 requirements.

.5 Shims: Alcan Utility sheet when not in contact with cementitious substances; stainless steel when in contact with cementitious substances or galvanized steel. Thicknesses as required per CSA A440.

.6 Window Hardware: Manufacturer's standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible with aluminum; designed to smoothly operate, tightly close, and securely lock aluminum windows and window wall assemblies and sized to accommodate sash or ventilator weight and dimensions. Cadmium-plated hardware shall not be permitted. Do not use aluminum in frictional contact with other metals. Where exposed, Provide nonmagnetic stainless steel.

.7 Compression-Type Weather Stripping: Provide compressible weather stripping designed for permanently resilient sealing and completely concealed when fiberglass window is closed. Weather-Stripping Material: Elastomeric cellular preformed gaskets complying with ASTM C509. Weather-Stripping Material: Dense elastomeric gaskets complying with ASTM C864.

.8 Sealant: Multi-component conforming to CAN/CGSB-19.24-M, Type 2, Class "B" for sealant to be incorporated between fiberglass framing and adjacent structures. Colours later selected by Consultant from standard colour selection. Furnish non-hardening, non-shrinking, non-migrating non-skimming, non-sagging, non-bleeding poly-isobutylene or partially vulcanized rubber base sealant for use in concealed-sealing of thin joints in metal work.

.9 Screen for Operating Units:

.1 Design windows and window wall assemblies and hardware to accommodate screens in tight fitting, removable arrangement with minimum of exposed fasteners and latches.

.2 glass fibre fabric mesh woven into 14 x 18 mesh screen cloth, CAN/CGSB-79.1-M.

.3 Frame: extruded aluminum with baked enamel finish.

.10 Insulation within frame assemblies: Foamed-in-place type (INS-9) as specified in Section 07 21 00 in locations indicated on the Drawings.

.11 Glazing Materials:

.1 Design glass and glazing to meet CAN/CGSB-12.20-M, including appendices and design requirements listed herein as applicable. Glass thicknesses given in this Section are minimum. Ensure glass bears manufacturer's labels indicating quality. Leave labels in place until final cleaning.

.2 Factory-Sealed Insulated Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E2190, IGCC or equivalent to CAN/CGSB-12.8, and complying with other requirements specified in this Section.

.1 Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary.

.1 Basis-of-Design (Silicone Secondary Seal): DOWSIL 982 or DOWSIL 3363 by The Dow Chemical Company as suitable for use or Equivalent.
.2 Colour: Black.

.2 Ensure low 'E' coating is edge-deleted over depth of primary and secondary edge seal at units where glass edges are visible.
.3 Edge spacer core to be straight and evenly set into glass units with maximum variation in line of spacer core of +/- 2 mm (0.08 inch) and ensure primary seal does not extend past inside edge of spacer core by more than 1.5 mm (1/16 inch).
.4 All units to have IGMA certification.
.5 Spacer: Plastic-covered stainless steel in colour selected by Consultant.

.1 Basis-of-Design: "CHROMATECH ULTRA" by Roll-Tech A/S; http://www.rolltech.dk or Equivalent.

.6 Low Emissivity Glass Coating (Low 'E'): Provide triple silver sputtered vacuum deposited Low 'E' coating to surfaces of sealed insulating glass unit to meet criteria specified herein. Uniformly apply Low 'E' coating to glass.

.7 Ensure low 'E' coating is edge-deleted over depth of primary and secondary edge seal at units where glass edges are visible.

.1 Basis-of-Design: "SunGuard® SN 68" or Equivalent meeting aesthetic and performance criteria by one of the following:

.1 Vitro Architectural Glass (formerly PPG)
.2 AGC Glass Industries
.3 Cardinal Glass Industries
.4 Viracon

.3 Safety / Security Window Film (FILM-S) - at all exterior glazing units: Optically clear microlayered polyester film, with abrasion-resistant acrylic coating over one surface and a pressure sensitive adhesive on the other. Apply to surface no. 2 of double glazed units.

.1 Colour: Clear.

.2 Thickness: Minimum 0.2 mm (8 mils)

.3 Impact Resistance:

.1 complying with testing requirements in ANSI Z97.1, Class A and 16 CFR 1201 for Category II.
.2 Complying with testing requirements in ASTM E1996 for "Large-Missile Test" when tested at +/- 3.6 kPA (75 psf) according to ASTM E1886; with film applied to 6.0 mm (1/4 inch) thick tempered glass.

.4 Accessories: Provide manufacturer's recommended weatherable, UV-resistant, structural sealant attachment system "3M Impact Protection Film Attachment System" by 3M Canada or Equivalent.

.5 Basis-of-Design: "3M Scotchshield Ultra S800 Safety and Security Window Film" by 3M Canada or equivalent.

.4 Vision Glass - Type VG1: Low-E-coated, clear double insulating glass.

.1 Overall Unit Thickness: 25 mm (1 inch)

.2 Outdoor Lite: 6 mm thick clear tempered glass.

.3 Glazing cavity: 90% Argon; 10% Air

.4 Indoor Lite: 6 mm thick clear tempered glass.

.5 Low-E Coating: triple-silver as specified in this Section, sputtered on surfaces no. 2

.6 Bird-friendly frit: Provide ceramic frit applied by acid etching on surface no. 1 of glazing.

.1 Pattern: Provide 6 mm (1/4 inch) diameter dots at 100 mm (4 inches) on center spacing, applied to glass units, with 100% coverage of glass unit.
.2 Basis-of-Design: Walker Glass or approved Equivalent.

.7 Performance Requirements:

.1 Winter U-Value: 0.25 Maximum
.2 SHGC: 0.37 Maximum
.3 Visible Light Transmittance (VLT): Not less than 60%.

2.4 AUXILIARY MATERIALS

.1 Preformed Silicone-Sealant Extrusion (at glazing transitions): Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates. Acceptable Products:

.1 "Silicone Transition System (STS)" by Dow Corning Corp

.2 “Proglaze ETA” by Tremco Canada

.3 or Equivalent to the above.

.2 Sprayed Polyurethane Foam Sealant (INS-7): Foamed-in-place, polyurethane foam sealant; flame-spread index of 25 or less according to ASTM E162; with primer and substrate cleaner recommended by foam-sealant manufacturer.

.1 Acceptable Products:

.1 "Zerodraft Air Sealant Foam and Insulating Sealant" by Zerodraft (Division of Canam Building Envelope Specialists Inc.), www.zerodraft.com
.2 “Handi-Foam®” by Fomo Products, Inc.; www.fomo.com
.3 "GREAT STUFF PRO™ Series" Foam Sealant by Dow Chemical.
.4 or Equivalent to the above.

.3 Flashing and Tapes: Self-adhesive types, conforming to AAMA 711 and sized as required to provide flashing, window seal and drainage.

.1 Acceptable Products:

.1 Rough Opening Flashing and Window Seal: “Wigluv 100/150/230 Tape” by SIGA or Equivalent.

2.5 FABRICATION

.1 Fiberglass frame and sash corners shall be connected with molded reinforced polymer shear blocks and mechanically secured. All joints shall be factory sealed and neatly fitted together.

.2 Provide integral window components such as glazing perimeter airseal, frame perimeter air seal, metal clip anchors, sills and closures.

.3 Fabricate in accordance with CSA A440 requirements and the manufacturer’s written instructions.

.4 Fabricate units square and true to detail with maximum tolerance of ± 1.5 mm (1/16") for units with diagonal measurement of 1800 mm (6'-0") or less than 3.00 mm (1/8") for units with diagonal measurement over 1800 mm (6'-0"), free from defects impairing appearance, strength and durability. Overall assembled profiles shall be as detailed on the Drawings.

.5 Make provision at sealed horizontal members to lead moisture accumulation to exterior.

.6 Anchorages must be attached to warm side of fiberglass window assembly.

2.6 FINISHES

.1 Fiberglass: Manufacturer's standard electrostatically applied finish. Colour to be selected by Consultant at a later date from manufacturer's standard range.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing work. Verify fiberglass window openings by field measurements before fabrication. Notify the Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Set window framing in its correct location, level, square and plumb and at proper elevations, with the nominal face of the framing aligned in a single vertical plane. Prior to flashing installation:

.1 Substrate must be smooth, dry and free of debris, including frost, grease, dirt and sharp edges.

.2 Ensure mechanical fasteners are installed flush to substrate surface.

.3 Ensure masonry joints are struck flush.

.4 Ensure voids over 25 mm (1") are filled and tooled flush, using compatible sealant or spray foam.

.5 Use manufacturer's recommended primer where necessary to promote adhesion to surfaces.

.6 Ensure door and window rough openings are slightly sloped to the exterior to ensure proper drainage.

.7 Install materials with not less than 25 mm (1 inch) overlap to building's primary air barrier membrane.

.2 Fasten and anchor framing in place in accordance with CSA A440.6. Install in accordance with reviewed Shop Drawings. Maintain continuity of air barrier and vapour barrier membranes by installing flashings and tapes as indicated on Drawings:

.3 Erection Tolerances:

.1 Limit variations from plumb, level or dimensioned angle to the following:

.1 3 mm (1/8") maximum deviation in storey height, or in 3 m (10') vertical run, or in 6 m (20') horizontal run.

.2 6 mm (1/4") maximum deviation in 12 m (40') in any direction.

.2 Limit variations from location (theoretical calculated positions in plan or evaluation based on established floor lines and column lines), including variations from plumb and level, to following:

.1 9 mm (3/8") total maximum deviation for member at any location.
.2 3 mm (1/8") maximum change in deviation for member for 3 m (10') run, any direction.

.3 Limit offsets in end-to-end and edge-to-edge alignment of adjoining and consecutive members, which form planes, continuous runs and profiles to 1.5 mm (1/16") maximum offset in flush alignment, including those which are to be 13 mm (1/2") or less out-of-flush, and including those which are separated 50 mm (2") or less by a reveal or protrusion in plane or wall.

.4 Glazing:

.1 Use glazing and bedding compounds of type compatible with secondary sealant in insulating glass unit.

.2 Surfaces receiving glazing materials shall be thoroughly wiped with low-VOC cleaning substances recommended by the manufacturer.

.3 Install windows using “inside-glazing” methods with exterior butyl tape and integral spacer. Provide heal bead at bottom of interior edge of sealed units and up the lower 75 mm (3") of each vertical to Provide a vented glazing cavity. Provide punched louvres or holes through exterior glazing flange for venting and drainage. Snap-in glazing stop to be complete with elastomeric roll-in wedge to hold glass tight and separate glass from fiberglass frame.

.5 Caulking: At interior and exterior joints between fiberglass framing and adjacent work of other Sections:

.1 Install backer rod over compressible filler material or perimeter blocking to Provide sealant joints of proper form, thickness to width ratios, and to Provide bond break at back side of sealant. Where backer rod cannot be used or is not shown Provide bond breaker tape to back side of sealant joint substrate.

.2 Clean substrate surfaces to which sealant is to bond and apply sealant primers as recommended by the sealant manufacturer.

.3 Caulk joints continuously to produce weatherproof and visually acceptable joint installation.

3.3 FIELD QUALITY CONTROL

.1 Site Tests and Inspections:

.1 Fiberglass window systems will be subject to tests to confirm performance criteria specified herein and in Sections 01 45 00 and Section 01 83 16. The Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

.2 Before concealing fiberglass window work obtain required inspections from an independent testing and inspection agency. As a minimum, the following tests will be required:

.1 Water Leakage Tests: ASTM E1105 at a minimum cyclic static-air-pressure differential as specified in Section 01 83 16, and shall not evidence water penetration.

.2 Air Leakage Tests: ASTM E783 the rate specified in Section 01 83 16.

.3 In event that the fiberglass window system does not pass tests performed by the inspection and testing company, take remedial action, approved by the Consultant, as necessary to

correct deficiencies observed as a result of tests. Perform retesting at own expense until tests indicate satisfactory results.

3.4 CLEANING

.1 Maintain window framing in a clean condition throughout construction period, so it will be without deterioration or damage at the time of acceptance. Select methods of cleaning which will promote achievement of uniform appearance and stabilized colours and textures for materials that weather or age with exposure.

.2 Immediately before Substantial Performance of the Work, clean windows and window wall assemblies thoroughly, inside and out. Demonstrate proper cleaning methods to the Owner during this final cleaning. Prepare a "Cleaning and Maintenance Manual" listing types of cleaning compounds, cleaning methods, sealants and glazing materials of the work of this Section and submit 2 copies to the Owner.

3.5 PROTECTION

.1 Protect window surfaces from contact with contaminating substances resulting from construction operations. In addition, monitor window surfaces adjacent to and below exterior adjacent surfaces during construction for presence of dirt, scum, alkaline deposits, stains, or other contaminants. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written recommendations.

.2 Remove protective covering and coating from fiberglass surfaces, inside and out, and clean surfaces, remove labels, stripes and protective devices and polish glass surfaces, immediately prior to final acceptance of the Work by Consultant.

END OF SECTION

Updated through ADD#10

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 The General Conditions and Supplementary Conditions of the Contract as amended in the Contract Documents.

.2 Division 01 requirements and any additional documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide unit skylights including but not limited to following:

.1 Unit skylights and associated glazing.

.2 Auxiliary materials required for a complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Unless otherwise stipulated by a specific publication date in this Section or the Ontario Building Code, the latest published editions of reference standards in force as of the Bid Closing Deadline for the Project, including adopted amendments, are applicable.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Sequencing: Coordinate installation with other related Sections.

.2 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 31 00.

.2 Pre-construction Site Meeting:

.1 Prior to start of work, arrange for Project site meeting of parties associated with work of this Section, including non-exhaustively Subcontractor performing work of trade involved, testing company's representative and Contractor's consultants of applicable discipline. Consultant may attend.

.2 Review Contract Documents to permit compliance with intent of this Section for work included under this trade, and ensure complete understanding of requirements and responsibilities relative to:

.1 work included,

.2 materials to be used,

.3 storage and handling of materials,

.4 installation of materials,

.5 sequence and quality control,

.6 Project staffing,

.7 restrictions on areas of work and other matters affecting construction.

.3 In particular ensure Division 3 requirements for concrete are compatible with requirements of this Section. Ensure following meet acceptable criteria to ensure proper performance floor covering work:

.1 floor flatness and floor levelness requirements for flooring installation and their acceptability by flooring manufacturer;

.2 surface texture of finished floor required for flooring installation;

.3 acceptable approaches to remediation of high moisture and high pH floors;

.4 adhesive application and floor covering installation. Scheduling:

.4 Prior to commencing work of this Section arrange for the manufacturer's technical representative to review with Contractor and Consultant, procedures to be adopted and conditions under which work is to be performed. Inspect surfaces to determine adequacy of existing and proposed conditions.

.5 Cooperate fully with other Subcontractors on The Work and promptly proceed with work of this Section as rapidly as job conditions permit.

.6 Supply items to be built-in in ample time to be incorporated into work of other Subcontractors, together with measurements and other information required for location thereof.

.7 Ensure work which may create dust does not proceed during work related to painting and final finishing.

1.6 SUBMITTALS

.1 Product Data:

.1 Submit manufacturer's literature, data sheets for each type of material provided under this Section for Project.

.2 Data sheets shall provide all required information. Submit 3 copies of detailed instructions for maintaining, preserving and keeping materials in clean and safe conditions and give adequate warning of maintenance practices or materials detrimental to specified materials. Submit manufacturer's installation instructions.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 78 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings indicating material layouts, details of construction, connections, and relationship with adjacent construction. As a minimum indicate following:

.1 Include plans, elevations, sections and details as applicable.

.2 Air Barrier Interface Detailing: Indicate details of air barrier, waterproofing and vapour retarder interface materials, accessories, fastening, seals, and relationship to The Work as necessary to coordinate The Work with other building trades.

.3 Manufacturer's literature must clearly indicate intended plane of primary air and water resistance for skylight system.

.4 Indicate field-measured dimensions on Shop Drawings.

.5 Delegated Design Submittals:

.1 Engineering design completion of unit skylights work is delegated to Contractor based on structural design criteria indicated in Contract Documents.

.2 Submit Shop Drawings for work of this Section that bear the stamp of a Professional Engineer registered in Province of the Work.

.3 Submit copy of structural calculations upon request by Consultant.

.6 Samples: Submit one 300 mm (12 inch) length of each type of skylight frame with portion of acrylic ~~dome~~pyramid.

.7 Embodied Carbon / Environmental Product Declarations (EPDs): When available, submit product-specific or industry-wide regional (i.e., North American) EPDs conforming to ISO 14025 or other recognized environmental Product declaration framework meeting following criteria:

.1 EPD Scope: must cover Cradle-to-Gate (A1 to A3) as a minimum.

.2 EPD Impact Categories: must report Global Warming Potential (GWP) in form of unit of $kgCO_2e$/declared unit as a minimum.

.3 Product Options: Give preference to Products with compliant documentation when choice is at Contractor's option.

.8 Material Ingredient Disclosure: When available, submit documentation disclosing chemical inventory of materials to at least 0.1% (1000ppm) meeting following criteria:

.1 Standard: Health Product Declaration (HPD) Open Standard, Cradle to Cradle v2 (Basic level) or Cradle to Cradle v3 (Bronze level), International Living Future Institute (ILFI) Declare, or other approved material ingredient declaration framework.

.2 Product Options: Give preference to Products with compliant documentation when choice is at Contractor's option.

.9 Low-Emitting Materials: For applicable Products specified or used for activities of this Section (i.e., site-applied coatings, adhesives, and sealants), submit certifications from third-party organizations indicating compliance with following:

.1 VOC Emissions: California Department of Public Health (CDPH) Standard Method v1.2–2017, using applicable exposure scenario.

.2 VOC Content: SCAQMD Rule 1113 (for paints and coatings) and SCAQMD Rule 1168 (for adhesives and sealants).

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Licensed Professionals: Employ a professional structural engineer registered in the province of Ontario, carrying minimum of $2,000,000.00 professional liability insurance to:

.1 design the components of the work of this Section requiring structural performance and their attachments to building's structure,

.2 be responsible for full assemblies and connections,

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the work of this Section during fabrication and erection,

.6 stamp and sign each shop drawing,

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

.3 Mock-ups:

.1 Provide Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship.

.2 Maintain Mock-ups during construction in an undisturbed condition as a standard for judging completed work.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

.2 Sequence deliveries to avoid delays and minimize on site storage.

.3 Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.

.4 Wrap protective heavy paper or apply strippable sprayed plastic to prevent any marring, scratching or damage to plastic and metal during handling and after installation.

1.9 WARRANTY

.1 Warrant work of this Section for period of 5 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within warranty period, to satisfaction of Consultant and at no expense to Owner. Defects include but are not limited to; buckling, opening of seams, bond failure and extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 A. I. A. Industries, Inc.

.2 Arc-O-Lite Skylights;

.3 Artistic Skylights;

.4 Kingspan / CPI International;

.5 Velux International

.2 Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent products in Consultant's opinion, and subject to Consultant's review, will be considered provided they meet the requirements of this Specification.

2.2 REGULATORY REQUIREMENTS

.1 Conform to OBC requirements to support snow load and wind load for location of project as minimum comply with loads specified herein.

2.3 PERFORMANCE / DESIGN CRITERIA

.1 Comply with AAMA/WDMA/CSA101/I.S.2/A440 (NAFS) or NFRC 400.

.2 Provision For Thermal Movement:

.1 Unit skylights must be designed to accommodate expansion and contraction of component materials caused by exterior metal surface temperatures ranging from 35 deg C (-31 deg F) to 85 deg C (185 deg F) without buckling, excessive stress on glass, joint seal failure, excessive stress on structural elements, damaging loads on fasteners, performance reduction, or other detrimental effects.

.3 Structural Design:

.1 Wind Loads: Design unit skylights to withstand wind loads based on Limit States Design and 1 in 50-year return period in accordance with requirements of the Applicable Building Code for geographical location of the Project.

.2 Snow Loads: Design unit skylights to withstand snow loads based on Limit States Design and in accordance with requirements of the Applicable Building Code for geographical location of the Project, but not less than 2.4 kPA (50 psf).

.3 Deflection: Limit deflection to L/180 or 25 mm (1 inch), whichever is less.

.4 Air infiltration through skylight: must not exceed ~~0.3~~ 0.5 L/s-m2 (~~0.06~~0.1 cfm/ft2) of fixed wall area plus permissible allowance specified for operable windows and doors within test area when tested in accordance with ASTM E283 at static air pressure difference of 300 Pa (~6.26 psf)

.5 Water Penetration: There must be no uncontrolled water penetration when skylight system is tested per ASTM E331at 20% of maximum inward and outward acting design wind pressure, but not less than 300 Pa (6.26 psf) or greater than 720 Pa (15.03 psf) or equivalent to ASTM E547.

.6 Provisions must be made for water entering system from the exterior to be drained back to exterior.

.7 Maximum Water penetration: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters or water that is drained to exterior.

.8 Solar Heat Gain Coefficient (SHG): Not more than 0.5

.9 VLT: 48%

.10 U-Value (imperial): Not more than 0.7

2.4 PYRAMIDAL RECTANGULAR CURB MOUNT SKYLIGHTS

.1 Frame Composition: Corrosion-resistant extruded aluminum base frame, 6063-T5 alloy, with 76 mm (3 inches) aluminum mounting flange, heliarc welded corners, and 51 mm (2 inches) thermal insulation with rigid vinyl thermal break. Provide 8-degree sloped condensation gutter and co-extruded rubber draft seal.

.2 Material: 6063-T5 aluminum alloy, heliarc welded corners.

.3 Glazing: Sealed double acrylic ~~dome~~pyramids.

.4 Curb: Minimum ~~100 mm (4 inch) high, mill finish aluminum, two-piece construction;~~ 38 mm (1-1/2 in) as indicated on Drawings.

.5 Outer and inner wall: 1.27 mm (0.050 in).

.6 Insulation: 50 mm (2 in) thick fiberglass

.7 Mounting Flange: 75 mm (3 in) aluminum mounting flange.

.8 Size: Refer to Drawings.

.9 Basis-of-Design: "Model P-PVCCM ~~Aluminum Base Frame - Model FF~~" by Artistic Skylight Domes.

2.5 MATERIALS

.1 Aluminum: Aluminum Sections: ASTM B209M, size accurately formed as shown on Drawings, extruded aluminum alloy AA-6063-T5 for all aluminum except surfaces receiving anodizing which shall be AA-6061-T6. Surfaces shall be free from defects impairing appearance, strength and durability.

.2 Frame: Extruded aluminum, perimeter curb frame with thermal break, continuous extruded aluminum intermediate support frame with integral sloped condensation gutter, extruded aluminum retainer straps, extruded aluminum ~~dome~~pyramid retaining frame screw attached to curb frame and integrally fitted with ~~dome~~pyramid compression gasket. Provide holes for positive non-plugging drainage of condensation gutter. Include curb frame splice and expansion joint cover.

.3 Gaskets: extruded resilient vinyl or neoprene.

.4 Integral Glazing Gaskets: Continuous EPDM, Santoprene silicone, butyl rubber or neoprene designed specifically for use in aluminum frame section and held under constant pressure. Seal end-to-end joints by fusion.

.5 Seals: closed cell neoprene sponge, compressible, with full recovery after 50% compression.

.6 Screws: Stainless Steel.

.7 Isolation coating: Alkali resistant bituminous paint or epoxy coating.

2.6 AUXILIARY MATERIALS

.1 Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic, nominally free of sulfur and containing no asbestos fibers, formulated for 15-mil dry film thickness per coating.

.2 Elastomeric Sealant: ASTM C 920; Type S; Grade NS; Class 25; and Uses NT, G, A, and (as applicable to joint substrates indicated) O; recommended by unit skylight manufacturer and compatible with joint surfaces.

.3 Elastomeric Sealant: ASTM C920; Type S; Grade NS; Class 25; and Uses NT, G, A, and (as applicable to joint substrates indicated) O; recommended by unit skylight manufacturer and compatible with joint surfaces.

.4 Fasteners: stainless steel or cadmium-plated steel. Ensure exposed fasteners match the adjacent aluminum colour.

.5 Gaskets: Continuous co-extruded vinyl, neoprene, EPDM, or Santoprene rubber under constant pressure.

.6 Weep Holes: Provide condensation management system with weep holes to ensure proper drainage.

2.7 FABRICATION

.1 Fit and assemble Work in shop. Execute Work in accordance with details and reviewed Shop Drawings.

.2 Fabricate extruded aluminum square frame from alloy AA-6063-T5 free from defects impairing appearance, strength.

.3 Fabricate Work square, true, straight, plumb and level, accurately to size detailed and free from distortion, waves, twists, buckles or other defects detrimental to appearance or performance.

.4 Provide method of securing edge of flexible flaps for air seal continuity to building air/vapour barrier.

.5 Equip curb with an integral metal cap flashing of same thickness and material as curb, fully welded at corners for absolute weather tightness. Ensure insulation on exterior of curb is rigid polyurethane or glass fibre board minimum 50 mm (2") in thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Installation, generally: Install work of this Section in strict accordance with manufacturer's written installation instructions and reviewed Shop Drawings. Supplement manufacturer's installation instructions with additional installation requirements specified in this Section to produce specified work results.

.2 Install unit skylights in accordance with the construction details provided in the CRCA's "Canadian Roofing Reference Manual", CSA A440 and AAMA 1607.

.3 Where metal surfaces of units will contact incompatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation recommended in writing by unit skylight manufacturer.

.4 Anchor unit skylights securely to supporting substrates.

.5 Set unit skylight flanges in thick bed of roofing cement to form a seal, unless otherwise indicated.

.6 Where cap flashing is indicated, install to produce waterproof overlap with roofing or roof flashing. Seal with thick bead of mastic sealant except where overlap is indicated to be left open for ventilation.

3.3 FIELD QUALITY CONTROL

.1 Water Leakage Testing: After installation is complete and sealants and glazing compounds have cured nominally, but before interior finishes are installed, test each skylight unit for water leaks in accordance with AAMA 501.2.

.2 Work will be considered defective if it does not pass tests and inspections.

.3 Additional testing and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

.4 Prepare test and inspection reports.

3.4 CLEANING

.1 Remove protective materials from ~~dome~~pyramid. Wash with mild soap and water solution. Rinse clean.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

.1 Work Included: Supply finish hardware including but not limited to the following:

.1 It is intended that the following list of hardware will cover finish hardware to complete the Project. Bring to the Consultants attention any omissions or discrepancies that will affect work in this section during the bidding period.

.2 Related Requirements:

.1 Division 01 – General Requirements

.2 Section 06 10 00 Finish Carpentry

.3 Section 06 40 00 Architectural Woodwork

.4 Division 08 Doors and Frames

.5 Section 08 12 16

.6 Division 26 Electrical

.7 Division 28 Electronic Safety and Security

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 PRICE AND PAYMENT PROCEDURES

.1 Measurement and Payment: Measurement for progress payments for work of this Section shall be made in accordance with the requirements of Section 01 45 16.

1.4 PRODUCTS SUPPLIED BUT NOT INSTALLED IN THIS SECTION

.1 Power supplies, compressor/control boxes, junction boxes installed by Division 26

1.5 ALLOWANCE

.1 Allow for cash amount specified in Section 01 21 00 – Allowances, for supply and installation of permanent core cylinders.

1.6 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the Bid closing date and time for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

.1 Door and Hardware Institute - Recommended locations for Architectural Hardware for Standard Steel Doors and Frames

.2 Door and Hardware Institute - Recommended locations for Architectural Hardware for Flush Wood Doors

.3 NFPA 80-Standard for Fire Doors and Windows, 1999 Edition

.4 Door and Hardware Institute - Sequence Format for Hardware Schedule

.5 Door and Hardware Institute - Key Systems and Nomenclature

.6 Door and Hardware Institute - Abbreviations and Symbols used in Architectural Door and Hardware Schedules and Specifications

.7 Door and Hardware Institute – Installation Guide for Doors and Hardware

.8 OBC

1.7 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting the work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to the requirements of Section 01 33 00.

1.8 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 33 00. Ensure data sheets Provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Material Safety Data Sheets: Submit MSDS for inclusion in operation and maintenance manual without limitations for adhesives, sealants and any other material later designated by the Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings for hardware installation in accordance with Section 01 33 00.

.2 Submit Shop Drawings in schedule form, prepared by an architectural hardware consultant (AHC), indicating the manufacturers' names, Product descriptions, makes, models, materials, finishes, functions, location of each item, template, complete keying schedule and other pertinent information. Repeat hardware item numbers used in Finish Hardware Schedule located at paragraph 3.6 of this Section. Include list of abbreviations and finish symbols and their meaning. Include manufacturer's cut sheets for each hardware item.

.4 Samples:

.1 Submit samples in accordance with Section 01 33 00.

.2 Do not order hardware from manufacturer until samples have been approved by the Consultant. Hardware and finishes supplied shall be identical to approved samples.

.3 Supply 1 of each item of hardware with specified finishes to Consultant. Label each sample as to manufacturer, type, finishes, size and location for use proposed. Approved samples will be retained for comparison and returned upon completion of the Work.

.4 Do not submit substitutions to accepted alternates.

.5 Updated Finish Hardware Schedule:

.1 Submit submittals in accordance with Section 01 33 00 Submittal Procedures. Prepare detailed hardware schedules in Door and Hardware (DHI) vertical format as detailed in Reference 1.5.4 listed above.

.6 Sustainable Design Submittals: Conform to requirements in Sections section 01 35 18, section 01 35 22, section 01 35 46, and section 01 74 20.

.7 Keying Schedule:

.1 After a keying meeting between representatives of the Owner, Consultant and hardware supplier furnish a keying schedule listing the levels of keying as well as an explanation of the key system's function, the key symbols used and the door numbers controlled. Utilize "Door and Hardware Institute - Key Systems and Nomenclature" as a guideline for nomenclature, definitions, and approach for selecting the optimal keying system. Provide 3 copies of the keying schedule for review prepared and detailed in accordance with the DHI publication referenced herein. Include schematic keying diagram and index each key to unique door designations. Index keying schedule by door number, keyset, hardware heading number, cross keying instructions, and special key stamping instructions. Provide one complete bitting list of key cuts and one key system schematic illustrating system usage and expansion. Forward bitting list, key cuts and key system schematic directly to the Owner, by means as directed by Owner.

.8 Wiring Diagrams:

.1 Coordinate with related trades, meet with the Owner and the building's security provider and submit a written description of the functional use (mode of operation) of electrical hardware products specified herein. Include operation for ingress, egress, fire alarm, and after hours use where applicable. Include door and frame elevations showing the location of each item of electrical hardware to be installed, mode of operation including a diagram showing number and size of conductors. Indicate on the elevation Drawings items provided by trades performing work related to this Section, include for back boxes, and 120V power sources. Provide point to point drawings showing terminal connections necessary for a complete installation.

.9 Operations and Maintenance Data:

.1 Prior to Substantial Performance of the Work, furnish to the Owner, two (2) copies of an Owner's operation and maintenance manual in a three-ring binder with the following information:

.1 Name of hardware distributor, address and contact name

.2 Copy of final "as-built" finish hardware schedule

.3 As installed "wiring diagrams, elevations, risers, point to point"

.4 Copy of final keying schedule

.5 Copy of floor plans with keying nomenclature assigned to door numbers as per the approved keying schedule

.6 Catalogue cut sheets and product specifications for each product

.7 Parts list for each product

.8 Installation instructions and templates for each product

1.9 QUALITY ASSURANCE

.1 Review installation procedures with the Contractor's designated installers. Hold instruction meetings with the installers prior to installation and subsequent review meetings during the installation period. Submit minutes of meetings to the Consultant.

.2 Substitutions: Only approved Products specified are accepted. Make substitution requests in accordance with Division 01. Include product data and indicate the benefit to the Project

.3 Supplier Qualifications: Successful hardware distributor to have a minimum of five (5) years' experience in the door and hardware industry. Distributor to have on staff an architectural

hardware consultant (A.H.C.) whose name will be listed on the hardware schedule title page submittal and will be responsible for scheduling, detailing, (see Reference 1.5. ordering and co-ordination of the finishing hardware for this Project. If so requested by the Consultant and or the installer, this individual will be required to visit the Site for any installation problems that may occur.

.4 Designated Installers: Hardware installers must have a minimum of five (5) years' experience in the installation of hardware. Provide verification of the installer's qualification to the Consultant for approval. Installers to attend review meetings with the hardware distributor.

1.10 DELIVERY, STORAGE AND HANDLING

.1 Marking and Packaging: Mark cartons with heading number, door number, and key-set symbol where applicable in original packaging provided by the manufacturer. Pack packaged hardware in suitable wrappings and containers to protect it from damage during shipping and storage. Enclose accessories, fastening devices and other loose items with each applicable item of hardware.

.2 Delivery: Deliver hardware to trades perform work related to the work of this Section.

.3 Storage: Store in a clean, dry room with lockable man door and adequate shelving to permit organization so item numbers are readily visible:

1.11 WARRANTY

.1 Furnish warranties by the following accepted manufacturers (with warranty period lengths as described below):

Hardware Item	Length of Warranty
Continuous Hinges	Lifetime
Locks (Mortise)	3 years
Locks (Cylindrical)	3 years
Exit Devices	3 years
Door Operators	2 years
Door Closers	30 years
Electric hold open	2 years
Overhead stops/holder	1 year
Floor/Wall stops	1 year
Electric Strikes	5 years
Key Switches/ Power Supplies	1 year

1.12 MAINTENANCE

.1 Maintenance Instructions:

.1 After the building is occupied arrange an appointment with the maintenance staff from the Owner for instruction on proper use, servicing, adjusting and lubrication of hardware furnished. Submit to the Consultant a list of attendees and meeting date.

.2 Extra Materials: Furnish the following items in proper manufacturer's cartons once the job has been completed:

.1 5 of each installation tool used for locks/passage/privacy, type of door closers, and exit devices.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products listed in the hardware are from the manufacturers listed below:

ITEM	MANUFACTURER NAME
Full Mortise Hinges	Ives
Continuous Hinges	Ives
Locksets, Latchsets/Deadbolts	Sargent
Cylinders	Sargent
Exit Devices	Von Duprin
Surface/Flush Bolts	Ives
Door Closers	LCN
Overhead Door Holders/Stops	Glynn Johnson
Door Pulls/Flatware	Ives
Wall/Floor Stops	Ives
Weather/Smoke/Sound Seals	Zero
Door Sweeps/Thresholds	Zero
Automatic Door Operators/Actuators	LCN
Keyswitch/Magnetic Locks	Schlage Electronics
Electric Strikes	Von Duprin
Power Supplies	Schlage Electronics

2.2 MATERIAL

.1 Screws and Fasteners: Screws and fasteners to be matching finish to their product and to be manufacturer's standard. Door closers, door holders and exit devices installed on fire rated wood doors and hollow metal doors to be attached with fasteners to meet NFPA 80 requirements.

.2 Materials-Acceptable Manufacturers (Note: Supply Products in a given category from the same manufacturer):

.1 Mortise Hinges

.1 Provide five knuckle bearing hinges with Non- Removable Pins (NRP) option on reverse bevel doors with locking hardware. Hinge width to accommodate door closer projection, door trim and allow for 180-degree swing. Doors up to 2286mm in height, supply 3 hinges, doors greater than 2286mm in height add one hinge for every additional 760mm of door height. Doors 915mm wide and less furnish 114 mm high hinges, doors greater than 915mm wide furnish 127mm high hinges, heavy weight

or standard weight as specified. Provide electrified hinges with quick connect “CON” as listed in the hardware groups:

.2 As Specified: Ives Hinges, 5BB1, 5BB1HW

.3 Approved Alternates: McKinney TA714, TA786, Hager AB800, AB850

.2 Continuous Hinges:

.1 Provide Ives heavy duty edge mount continuous gear type aluminum hinges. Ives aluminum hinges tested and approved to UL 10C (90 minutes). Material 6063-T6 aluminum, clear satin finish (628). Aluminum geared hinges certified to ANSI 156.26 Grade 1. Hinge length to suit door height. Hinge length 25mm (1 inch) less door height.

.1 Supply as Specified: Ives 112XY, 112XY EPT

.2 Approved Alternates: McKinney MCK-12HD, Select Hinge SLHD

.3 Flush Bolts/Co-Ordinators:

.1 Manual Flush Bolts-Metal Doors: Manual flush bolt for metal doors to be cUL listed for 3-hour fire doors with ½ inch diameter bolt tip with ¾ inch throw. Standard rod length to be 12 inches, supply longer length rods to suit higher door heights. Provide dustproof strikes with flush bolts that incorporate a bottom bolt:

.1 Supply as Specified: Ives FB458 series

.2 Approved Alternates: Hager 282D, Thomas Door Security UL-MFB-M

.2 Co-ordinators and Filler Bars: cUL listed for installation on labeled frames. COR series co-ordinator channels and fillers made of aluminum, furnished in 628 finish. Provide coordinators of correct size for use on pairs of doors when one door is required to close before the other. Provide filler bar to suit opening width to maintain architecturally clean lines. Provide mounting brackets for other soffit applied hardware. Co-ordinator units to be equipped with an override feature which allows the active door to close under extreme pressure

.1 Supply as Specified: Ives COR Series Bar Co-ordinators

.2 Approved Alternates: Rockwood 2672, ABH Manufacturing 3700 Series

.4 Locksets/Deadlocks/Privacy Sets:

.1 Mortise: Grade 1 Operational, Grade 1 Security, mortise lock for commercial and institutional buildings. Manufacture lock cases from fully wrapped, heavy 12 gage steel with a protected leading edge and screw configuration that limits access to operating parts. Lock components to be manufactured of zinc dichromate plated steel. Latch bolts to have a standard 2 ¾ inch backset with a full ¾ inch throw. Latchbolts to be non-handed, field reversible without opening the lock case. Latchbolts to be 2 piece anti-friction, manufactured from stainless steel. Solid latchbolts and/or plastic anti-friction devices are not acceptable. Deadbolts to be 1 ¾ inch total length have standard 1 inch throw with a minimum ¾ inch internal engagement when fully retracted. Deadbolts to be constructed of stainless steel, incorporating a security roller pin with a minimum Rc60 rating for surface hardness. Lever assembly (external) to be one piece design attached by threaded bushing. Lever assembly (internal) to be attached by screw less shank. Lever attachments by common tools (allen nuts and/or set screws) are not acceptable. Thru bolt lever assemblies through the door for positive interlock. Levers to have independent rotation in both directions. Lever operation to be freewheeling (clutch) when in the locked mode. Spring cages are to be incorporated into the lever assemblies. Hub

blocking plate to be solid, cast stainless steel. Manufacturers utilizing open hub designs are not acceptable. Spindles to be independent, designed to “break away” at a maximum of 75psi torque. Mounting tabs are to be automatic self-adjusting, vertically and horizontally for door bevel and strike alignment. Cylinders to be secured by a cast stainless steel, dual retainer. Manufacturers utilizing screws and/or stamped retainers are not acceptable.

.1 Supply as Specified: Schlage “L” series

.2 Approved Alternates: Sargent 8200 series, Hager 3800 Series

.2 Strike Plates: Provide lockset and latchset strike plates with lip centre dimensions sized to minimally clear trim. Where strike lip extends beyond the projection of the casing or other trim, provide curved lip strikes. Strike plates applied to inactive leaf of paired openings to have flat lip sized to fit flush with the face of the door skin

.5 Exit Devices/Device Trims/Mullions:

.1 Narrow Style: Exit device to be cUL listed for panic hardware and fire exit hardware. Supply exit devices and fire exit devices featuring coil compression springs on device mechanism subassemblies and dead latching mechanisms for active latch bolts. Supply exit devices with smooth mechanism case and “the quiet one” fluid dampener to eliminate noise associated with exit device operations. Non-handed device with touchpad assemblies with no exposed fasteners and cast end caps, reinforced aluminum with stainless steel touchpad and raised edge to minimize pinching. Doors greater than 950mm wide supply long bar exit devices, doors greater than 2134mm high supply extension rods were required. Fits door stiles as narrow as 1 ¾ inch.

.1 Supply as Specified: Von Duprin 35A series

.2 Approved Alternates: Falcon 24 Series, Corbin Russwin ED400

.2 Heavy Duty: Exit device to be cUL listed for panic hardware and fire exit hardware. Supply panic hardware and fire exit devices featuring coil compression springs on device mechanism subassemblies and dead latching mechanisms for active latch bolts. Supply exit devices with smooth mechanism case and “the quiet one” fluid dampener to eliminate noise associated with exit device operations. Non-handed device with touchpad assemblies with no exposed fasteners and cast end caps, reinforced aluminum with stainless steel touchpad and raised edge to minimize pinching. Roller strikes to be standard on rim and surface vertical rod devices, mortise exit devices (626) complete with strikes that match the same finish as the device. Doors greater than 950mm wide supply long bar exit devices, doors greater than 2134mm high supply extension rods for surface vertical rod series. 1,000,000cycle testing independently certified by ETL.

.1 Supply as Specified: Von Duprin 98 series.

.2 Approved Alternates: Falcon 25 Series, Corbin Russwin ED5000

.6 Door Closers: Door closers to have the following features:

.1 Fully hydraulic, rack and pinion action with high strength cast iron cylinders and one-piece forged steel pistons.

.2 Include high efficiency, low friction pinion bearings.

.3 Hydraulic fluid of a type requires no seasonal adjustments, ULTRA X TM fluid has constant temperature control from -35 degrees Celsius to +49 degrees Celsius.

.4 Hydraulic regulation controlled by tamper-proof, non-critical screw valves, adjustable with a hex wrench.

.5 Separate adjustments for backcheck, general speed and latch speed.

.6 Door closers with special template (ST-) numbers include required associated product, information sheets and instructions

.7 Size 1 manual door closers to provide less than 5 pounds opening force on a 900mm door leaf.

.8 Door closer with Pressure Relief Valves are not accepted.

.9 Door closer bodies, arms, covers to be powder coated

.10 Closers with powder coat finishes to exceed a minimum 100-hour salt spray test, as described in ANSI A156.18 and ASTM B117.

.11 Closers detailed with plated finishes to include plated covers (or finish plates), arms and visible fasteners.

.7 Medium Duty Mechanical (Interior/Exterior): Non-sized (1-6) and non-handed cylinder body to have 1 ¼ inch (32mm) piston diameter with 5/8 inch (16mm) single heat-treated shaft. Track closer cylinder body non-sized (2-4) or (1-2). Closers to have forged main arm and forearm (forged steel main arm and forearm EDA and CUSH type arms). Optional arms to be interchangeable within the series of closers, except track arm type closers. Track arm type closers to have single lever arm with low friction track and roller assembly and provisions for an optional bumper to assist backcheck.

.1 Supply as Specified: LCN1460 HD Full Cover series

.2 Approved Alternates: Yale 3500 Series, Norton 7700 Series

.8 Heavy Duty Mechanical (Multiple Applications): Non-sized (1-6) and non-handed cast iron cylinder body to have 1 1/2 inch piston diameter with 3/4 inch journal double heat-treated pinion shaft with 5/8 inch full complement bearings. XP closer hydraulic regulation controlled by tamper-proof, non- critical screw valves, abrasion resistant Vitron “O” ring, adjustable with a hex wrench. Closer to have “FAST” Power Adjust speed dial to show spring size power. Track closers non-sized 1-4. Closers to have forged steel main arm and forearm (forged steel main arm and forearm EDA and CUSH type arms). Optional arms to be interchangeable within the series of closers, except track arm type closers. Track arm type closers to have single lever forged arm with low friction track and roller assembly and provisions for an optional bumper to assist backcheck.

.1 Supply as Specified: LCN 4040XP series

.2 Approved Alternates: Yale 5800, Norton 8500 Series

.9 Heavy Duty Electric Operator: Provide low energy automatic operator units that are electro-mechanical design. Powered by DC motor working through reduction gears. Spring force closing. Motor is off when door is in closing mode. Door can be manually operated with power on or off without damage to operator. Provide variable adjustments, including opening and closing speed adjustment. Provide units with manual off/auto/hold-open switch, push and go function to activate power operator, vestibule interface delay, electric lock delay, hold-open delay adjustable from 2 to 30 seconds, and logic terminal to interface with accessories, mats, and sensors. Provide full length aluminum header, drop plates, angle brackets, or adapters for arms to suit details. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings, consult with owner. Provide Rocker Switch 8310-806R where specified in hardware groups.

.1 Supply as Specified: LCN 9531, 9542, 9553 series

.2 Approved Alternates: Horton 7100, Besam SW200i

.10 Overhead Door Stops/Holders:

.1 Heavy Duty Surface Mounted: Surface overhead stops/holders to be stainless steel base, non-handed for single-acting doors with a heavy-duty channel/slide-arm design and offset jamb bracket to allow for simple field modifications of functions. Channel to be surface mounted to the door with thru bolts and the jamb bracket is surface mounted to the frame soffit

.1 Supply as Specified: Glynn-Johnson 90 series

.2 Approved Alternate: ABH Manufacturing 9000 Series, Dorma 900s

.2 Heavy Duty Concealed Mounting: Concealed overhead stops/holders to be stainless steel base, non-handed for single or double-acting doors with a low-profile channel, mortised in the door and jamb bracket is mortised in the doorframe. Unit to be fully concealed when door is in the closed position. Units to be field adjustable for function changes if required

.1 Supply as Specified: Glynn-Johnson 100 series

.2 Approved Alternate: ABH Manufacturing 1000 Series, Sargent 1760 Series

.11 Door Pulls/Flatware: Door Pulls are to be 19mm, 25.4 mm diameter. Flatware to be of stainless steel material, .050 gauge.

.1 Supply as Specified: Ives

.2 Approved Alternate: Canadian Builders Hardware Gallery

.12 Floor/Wall Stops:

.1 Floor Stops: Floor stops to be heavy-duty cast dome stop constructed of brass/bronze with grey, non-marring rubber bumper.

.1 Supply as Specified: Ives FS439

.2 Approved Alternate:Canadian Builders Hardware Gallery

.2 Wall Stops (No Button on Locking Hardware): Wall stops to be constructed of stainless-steel base with special retainer cup that makes the rubber stop tamper resistant. Convex design of rubber bumper.

.1 Supply as Specified: Ives WS406/4077CVX

.2 Approved Alternate:Canadian Builders Hardware Gallery

.13 Weather Seals/Meeting Stile Gasketing/Thresholds/Weatherstrip/Door Sweeps:

.1 Supply as Specified: IVES

.2 Approved Alternates: KN Crowder Unique Architectural

.14 Keyswitch/Electric Strikes/Magnetic Locks/Power Supplies, Power Transfers, Mortar Guards:

.1 Power Supplies: Power supplies to be tested and certified to meet UL294. Universal 120-240 VAC input, low voltage DC output, regulated and filtered. Power supplies to have 2A, 4A, 6A output,12/24VDC field selectable with jumper. Provide emergency release terminals, where required, that allow the release of devices upon activation of the fire alarm system complete with fire alarm input for initiating “no delay” exiting mode. Power supply to be flat mounting design and polarized locking connections for additional option boards specified.

.1 Supply as Specified: Schlage Electronics PS-902, PS-904, PS-906

.2 Approved Alternate Thomas Access Control Hager

.2 Power Transfer: Provide a means to transfer power from frame to door stile. Devices shall be reversible and allow a full 180° door swing with 4 1/2 inch x 4 1/2 inch butt hinges or 3/4 inch offset pivots. When door is in closed position, transfer unit shall be concealed. Transfer units shall contain ten 24 awg UL approved conductors. Rating: 10 Amps at 24 VDC (Class 1 low voltage)

.1 Supply as Specified: Von Duprin EPT

.3 Electric Strikes: Grade 1, electric strike to be cUL listed burglary-resistant and electric strike for fire doors and frames. A label for single doors and B label for double doors. Electric strike to be stainless steel construction, non handed available in 12 V or 24V AC or DC with continuous duty solenoid and accept ¾" throw latchbolts. Stirke box to be adjustable to compensate for any misalignment of the door or frame with two piece plug connector for ease of installation.

.1 Supply as specified: Von Duprin 6000 Series

.2 Approved Alternate Rutherford control RCI F2164 HES 9600

.4 Mortar Guards: Provide and supply to hollow metal supplier to weld in place TA 6400 series by Thomas Access Control at frame locations where electrified hardware components are to be mounted. Provide handing of mortar guard boxes to the hollow metal frame Supplier. The hollow metal frame Supplier is responsible for ensuring the proper location of required mortar boxes.

.5 Molex Connectors: Where scheduled in the hardware sets, provide each item of electrified hardware and wire harnesses with sufficient number and wire gauge with standardized Molex plug connectors to accommodate electric function of specified hardware. Provide Molex connectors that plug directly into connectors from harnesses, electric locking and power transfer devices. Provide through-door wire harness for each electrified locking device installed in a door and wire harness for each electrified hinge, electrified continuous hinge, electrified pivot, and electric power transfer for connection to power supplies.

.6 Junction Box: Provide high quality NEMA 1, junction box to provide convenient installation for electrified hardware. Units are surface mounted 254mm high, 254mm wide, 152mm deep and includes hinged door with twist turn lock, 20 position terminal strip to accept 24 to 12 gauge wire.

.1 Supply as Specified: Von Duprin JB7

.7 Electric Washroom Accessories: Provide electric washroom relay to compete the installation of automatic door operators for universal and barrier free washroom requirements. See Division 28 for other components.

.1 Supply as Specified: Camden – Advanced Logic Relay CX-33

2.3 FINISHES

.1 Unless otherwise specified in paragraph 3.6 of this Section, finishes to be brushed chrome (BHMA 626/652). Finishes are specified as follows:

ITEM	BHMA#	DESCRIPTION	BASE MATERIAL
Hinges	630	satin stainless steel	stainless steel
Hinges	652	satin chrome plated	steel

Continuous Hinges	689	anodized aluminum	aluminum
Lock Trim	626	satin chrome plated	brass/bronze
Exit Devices	626	satin chrome plated	brass/bronze
Door Closer	689	powder coat aluminum	steel
Door Pulls	630	satin stainless steel	stainless steel
Protective Plate	630	satin stainless steel	stainless steel
Doorstops/Holders			
Overhead	630	satin stainless steel	stainless steel
Wall/Floor	630	satin stainless steel	Stainless steel
Thresholds	628	anodized aluminum	aluminum
Weatherstrip	628	anodized aluminum	aluminum
Miscellaneous			
Key Switches	630	satin stainless steel	stainless steel

2.4 CYLINDERS, KEYING SYSTEMS AND KEY CONTROL

.1 Final keying under allowance by owner.

.2 Keying requirements to be confirmed by the Owner.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Ensure that doors and frames are prepared and reinforced to receive finish hardware prior to installation.

.2 Ensure that door frames and finished floor are plumb and level to permit proper engagement and operation of hardware.

.3 Verify power is run to door opening requiring electrified hardware.

.4 Submit in writing a list of deficiencies determined as part of the inspection required in paragraphs 3.1.1 and 3.1.2 above to supervising consultant prior to installation of finished hardware. Correct door frame installation before proceeding with finish hardware installation.

3.2 INSTALLATION

.1 Hardware installers must have a minimum of five (5) years' experience in installation of hardware. Provide verification of installer's qualification to the Consultant for approval. Installers to attend review meetings conducted by the hardware distributor.

.2 Install hardware at mounting heights as specified in the manufacturer's templates or specific references in approved hardware schedule or approved elevation Drawings.

.3 Where mounting height is not otherwise specified in the Drawings, install hardware at mounting heights as indicated in paragraphs 1.5.1 and 1.5.2 in this Section.

.4 Install hardware using only the manufacturer supplied and approved fasteners in strict adherence with the manufacturer's published installation instructions.

.5 Ensure locksets / latchsets / deadlocks are of the correct hand before installation to ensure that the cylinder is in the correct position. Handing is part of the installation procedure.

.6 Ensure that exit devices are of the correct hand and adjust device cam/drive screw for proper outside trim function prior to installation. Handing is part of the installation procedure.

.7 Follow manufactures installation instructions. Adjustment of door closers is inclusive of spring power, closing speed, latching speed and back-check, valve screws to achieve backcheck at the time of installation.

.8 Adjust delayed action door closers to forty (40) second delay for barrier free accessibility and movement of materials. Time period to be approved by the Owner.

.9 Install head seal weatherstrip prior to installation of soffit mounted hardware. Trim, cut and notch thresholds and saddles neatly to minimally fit the profile of the door frame. Install thresholds and saddles in a bed of caulking completely sealing the underside from water and air penetration.

.10 Counter sink through bolt of door pull under push plate during installation.

.11 Install blocking material in cavities of metal and wood stud walls and partitions. Located concave and convex type door bumpers at the appropriate height to properly contact protruding door trim.

.12 Outlet back boxes, provisions for power, conduit complete with pull strings for security systems power and control boxes for integrating of security system with fire alarm system and coordination of complete system to be furnished under Division 26 – Electrical.

.13 The authorized system integrator shall be responsible for mounting card readers, controllers, master controllers, input panels and interface with Electrical Access Control (EAC) hardware and power supplies. They are also responsible for low voltage wiring, wire terminations, final hookup, testing, system setup, warranty and owner turnover with training

3.3 FIELD QUALITY CONTROL

.1 Verify each door leaf opens closes and latches. Inspect fire rated openings to ensure they are installed in compliance with NFPA 80 requirements. Test access control system and electrified hardware devices for proper operation with owner to sign off on verification of operation. Verify electric door release hardware operates to close the door upon activation of the fire alarm system.

.2 Perform bi-monthly on-site inspections during hardware installation and provide inspection reports listing progress of work, unacceptable work and corrective measures. Repair or replace as directed by the Consultant.

.3 Before completion of the work but after the hardware has been installed, submit a certificate to the Consultant stating that final inspection has been made and that hardware has been checked for installation and operation.

3.4 ADJUSTING AND CLEANING

.1 Check and make final adjustments to each operating item of hardware on each door to ensure proper operation and function.

.2 Adjust doors with self-closing devices or automatic closing devices for operation after the HVAC system is balanced and adjusted. Adjust spring power of non sized door closers to close and latch the door.

.3 Hardware to be left clean and free of disfigurements.

.4 Instruct owner personnel in the operation, adjustment and maintenance of hardware.

.5 Check locked doors against approved keying schedule.

3.5 PROTECTION

.1 Protect hardware from damage during construction. Wrap locks, panic hardware, and fire exit hardware, door pull trim with kraft paper or plastic bubble materials to protect finish from damage until date of substantial completion. Remove and reinstall or where necessary, use temporary hardware to maintain finish in new condition and maintain manufacturer's warranty.

3.6 HARDWARE GROUPS

END OF SECTION

Updated through ADD#10

PART 1 - GENERAL

SEE ADD#12 Q#338

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included:

.1 Provide glass and glazing for applications including, but not limited to the following:

.1 glazing for architectural woodwork.
.2 glazing for hollow metal doors.
.3 glazing for borrowed lites and screens.
.4 glazing for flush wood core doors.
.5 glazing for aluminum doors, entrances and storefronts.
.6 miscellaneous specialty glass, gaskets, tapes and glazing materials

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 In particular address the following items:

.1 Prior to commencing work of this Section arrange for the manufacturer's technical representative to review with, the Contractor and Consultant, procedures to be adopted and conditions under which work shall be performed. Inspect surfaces to determine adequacy of existing and proposed conditions.
.2 Coordinate installation with related Sections referenced herein.
.3 Coordinate and verify with tempered glass manufacturer criteria for roll wave factor (RW) to ensure optimal flatness in the glass assemblies;

.4 Cooperate fully with Subcontractors that are performing the work of other Sections and promptly proceed with the work of this Section as rapidly as job conditions permit.

.5 Cooperate.Cooperate with Subcontractors that are performing the work of other Sections for the application of all miscellaneous specialties.

.6 Supply items to be built-in in ample time to be incorporated into work of other Subcontractors, together with measurements and other information required for location of it.

.7 Ensure work which may create dust does not proceed during work related to painting and final finishing.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials. Provide gloss measurements for acid etched glazing.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Samples: Submit samples of materials identifying quality and type of glass if required by Consultant before commencing work. Ensure samples are clearly labelled with manufacturer's name and type. Submit the following samples:

.1 fire resistive glass

.2 mirrors,

.3 decorative glass

.4 film types including decorative types and custom films with graphics and special colours.

.5 etched glass

.6 bird deterrent glass

.4 Test and Evaluation Reports:

.1 Provide adhesion test reports on metal and glass tested in accordance with ASTM C794, 14 Day cure and 7 Day submersion.

.2 Provide to sealant manufacturer, Shop Drawings showing size of lites, design loads and sealant dimensions for sealant manufacturer's evaluation and statement on stress.

.5 Shop Drawings: Submit Shop Drawings in accordance with Section 01 30 00. Ensure Shop Drawings indicate material characteristics, details of construction, connections and relationship with adjacent construction. Where required, ensure Shop Drawings are prepared and stamped by a Professional Engineer licensed in the Province of Ontario.

.6 Product Certificates:

.1 Submit certificates signed by manufacturers of glass and glazing Products certifying that Products furnished comply with requirements of this Section. In particular, submit data substantiating that tempered, laminated and insulated glazing units are tested in accordance with applicable standards specified herein.

.2 Adhesion and Compatibility: Provide compatibility and adhesion test reports from sealant manufacturer indicating that glazing materials were tested for compatibility and adhesion

with glazing sealants. Include sealant manufacturers interpretation of test results relative to sealant performance and recommendations for primers and substrate preparation needed for adhesion.

.7 Maintenance Data: Provide maintenance data indicating cleaning instructions for inclusion into the maintenance manual in accordance with the requirements of Section 01 70 00.

1.7 QUALITY ASSURANCE

.1 Installer's Qualifications:

.1 Ensure work of this Section is performed by an experienced installer trained, experienced and familiar with glass and glazing methods and standards specified herein.

.2 Provide work of this Section executed by competent installers with a minimum 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

.2 Fabricator's Qualifications:

.1 Insulating Glass Fabricator: Ensure fabricator belongs to Certified Fabricator Program and comply with CAN/CGSB 12.8 and/or ASTM E2190 testing.

.2 Provide work of this Section executed by manufacturer having 10 years' experience in the manufacture and fabrication of the glass and glazing of type and quality shown and specified herein. Submit proof of experience upon request.

.3 Licensed Professionals: Employ a full time structural Professional Engineer registered in the Province of Ontario, carrying minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance in accordance with applicable codes and regulations, review design documents, and Provide site administration and inspection of this part of the Work.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Preconstruction Testing: Submit to sealant manufacturer samples of each type of glass, gasket, glazing accessory and glass framing member that will contact or affect glazing sealants for compatibility and adhesion testing. Submit test samples in sufficient time for testing and analysis of results to prevent delay in progress of work.

.6 Mock-ups:

.1 Provide mock-ups in locations designated by the Consultant and as specified in individual Sections for glazed systems and assemblies to demonstrate quality of workmanship.

.2 Prior to full production and final installation of tempered glass, submit full-size mock ups of glass assemblies; Ensure roll wave in glass assemblies are placed parallel to window sill. Allow the Consultant to view the assemblies in conditions similar to the Project locations under various light exposures and times of Day to establish acceptable optical distortion.

.3 Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements: Deliver glass and associated materials to Site in original crates and containers with the manufacturer's name and brand distinctly marked thereon and with glass labelled as to types. Do not remove labels on glass until after work is accepted by the Consultant.

.2 Storage and Handling Requirements: Store materials within the building, in a clean, dry location, acceptable or as designated by the Consultant. Fully protect materials from damage of any kind until ready for use.

1.9 PROJECT CONDITIONS

.1 Environmental Requirements: No glazing done when temperature is less than 7 deg C (44 deg F) or sash or frames are wet, damp or frosted.

.2 Protect work of other trades from damage resulting from the work of this Section.

.3 Identify glazed openings immediately following glass installation. Use coloured tapes or flags suspended near, but not in contact with glass. Attach to frames or surround with suitable non-staining strippable adhesives or tapes.

1.10 WARRANTY

.1 The Contractor warrants mirrors for period of 10 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with the General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: visual distortion, deterioration of silvering on mirrors.

.2 The Contractor warrants laminated glass for period of 5 years from Substantial Performance of the Work against defects and deficiencies in accordance with the General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no additional expense to the Owner. Defects include but are not limited to: deterioration, edge separation, delamination, material obstructing vision glass and blemishes exceeding those allowed by GANA (LGSA) standards. Upon notification of such deterioration within the warranty period, Provide full replacement of glass units showing defects at no additional cost to Owner.

.3 The Contractor warrants fire resistive glass for a period of 5 years against defects and/or deficiencies in accordance with the General Conditions of the Contract.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Comparable Products from the manufacturers listed herein will be considered provided they meet the requirements of the Drawings, schedules and this Specification, offering functionally, aesthetically equivalent Products in the Consultant’s opinion and subject to Consultant’s review.

.1 Glass and Glazing:

.1 AGC Flat Glass North America, Ltd.
.2 Guardian Industries Corp.
.3 McGrory Glass
.4 Pilkington Special Glass Limited
.5 PPG Canada Inc.
.6 Schott North America Inc.
.7 Trulite Industries Limited
.8 Viracon
.9 TGP
.10 Walker Glass

.2 Architectural Decorative Glass

.1 AGC
.2 Goldray Industries Ltd.
.3 Skyline Design
.4 Walker Glass, or

.3 Polycarbonate Mirrors:

.1 Plaskolite, Inc;
.2 Curbell Plastics, Inc.

.4 Convex Surveillance Mirrors:

.1 CR Laurence;
.2 Security Mirror Industries Ltd.

.5 Glazing Security Films:

.1 3M Films;

.6 Glazing Decorative Films:

.1 Decorative Films;
.2 Llumar;

.7 Glazing Sealants and Gaskets:

.1 Dow Corning;
.2 GE Silicones;
.3 Tremco Canada;

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Fire-Resistive Characteristics:

.1 Fire rated door assemblies shall comply with NFPA 80; tested, inspected according to NFPA 257 and shall be acceptable to Authorities Having Jurisdiction.
.2 Where required (60, 90 min Doors, 120 mins) Provide fire resistive glass tested in accordance with CAN/ULC S101 as applicable and acceptable to Authorities Having Jurisdiction for specific application.

.2 Glass and glazing used in this Project shall be designed in conformance with these Specifications, CAN/CGSB-12.20-M, the OBC and regulations of Authorities Having Jurisdiction. In case of conflict, the Contractor shall comply with most stringent requirements.

.3 Glass and glazing systems shall be, where applicable, watertight and airtight capable of withstanding thermal movement and wind and impact loads without failure of any kind, including loss or breakage of glass, failure of seal or gaskets, exudation of glazing sealants, and excessive deterioration of glazing materials.

.2 Design and Performance Requirements:

.1 Provide glass for work of this Section free from bubbles, waves, discolouration and other defects, of types specified herein for locations indicated on Drawings or noted on Door Schedules. Ensure glass bears manufacturer's label indicating quality and testing agency certifications. Leave labels in place until final cleaning.

.2 Perform work of this Section in accordance with GANA - Glazing Manual; www.glasswebsite.com and LSGASM - Standards Manual for laminated glazing installation methods.

.3 Ensure insulating glass units are manufactured in accordance with Insulating Glass Manufacturing Quality Procedures; www.igmaonline.org

.4 Determine optical distortion in accordance with ASTM C1652 requirements of fully tempered glass substrates which have been processed in a heat controlled continuous or oscillating conveyance oven; Measure the wavelength and amplitude of the roll wave factor (RW) of glass panel using planer grid, a digital camera and other software that meets ASTM C1652 requirements.

.5 Deflection: Limit glass deflection to flexural limit of glass with full recovery of glazing materials.

.6 Confirm glazing material thicknesses by analyzing Project loads and in-service conditions. Provide glazing material for various size openings in nominal thicknesses indicated, but not less than thicknesses and in strengths required to meet or exceed performance criteria.

.7 Human Impact Load Resistance: Provide glazing materials listed and labeled as complying with testing requirements of ANSI Z97.1 - Class A.

.8 Ensure solvents and/or other volatile elements in glazing system do not affect properties and performance of materials used for edge seal and sealant glass bond.

.9 Ensure materials used for edge seals are compatible with other materials they come in contact within the glazing system. If required, perform compatibility tests to ASTM C510, ASTM C794 and ASTM C1087, or others as applicable.

.10 Use sealants and other materials in glazing system which are unaffected by long term UV light exposure.

2.3 MATERIALS

.1 Heat Strengthened Glass (HSGL): Conforming to ASTM C1048, Kind HS minimum 6 mm (1/4"). Perform heat strengthening using horizontal tong free method; surface compression in range of 3,500 to 7500 psi, preferably no higher than 5000 psi.

.2 Tempered Glass (TGL/CGL): Conforming to ASTM C1048, Kind FT or CAN/CGSB-12.1-M, Type 2 tempered, Class B float glass, Category II, minimum 6 mm (1/4"). Perform heat strengthening using horizontal tong free method; surface compression not less than 10,000 psi.

.1 Visual Distortion: Ensure glass is tempered by the horizontal toughening process only and conforms to the following roll wave factor (RW) limits measured in accordance with ASTM C1652 requirements:

.1 Roller Wave: +/– 0.15 mm over 300 mm.
.2 Edge Dip: 0.25 mm maximum.

.2 Provide at all locations unless indicated otherwise.

~~.3 Laminated Glass (GL-1 and GL-1A): Provide glass laminated to interlayers to produce laminated lites free of foreign substances, air and glass pockets. [TBD]~~

~~.1 Interlayer: clear PVB interlayer of thickness as indicated in specific assemblies.~~

.4 Intumescent Fire Resistive Glass ~~(FRGLI):~~ (FGLI)

.1 Conforming to CAN/ULC S101 for fire resistance rating indicated; and impact and safety rated in accordance with ANSI Z97.1 – Class A.

.2 Provide units composed of multiple layers of annealed glass as specified herein laminated with intumescent interlayer in thicknesses required to suit design and fire resistive requirements.

.1 Acceptable Products:

.1 "Pyrostop" by Pilkington; or
.2 "Contraflam" by VetroTech;
.3 "Pyrobel" by AGC; or
.4 "Superlite II-XL" by SaftiFirst;
.5 or Equivalent to the above.

.2 Provide at all fire-rated locations unless indicated otherwise.

~~.5 Polycarbonate Security Glazing (SGL)~~

~~.1 Glass-Clad Polycarbonate: ASTM C 1349, and other requirements specified.~~

~~.2 Bullet Resistance Protection Level: Level 3 per UL 752~~

~~.3 Minimum Overall Unit Thickness: 30 mm (1-3/16 inch)~~

~~.4 Unit Makeup: Multiple Laminations of glass and polycarbonate as necessary to meet performance requirements specified in this Section. Exposed polycarbonate is not acceptable.~~

~~.5 Acceptable Manufacturers:~~

~~.1 Global Security Glazing~~
~~.2 OldCastle Glass~~
~~.3 Prelco.~~
~~.4 or Equivalent to the above.~~

~~.6 Spall-Resistant Film: Provide composite of clear polyvinyl butyral film and clear abrasion-resistant polyester film. Provide on threat side.~~

~~.1 Acceptable Products: DuPont Glass Laminating Solutions, DuPont Company; SpallShield or approved Equivalent.~~

.6 Frameless Mirrors ~~(MIR-3 and MIR-4)~~:

.1 Conforming to ASTM C1503, Mirror Select Quality, size(s) as shown on Drawings, 6 mm (1/4") thick float glass with process deposit of 5 silver coats, 3 copper coats and final protective seal.

.2 Mirror Adhesive: Compatible with silver coatings, copper coatings and protective seal applied to mirrors, recommended by manufacturer to hold mirrors permanently in position without visible signs of mirror deterioration throughout warranty period. Provide Low-VOC mirror adhesive material recommended by the glass fabricator.

.3 Edge Treatment: Square and polished. Silvered Seal edges after edge treatment to prevent chemical or atmospheric penetration of glass coating.

.4 Extruded-Aluminum Top and Bottom Trim: 1.3 mm (0.05") thick aluminum J-channels with return that produces glazing channel to accommodate mirrored glass thickness indicated.

.1 Bottom Trim: J-channels formed with front leg and back leg, and not less than 20 mm (7/8") in height.

.1 Acceptable Products: "CRL Standard Bottom J Channel Series" by CR Laurence; or equivalent.

.2 Top Trim: J-channels formed with front leg and back leg, and not less than 25 mm (1") in height.

.1 Acceptable Products: "CRL Standard Top - J-Channel Series" by CR Laurence; or equivalent.

.3 Aluminum Finish: Satin anodized.

.7 Thermally Insulated Glazing Materials: Refer to Section 08 44 00.

.8 Glazing Films:

.1 Dimensionally stable cast film, minimum 0.05-mm (2-mil) thick, with pressure-sensitive clear adhesive back for adhering to glass and releasable protective backing.

.2 Provide film with factory edge with maximum tolerance of 1.5 mm (1/16") gap between film edge and glass stop. Provide tamper-resistant clear sealant at edges of film at glass stops.

.3 Locate films on glass doors and other glazed areas indicated on Drawings and Schedules to meet code requirements. Apply film to non-public side of glass unless noted otherwise.

.4 Film Colours and Graphics: to be determined at a later date by Consultant from manufacturer's full range including custom colours to match approved samples.

.5 Apply films in sizes, extents and cutouts to suit design requirements.

.6 Security Films (FILM-S): Provide security Film "Ultra S800 Series" by 3M or equivalent by Ace Security Laminates. Provide film conforming to CPSC 16 CFR Category II (400 ft/lb) and ANSI Z97.1. Colour: As selected by the Consultant at a later date.

.7 Decorative Film Types:

.1 Translucent Film (FILM1): Provide "SOLYX SXWF-WF White Frost" by Decorative Films or Equivalent by 3M or Llumar.

.2 Opaque Film (FILM2): Provide " SOLYX SXWF-WB White/Black Out" by Decorative Films or Equivalent by 3M or Llumar.

.9 Glazing, Sealing Compounds and Accessories:

.1 Ensure glazing, sealing compounds and accessories are compatible with all contact surfaces of frames, accessories used in glazing system and contact surfaces of compounds used in glazing systems. Wood or other organic materials are not acceptable for use in glazing systems.

.2 Glazing Compound: Non-hardening modified oil type. Colour to match adjacent surfaces unless indicated otherwise.

.3 Sealant Compound: In accordance with Section 07 92 00. Provide one component type, elastomeric chemical curing, CAN/CGSB-19.13-M, Class G-2-25-A-N or ASTM C920, Type S, Grade NS Class 25 or one component, silicone base solvent curing. Colour: to match adjacent surfaces unless indicated otherwise.

.4 Elastomeric Joint Sealants: In accordance with Section 07 92 00 and ASTM C920.

.5 Sealant for Interior Non-Structural Glass-to-Glass Butt Glazing Installation: Translucent 1 part silicone sealant conforming to CAN/CGSB-19.13-M and ASTM C920, "Tremsil 200" by Tremco Canada or "DC 999" by Dow Corning Canada.

.6 Cellular Gaskets for Compression Glazing: ASTM C509 cellular, elastomeric, preformed, black. Closed cell neoprene or EPDM extrusions including molded corners where applicable by Tremco Canada or Equivalent.

.7 Dense Gaskets for Compression Glazing: ASTM C864, Option II or ASTM C1115, Type C, dense neoprene or EPDM extrusions, 60 and 70 Durometer density including molded corners where applicable by Tremco Canada or Equivalent.

.8 Glazing Splines: Neoprene or EPDM manufacturer's standard dry glazing splines to suit aluminum extrusions. Colour to match adjacent surfaces unless indicated otherwise.

.9 Glazing Points and Wire Spring Clips: Corrosion resistant, manufacturer's standards.

.10 Edge Blocking for Glass: 60 - 70 Durometer neoprene, silicone or EPDM, channel shaped, 100 mm - 150 mm (4" - 6") long.

.11 Setting Blocks: 7 mm x 100 mm (5/16 x 4") EPDM or extruded 80-90 Durometer neoprene. Width: 1.6 mm to 3 mm (1/16" to 1/8") less than design glazing pocket width.

.1 Only use EPDM at insulating glass units.
.2 At fire-rated glazed doors and partitions, use similar sized fire-rated silicone as recommended by the fire-rated glass manufacturer and identical to Product used in test assembly to obtain rating.

.12 Lateral Shims: Neoprene, silicone or EPDM, 40 - 60 Durometer, 100 mm (4") long or as required.

.13 Compression Glazing Gaskets for interior aluminum frame glazing: EPDM, neoprene, thermoplastic or other acceptable material with Shore A Durometer of 35 (± 5). Ensure material has sufficient thickness to allow 25% compression when installed. Provide "VISIONstrip®" by Tremco Canada or Equivalent by Armet, Dow Corning or PTI (or Equivalent) having the following characteristics:

.1 Resistance to permanent set: 30% maximum
.2 Tensile Strength: 2000 psi (1500 psi for silicone) minimum
.3 Minimum elongation at break: 300% (700% for silicone)

.14 Compression Glazing Tape: "Polyshim II Tape" by Tremco Canada or Equivalent with 60 durometer hardness. Ensure tape is sufficiently wide and thick to completely cover bite area of glazing unit when unit is pushed into place.

.15 Interior Structural Glazing Sealant:

.1 In accordance with Section 07 92 00. Provide one component, chemical curing, silicone based sealant, conforming to ASTM C1184 and CAN/CGSB-19.13-M (Classification MCG-2-25-A-N) unless otherwise indicated.
.2 Ensure sealant is UV resistant, ozone resistant, non-bleeding, non-staining and capable of supporting its own weight, weight of glazing units and other specified or referenced loads to meet design criteria; in conformance with OBC requirements. Where applicable, ensure silicone sealant is compatible with edge-seal of insulated glass units. Acid curing is not acceptable.
.3 Acceptable types for shop glazing: "Proglaze II Multi Component" by Tremco Canada; or "Ultraglaze 4400" (where recommended by manufacturer) by GE Silicones; or "DC-983" by Dow Corning Canada (or Equivalent).
.4 Acceptable types for field glazing: "Spectrum® 2 or Proglaze SG" by Tremco Canada; or "Ultraglaze 4000/4400" by GE Silicones; or "DC-795" by Dow Corning Canada (or Equivalent).

.10 Primer Sealers and Cleaners: To glass and plastic glazing manufacturer's standards.

2.4 FABRICATION

.1 Fabricate glazing units in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of Product manufacturer and referenced glazing standard, to comply with system performance requirements.

.2 Label each lite of glazing with registered name of Product and weight and quality.

.3 Check dimensions on job site before cutting materials.

.4 Grind and chamfer edges of unframed glass and mirrors. Grind and chamfer edges of glass shelves and sliding doors.

.5 Ensure minimum bite or lap of glazing on stops and rabbets as recommended by glazing manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work.

.2 Obtain glass dimensions on the job site. Ensure glass is not more than 4 mm (3/16") less than rebate size in either dimension, with allowance for edge spacers, shims and setting blocks as required.

.3 Ensure framing to be glazed is plumb, secure and permanently fixed in position.

.4 Notify the Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 PREPARATION

.1 Thoroughly clean glass rebates and glass of dust, dirt, mortar and other foreign materials prior to glazing. Remove oils and grease with non-staining solvents such as Xycol or Methyl Ethyl Ketone solutions.

.2 Properly prime, before glazing, glazing rebates in wood doors.

3.3 INSTALLATION

.1 If required, thoroughly mix glazing compound as recommended by manufacturer. Thinning of glazing compound will not be permitted.

.2 Carefully remove glazing stops and replace after glazing. Take care to prevent damage to stops.

.3 Doors, Screens, Sidelites and Interior Windows:

.1 Place setting blocks on sill at 1/4 points from each corner unless otherwise directed by glazing manufacturer.

.2 Place continuous glazing gaskets on edges of glass.

.3 Centre and space each piece of glass with spacers located and installed according to manufacturer's directions.

.4 Place glass so no voids occur between glass and glazing material, and glazing stops.

.5 Secure glass in place with stops, secured in place with screws.

.4 Glazing Sealant:

.1 Compatibility: Select sealants with proven compatibility with surfaces contacted in installation and under service conditions indicated, as demonstrated by testing and field experience.

.2 Apply glazing sealant to clean, dry, grease and oil free surfaces. Provide exposed glazing sealant smooth, free from ridges, wrinkles, air pockets and embedded foreign materials.

.3 Prime surfaces if required by the glazing sealant manufacturer.

.4 Trim glazing sealant flush with tops of stops and glazing channels.

.5 Remove excess glazing sealant or droppings which would set up or become difficult to remove from finished surfaces. Remove excess sealant immediately. Do not use chemicals, scrapers, or other tools which would affect finished surfaces.

.5 Interior Glazing:

.1 Fire Rated Hollow Metal Doors and Screens:

.1 Set glass in fire rated metals doors and screens on continuous setting block with 3 mm (1/8") gap between glazing stop glass and embed in glazing compound in accordance with NFPA 80 and the OBC requirements. Strike and point exposed joints between metal and glass or Install glass in accordance to ULC tested proprietary methods of installation.

.2 Tape/Tape Method:

.1 Cut glazing tape to proper length and Install against permanent stop projecting 1.5 mm (1/16") above sightline.
.2 Place glazing tape on free perimeter of glass projecting 1.5 mm (1/16") above sightline.
.3 Trim off excess tape to sightline.

.3 Combination Method-Tape/Sealant:

.1 Cut glazing tape to proper length and Install against permanent stop projecting 1.5 mm (1/16") above sightline.
.2 Fill gap between glass and applied stop with sealant to depth equal to bite of frame on glass to uniform and level line.
.3 Trim off excess tape to sightline.

.4 Compound/Compound Method:

.1 Apply sealant to back and bottom of rabbet.
.2 Bed glass in position with non hardening compound sealant.
.3 Position and secure glass of smaller dimension only using spring wire or glaziers' clips. Apply face compound and trim sealant to slope away from light, OR Fill gaps between glass and stops with compound until flush with sightline and tool to smooth straight line.

.5 Dry Method (Gaskets):

.1 Place gasket against permanent stop and position glazing sheet.
.2 Apply removable stops. Install gaskets in frame channels.

.6 Combination Method-Tape/Gasket for intermediate and large acrylic or polycarbonate lights over 600 mm x 600 mm (24" x 24"):

.1 Cut glazing tape to proper length and Install against permanent stop.
.2 Position glass.
.3 Apply removable stops and Install gaskets in frame channel.

.7 Two Sided Butt - Joint Glazing:

.1 2 side glazing at head and sill use wet, dry, or wet/dry glazing systems.
.2 Position glazing so that vertical edges are spaced slightly apart and seal with silicone sealant.
.3 Grind vertical joint with slight kerf and polish for aesthetics.

.8 Window Film:

.1 Install window film in accordance with the manufacturer’s printed instructions by experienced film applicators as recommended by the glass film manufacturer.
.2 Ensure glass surfaces are clean and ambient temperature is between 16 deg C and 38 deg C (61 deg F and 100 deg F).

.3 Whenever 2 or more pieces of the same colour translucent film are seamed together as a continuous band of colour, they shall be matched to assure uniform reflected daytime colour and transmitted night appearance.

.6 Mirrors:

.1 Install mirrors where indicated on the Drawings. Install mirrored glass units to comply with written instructions of the mirrored glass manufacturer and with referenced GANA and NAAMM publications. Mount mirrored glass accurately in place in a manner that avoids distorting reflected images.

.2 Mount plumb and level and accurately in position and secure rigidly in position.

.3 Ensure back-up wall surface is thoroughly dry, smooth and firm and primed.

.4 Provide space for air circulation and elimination of condensation between back of mirror and wall.

.5 Install frameless mirrors with mirror edges ground and polished.

.1 Locate joints in mirrors to the Consultant's direction. Generally joints are acceptable only for locations where mirrors are longer than 2400 mm (8'-0"). Provide butt joints with ground and polished edges. Apply 6 mm (1/4") wide clear silicone bead at butt joints.

.2 Secure wall and ceiling mirrors in place over special adhesive, temporarily fixing in place until adhesive sets.

.3 Set mirrors with J-trims specified in this Section. Anchor rigidly to wall construction.

.7 Security One Way Mirrors:

.1 Install security one way tempered mirrors where indicated on Drawings.

.2 Mount plumb and level and accurately in position and secure rigidly in position.

.3 Install security one way tampered mirrors according to manufacturer's directions. Ensure reflective surface shall be facing brightly lit subject side.

.4 Subject side lighting shall be bright and evenly distributed over all walls and furnishings, but shall not be shining directly onto one way tempered mirrors. Subject side shall be bright and light in colour and shade to create a bright reflected image.

.5 Observer side lighting shall be dim with no open light sources. Observer side decorations shal be subdued, non-reflective, dark and uniform. Observer side people, objects and light source shall be at reasonable distance from one way tempered mirror area.

.6 Maintain 8:1 light ratio with subject lit brightly.

.7 Install mirrors with frames according to manufacturer's direction. Use concealed tamper proof fasteners in addition to adhesive where required.

3.4 PROTECTION

.1 Provide and maintain necessary protection of completed work against damage.

.2 Do not mark or attach anything directly to exposed glass and framing surfaces.

.3 If welding is to take place above or near completed glazing work, protect glass with plywood or other suitable means to reduce likelihood of weld spatter damaging glass surfaces.

.4 Protect glass from other trades, workers, tools and other similar materials.

.5 Replace cracked, broken, or defective glass at no additional cost to the Owner and to the Consultant's satisfaction.

.6 Identification of Glazing: Mark glass lites with temporary, easily removable, large safety markings, immediately after glass installation. Maintain safety markings until final clean-up.

3.5 CLEANING

.1 Clean installed glass and metal frequently during construction. Avoid etching and staining glass and metal during construction.

.2 Clean and polish glass. Remove labels.

.3 Remove sealant and compound droppings from finished surface.

.4 Periodically clean installed glass during construction to avoid permanent etching and staining.

.5 Remove markings at time of final clean-up. Final clean-up shall be carried out in accordance with glass and sealant manufacturer's recommendations to the Consultant's satisfaction.

.6 Avoid storing materials adjacent to glass.

.7 Protect glass from other trades.

.8 At completion of work, replace any damaged (includes scratches) or broken glass provided under this Section with similar glass.

.9 Wash glazing units on both exposed surfaces in each area of Project prior to scheduled inspections. Wash glazing units as recommended by the glazing unit manufacturer

3.6 INTERIOR GLAZING SCHEDULE

.1 Refer to Drawings and Door and Frame Schedule.

END OF SECTION

SEE ADD#8
Q#249

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide louvres including but not limited to the following:

.1 Supply and Install louvers, bird screens, blank-off panels, structural supports and attachment brackets as indicated the Drawings, as specified herein, and as needed for a complete and proper installation

.2 additional steel support framing.

.3 extruded aluminum prefinished wall louvres.

.4 bird screens.

.5 Insect screens.

.6 blank off panels.

.7 sealants.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting the work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide

adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings of the Work of this Section in accordance with Section 01 30 00. In addition to minimum requirements, indicate the following:

.1 include elevations, sections and specific details for louver.

.2 show anchorage details and connections for all component parts

.3 structural supports and framing provided as part of this Section.

.4 provision for structural and thermal movement between louvres and adjacent materials.

.4 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples in sizes indicated:

.1 louvres minimum 600 mm (24") square.

.2 louvre flashing minimum 300 mm (12") square.

.5 Test Reports:

.1 Submit air flow and water entrainment performance test results.

.2 Submit test reports for air-performance, water-penetration, and wind-driven rain ratings for applicable Product being supplied complies with specified requirements and has been tested in accordance with procedures stipulated in AMCA 500-L of the Air Movement and Control Association (AMCA).

1.7 QUALITY ASSURANCE

.1 Qualifications: Provide work of this Section executed by competent installers with a minimum of 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

.2 Licensed Professionals: Employ a full time structural Professional Engineer, registered in the province of Ontario, carrying minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance,

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the Work of this Section during fabrication and erection,

.6 stamp and sign each Shop Drawing,

.7 provide site administration and inspection of this part of the Work.

.8 submit certificate validating seismic assessment and field review of this part of the Work

.3 Mock-ups:

.1 Provide mock-ups in locations designated by the Consultant and as specified louvres system and assemblies to demonstrate quality of workmanship.

.2 Prior to full production and final installation of louvre assemblies allow Consultant to view assemblies to establish quality of workmanship.

.3 Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

.4 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.5 Supervision: Arrange for Product manufacturer's technical representative to:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect installation and report unsatisfactory conditions to the Consultant.

.4 attend final inspection and to submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer's requirements.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Coordinate deliveries to comply with the Construction Schedule and arrange for strategic off-the-ground, undercover storage locations.

.2 Properly wrap louvres with protective coverings and put in suitable crates to prevent distortion and damage. Carefully unload, handle and store to prevent damage.

.3 Protect work of this Section from damage. Protect other work from damage resulting from this Work. Repair or replace damaged work to the satisfaction of the Consultant at no cost to the Owner.

1.9 WARRANTY

.1 The Contractor warrants the work of this Section for period of 5 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with the General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: extensive colour fading.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers may be acceptable subject to conformance to requirements of the Drawings, schedules and Specifications:

.1 Construction Specialties Ltd. (C/S)

.2 McGill Architectural Products (McGill)

.3 TenPlus Architectural Products Ltd. (TenPlus)

.2 Design is based on Products by TenPlus Architectural Products Ltd. Comparable Products from manufacturers listed herein offering functionally and aesthetically equivalent Products will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Design and Performance Requirements:

.1 Professional Engineer Requirements: Drawings and structural calculations shall be signed and sealed by a professional engineer licensed to practice in the Province of Ontario.

.2 Design all materials to withstand wind and snow loads as required by the OBC. Maximum allowable deflection for louvre structural members shall be l/180 or (0.75”), whichever is less. Maximum allowable deflection for louvre blades shall be l/120 or (0.50”) across weak axis, whichever is less.

.3 Air-Performance, Water-Penetration, and Wind-Driven Rain Ratings: Complying with Air Movement and Control Association International (AMCA) - AMCA 500-L for anticipated wind speed and precipitation in the geographical location of the Work.

.1 Air Performance: Not more than 0.10” inch water gauge (wg) static pressure drop at 700-fpm free-area velocity.
.2 Wind-Driven Rain Performance: Not less than 95% effectiveness when subjected to a rain fall rate of 3” per hour and a wind speed of 29 mph.
.3 AMCA Seal: Mark units with AMCA Certified Ratings Seal.

.4 Louvre members shall not vibrate when subjected to design wind loading. Provide integral bosses as required.

.5 Free Area: Minimum 50%.

.6 Thermal Movement: Design louvres to accommodate the expansion and contraction of components due to temperature changes.

.7 Refer to Section 01 83 16 for additional performance and testing requirements pertaining to the work of this Section.

2.3 MATERIALS

.1 Aluminum Extrusions: ASTM B221/B221M, exposed surfaces prefinished as specified.

.2 Aluminum Sheet: ASTM B209/B209M.

.3 Fasteners: ANSI Series 304 stainless steel tamperproof screws, bolts, nuts, washers, rivets and other fasteners.

.4 Anchoring Devices: Aluminum, non-magnetic stainless steel or other non-corrosive metal compatible with aluminum.

.5 Structural Steel Supports: Grade 300W, cleaned to SSPC-SP 3 requirements and shop primed with primer conforming to CISC/CPMA 2-75.

.6 Blades, Heads, Jambs and Sills: minimum 2.0 mm (0.08") thick; blades fixed type, stormproof profile.

.7 Bird Screen: 13 mm (1/2") square woven mesh of aluminum wire, minimum 2.9 mm (0.1142”) diameter aluminum wire cloth secured to 3 mm minimum thick extruded aluminum U frame mitred at corners. Fixed aluminum or sheet steel sheet over back of louvers may be acceptable in lieu of bird screens.

.8 Insect Screen: manufacturer's standard mesh.

.9 Blank-Off Panels: Provide where indicated on the Drawings:

.1 Aluminum sheet metal, insulated, laminated sandwich panel finished to match the associated louvre. Laminate sheet metal on both sides of insulation.

.2 Blank-off panel insulation CAN/ULC-S702, type 1, minimum 38 mm thick mineral wool.

2.4 MANUFACTURED UNITS

.1 Prefinished, Fixed, Extruded-Aluminum Louvers (LVR):

.1 Provide horizontal storm-resistant louvers.

.2 Heads, sills, jambs and mullions: one-piece structural aluminum members with integral caulking slot and retaining beads. Mullions to be with integral drains.

.3 Blades: one-piece aluminum extrusions with front lip gutter and multiple secondary gutters designed to catch and direct water to jamb and mullion downspouts. Supply louvers minimum 150 mm (6") by full depth sill flashings formed from minimum 1.27mm (0.050") thick aluminum.

.4 Material thicknesses shall be as follows:

.1 Heads, sills, jambs and mullions: 2.06mm (0.081")
.2 Fixed blades: 1.52mm (0.060")
.3 Louver Depth: Not less than 100 mm (4")

.5 Acceptable Products: "4 inch Storm Blade Louvers - Model H4451" by TenPlus Architectural Products Ltd. or Equivalent.

2.5 FABRICATION

.1 Form blades, mullions and frames to sizes and shapes indicated.

.2 Provide louvre blades with extruded aluminum blade supports in section modulus and depth to resist loads anticipated and meet design requirements specified herein. Provide integral reinforcing ribs to prevent bowing and distortion.

.3 Accurately cut and fit components to produce tight hairline junctures. Securely fasten frame members together with adequate concealed welds and seal with sealant to ensure watertight joints.

.4 Fabricate bird screens using aluminum mesh securely locked into a heavy extruded aluminum channel frame. Install bird screens on the inside of louvres and screw fasten to frames to permit removal if required.

.5 Adequately secure angle reinforcing for louvred penthouses as an integral part of the assembly. Neatly mitre and heliarc weld corners of louvred penthouses.

.6 Coat surfaces of aluminum in contact with steel, concrete and/or masonry using specified bituminous coating.

2.6 FINISHES

.1 Finish louvers after assembly.

.2 General: Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise indicated. Apply finishes in factory. Protect finishes on exposed surfaces prior to shipment. Remove scratches and blemishes from exposed surfaces that will be visible after completing finishing process. Provide color as indicated or, if not otherwise indicated, as selected by Consultant.

.3 High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both colour coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

.1 Colour and Gloss: As selected by the Consultant from the manufacturer's full range..

.4 Isolation Coating: Bituminous paint, alkali-resistant bituminous paint or epoxy resin solution to Provide dielectric separation which will dry to be tack-free and withstand high temperatures. Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers. Carboline Bitumastic 50 by Carboline Canada, or Copper Creek Top Service 760 Black by Sherwin Williams Company, 410-02 by Bakor Inc. or other Equivalent Product and manufacturer acceptable to Consultant.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

3.2 INSTALLATION

.1 Comply with the manufacturer's instructions and recommendations for installation of work.

.2 Verify dimensions of supporting structure at site by accurate field measurements so that Work will be accurately designed, fabricated and fitted to the structure.

.3 Anchor louvers to building substructure as indicated on the Drawings.

.4 Erection Tolerances:

.1 Maximum variation from plane or location shown on the reviewed Shop Drawings: 1/8" per 12 feet of length, but not exceeding 1/2" in any total building length or portion thereof (noncumulative).

.2 Maximum offset from true alignment between two members abutting end to end, edge-to edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no load conditions.

.5 Cut and trim component parts during erection only with approval of manufacturer or fabricator, and in accordance with his recommendations. Restore finish completely. Remove and replace members where cutting and trimming has impaired strength or appearance of assembly.

.6 Do not erect warped, bowed, deformed or otherwise damaged or defaced members. Remove and replace any members damaged in erection process as directed.

.7 Set units level, plumb and true to line, with uniform joints and at correct location in openings, with bird screens on inside. Method of attachment shall be concealed.

.8 Caulk perimeter of frames to adjacent materials or to supports using joint backing and sealant. Neatly tool and finish joints.

3.3 PROTECTION

.1 Protect installed materials to prevent damage by trades performing work of other Sections. Use materials that may be easily removed without leaving residue or permanent stains.

3.4 ADJUSTING AND CLEANING

.1 Immediately clean exposed surfaces of louvers to remove fingerprints and dirt accumulation during installation process. Do not let soiling remain until final cleaning.

.2 Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to material finishes. Thoroughly rinse surfaces and dry.

.3 Restore louvers and accessory components damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by the Consultant, remove damaged materials and replace with new materials.

.4 Touch up minor abrasions in finishes with a compatible air-dried coating that matches color and gloss of factory applied coating.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide labour, materials, products, equipment and services to complete the decorative metal screens work specified herein. This includes, but is not necessarily limited, to:

.1 Rooftop fixed decorative metal screens.

.2 Auxiliary materials required for complete installation.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Unless otherwise stipulated by a specific publication date in this Section or the Ontario Building Code, the latest published editions of reference standards in force as of the Bid Closing Deadline for the Project, including adopted amendments, are applicable.

1.5 SUBMITTALS

.1 Product Data: Submit product data in accordance with Section 01 33 00 for the following:

.1 Submit manufacturer's instructions, printed product literature and data sheets for the decorative metal screens work and include product characteristics, performance criteria, physical size, finish and limitations.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 78 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings in accordance with Section 01 33 00, for decorative metal screens and accessories. Include plans, elevations, sections, details, and attachments to other work. Show frame profiles and blade profiles, angles, and spacing.

.1 Show mullion profiles and locations.

.4 Samples: Submit samples in accordance with Division 01 for each type of metal finish required.

.5 Professional Engineer’s Stamped Shop Drawings and Submittals: For decorative metal screens indicated to comply with structural performance requirements and design criteria, including analysis data signed and sealed by the qualified Professional Engineer responsible for their preparation.

1.6 QUALITY ASSURANCE

.1 Welding Qualifications:

.1 Provide welding in accordance with CSA W59-M performed by a fabricator and mechanics fully approved by the Canadian Welding Bureau as specified herein.

.2 Ensure fabricator is fully certified by Canadian Welding Bureau for fusion welding of steel structures to CSA W47.1 and for fusion welding of aluminum to CSA W47.2.

.2 Fabricator qualifications. A firm experienced in producing fencing/infill/gate products similar to those indicated for the Project and with a record of successful in-service performance.

.3 Source Limitations: Obtain fixed decorative metal screens from single source from a single manufacturer where indicated to be of same type, design, or factory-applied colour finish.

1.7 FIELD CONDITIONS

.1 Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.8 WARRANTY

.1 Extended Warranty for Finishes: Repair or replace components on which finishes fail in materials or workmanship within specified warranty period.

.1 Deterioration includes, but is not limited to, the following:

.1 Colour fading more than 5 Hunter units when tested according to ASTM D2244.

.2 Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

.3 Cracking, checking, peeling, or failure of paint to adhere to bare metal.

.2 Warranty Period: 10 years from date of Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Dowco

.2 Construction Specialties

.3 Equivalent.

2.2 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Professional Engineering Design and Certification: Design decorative metal screens, including comprehensive engineering analysis by a Professional Engineer licensed to practice in the Province of Ontario, using structural performance requirements and design criteria indicated.

.2 Structural Performance: Decorative metal screens shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louvre components, noise or metal fatigue caused by louvre-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.

.1 Wind Loads: Determine loads based on pressures as indicated on Drawings.

.2 Provide additional structural supports as required to adequately secure decorative metal screens within openings.

.3 Vibration Control: Ensure louvre members do not vibrate when subjected to above wind loading. Provide integral bosses as required.

2.3 MATERIALS

.1 Steel Plates, Shapes, and Bars: ASTM A 36/A 36M or equivalent to CSA G40.20/G40.21, Grade 300W.

.2 Aluminum Extrusions: ASTM B 221M (ASTM B 221), Alloy 6063-T5, T-52, or T6.

.3 Aluminum Sheet: ASTM B 209M (ASTM B 209), Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer for required finish.

.4 Fasteners: Use types and sizes to suit unit installation conditions.

.1 Use hex-head or Phillips pan-head screws for exposed fasteners unless otherwise indicated.

.2 For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.

.3 For fastening galvanized steel, use hot-dip-galvanized steel or 300 series stainless-steel fasteners.

.4 For fastening stainless steel, use 300 series stainless-steel fasteners.

.5 For color-finished decorative metal screens, use fasteners with heads that match colour of decorative metal screens.

.5 Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187.

.6 Grout: Non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, and water-reducing and plasticizing additives.

2.4 DECORATIVE METAL SCREENS

.1 Description: decorative screen systems fabricated using durable aluminum with hidden supports and frames. Blade sizes, spacing, and configuration to be as selected by the Consultant to meet sight cutoff and aesthetic requirements.

.2 Finish: Kynar to match aluminum panels.

.3 Basis-of-Design: “Dowco with 4 in blades at 5 in o/c” or Construction Specialties VAC-301

2.5 ACCESSORIES

.1 Mounting Hardware: Provide necessary fasteners, anchors, and brackets for proper installation of screen system. Hardware to be non-corrosive, and compatible with aluminum to prevent galvanic action; conceal from view.

.2 Roof Penetration Sealing System: sealing system composed of precast modular polyester curbs, polyester adhesive and 1-part moisture-cure, self-levelling, pourable sealer.

.1 Acceptable Products: “ChemCurb System” by Chem Link Inc.,

2.6 FABRICATION

.1 Factory assemble decorative metal screens to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

.2 Maintain equal louvre blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

.3 Include supports, anchorages, and accessories required for complete assembly.

.4 Join frame members to each other and to fixed louvre blades with fillet welds concealed from view unless otherwise indicated or size of louvre assembly makes bolted connections between frame members necessary.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

.1 Compliance: comply with manufacturer's written recommendations or specifications, including product technical bulletins, handling, storage and installation instructions, and datasheets.

3.2 EXAMINATION

.1 Site Verification of Conditions: Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to installation. Commencement of work implies acceptance of previously completed work.

.2 Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

.1 Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.4 INSTALLATION

.1 Install the decorative screen system in accordance with the manufacturer's written instructions and as indicated on Drawings. Ensure components are securely fastened and aligned, with hidden supports and frames.

.2 Locate and place decorative metal screens level, plumb, and at indicated alignment with adjacent work. Use concealed anchorages where possible.

.3 Form closely fitted joints with exposed connections accurately located and secured.

.4 Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

.5 Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.

.6 Install concealed gaskets, flashings, joint fillers, and insulation as louvre installation progresses, where weathertight louvre joints are required. Comply with Section 07 92 00, Joint Sealants for sealants applied during louvre installation.

.7 Use roof penetration sealant systems at all penetrations.

3.5 FIELD QUALITY CONTROL

.1 Manufacturer Services: Arrange for Product manufacturer’s technical representative to:

.1 meet and discuss installation procedures and unique conditions at the Place of the Work.

.2 inspect substrate surfaces and recommend solutions to accommodate adverse conditions.

.3 periodically visit and inspect installation and report unsatisfactory conditions to Contractor.

.4 attend final inspection and to submit written certification that Products, systems and assemblies have been installed in accordance with manufacturer’s requirements.

3.6 ADJUSTING AND CLEANING

.1 Clean exposed louvre surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.

.2 Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.

.3 Restore decorative metal screens damaged during installation and construction so no evidence remains of corrective work. If the results of restoration are unsuccessful, as determined by Consultant, remove damaged units and replace with new units.

.1 Touch up minor abrasions in finishes with air-dried coating that matches colour and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide gypsum board work including but not limited to following:

.1 framing components (studs, channels, furring and other cold-formed metal members.)

.2 suspended ceiling components

.3 concealed reinforcing

.4 interior boards

.5 joint treatments

.6 trims and accessories

.7 ballistic-rated panels in partitions where noted on Drawings and Schedules

.8 seismic bracing

.9 auxiliary materials

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions used in this Section:

.1 Drywall: Gypsum Board.

.2 Critical Lighting: Strong side lighting from windows or surface-mounted light fixtures.

.3 Textured Wall Finishes: Regular or irregular patterns typically produced by applying a mixture of joint compound and water, or proprietary texture materials to a gypsum board surface previously coated with primer.

.4 Steel Thickness:

.1 Base Steel Thickness: Thickness of bare steel exclusive of coatings.

.2 Design Thickness: Target or "nominal" thickness used to determine structural properties of the cold formed Products.

.3 Minimum Thickness: Design thickness minus minimum allowable under-tolerance required by CSA S136 (95% of design thickness) or material specification; whichever is more stringent.

.4 Designation Thickness: For the purposes of this Section; thicknesses provided will be minimum base steel thicknesses in accordance with CSA S136 and determined by the following table:

Designation Thickness	Minimum Base Steel Thickness		Gauge No. (For reference Only)	Colour
(mils)	(in)	(mm)	Ga	
18	0.0179	0.455	25	Not Painted
33	0.0329	0.836	20	White
43	0.0428	1.087	18	Yellow
54	0.0538	1.367	16	Green
68	0.0677	1.72	14	Orange

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

.2 Coordination:

.1 Coordinate the installation of suspension systems with the installation of the overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.

.2 Coordinate installation and cooperate with mechanical and electrical trades to accommodate mechanical electrical items and any other work required to be incorporated into or coordinated with ceiling and soffit systems.

.3 Coordinate work of this Section with application of firestopping and fireproofing work to ensure assemblies provided meet requirements of Authorities Having Jurisdiction.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings indicating material characteristics, details of construction, in particular locations of construction joints, connections and relationship with adjacent construction. Take field measurements prior to preparation of Shop Drawings and fabrication to ensure proper fitting of work. Ensure Shop Drawings show following:

.1 standard construction of assemblies,

.2 sound attenuating construction,

.3 locations of access panels,

.4 elevations,

.5 finishes and relevant details of furring,

.6 seismic bracing

.4 Certificates:

.1 Submit certification from structural Professional Engineer registered in Province of Ontario stating that installed suspended ceiling system is capable of supporting its own weight and weight of lighting, grilles and other mechanical and electrical fixtures required by the Mechanical and Electrical Divisions of the Specifications and are capable of resisting seismic motions in accordance with requirements specified herein.

.2 Obtain approval of electrical utility Authorities Having Jurisdiction for support of light fixtures, by ceiling grid and supports. Adjust grid, fixing devices and support hangers as required to obtain approval.

.5 Samples: Submit samples in accordance with Section 01 30 00. Submit following samples in sizes indicated:

.1 each trim accessory minimum 300 mm (12") long.

1.7 QUALITY ASSURANCE

.1 Applicator Qualifications: Provide work of this Section executed by competent installers with a minimum of 5 years' experience in the application of the Products, systems and assemblies specified herein.

.2 Licensed Professionals: Employ a structural Professional Engineer registered in the Province of Ontario, carrying minimum $2,000,000.00 professional liability insurance, to:

.1 design the components of the Work of this Section requiring structural performance,

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, yield strengths, gauge thicknesses and joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations,

.4 be responsible for production and review of Shop Drawings,

.5 inspect the Work of this Section during fabrication and erection,

.6 stamp and sign each Shop Drawing,

.7 provide site administration and inspection of this part of the Work.

.8 submit certificate validating seismic assessment and field review of this part of the Work

.3 Mock-ups: Provide minimum 9 m2 (100 sq. ft) Mock-ups in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work. Approved Mock-ups may become part of finished Work if undisturbed at time of Substantial Performance. Provide Mock-ups for following:

.1 Level 4 and Level 5 gypsum board finish indicated herein.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials to site with manufacturer's original labels intact. Do not remove wrappings until ready for use.

.2 No outside storage permitted. Store in clean, dry area, off ground. Provide adequate ventilation to avoid excess moisture, surface relative humidity and mould or fungal growth. Remove immediately any board showing signs of mould, mildew or fungal growth.

.3 Stack gypsum board flat on level and dry surface without overhanging boards. Prevent sagging and damage to edges, ends and surfaces. Protect bagged Products from moisture or wetting.

1.9 PROJECT CONDITIONS

.1 Cooperate and coordinate with Sections applying wet trades and trades installing mechanical and electrical services.

.2 Do not Install panels that are wet, those that are moisture damaged, and those that are mold damaged.

.3 Do not Install work of this Section in any area unless satisfied that work in place has dried out and that no further installation of materials requiring wetness, moisture or dampness is contemplated.

.4 Relative humidity in area of work of this Section shall not exceed 55% for duration of the Project. Coordinate stud layout at partitions accommodating wall mounted fixtures by other trades.

.5 Ensure temperature of surrounding areas is minimum 13 deg C (55 deg F) and maximum 21 deg C (70 deg F) for 7 Days before and during application of gypsum board; maintain for 4 Days thereafter.

.6 Ensure heat is provided at appropriate time before work has started to bring surrounding and adjacent materials up to required temperature and maintained as specified. Avoid concentrated or irregular heating during drying by means of deflectors or protective screens.

.7 Ensure ventilation is provided for proper drying of joint filler and adhesive and to prevent excessive humidity. Do not force dry adhesives and joint treatment.

.8 Provide protection of materials and work of this Section from damage by weather and other causes. Protect work of other trades from damage resulting from the work of this Section. Make Good such damage immediately.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Metal Framing:

.1 Bailey Metal Products Ltd.

.2 Dietrich Metal Framing

.3 Gordon Incorporated.

.4 Trim-Tex Inc.

.5 Roll Formed Specialty

.6 Unifix Inc.

.7 Chicago Metallic

.2 Gypsum Board and Accessories:

.1 CertainTeed Gypsum Canada Inc.

.2 CGC Inc.

.3 Georgia-Pacific Canada, L.P.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Fire-resistance:

.1 Design fire rated construction including ceiling, partition or fire protective membranes and furring in accordance with OBC - Supplementary Standards SB-3 and to approved ULC or cUL design requirements.

.2 Provide materials and construction identical to those tested in assembly indicated according to standards referenced above, by an independent testing agency.

.2 Design and Performance Requirements:

.1 Gypsum Partition Design:

.1 Typical interior partitions shall be of depth indicated on the Drawings with metal studs spaced at intervals specified in this Section with minimum 1 layer of 15.9 mm thick (5/8”) gypsum board on each side. Provide heavier gauges where required for extra unsupported height or wall-mounted accessories or equipment mounting.

.2 Provide moisture resistant gypsum board (MRGB) at all wet areas and toilet rooms. Provide tile backer board at walls surrounding showers. Refer to Drawings for exact locations.

.3 As a minimum, Provide full height partitions at the following locations:

.1 mechanical, electrical, security, and telecommunications rooms, stairs, elevator shafts, chases and toilets, at fire rated walls, private offices, conference rooms, and break rooms unless otherwise indicated on Drawings.

.4 Ensure partition design can accommodate following loadings with deflection not exceeding L/240 in any direction:

.1 Minimum Lateral Load for Partitions: 0.24 kPA (5 psf)
.2 Minimum Lateral Load for Firewalls: 0.51 kPA (10 psf)
.3 Minimum Lateral Load for Cavity Shaft Walls: 0.73 kPA (15 psf)

.2 Shaft Wall and Ceiling Design:

.1 Design and size partitions surrounding elevator shafts to accommodate all internal structural members completely within the required fire resistance rated construction, while maintaining the shaft wall rating without interruption. Shaftwall system for elevator shafts shall not have pointed ends of screws penetrating into shaft.

.2 Supply components from same manufacturer. Ensure components are compatible and tested by approved independent testing facilities acceptable to Authorities Having Jurisdiction.

.3 Ensure shaftwall framing, shaftliner, gypsum board and joint treatment materials Provide 1 or 2 or 3 hour fire resistance rating as noted on Drawings when tested in accordance with ULC S101.

.3 Reinforcing:

.1 Provide reinforcing where required to support manufactured component items such as washroom accessories, casework/millwork, wall mounted equipment, expansion control covers, and similar items.

.2 Provide boxed double studs at each door jamb.

.4 Gypsum Board Ceiling Design:

.1 Design ceiling suspension system in accordance with manufacturer's printed directions and conforming to ASTM C754 requirements.

.2 Design metal ceiling suspension system to sustain loads imposed to L/360 deflection limit in any direction.

.3 Use grid of hangers, runner and furring channels securely anchored to structure above. Allow for thermal movement.

.4 Design hanger anchor and entire suspension system static loading not to exceed 25% of their ultimate capacity including lighting fixture dead loads.

.5 Design suspension system to support weight of mechanical and electrical items such as air grilles and lighting fixtures and other items with adequate support to allow rotation / relocation of light fixtures. Design sub-framing as necessary to accommodate, and to circumvent, conflicts and interferences where ducts or other equipment prevent regular spacing of hangers.

.6 Design exterior soffit and ceiling system where applicable to withstand positive and negative wind loads effect to suit Project design requirements.

.5 Acoustic Design:

.1 Provide sound rated construction having STC rating indicated in accordance with OBC- Supplementary Standards SB-3 and tested in accordance with ASTM E90 and classified according to ASTM E413 by an independent testing agency.

.2 Provide sound attenuation batts as specified herein within cavities of partitions indicated on Drawings.

.6 Seismic Performance:

.1 Design work of this Section to withstand seismic motions determined in accordance with requirements for designated seismic category for location of Project as determined by Ontario Building Code (Supplementary Standard SB-1) and CAN/CSA S832.

.7 Comply with following guide recommendations unless specified otherwise in the Contract Documents:

.1 Gypsum Association, Fire Resistance Design Manual, 20th Edition, GA-600-2012

.2 Applications Guide CGC folder SA-130;

.3 Fire Resistant Assemblies CGC folder SA-100;

.4 Acoustical Assemblies CGC folder SA-200;

.5 Abuse-Resistant Assemblies CGC folder SA-929;

.6 Moisture Resistant Assemblies CGC folder SA-934;

.7 Shaft Wall Systems CGC folder SA-926;

.8 Gypsum Fire Wall Systems CGC folder SA-925.

2.3 MATERIALS

.1 Framing Members:

.1 Comply with ASTM C754 for steel framing and conditions indicated.

.2 Steel Sheet Components: Comply with ASTM C645 requirements for metal, unless otherwise indicated.

.3 Minimum base-metal thicknesses indicated in this Section are minimums, Provide heavier thicknesses where required at unrestrained heights, to frame openings or for impact resistance requirements.

.4 Ensure all studs are screwable with crimped web and returned flanges and in maximum continuous lengths practicable.

.5 Provide knockout openings in stud webs at 600 mm (24") o.c. to accommodate (if required) horizontal mechanical and electrical service lines and bracing.

.6 Galvanized sheet steel: Conforming to ASTM A653/A653M, structural and commercial quality sheets; specially treated by phosphate conversion process if steel is to be exposed and finish painted.

.7 Hot-Dip Galvanizing: Conforming to ASTM A123/A123M, for galvanizing steel and iron Products; and ASTM A153/A 153M, for galvanizing steel and iron hardware.

.8 Protective Coating: All framing members shall be coated as follows: ASTM A653/A653M, G60 (Z180) unless otherwise noted.

2.4 FRAMING COMPONENTS

.1 Partition Framing

.1 Regular Steel Studs:

.1 Minimum Base-Metal Thickness: 18 mils (0.0179 inch - 0.455 mm – 25 ga - Not Painted)

.2 Depth: As indicated on Drawings.

.3 Locations: all gypsum board partitions unless otherwise indicated.

.2 Heavy Duty Steel Studs:

.1 Minimum Base-Metal Thickness: 43 mils (0.0428” – 1.087mm – 18ga – Yellow) unless otherwise indicated.

.1 Provide 54 mils (0.0538” – 1.367mm - 16ga – Green) boxed studs to frame all openings unless otherwise indicated.

.2 Depth: As indicated on Drawings.

.3 Locations:

.1 At abuse-resistant and impact-resistant partitions.
.2 Where required for unrestrained heights or in openings.
.3 As indicated on Drawings and schedules

.3 Specialty Studs:

.1 High Capacity Studs: Provide studs produced from high quality materials using patented construction to achieve increased spans while maintaining structural and acoustic integrity

.1 Minimum Base-Metal Thickness: 18 mils (0.0179" – 0.455 mm – 25 ga – Not Painted) unless otherwise indicated.
.2 Depth: As indicated on Drawings. Conform to limiting height table substantiating performance of sections as recommended by manufacturer.
.3 Locations:

.1 Where required in order to maintain acoustic ratings
.2 As indicated on Drawings and schedules

.4 Acceptable Product: B18™ (HARD BOARD) Stud by Bailey Metal Products Ltd or equivalent.

.2 Shaftwall Framing: Studs and runners including C-T, C-H and E studs and J-L Corners, J track and J runners and other associated components designed for use in shaft wall construction and as specified by shaftwall liner panel manufacturer.

.1 Minimum Base-Metal Thickness: 33 mils (0.0329" – 0.836mm – 20ga – White).
.2 Depth: as indicated on Drawings.

.4 Floor and Ceiling Partition Runners:

.1 Minimum Base-Metal Thickness: 18 mils (0.0179" – 0.455 mm – 25 ga – Not Painted)

.2 Dimensions: 30 mm (1/4") minimum leg length x width to suit stud depth. Provide top track with longer legs where required to compensate for deflection of structure above.

.5 Furring Channels: Conforming to ASTM C645.

.1 Hat-Shaped Furring Channels:

.1 Minimum Base Metal Thickness: 18 mils (0.0179" – 0.455 mm – 25 ga – Not Painted)
.2 Depth: 38 mm (1-1/2") unless otherwise indicated on Drawings.

.6 Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.

.1 Acceptable Products: "Multi-Slot Track" by Bailey complete with Bailey Top Deflection Clip (TDC) or VertiClip SLD or VertiTrack VTD Series by The Steel Network Inc; to accommodate anticipated deflections and loadings or equivalent.

.2 Suspended Ceiling Components: At Contractor's option, Provide either traditional framed suspension system components consisting of tie wires, hangers, anchorages channels and attachments OR Provide manufactured direct-hung grid suspension system as specified herein.

.1 Traditional Framing:

.1 Tie Wire: ASTM A641/A 641M, Class 1 zinc coating, soft temper, minimum 1.291 mm (0.051" – 16 AWG) diameter wire.

.2 Wire Hangers: ASTM A641, soft, Class 1 galvanized wire, soft temper, minimum 3.26 mm (0.129" – 8 AWG) diameter.

.3 Furring anchorages: ASTM C754, 1.291 mm (0.051" – 16 AWG) diameter galvanized wire ties, manufacturer's standard wire type clips, bolts, nails or screws as recommended by furring manufacturer.

.4 Hanger Attachments:

.1 Cast-in-Place Concrete Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E488 by an independent testing agency.

.1 Acceptable Products: "HHDCA Ceiling Hanger" by Hilti (Canada) Inc. or Equivalent.

.2 Composite Deck Anchors: Ceiling wire fastening assembly, "X-CW Ceiling Wire Assembly" by Hilti or Equivalent.

.3 Attachment to structural steel components: Comply with ASTM C754 unless otherwise indicated

.5 Carrying Channels: ASTM C645, Cold-rolled, commercial-steel.

.1 Minimum Base Metal Thickness: 18 mils (0.0179" – 0.455 mm – 25 ga – Not Painted)

.1 For Gypsum Board: Provide 33 mils (0.0329" – 0.836mm – 20ga – White) thickness.

.2 For Cement Board: Provide 54 mils (0.0538" – 1.367 mm – 16 ga – Green) thickness

.2 Dimensions: 38 mm (1-1/2") high with 19 mm (3/4") flanges, for primary carrying member in suspended ceilings and as horizontal stiffeners or bracing in metal stud systems.

OR

.2 Grid Suspension System for Ceilings:

.1 ASTM C645, direct-hung system composed of commercial-quality, cold-rolled steel, main beams and cross-furring members that interlock with following characteristics:

.1 Main Tees: Fire-Rated Heavy Duty classification with integral reversible splice with knurled face.
.2 Cross Members: Fire-Rated members with knurled face.
.3 Cross Tees: cross tee 38mm high x 1220mm long with 38mm wide face.
.4 Furring Channel: furring channel 22mm high x 1220mm long with 38mm face.
.5 Accessory Cross Tees: Complete with knurled faces.
.6 Wall moldings: Single web with knurled face.
.7 Accessories: Transition clips, Splice clips, wall attachment clips, splice plates and dome hubs as recommended by manufacturer for specific applications.
.8 Finish: Hot-dip galvanized.

.2 Acceptable Products:

.1 "Drywall Grid Systems" by Armstrong World Industries, Inc.

.2 "Drywall Suspension System" by CGC Inc.
.3 Equivalent by Rockfon.
.4 or Equivalent to the above.

.3 Concealed Reinforcing:

.1 Sheet Steel Reinforcing and Backing Plates: Steel sheet for blocking and bracing in locations, lengths and widths indicated on Drawings.

.1 Minimum Base-Metal Thickness: Minimum 43 mils (0.0428" – 1.087mm – 18ga – Yellow) commercial quality cold rolled galvanized sheet steel.

.2 Structural Shapes, Plates, Reinforcements: 3 mm (1/8") New material conforming to CSA G40.20 and CSA G40.21, Grade 300W. Hot dipped galvanizing with minimum zinc coating of 600 g/m^2 to ASTM A153/A 153M

.3 Metal Studs used as Reinforcements: Minimum 43 mils (0.0428" – 1.087mm – 18ga – Yellow) studs as specified herein in locations indicated on Drawings and as required to support building components.

.1 Depth: As indicated on Drawings.

.4 Stud Spacer Bars: Pre-notched bridging and spacing bar to facilitate erection of interior, non load-bearing studs and to Provide resistance to stud rotation and displacement. Acceptable Product: "Spazzer® 9200 Spacing Bar" by Dietrich Metal Framing or Equivalent.

2.5 BOARD TYPES

.1 Interior Board Types:

.1 General-Purpose Gypsum Board (GB): Conform to ASTM C1396M. Unless indicated otherwise use 15.9 mm (5/8") thick by 1200 mm (4') wide standard facing board in maximum continuous lengths up to 3600 mm (12') with beveled and/or tapered edges with butted square ends to suit design requirements:

.1 Walls: Provide 15.9 mm (5/8") (Type X) thick with tapered edges unless otherwise specified.

.1 Acceptable Products:

.1 "Sheetrock® - Regular Gypsum Panels" by CGC
.2 "ToughRock® Gypsum Boards" by Georgia-Pacific Canada, L.P. "Air Renew Essential (Type X) Indoor Air Quality Gypsum Board" by CertainTeed
.3 or Equivalent to the above.

.2 Ceilings: 15.9 mm (5/8") thick (Type X) gypsum board or 13 mm (1/2") thick anti-sag interior ceiling gypsum board.

.1 Acceptable Products:

.1 "Sheetrock® - Regular Gypsum Panels" or "Sheetrock® - Sag-Resistant Interior Gypsum Ceiling Board" by CGC
.2 "ToughRock® Gypsum Boards" or "ToughRock® CD® Ceiling Board" by Georgia-Pacific Canada, L.P.
.3 " Interior Ceiling Gypsum Board" by CertainTeed
.4 or Equivalent to the above.

.3 Fire Rated Gypsum Board (GB): ASTM C1396M, Type X, 15.9 mm (5/8") thick by 1200 mm (4') wide gypsum board in maximum practical lengths and tapered edges as required by each fire resistance assembly.

.1 Acceptable Products:

.1 “ToughRock® Fireguard or Fireguard C” by Georgia-Pacific Canada, L.P.
.2 “Sheetrock Firecode or Firecode C Core” by CGC Inc.
.3 “Type X or Type C Indoor Air Quality Gypsum Board” by CertainTeed Gypsum Canada Inc.
.4 or Equivalent to the above.

.2 Moisture Resistant Gypsum Board (MRGB): 15.9 mm (5/8") (Type X) thick glass mat reinforced board with moisture treated core conforming to ASTM C1658M and ASTM C1396M with following characteristics:

.1 Mold Resistance Rating: 10 with no mold growth after 4 weeks exposure in accordance with ASTM D3273.

.2 Permeance (for tile backer boards at showers and other areas exposed to high moisture only): < 85.71 ng/(Pa s m²) when tested with no tile or coating and in accordance with ASTM E96.

.3 Boards containing paper or other organic materials in their composition are not acceptable.

.4 Acceptable Fiberglass mat faced (Paperless)Products:

.1 Regular-purpose type (limited moisture exposure e.g sink backsplashes):

.1 “Dens Armor Plus High performance Interior Panel” by Georgia-Pacific Canada, L.P.
.2 "SheetRock Brand Glass-Mat Panel – Mold Tough" by CGC
.3 Equivalent containing no paper or organic materials in core assembly.

.2 Tile backer board (high moisture exposure e.g showers): Refer to Section 09 30 13.

.3 Abuse-resistant Gypsum Board (ARGB): 15.9 mm (5/8") thick (Type X) board smooth paintable surface consisting of fibre-reinforced gypsum core with fibre-reinforced gypsum perlite interlayers and embedded fibreglass with moisture treated core conforming to ASTM C1396M with following characteristics:

.1 Mold Resistance Rating: 10 with no mold growth after 4 weeks exposure in accordance with ASTM D3273.

.2 Abuse resistance: in accordance with ASTM C1629.

.1 Minimum Surface Abrasion: Level 1
.2 Minimum Surface Indentation: Level 1
.3 Minimum Soft body impact: Level 1

.3 Boards containing paper or other organic materials in their composition are not acceptable.

.4 Acceptable Products:

.1 Paperless type (at locations exposed to moisture and/or at dry locations):

.1 "DensArmour Plus Abuse Guard Paperless Interior Drywall” by Georgia-Pacific Canada, L.P.,
.2 "Sheetrock Glass Mat Abuse Resistant Panel Mold Tough" by CGC Inc.
.3 Equivalent containing no paper or other organic materials.

.2 Paper-faced type (at dry locations only):

.1 “ToughRock Abuse Resistant Gypsum Board” by Georgia-Pacific Canada, L.P.
.2 “AirRenew® Extreme Abuse Resistant Gypsum Board” by CertainTeed Gypsum Canada Inc.,
.3 "Sheetrock Mold Tough Abuse Resistant Gypsum Panels" by CGC Inc.
.4 or Equivalent to the above.

.2 Shaft Walls:

.1 Liner Panels: 25 mm (1") thick (Type X), shaft wall liner panels consisting of water-resistant, noncombustible gypsum core with bevelled edges conforming to ASTM C1658 with following characteristics:

.1 Mold Resistance Rating: 10 with no mold growth after 4 weeks exposure in accordance with ASTM D3273.

.2 Fire-performance: non combustible according to CAN4-S114-M; flame spread: 0, smoke developed: 0 in accordance with CAN/ULC-S102-M.

.3 Boards containing paper or other organic materials in their composition are not acceptable.

.4 Acceptable fiberglass mat faced (Paperless) Products:

.1 Dens Glass Ultra Shaftliner by Georgia-Pacific Canada, L.P.
.2 “GlasRoc® Shaft Liner Type X” by CertainTeed Gypsum, Canada Inc.
.3 “Sheetrock Brand Glass Mat liner Panels” by CGC Inc.
.4 or Equivalent

.2 Face Boards: 15.9 mm (5/8") thick fire-rated gypsum board as specified herein.

.3 Exterior Board Types: Refer to Section 06 16 00.

2.6 JOINT TREATMENTS

.1 Conforming to ASTM C475 and gypsum board manufacturer’s recommendations. Confirm all Products with board manufacturer prior to application.

.2 For fire rated assemblies ensure setting compound is tested in accordance with ASTM E814 and ULC-S115 for required rating.

.3 Joint Tape:

.1 Interior Boards:

.1 General-Purpose Gypsum Board: Minimum 50 mm (2") wide kraft paper tape with feathered edges or fibreglass tape as recommended by manufacturer.

.2 Moisture-resistant gypsum board: Minimum 50 mm (2") wide mould resistant fibreglass mesh tape as recommended by panel manufacturer.

.3 Shaft walls: As recommended by panel manufacturer.

.2 Exterior Boards: 50 mm (2") and 100 mm (4") wide fibreglass mesh tape as recommended by panel manufacturer with pressure sensitive adhesive on 1 side.

.4 Joint Compound: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

.1 Interior Applications: Minimum application of 3 coats.

.1 Prefilling: At open joints and damaged surface areas, use setting-type taping compound as recommended by panel manufacturer.

.2 General-Purpose Gypsum Board:

.1 1st Coat (Embedding): Setting-type taping or drying-type, all-purpose compound as recommended by panel manufacturer for embedding tape and first coat on joints, fasteners, and trim flanges.

.1 Use setting-type compound for installing paper-faced metal trim accessories.

.2 2nd Coat (Fill Coat): Use setting-type, sandable topping or drying-type, all-purpose compound as recommended by panel manufacturer.

.3 3rd Coat (Finish Coat): For third coat, use setting-type, sandable topping or drying-type, all-purpose compound as recommended by panel manufacturer.

.4 Skim Coat (final coat of Level 5 finish): One of the following methods are acceptable:

.1 setting-type, sandable topping compound
.2 drying-type, all-purpose compound
.3 high-build interior coating Product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish.
.4 High Build Surface Primer in accordance with GA-214 - Recommended Levels of Gypsum Board Finish; refer to Section 09 91 00 for additional information.

.3 Moisture resistant gypsum board (MRGB):

.1 1st Coat: High density setting-type taping, low shrinkage type compound. Acceptable Products:

.1 “Durabond 90 Compound” by CGC Inc.,
.2 “High Density 90 - ProRoc” by CertainTeed Canada Inc.
.3 or Equivalent

.2 2nd Coat (Fill Coat): use drying-type, all-purpose compound as recommended by panel manufacturer.

.3 3rd Coat (Finish Coat): use drying-type, all-purpose compound as recommended by panel manufacturer.

.4 Skim Coat (where MRGB is left exposed): high-build interior coating Product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish.

.5 Sealant for Moisture Resistant Gypsum Board Edges: Provide water resistant sealant as recommended by gypsum board manufacturer and acceptable to Consultant.

.4 Abuse-resistant and Impact-Resistant Gypsum Board: Minimum 50 mm (2") wide mould resistant fibreglass mesh tape as recommended by panel manufacturer.

.5 Provide Dust Control Drywall Compound in lieu of regular all-purpose drywall compounds in existing facilities.

.1 Acceptable Products: “Dust Control Drywall Compound” by CGC Inc or “Dust Away” by CertainTeed Canada Inc.; for ProRoc M2Tech use ProRoc 90 M2Tech Ready Mix Compound or Equivalent.

.2 Exterior Applications: Use setting-type taping compound and setting-type, sandable topping compound as recommended by the panel manufacturer.

2.7 TRIMS AND ACCESSORIES

.1 Conforming to ASTM C1047 and gypsum board manufacturer's recommendations, Provide accessories used in conjunction with gypsum board assemblies to protect edges, corners and for design features. Confirm compatibility of trim and accessory Products with board manufacturer prior to application.

.2 Joint and Corner Trims: Provide paper-faced metal or plastic Products as specified herein.

.1 Paper-Faced Metal (dry locations only): Provide "CGC Beadex® Brand Paper-Faced Metal Drywall Beads And Trims" by CGC or Equivalent in the following shapes:

.1 Cornerbead.

.2 Bullnose bead.

.3 Bullnose Cornerbead: With notched or flexible flanges.

.4 LC-Bead: J-shaped; exposed long flange receives joint compound.

.5 L-Bead: L-shaped; exposed long flange receives joint compound.

.6 U-Bead: J-shaped; exposed short flange does not receive joint compound.

.7 Control joints.

2.8 AUXILLIARY MATERIALS

.1 Provide auxiliary materials that comply with installation standards referenced herein.

.2 Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

.1 Screws for Sheet Steel Members: ASTM C954, self-drilling, self-tapping gypsum board screws. Provide minimum 25 mm (1") long, #6 for single layer application; and minimum 38 mm (1-1/2") long #7 for double layer application meeting the following requirements:

.1 For single layer application over metal framing: self-drilling, self-tapping, case hardened, No. 6 contoured Phillips head or Type S bugle head. Fasteners to be corrosion resistant. Use drill point screws for abuse resistant gypsum panels.

.2 For double layer application over gypsum backing board and existing gypsum board; 38 mm (1-1/2") Type G bugle head. For each additional layer of board, increase length of fasteners proportionally.

.2 Fasteners for Cement Board: Galvanized or coated streaker type screw, 32 mm (1-1/4") long.

.3 Dust Barrier: Minimum 0.152 mm (6 mil) polyethylene, CAN/CGSB-51.33-M, Type 2.

.4 Laminating Compound: Low VOC, asbestos-free adhesive or joint compound recommended by manufacturer for directly adhering gypsum panels to continuous substrate. At fire-rated construction, use adhesive which conforms to that used in applicable fire tests.

.1 Acceptable Products:

.1 "Sheetrock brand laminating compound" by CGC Inc.

.2 "Dehydratine 9T" by W.R. Grace and Co.

.3 "Stangard Foamastic by Standard Chemicals" Ltd.

.4 or Equivalent to the above.

.5 Isolation Strip for Studs: Provide one of the following:

.1 Asphalt-Saturated Organic Felt: ASTM D226, Type I (No. 15 asphalt felt), nonperforated or CSA A123.3; No. 15 Type.

.2 Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

.1 “Rubatex” by Rubatex Corp. or “Perma-Stik 122X” by Jacobs and Thompson Inc.

.2 “Arnofoam” by Arno Adhesive Tapes Incorporated

.3 “Greyflex Expanding Foam Sealant” by Emseal Corporation.

.6 Firestop Track Top Gasket: intumescent cover for ceiling tracks to Provide fire, smoke, and acoustic ratings for head-of-wall joints between gypsum walls and concrete floor slabs.

.1 Size: To suit stud dimensions.

.1 Use only firestop top track seal Product that has been UL 2079 tested for specific fire-rated construction conditions conforming to construction assembly type, space requirements and fire-rating required for each application.

.2 Performance Requirements:

.1 Surface Burning Characteristics (CAN/ULC S102): Flame Spread: 15; Smoke Developed: 35.

.3 Size: To suit stud dimensions.

.4 Acceptable Products: "SERIES TTG Track Top Gasket" by Specified Technologies; or CFS-TTS Firestop Top Track Seal by Hilti or Equivalent.

.7 Sound Control Materials:

.1 Acoustic Insulation: As specified in Section 07 21 00.

.1 One of the following types are acceptable:

.1 Mineral Wool: CAN/ULC-S702, Type 1; ASTM C553 (Type VII) and non-combustible in accordance with requirements of CAN/ULC-S114. Acceptable Products:

.1 "ROXUL AFB" by Roxul Inc.
.2 “Thermafibre Sound Attenuation Blankets” by CGC Inc
.3 “MinWool Sound Attenuation Fire Batts” by Johns Manville.
.4 or Equivalent to the above.

.2 Mineral Glass Fibre: CAN/ULC-S702, Type 1; ASTM C553 (TYPE VII) and non-combustible in accordance with requirements of ULC CAN/ULC-S114. Acceptable Products:

.1 “EcoTouch™ QuietZone® PINK™ FiberGlas® Acoustical Batts” by Owens Corning Canada LP
.2 “NoiseReducer Sound Attenuation Batts” by CertainTeed.
.3 “Sound-Shield Formaldehyde-Free Fiber glass Insulation” by Johns Manville.
.4 or Equivalent to the above.

.2 Acoustical Sealant: Conforming to requirements of Section 07 92 00

.1 Gun applied, smoke-rated and acoustic sealant:

.1 ASTM C834, Type P, Grade -18°C and ASTM C920, Class 12.5.
.2 Flammability: CAN/ULC S102.

.3 Mold resistance: Complying with ASTM G21.
.4 Acceptable Products:

.1 QuietZone Acoustic Sealant" by Owens-Corning Canada Inc.
.2 "Tremstop Acrylic Acoustical Sealant" by Tremco Ltd.,
.3 "QuietSeal Pro" by Pabco Gypsum.
.4 "CP506 – Smoke and Acoustic Sealant" by Hilti (Canada) Limited; or equivalent.
.5 or Equivalent to the above.

.2 Acoustic Sprayed-on Sealant: Acrylic based, sprayed-on acoustic seal for sealing joint openings in non fire-rated acoustic assemblies and smoke partitions;

.1 Material Characteristics: Minimum 12.5% movement capacity.
.2 Flammability: CAN/ULC S102.
.3 Mold resistance: Complying with ASTM G21.
.4 Acceptable Products: "CP572 – Smoke and Acoustic Spray" by Hilti or Equivalent.

.3 Putty Pad for sealing electrical boxes and other penetrations: Non corrosive, easily cleanable, QuietPutty 380 by Pabco Gypsum, fire-rated, mouldable putty, to maintain performance of acoustically rated walls with penetrations such as electrical outlets, HVAC ducts, water hookups and cables. Fire rating: 1 hour fire in accordance with UL 1479 or CAN/ULC S115.

.4 Gaskets: ASTM D1056, Closed cell neoprene, 3 mm (1/8") thick x 64 mm (2-1/2") wide.

.8 Access Doors for Architectural, Mechanical and Electrical: Where supplied by Division 21, 22 23 and 26 shall be installed under this Section.

.1 Flush Non-Rated Access Doors and Frames: Fabricated from galvanized sheet steel.

.1 Door: Minimum 1.5 mm (0.060") sheet metal, set flush with exposed face flange of frame.

.2 Frame: Minimum 1.5-mm (0.060") thick sheet metal with 25-mm (1") wide, surface-mounted trim.

.3 Hinges: Spring-loaded, concealed-pin type or Continuous piano as required.

.4 Latch: cylinder lock and key.

.5 Size: As indicated on Drawings, minimum 16" x 16".

.6 Acceptable Products:

.1 "N/W Series, Flush Non-Rated Access Panels" by Nystrom Building Products; or "DW-5040" by Acudor Products Inc.; or Equivalent.

.2 Fire-Rated Access Doors and Frames: Fabricated from galvanized sheet steel.

.1 Fire-Resistance Rating: Not less than that of adjacent construction

.2 Temperature Rise Rating: As required by Authorities Having Jurisdiction but not less than 139 deg C (250 deg F) at the end of 30 minutes.

.3 Door: Flush panel with a core of mineral-fiber insulation enclosed in sheet metal with a minimum thickness of 0.9 mm (0.036")

.4 Frame: Minimum 1.5 mm (0.060") thick sheet metal with 25 mm (1") wide, surface-mounted trim.

.5 Hinges: Continuous piano type.

.6 Automatic Closer: Spring type.

.7 Latch: Self-latching device operated by flush key with interior release

.8 Acceptable Products:

.1 “Nystrom’s I-Series Insulated Access Door” by Nystrom Building Products; or “FW-5050" by Acudor Products Inc.; or Equivalent.

.9 Ballistic-Rated Panels:

.1 Conforming to UL 752, and suitable for use in fire-rated partitions tested to CAN/ULC S101, provide fiberglass panels consisting of multiple layers of woven roving ballistic grade fiberglass woven in house impregnated with a thermoset polyester resin and compressed into flat rigid sheets designed to capture projectiles with following characteristics:

.1 Nominal thickness: 13 mm (1/2”)

.2 Nominal weight: 5.25 lbs per sq. ft.

.3 Size: As required to suit installation, but not less than 1220 mm x 2440 mm (4’ x 8’)

.4 Ballistic rating: Minimum Level 3 per UL 752.

.5 Acceptable Product: “O.F. 300 Opaque Fiberglass Panels” by Armortex or equivalent by ArmorCo. (or Equivalent).

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Examine substrate for compliance with applicable requirements, including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance.

.2 Do not proceed until unsatisfactory conditions have been corrected. Beginning of installation shall indicate acceptance of substrate conditions.

3.2 PREPARATION

.1 Provide adequate ventilation to eliminate excessive moisture before commencing and during work to ensure proper drying of joint filler and adhesive. Do not force dry adhesive and joint treatment.

.2 Give a minimum of 48 hours’ notice to the Consultant to permit it to perform an inspection of the internal wall/partition elements and services prior to concealing with gypsum board.

3.3 INSTALLATION

.1 Comply with ASTM C754 unless otherwise indicated.

.1 Interior Gypsum Board Assemblies: Comply with requirements in ASTM C840 that apply to framing installation. Provide partitions complete to underside of structure, unless otherwise indicated on Drawings.

.2 Refer to Drawings for partition types and their respective sound attenuation and fire-rating requirements.

.3 Exterior Gypsum Assemblies: Comply with requirements in ASTM C1280 that apply to application of exterior gypsum panel Products.

.4 Conform to installation recommendations contained in CGC Drywall Steel-Framed Systems for metal stud partitions, ceilings, column fireproofing and bulkhead detailing.

.2 Install supplementary concealed reinforcement framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

.3 Install bracing at terminations in assemblies.

.4 Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 FRAMING SYTEMS

.1 Gypsum Board Partitions:

.1 Install studs so flanges within framing system point in same direction.

.2 Co-ordinate erection of studs and installation of service lines.

.3 Provide continuous gasket between floor tracks and structure to separate metal framing from masonry and/or concrete.

.1 Provide isolation strips under steel studs runners for stud walls constructed on slab on grades, slabs above grades, stud at roofing curbs and stud on below grade concrete slabs.

.2 Install resilient sponge tape where gypsum board ceilings abut heads of door frames and where wallboard abuts heads or jambs of exterior door and window frames.

.4 Do not secure studs to exterior window framing or to ceiling grid members.

.5 Space studs as follows:

.1 Single-Layer Application: 400 mm (16”) o.c., unless otherwise indicated.

.2 Multilayer Application: 400 mm (16”) o.c., unless otherwise indicated.

.3 Tile backing panels: 400 mm (16”) o.c., unless otherwise indicated.

.6 Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling. Align accurately.

.7 Deflection Tracks: Where framing extends to overhead structural supports, Install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.

.8 Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; Install runner track section (for cripple studs) at head and secure to jamb studs.

.1 Install two heavy duty boxed studs at each side of openings. Extend each stud through suspended ceilings and attach to underside of overhead structure.

.2 Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (12.7-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.

.9 Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.

.10 Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.

.1 Firestop Track: Where indicated, Install to maintain continuity of fire-resistance-rated assembly indicated.

.11 Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.

.12 Metal Furring:

.1 Provide furring rigid, secure, square, level or plumb, framed and erected to maintain finish dimensions and contours indicated. Allow for thermal movement.

.2 Provide furring around ducts, pipes and dropped beams occurring in finished areas and for vertical gypsum board breaks within or at termination of ceilings.

.3 Provide metal furring channels fastened to masonry or concrete surfaces in parallel rows at 400 mm (16") oc unless gypsum board is indicated to be adhered directly to masonry or concrete surfaces. Shim metal furring channels to Provide a level surface.

.13 Concealed Reinforcements in Partitions:

.1 Provide hollow structural steel, stud, angle and steel plate sections, galvanized sheet steel as specified herein where required to support manufactured components.

.2 Provide rigid and secure installation capable of offering resistance to minimum pull force requirements specified herein. In general, weld connections.

.3 Install stud spacer bars specified herein as required to restrain studs against lateral and torsional movement and to Provide supplementary horizontal bracing.

.4 Sheet Steel Reinforcing/Backing Plate: Provide galvanized sheet steel plate as specified herein where required to support manufactured components. Provide additional sheet plates, reinforcing framing studs, angles, furring channels secured between studs and other accessories to support components including, but not limited to:

.1 washroom accessories.
.2 access panels.
.3 architectural woodwork.
.4 wall mounted miscellaneous specialties and equipment.
.5 wall protection.
.6 handrails and guardrails,
.7 wall-mounted monitors.

.2 Suspended Systems:

.1 Install suspension system components in sizes and spacings indicated on the Drawings, but not less than those required by installation standards that are referenced herein for assembly types and other assembly components indicated.

.2 Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

.3 Provide additional cross-reinforcing at bulkheads and at other openings.

.4 Suspend hangers from building structure as follows:

.1 Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.

.1 Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

.2 Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, Install supplemental suspension members and hangers in the form of trapezes or equivalent devices.

.3 Wire Hangers:

.1 Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
.2 Fasten all ceiling hanger wires to structural members of floor or roof above. Where supporting member is an open web joist or truss, loop wires around bottom chord of joist or truss.
.3 Where the supporting member of roof or floor is concrete, embed wire in concrete prior to casting. Embed wire 250 mm (10”) minimum and looped three times. For precast concrete, loop wire around metal angle which is fastened to the concrete with an approved fastener.

.4 Carrying channels: Secure with hanger wire saddle-tied along channels. Provide metal furring channels at right angles to carrying channels. Attach furring channels to carrying channels with saddle-tie of double strand tie wire.

.1 Provide 25 mm (1") clearance between runners and walls. Provide splicers behind joints. Level channels to a maximum tolerance of 3 mm (1/8") over 3600 mm (12').
.2 Provide 25 mm (1") clearance between furring ends and abutting walls.

.5 Runner Attachment: Support terminal ends of each cross runner and main runner maximum 200 mm (8”) from each wall or ceiling discontinuity with wire hanger. Loop all vertical support wires around runners, joists, screw eyes, and similar items, with a minimum of three turns, then twisted about themselves a minimum of three times.

.6 Do not attach hangers to steel roof deck.

.7 Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.

.8 Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.

.9 Do not connect or suspend steel framing from ducts, pipes, or conduit.

.10 Do not support ceiling fixtures from main runners or cross runners causing excessive deflections of ceiling suspension system. In such cases, support fixture load independently by supplemental hangers within each corner.

.11 Locate fixtures to avoid eccentric loading of main runners and cross runners, except where provisions are made to prevent undesirable section rotation and displacement.

.12 Runners supporting ceiling fixtures cannot rotate more than 2 degrees under fixture loads. Devices to limit rotation shall support fixture in a manner that main and cross runners are loaded symmetrically and not eccentrically.

.13 Space suspended ceiling system components as follows:

.1 Wire hangers: maximum 1200 mm (4') o.c along carrying channels and within 150 mm (6") of ends of carrying channel runs.
.2 Carrying channels: maximum 1200 mm (4') oc and within 150 mm (6") of walls.
.3 Metal Furring: maximum 600 mm (24") o.c. and within 150 mm (6") of walls.

.5 Seismic Bracing: Sway-brace suspension systems with seismic connections, supports and Lateral-Force Bracings. Conform to requirements of ASTM E580.

.1 Install lateral-force bracing to ceilings where gypsum wallboard panels are attached by screws to metal suspension members and ceilings extend to walls;

.2 Install hanger wires splayed 90 degrees from each other at an angle not exceeding 45 degrees from horizontal plane of ceiling to satisfy force-bracing requirements. A

.3 Attach wires to main runners and place within 50 mm (2“) of intersection of cross tees. Bracing points shall not exceed 3600 mm (12’) on center with first point of bracing within 1200 mm (4’) of perimeter of suspended ceiling system.

.4 Fasten vertical uplift strut to and extends from main runner near bracing points to structural support members above. Design and installation of uplift strut shall be determined for each ceiling system to suit design requirements.

.5 Partition Bracing: Brace nonbearing interior partitions to suspended ceilings by providing No. 12 gage galvanized, soft annealed mild steel suspension hanger wire laid at 45 degrees maximum to horizontal plane of ceiling at 2400 mm (8’) on center. Attach walls to metal suspension runners with a positive attachment designed by the metal suspension system manufacturer.

.6 Provide wider wall moulding on all sides to support individual panels around perimeter. Minimum size: 50 mm (2”).

.6 Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

3.5 INTERIOR BOARD APPLICATION

.1 Provide gypsum board in accordance with manufacturer's written installation instructions and finish to requirements of ASTM C840. Provide finished work plumb, level and true, free from perceptible waves or ridges and square with adjoining work.

.2 Provide gypsum board perpendicular to framing and in lengths that will span ceilings and walls without creating end (butt) joints. Stagger abutting end joints of adjacent panels not less than one framing member. Accurately fit exposed butt joints together and make edges smooth.

.3 Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1.5 mm (1/16”) of open space between panels. Do not force into place.

.4 Maintain wallboard panels minimum 6 mm (1/4") and maximum 13 mm (1/2") above floor to prevent moisture transfer. Extend panels to underside of deck or structure.

.5 Isolate perimeter of gypsum board applied to non-load-bearing partitions (except shaft walls) at structural abutments, except floors. Provide 6 mm (1/4”) wide spaces at these locations, and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

.6 Erect plain wallboard vertically or horizontally, whichever results in fewer end joints. Keep end joints away from prominent locations and central portions of ceilings. Locate vertical joints at least 300 mm (12") from jamb lines of openings.

.7 Cut and fit gypsum board to accommodate or fit around other parts of the Work. Apply sealant beads at perimeter of services and similar objects which penetrate wallboard in accordance with manufacturer's directions.

.8 Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, within walls and spaces that will not be visible in the Work). Do taping and filling of concealed surfaces above ceiling line, at fire rated and sound rated partitions and walls.

.9 Fasten gypsum board to metal furring and metal studs with screws. Space screws at 200 mm (8") oc at board edges and 300 mm (12") oc on board field. Ensure perimeter screws are not less than 9 mm (3/8") nor more than 13 mm (1/2") from edges and ends are opposite screws on adjacent boards.

.10 Do not secure gypsum board by installing screws into aluminum or steel window and door frames. At fire-rated assemblies, reduce spacings to comply with labelling authorities assembly listings. For other specialty boards screw spacing shall be in accordance with manufacturer’s recommendations.

.11 Joint Treatment:

.1 Mix joint compound or ready-to-use compounds according to manufacturer's directions. Use pure, unadulterated, clean water for mixing. Do not use set or hardened compound.

.2 Tape and fill joints and corners in accordance with gypsum board manufacturer's printed instructions. Fill either manually, using hand tools or by mechanical taping and filling machine of proven efficiency.

.3 Allow sufficient drying time between coat applications and prior to sanding. Conform to the manufacturers’ instructions.

.4 Provide finished work smooth, seamless, plumb and true, flush and with square plumb neat corners.

.12 Single-Layer Application:

.1 Ceilings: apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing, unless otherwise indicated.

.2 Partitions/walls: apply gypsum panels with long dimension parallel to supports, unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints. Locate end joints over supporting members. Locate vertical joints at least 300 mm (12") from jamb lines of openings.

.3 Fastening Methods: Apply gypsum panels to supports with steel drill screws as specified herein. Ensure perimeter screws are not less than 9 mm (3/8") and not more than 13 mm (1/2") from edges and ends of adjacent boards.

.4 Joints: Finish all joints unless specified otherwise in this Section.

.13 Multilayer Application:

.1 Lay out work to minimize end joints on face layer. Offset parallel joints between face and base layers by at least 250 mm (10") and to apply face layer at right angles to base layer.

.2 Base Layer: Same as face layer unless otherwise indicated on Drawings.

.3 Ceiling: Apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.

.4 Partitions/walls: Apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless

otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.

.5 Fastening Methods: Fasten base layers with screws spaced 300 mm (12") o.c.; fasten face layers with adhesive with notched spreader to leave 9 mm x 13 mm (3/8" x 1/2") ribbons, 38 mm (1-1/2") apart over entire back side of face layer. Provide supplementary fasteners. Follow manufacturer's recommendations for adhesive application. Temporarily brace or fasten gypsum panels until fastening adhesive has set.

.6 Joints: Finish joints in face layers only, unless otherwise required to achieve fire resistant ratings indicated. Setting compound for fire rated construction shall conform to requirements of Authorities Having Jurisdiction to obtain fire rating shown on Drawings.

.14 Laminating to Substrate (Concrete Block or Masonry): Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written recommendations and temporarily brace or fasten gypsum panels until fastening adhesive has set.

.1 Joints: Finish all joints unless specified otherwise. Do not treat joints of laminated gypsum board for at least 24 hrs after lamination.

.15 Moisture Resistant Gypsum Board:

.1 Install in locations indicated on Drawings. Ensure moisture resistant gypsum board is installed on any wall/partition containing a plumbing fixture (i.e. water closets, sinks, tubs and similar fixtures) whether or not explicitly shown on Drawings.

.2 Provide in accordance with manufacturer's written installation instructions.

.3 Install with 6 mm (1/4") gap where panels abut other construction or penetrations.

.4 Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

.5 Joint Finish: Ensure surface is smooth and free of tool marks and ridges.

.1 All joints and interior angles shall have fiberglass tape embedded in high density setting joint compound as specified herein. Provide 2 separate coats of joint compound applied over all flat joints and 1 separate coat of joint compound applied over interior angles.

.2 Cover fasteners heads and accessories with 3 separate coats of joint compound.

.3 Conform to manufacturer's instructions.

.16 Sound Rated Assemblies:

.1 Where indicated on Drawings, Provide sound rated partitions and ceilings to meet required minimum STC ratings.

.2 Acoustic Sealant:

.1 Comply with ASTM C919 and with manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings. Seal off piping, electrical output boxes, and ductwork with acoustical treatments.

.2 Install a continuous bead of acoustical sealant at both faces of partitions, at perimeters, at every air gap (such as gaps around perimeter of wall), between wall panels, at perimeters, behind control joints, at openings and through any penetrations made for plumbing/electrical wiring and similar locations.

.3 Treat junction boxes with acoustic putty, treat piping and duct work either with fiberglass duct liner or damping material or both. Treat frame with gasket material (weather-strip) and Install security flap on bottom of door to seal it off.

.4 At all partitions except shaft walls, apply 1 continuous 6 mm (1/4") bead of acoustical sealant to each side of partition where gypsum board meets dissimilar materials. Where 2 layers of gypsum board per face are required, apply bead of sealant at perimeter of base layer only.

.3 Acoustic Insulation:

.1 Provide acoustic insulation to completely fill height of stud cavities. Tightly butt ends and sides of blankets within cavities. Cut blankets to fit small spaces.

.2 Carefully fit blankets behind electrical outlets, bracing, fixture attachments and mechanical and electrical services.

.3 Install sound attenuation blankets before installing gypsum panels. Staple blankets to back of gypsum board as recommended by gypsum board manufacturer.

.17 Fire-rated Assemblies:

.1 Provide fire rated enclosures, separations and assemblies as indicated on Drawings. Ensure materials for fire rated construction conform to requirements of Authorities Having Jurisdiction to obtain fire rating shown on Drawings. Work in cooperation with those performing the work required under the Section providing for firestopping work.

.2 Where dissimilar components are built into fire rated assemblies ensure continuity of fire separation by boxing in elements with gypsum board and framing to suit requirements of Authorities Having Jurisdiction.

.3 Provide fire resistive joint system between gypsum board wall assembly and steel columns in accordance with OBC requirements. One of the following methods are acceptable:

.1 Provide mineral fiber insulation flush with interior and exterior faces of gypsum board, fire resistant joint sealants and fire stop joint spray in accordance with applicable ULC design.

.2 Provide firestop track top gaskets between gypsum walls and concrete floor slabs as specified herein adhered on top stud runners.

.18 Shaft Wall:

.1 Construct shaft wall assemblies to Provide fire resistance ratings indicated, from both sides, and to maintain airtight seal. Apply continuous sealant around partitions to ensure airtight shaft enclosures.

.2 Install shaft wall studs at centres to meet design requirements in accordance with manufacturer's instructions or fire rated test design. Provide framing to enclose sides, tops and bottoms of shafts terminating at floor or in ceiling space, to maintain fire rating of shaft assembly.

.3 Install shaft wall liner in accordance with manufacturer's instructions at areas where specially designed studs require shaft wall liner panel application as required.

.4 Provide firestopping and smoke seals at penetrations as specified under Section 07 84 10.

.5 Where shaft wall height exceeds maximum available panel height, liner panel joints shall be positioned within upper and lower third points of wall, and shall be staggered to prevent continuous horizontal joint.

.6 Frame around duct openings through shaft walls with 'J' runners.

3.6 APPLICATION OF TRIMS AND ACCESSORIES

.1 For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

.2 Control Joints:

.1 Form control and expansion joints with space between edges of adjoining gypsum panels. Provide pre-fabricated, pre-manufactured control joints unless otherwise indicated.

.2 Provide control joints full height (floor-to-ceiling or door header-to-ceiling) in partitions and furring runs.

.3 Provide control joints from wall to wall in ceiling areas.

.4 Provide continuous polyethylene dust barrier behind and across control joints.

.5 Install control joints at locations indicated on Drawings and in accordance with requirements of ASTM C840 but not more than 9000 mm (30') on centre. As a minimum, Install control at following locations:

.1 at both sides of frames ().

.2 at locations where changes in support framing/construction occurs.

.6 Obtain the Consultant's approval for exact locations of control joints.

.3 Joint and Corner Trim:

.1 Provide interior trims and beads at reveals, ceiling-wall intersections, partition perimeters; and at intersection of dissimilar constructions such as gypsum board-to-concrete or gypsum board-to-acoustic tile ceilings.

.2 Provide metal trim and beads where gypsum board abutts against a surface having no trim concealing junction.

.3 Provide 13 mm (1/2") separation gasket between interior trim and window frames or other cold surfaces or Provide sponge tape between gypsum board framing, where such framing abuts exterior door or window frame. Tape shall be either full width or 1 strip of 9 mm (3/8") wide on each side of framing member.

.4 Unless otherwise indicated on the Drawings, Install trims as follows:

.1 Cornerbead: at outside corners, unless otherwise indicated.

.2 Bullnose Bead: at outside corners where indicated on the Drawings.

.3 U-Bead and LC-Bead: at exposed panel edges.

.4 L-Bead: where indicated on the Drawings.

.4 Aluminum Wall Trims and Reveals:

.1 Provide metal trim casing bead or reveals at junctions with dissimilar materials as indicated on Drawings.

.2 Install in locations indicated on the Drawings.

.5 Access Doors and Panels: Install access doors and panels supplied as part of the work of Divisions 21, 22, 23 and 26 and where required as part of work of this Section. Coordinate with the work to be performed under other Sections for locations and sizes.

.1 Install access panels in accordance with the manufacturer’s instructions.

.2 Install access panels in locations including but not limited in walls, bulkheads, ceilings and soffits. Final locations to be determined by coordination with trades installing mechanical,

electrical and other building services. Obtain the Consultant's confirmation of locations prior to installation.

.3 Consultant reserves right to relocate access panels up to 3600 mm (12') from locations shown on Drawings due to site conditions, providing ample warning is given prior to installation.

.6 Ballistic Rated Panels:

.1 Cut fiberglass to appropriate sizes. Install using self tapping dry wall screws. Provide minimum 100 mm (4") overlap strips (battens) at seams. Install prior to installing gypsum board in locations indicated on Drawings and schedules.

3.7 TOLERANCES

.1 Framing Tolerances: Install each framing member so fastening surfaces vary not more than 3 mm (1/8 ") in 3000 mm (10'-0") in any direction.

3.8 CLEANING

.1 Cooperate and coordinate with those performing the work of other Sections to obtain satisfactory gypsum board finish work. Do all cutting, patching and Make Good as required as a result of the installation work of other Sections.

.2 Clean off beads, casings, joint cement droppings and similar items and remove surplus materials and rubbish on completion and as directed by the Consultant.

3.9 FIELD QUALITY CONTROL

.1 Carry out work using skilled tradesmen carefully supervised by competent foremen. Take all measurements accurately.

3.10 GYPSUM BOARD FINISHING SCHEDULE

.1 Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

.2 Prefill open joints and damaged surface areas.

.3 Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

.4 Finish panels to levels indicated below and according to ASTM C840:

Finishing Level	General Areas	Final Appearance
0	Temporary construction areas and unfinished construction areas.	Unfinished
1	Plenum areas above ceilings, service corridors or any places not viewed by public and where assembly would generally be concealed.	Tool marks and ridges are acceptable.

Finishing Level	General Areas	Final Appearance
2	Following Areas: - where moisture resistant gypsum backing board (MRGB) is used as substrate for tile; -exposed assemblies in garages, warehouse storage areas and service corridors.	Tool marks and ridges are acceptable. Thin coating of compound covers tape; one coat compound over fastener heads.
3	Areas scheduled to receive textured finishes (spray or hand applied) and not subject to critical lighting.	No marks or ridges. Ready for priming, to be followed by textured finish.
4	All public exposed areas where **flat, velvet, eggshell paints, glazed coatings, light textured finishes or wall coverings** (including wall protection items) are scheduled to be applied.	No marks or ridges. Ready for priming, followed by wall coverings, flat paints or light textures.
5	Public exposed areas as follows: - At all lobbies and atriums - Where wallcoverings and gypsum-applied finishes less than 3 mm (1/8”) thick are scheduled to be installed. - where **satin, gloss, semi-gloss or high gloss** paint finish are scheduled to be applied; - where accent paint colours are scheduled to be applied on gypsum board. Coordination with Section 09 91 00; - where severe lighting conditions occur (walls and ceiling areas near windows, skylights, long hallways and atriums with large surface areas exposed to artificial and natural light) - where exposed moisture-resistant gypsum board (MRGB) or fiberglass-mat faced gypsum board (ARGB) is scheduled to be installed.	No marks or ridges. Entire surface covered with skim coat of compound and ready for priming.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide ceramic tile including but not limited to the following:

.1 ceramic/porcelain floor tile complete with base, trims and fittings.

.2 crack isolation membrane.

.3 waterproof isolation membrane (in wet areas).

.4 expansion control (control joints and expansion joints).

.5 transitions and trims.

.6 installation systems, levelers, mortars and grouts.

.7 joint sealing.

.8 slip-resistant coating applied to tiles.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Definitions used in this Section:

.1 Ceramic Tile: Ceramic surfacing unit relatively thin in relation to facial area, made from clay or mixture of clay and ceramic materials, fired at temperature sufficiently high enough to produce specific physical properties and characteristics conforming to the standards specified herein above.

.2 Porcelain Tile: Porcelain tile manufactured in various thickness and sizes having matt or unglazed or high polish finish is ceramic tile that is generally made by dust pressed method from a composition which results in tile that is dense, impervious, fine grained, smooth and textured with sharply formed face. Water absorption conforming to ASTM C373.

.2 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings: Prior to starting the work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

.2 Coordination:

.1 In particular ensure requirements for concrete subfloor preparation are compatible with the requirements of this Section. Ensure the following meet acceptable criteria to ensure proper performance floor covering work:

.1 floor flatness and floor levelness requirements for flooring installation and their acceptability by flooring manufacturer;
.2 surface texture of finished floor required for flooring installation;
.3 acceptable approaches to remediation of high moisture and high pH floors;
.4 adhesive application and floor covering installation.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Division 01, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for the work of this Section in accordance with Division 01.

.1 Ensure Shop Drawings indicate material characteristics, dimensions, details of construction, joint layouts including movement joints, connections and relationship with adjacent construction.

.4 Samples: Submit samples in accordance with Division 01.

.1 Manufacturer's colour charts consisting of actual tiles or sections of tiles showing full range of colours, textures, and patterns available for each type and composition of tile indicated. Include Samples of accessories involving colour selection.

.2 Manufacturer's colour charts consisting of actual sections of grout showing the full range of colours available for each type of grout indicated.

.3 Submit full size units of each type of trim and accessory in each colour required for installation; minimum 150 mm (6”) lengths .

.4 Tiles: Submit four (4) pieces of each tile specified and selected.

.5 Submit individual sample panels of each colour of ceramic tile, set with adhesive, grouting and bonding method as specified, showing quality, colour and finish of material, grout and pattern of tiles. Each panel shall be minimum 600 mm x 600 mm (24" x 24").

1.7 PROJECT CLOSEOUT SUBMITTALS

.1 Maintenance Instructions:

.1 Submit maintenance instructions in accordance with Division 01. Provide Owner with 3 copies of TTMAC Maintenance Guide.

.2 Include specific warnings of any maintenance practice or materials which may damage or disfigure tile work. Include cleaning methods, cleaning solutions recommended, stain removal methods, polishes and waxes recommended.

.3 Provide manufacturer's maintenance data sheets for floor sealers and other non-tile maintenance materials and accessories.

.2 Maintenance Materials:

.1 Deliver 5% of the total of each tile material used for the work, packaged neatly in original containers to prevent damage, from same lot or batch with minimum of 1 box with 8 pieces of each colour and type; clearly marked to identify following:

.1 Manufacturer and Distributor’s name;
.2 Material Series Name and Stocking number;
.3 Material description including colour and pattern if applicable.

.2 Deliver extra stock to the Owner as soon as permanent, locking storage facilities are available. Place extra stock in designated storage area where directed.

1.8 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years’ experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years’ experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 *Mock-Ups*:

.1 Where designated or requested, *Provide Mock-Ups* on site, of each type, style, finish, size, colour of ceramic tile, trims and threshold along with respective installation system.

.2 Record pertinent remarks, observations and recommendations discussed in presence of participants.

.3 Sample flooring area, once accepted, including recorded remarks and recommendations shall become a permanent part of *Project* and shall be the standard of workmanship against which balance of ceramic tile work will be judged.

.4 Maintain *Mock-ups* which are not part of *Project* during construction in an undisturbed condition as a standard for judging completed work; demolish and remove *Mock-ups* from *Project* when directed by *Consultant* .

1.9 DELIVERY, STORAGE AND HANDLING

.1 Delivery and Acceptance Requirements:

.1 Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use in accordance with ANSI A 108.1 for labelling sealed tile packages .

.2 Comply with the material manufacturer's ordering instructions and lead time requirements to avoid delays.

.3 Coordinate deliveries to comply with Construction Schedule arrange for above ground, under cover storage before materials are delivered to the Site.

.2 Storage and Handling Requirements:

.1 Store packaged materials in original containers with seals unbroken complete with labels in accordance with the manufacturer's instructions.

.2 Prevent damage to materials and Products during handling and storage. Keep delivered materials dry and free from stains inside weatherproof structure or otherwise protected from freezing and elements. Store cementitious materials off damp surfaces.

.3 Protect epoxy adhesives, additives, mortar mixes and grouts from freezing, moisture and excessive heat during transportation and storage. Maintain temperatures in storage area between 15 deg C (59 deg F) and 20 deg C (68 deg F).

1.10 PROJECT CONDITIONS

.1 Ambient Conditions:

.1 Do not perform of this Section below 12 deg C (54 deg F) when working with portland cement mortars, dry set mortars, latex portland mortars, bond coat. Keep temperature between 12 deg C (54 deg F) to 32 deg C (90 deg F).

.2 Tile areas: maintain temperature 12 deg C (54 deg F) to 35 deg C (95 deg F) during installation and for 7 Days post-installation, unless directed otherwise by manufacturer and ANSI A108.

.3 Provide ventilation, environmental protection as recommended by manufacturer. Maintain suitable environmental conditions, protect work during/after installation. Adhere to trade standards, manufacturer's Product instructions. Follow Product MSDS, label instructions for safety, health, precautionary, environmental protection. Comply with relevant federal, provincial, local, statutory regulations.

.4 Follow manufacturer's recommended working temperatures for adhesives, grouts installation. Ensure epoxy mortars, grouts surface temperatures between 16 deg C (60 deg F) and 32 deg C (90 deg F) at installation.

.2 Site Conditions:

.1 Close doors and windows and turn off direct forced ventilation systems and apparatus. Turn off radiant floor heating systems and protect work area from direct draft, sun and heat exposure during installation and for at least 72 hours after completion.

.2 When necessary build temporary shelter and use indirect auxiliary heaters to maintain adequate temperature level in working environment.

.3 Exhaust temporary heaters to building exterior to prevent health hazards and damage to work from toxic fumes and emanations.

.4 Protect work of this Section against damage by other trades during application and 3 Days after application.

1.11 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 10 years from Substantial Performance of the Work against defects, excessive wear, and loss of adhesion including replacement of defective tile work, materials, labour costs for demolition of defective work,

accessories, and installation systems at the Owner's convenience. Defective work includes without limitation, tiles broken in normal use due to deficiencies in setting bed, loose tiles or grout and similar defects which can be attributed to poor performance of work or defective materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Setting Materials and Adhesives:

.1 Ardex Engineered Cements
.2 Flextile Ltd.
.3 Kiesel
.4 Laticrete International, Inc.
.5 Mapei Inc.

2.2 REGULATORY REQUIREMENTS

.1 Conform to OBC requirements and in particular slip resistance requirements of tile surfaces in horizontal applications

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Provide tile Products that comply with ANSI A137.1 (minimum Standard Grade) or equivalent ISO 10545 or CAN/CGSB-75.1 characteristics for types, compositions, and other characteristics indicated.

.2 Slip Resistance (Coefficient of Friction):

.1 Provide tile products that comply with ANSI A137.1 (minimum Standard Grade) or equivalent ISO 10545 or CAN/CGSB-75.1 characteristics for types, compositions, and other characteristics indicated.

.2 Slip Resistance (Coefficient of Friction):

.3 Dry areas: Provide materials having a minimum Dynamic Coefficient of Friction (DCOF) of 0.42 in accordance with ANSI A326.3 when tested using the BOT 3000 Digital Tribometer.

.4 Wet areas: Provide materials having a minimum Dynamic Coefficient of Friction (DCOF) of 0.6 (wet) in accordance with ANSI A326.3 when tested using the BOT 3000 Digital Tribometer.

.3 Installation Materials: Provide materials complying with ANSI A108.02, reference standards indicated herein, ANSI standards referenced by TTMAC installation methods specified in TTMAC- Specification Guide 09 30 00; Tile Installation Manual 2012/2014, and other requirements specified herein.

.4 Provide tile trims and accessories such as bullnoses, copings, caps, cut base (to match CT-101), nosings, corner pieces, and other special units as specified, indicated, and required. Without limitations and unless noted otherwise, Provide tile trim and accessories for each type of tile including:

.1 rounded and squared finished edges;

.2 inside and outside corners;

.3 outer and inner cove bases;

.5 Substrate and Backing Surface Flatness Tolerances: Section 03 35 00 establishes a flatness requirement for F_F25 for slabs on grade and F_F20 for suspended slabs for in place concrete and is considered as the starting flatness for work of this Section; final measurement for flatness and level using mortar bed or self levelling screed materials provided by this Section will be measured in same manner as specified in Section 03 35 00 to achieve the following:

.1 Small Format Floor Tile: Tiles having dimensions less than 100 mm x 100 mm require floor flatness as specified in Section 03 35 00 .

.2 Standard Format Floor Tile: Tiles having dimensions from 100 mm x 100 mm and less than 400 mm x 400 mm require floor flatness measured to a minimum F_F35; equivalent to 5 mm with no more than 2 gaps under a 3000 mm straightedge measurement.

.3 Large Format Floor Tile: Tiles having dimensions 400 mm x 400 mm and larger require floor flatness measured to a minimum of F_F50; equivalent to 3 mm with no more than 2 gaps under 3000 mm straightedge measurement.

.4 Wall Tiles: Provide wall levelling similar to that specified for floors for tiles having similar sizes listed above.

MATERIALS

.6 Tile Types:

Generic Location (Refer to Drawings for specific locations)	Code	Basis-of-Design Manufacturer (or Equivalent)	Basis-of-Design Product (or Equivalent)
Porcelain Tile (Lobby / Corridor)	CT-101	Stone Tile	Product: “Masterplan” Colour: “Cinder Plain Matte” Size: 600 mm x1200 mm / (24 in x 48 in)
Porcelain Tile (Washrooms / Shower Floor)	CT-201	Olympia Tile	Product: “Spectra Small Grain” Finish: “Matte” Colour: to be selected by Consultant at a later date. Size: 20 cm x 20 cm
Ceramic Tile (Washroom / Locker Room Walls)	CT-401	Olympia Tile	Product: “Colour and Dimension” Colour and Finish: “Arctic White – Bright” Size: 10 cm x 60 cm

.1 Chemical Resistant Grouts:

.1 Epoxy Grout (Floors and Walls at wet areas only): ANSI A118.3; 100% Solids, two component water based washable epoxy grout, consisting of hardening resin and premixed portion of epoxy resin, colour pigments, and graded aggregate; *Acceptable Products:*

.1 "Epoxy Grout Flex-Epoxy 100" by Flextile Ltd.,
.2 "SPECTRALock Pro Gout" by Laticrete International, Inc.
.3 "Kerapoxy " by Mapei Inc.

.4 “ARDEX WA” by Ardex Engineered Cements
.5 “Okapox F/K” wall and floor by Kiesel

.2 Urethane Grout (Floors and Walls): ANSI A118.3, 1 component urethane grout; *Supply* following: "Colour Max Chemical and Stain Resistant Grout" by Flextile Ltd. or approved equivalent.

.2 Cementitious Grout:

.1 Walls (Unsanded): ANSI A118.7, for porous and absorbent type tiles, non-vitreous clay tiles, marbles or soft glazed wall tiles; *Acceptable Products:*

.1 "Flextile 500 Series Polymer Modified Grout" by Flextile Ltd.
.2 "Laticrete Unsanded Grout, 1600 series with Laticrete 1776 grout admixture" by Laticrete International Inc.
.3 “Keracolor-U” or “Ultracolor® Plus” (Fast Set) by Mapei Corporation.
.4 “ARDEX FG-C Grout by Ardex Engineered Cements
.5 “Servoperl royal” universal, high performance grout by Kiesel

.2 Floors (Sanded): ANSI A118.7, highly abrasion resistant grout for impervious and vitreous tile types; Acceptable Products:

.1 “600 Polymer Modified Sanded Grout” or "1600 RSF (fast set)"by Flextile Ltd.,
.2 “Laticrete sanded grout, 500 series” with “Laticrete 1776” grout admixture by Laticrete International, Inc.
.3 “Keracolor-S” or “Ultracolor® Plus” (Fast Set) by Mapei Corporation.
.4 “ARDEX FL Grout” by Ardex Engineered Cements
.5 “Servoperl royal” universal, high performance grout by Kiesel

.3 Grout Sealer: Penetrating sealer as recommended by grout manufacturer to suit grout selected.

.4 Grout Colours: As selected by the Consultant from the manufacturer's full range at a later date.

.7 Transitions and Trims: Provide aluminum profiles designed specifically for flooring applications with height, profile and type to suit tile and setting-bed thickness and installation requirements. Unless indicated otherwise, transitions and trim finishes to be satin aluminum.

.1 Same-height Transitions:

.1 New Construction: Provide L-shaped profile with 3 mm (1/8”) wide visible surface, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.

.1 Acceptable Products (TRANSITION 2): "Schluter-SCHIENE" by Schlüter Systems or Equivalent.

.2 Varying-height (Sloped) Transitions: ADA compliant-type. Provide minimum width to height ratio to conform to barrier-free requirements specified in CSA B651 and AODA. Following types are acceptable:

.1 Unless otherwise indicated, Provide profile with sloped exposed surface, 4 mm (5/32”) tall leading edge, integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.

.1 Acceptable Products (TRANSITION 1): "Schluter-RENO-U" by Schlüter Systems or Equivalent.

.3 Trims edge-protection, inside and outside corner profiles:

.1 TRIM-1: Provide J-shaped stainless steel profile with integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.

.1 Acceptable Products: "Schluter-QUADEC" by Schlüter Systems or Equivalent.

.2 TRIM-2: Provide L-shaped stainless steel profile with integrated trapezoid-perforated anchoring leg, and integrated grout joint spacer.

.1 Acceptable Products: "Schluter-JOLLY" by Schlüter Systems or Equivalent.

.4 Movement and Control Joints: Manufacturer's recommended PVC or soft rubber profiles and products to accommodate job-specific movement conditions and to meet design requirements.

.1 Acceptable Products: "Schlüter – DILEX Series" by Schlüter Systems or Equivalent. Specific profile as recommended by manufacturer.

.5 Tactile Indicator Tiles (TWS-2): Provide tactile walking surface indicators with truncated domes. Colour to be selected by the Consultant at a later date.

.1 Acceptable products: "Elan Tile" by Kinesik or Equivalent.

.6 Stair Nosing: Cast stainless steel nosing, with an integral abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both complete with anchoring legs and end caps. Fabricate units in lengths necessary to accurately fit openings or conditions. Provide nosing to protect tiled stair edges and provide easily visible, slip-resistant wear surface.

.1 Acceptable Products: "Schluter®-TREP-E/EK" by Schlüter Systems or Equivalent.
.2 Coordinate with Section 05 51 00.

.7 Shower Dam Profiles: Provide 8 mm (5/16 inch) high collapsible barrier-free shower dams in locations indicated on Drawings.

.1 Acceptable Products: "Shower Profile WSK" by Schlüter Systems or Equivalent.

.8 Surface Preparation:

.1 Mixes and Accessories: Provide the following as required for installation systems indicated. Conform to admixture manufacturer's recommendations for Products and mixtures.

.1 Cement: CSA A3000 grey or white Portland cement; white for grout.
.2 Sand: ASTM C144 or CSA A23.1, sharp, screened mortar sand free from organic and deleterious materials.
.3 Water: Potable.
.4 Lime: ASTM C207, Type S, hydrated lime (where recommended),

.2 Self Levelling and Smoothing Underlayment: Cementitious self levelling smoothing underlayment meeting or exceeding requirements of ANSI A108.1, Type 2 for levelling up to 50 mm (2 inch) and as follows:

.1 "ARDEX Liquid Backer Board" by Ardex Engineered Cements
.2 "Flex-Flo Plus" by Flextile Ltd.
.3 "Servoplan S 111" (40 mm) or "Servoplan E600" (80 mm) with "Servoplan Ki 1" by Kiesel GmbH.
.4 Or Equivalent to the above.

.9 Crack Isolation Membrane:

.1 2 part system: ANSI A118.10 & ANSI A118.12, crack isolation membrane made up of liquid rubber and reinforcing fabric to Provide crack bridging capability over non-structural cracks, compatible with thin set mortar. Acceptable Products are:

.1 "Laticrete Blue 92" by Laticrete International, Inc.,
.2 "WP-980 Waterproof & Crack Isolation Membrane" by Flextile Ltd.
.3 "Servoflex DMS 1K SuperTec and Crack Isolation Membrane" by Kiesel
.4 or Equivalent to the above.

.2 Single component System (Peel and Stick): ANSI A118.10 & ANSI A118.12, highly flexible load bearing "peel and stick" sheet membrane and primer compatible with tile/stone setting mortars. Acceptable Products are:

.1 "Mapeguard Primer and Mapeguard 2" by Mapei Corporation
.2 "Flexilastic 1000 Crack Isolation Membrane" complete with primer by Flextile Ltd.
.3 "Servoflex DMS 1K SuperTec" by Kiesel
.4 or Equivalent to the above.

.10 Waterproofing & Crack isolation Membrane: load bearing membrane for installation of ceramic tile in wet areas**.** Following types are acceptable:

.1 2 part system: ANSI A118.10, extra heavy duty, seamless, Ensure reinforcing fabric is non-woven fabric designed specifically for use with waterproofing membrane. Acceptable Products:

.1 "Flextile WP-980 Waterproof & Crack Isolation Membrane with Reinforcing Fabric" by Flextile Ltd.
.2 "Latacrete 9235" waterproof membrane system with Latacrete's fiberglass cloth reinforcement by Laticrete International, Inc.
.3 "Mapelastic™ 315" by Mapei Corporation.
.4 "ARDEX 8+9 Waterproofing & Crack Isolation Membrane with SK Mesh" by Ardex Engineered Cements
.5 "Servoflex DMS 1K SuperTec and Crack Isolation Membrane" by Kiesel
.6 or Equivalent to the above.

.2 Uncoupling Membrane (for all large-format tiles): Load bearing, pre-manufactured membrane meeting requirements of ANSI A118.12; thickness as recommended by manufacturer to accommodate in-plane substrate movement of 3 mm (1/8 inch) in thin set applications meeting or exceeding requirements of ANSI A108.1 and as follows:

.1 "Flexbone" by Ardex Engineered Cements
.2 "FlexMat" by Flextile Ltd.
.3 "Strata Mat" or "Strata Mat XT" by Laticrete International, Inc
.4 "Schluter 'DITRA XL'" Schluter Systems.
.5 "Mapeguard UM" by Mapei,Inc.
.6 Or Equivalent to the above.

.3 Tile Backer Board (at showers): Lightweight, high density, waterproof extruded polystyrene core with a reinforced, waterproof membrane on both sides:

.1 Thickness: not less than 16 mm (5/8 inch)
.2 Provide product complete with accessories required to provide a complete waterproofing system.
.3 Acceptable Product: "Kerdi Board Panels" by Schluter Inc. including required accessories or Equivalent.

.11 Mortars and Bond Coats:

.1 Latex Modified Thin-Set System (Floor and Wall Applications): ANSI A118.4, Latex portland mortar consisting of 2 component liquid latex mixed with factory blended dry set mortar. *Provide* as bond coat for setting tiles on masonry, concrete, cementitious backer units, coated glass mat backer boards and other suitable backing.

.1 Performance characteristics: *Provide* setting *Products* that exceed the requirements of ANSI A118.4 as indicated below.

.2 Acceptable Products:

.1 "Flextile #51 Thin-Set Mortar" and "Flextile #44 Acrylic Latex Mortar Additive" by Flextile Ltd.
.2 "Laticrete 4237" with "211 Crete Filler Powder" by Laticrete International Ltd.
.3 "Kerabond/Keralastic" by Mapei Inc.
.4 “X77 Microtec Fiber-reinforced” by Ardex Americas
.5 “Servolight S2 SuperTec” walls and floors, Servoflex Trio SuperTec (floors only) by Kiesel

.2 Thin-Set and Medium Bed System (Wall and Floor Applications – Large Format Tiles): ANSI A118.4, Nonsagging mortar.

.1 Performance characteristics: *Provide* setting *Products* that exceed the requirements of ANSI A118.4 as indicated below.

.2 *Acceptable Products:*

.1 “56SR Non-Sag Mortar” by Flextile
.2 “Ultraflex LFT” by Mapei.
.3 “ARDEX X 5 Thin Set Mortar” by Ardex Engineered Cements
.4 “Servolight S2 SuperTec” walls and floors, Servoflex Trio SuperTec (floors only) by Kiesel

.12 Elastomeric Sealants: Provide sealants, primers, backer rods, and other sealant accessories that comply with applicable requirements of Section 07 92 00.

.13 Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

.1 Self-leveling Underlayment:

.1 "Flex-Flo" (up to 12 mm (15/32 inch)) or "Flex-Flo Plus" (up to 50 mm (2 inch)), by Flextile Ltd.
.2 "Laticrete 86" (up to 12 mm (15/32 inch)), by Laticrete International, Inc.
.3 "Ultra Plan/Ultra Plan MB" (up to 5 mm (3/16 inch)) or "Planicrete M20" (up to 50 mm (2 inch)) by Mapei Inc.
.4 “ARDEX Liquid Backer Board” (up to 30mm (1¼ inch)) or “ARDEX K15” (up to 50mm (2 inch))by Ardex Engineered Cements.
.5 Servoplan P 200 Plus (concrete substrates, 1mm – 30mm (1/32 inch -1 ¼ inch) or Servoplan BF 850, 5mm-100mm (3/16 inch- 4 inch) – pre-leveler, Servoplan S 444 (3mm-15mm; by Kiesel

.2 Screed mortars:

.1 "Topcem Premix with Planigrout AC,” Accelerated Cure thick bed Screed and additive by Mapei Inc.

.2 "Flextile FS Screed" by Flextile Ltd or "4:1 Dry Pack Mortar and Flextile #43" by Flextile Ltd.
.3 "Laticrete 3701 Mortar Admix" and "Laticrete 226" thick bed mortar by Laticrete.
.4 “ARDEX AM100” by Ardex Engineered Cements
.5 “Servocret RS (fast setting – 1hr), Servocret RS-N (normal setting), non-sag, walls and floors, pumpable by Kiesel

.14 Slip-Resistant Coating:

.1 Provide surface-applied coating designed to provide durable skid resistant finish to tile. Ensure coating does not affect tile aesthetic and finish. Provide in all floor locations unless otherwise indicated on Drawings and schedules.

.2 Basis-of-Design: “Sure Step – Anti-Slip Floor Treatment” by True Traction; www.truetraction.ca (or Equivalent).

2.4 MIXES

.1 Mix mortars and grouts to comply with requirements of applicable ANSI A108 reference standards and manufacturer’s recommendations for accurate proportioning of materials, water or additive content, mixing equipment and mixer speeds, mixing containers, mixing time, pot life and other procedures needed to produce mortars and grouts of uniform quality with optimum performance characteristics.

.2 Do not add water or other materials to dilute mortar or grout additives unless recommended by the admixture manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Verify existing conditions and finishes are ready to receive specified tile work. Ensure backings are structurally sound, level, and plumb within required tolerances. Ensure concrete is cured, has no structural cracks, openings and Projects not required to meet design requirements.

.2 Ensure concrete is cured for a minimum of 28 Days and has the following finishes as required to suit designated application methods:

.1 Steel trowel finish if installation includes load bearing waterproof membrane over concrete and thin set applications.

.2 Fine broom or wood float finish for thin set applications.

.3 Screed finish for mortar bed applications.

.4 Notify Consultant in writing of unacceptable substrate conditions. Beginning of installation implies acceptance of existing conditions.

.5 Ensure compatibility of adhesives, waterproofing, reinforcing and fillers with adjacent substrate and component coming in contact with these Products.

.6 Ensure waterproofing and adhesive manufacturers examine substrate conditions, verify conditions are suitable for installation prior to commencement, and review application procedures. If requested, submit written report confirming this.

3.2 PREPARATION

.1 Refer to Section 09 21 16 for provision of substrates.

.2 Ensure surface is dimensionally stable, cured free of contaminants such as oil, sealants and curing compounds.

.3 Scarify concrete substrate with blast track equipment if necessary to completely remove curing compounds or other substances that would interfere with proper bond of setting materials.

.4 Mortar bed application substrate surface variation shall not exceed 6 mm in 3000 mm (1/4" in 10').

.5 Thin set application substrate surface variation shall not exceed 3 mm in 3000 mm (1/8" in 10').

.6 Apply latex cementitious leveling coat to correct substrate irregularity up to 8 mm (5/16") thickness. Above 8 mm (5/16") correct irregularity by mortar bed method.

.7 Review setting out point with the Consultant for each location, verify patterns and edge conditions.

.8 Verify expansion joints have been installed properly. Provide control or expansion joints in widths and depth as located and detailed on the Drawings. Carry existing joints in concrete subfloors through to surface of tile work.

.9 Install expansion joints directly over joints in structural surfaces where tile work abuts restraining surfaces such as perimeter walls, curbs, columns, wall corners and similar components.

.10 Provide control joints in accordance with the following layout guidelines and as indicated:

Environment	Minimum	Maximum	Joint Width
Interior/Shaded	4800 mm	6100 mm	6 mm minimum
Interior/Sunlight	2400 mm	3700 mm	6 mm minimum
Exterior/Normal	2400 mm	3700 mm	10 mm minimum
Exterior/Excessive	2400 mm	3000 mm	13 mm minimum

.1 Slabs-on-Grade:

.1 Over saw cut control joints.
.2 Around columns.
.3 Over perimeter joints.

.2 Suspended Slabs:

.1 Over beam locations.
.2 Around columns.

.11 Verify service fittings, floor drains, rough-ins and similar requirements are completed and are at proper levels to receive ceramic work.

.12 Provide slopes to floor drains using mortar screeds or other leveling bed materials recommended by setting bed manufacturer.

.13 Crack Isolation Membrane

.1 Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

.2 Do not Install tile or setting materials over crack isolation membrane until membrane has cured.

.14 Waterproof Membrane:

.1 Install waterproofing in strict compliance with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

.2 Do not Install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight. Repair and retest if required.

.3 Do not allow traffic on exposed waterproof membrane.

.4 Provide waterproof membrane to following decks, floors, walls, steps and ramps at areas subject to high levels of moisture

3.3 INSTALLATION

.1 Provide tile in accordance with Terrazzo Tile & Marble Association of Canada - Specification Guide 09 30 00; Tile Installation Manual, unless specified otherwise in this Section, and applicable ANSI A108 standards.

.2 Provide minimum of 95% bond coverage by backbuttering or other approved technique for the following installations, in accordance with ANSI A108 Series of tile installation standards:

.1 Tile floors in wet areas.

.2 Tile floors composed of tiles 200 by 200 mm (8” by 8”) or larger.

.3 Tile floors composed of rib-backed tiles.

.3 Grouting: Apply grout in accordance with manufacturer's printed instructions. Minimum of 2/3 of joint depth shall be kept open for grouting and grout shall penetrate joint to bond coat.

.1 Joint Widths: Unless otherwise recommended by the tile manufacturer for specific conditions, Provide grout joint width as follows: 3 mm (1/8”)

3.4 CLEANING AND PROTECTION

.1 On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

.2 Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile floors.

.3 Prohibit foot and wheel traffic from tiled floors for at least seven Days after grouting is completed.

.4 Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces. Correct defective pointing and other unsatisfactory conditions.

.5 Clean adjacent surfaces which have been soiled or otherwise marred, to completely remove evidence of foreign materials.

.6 Replace cracked, discoloured, chipped, and damaged work which cannot be satisfactorily repaired.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide acoustic tile ceilings including but not limited to following:

.1 ceiling suspension systems.

.2 lay-in acoustic ceiling panels.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Division 01, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for work of this Section in accordance with Division 01. In addition to minimum requirements, indicate following:

.1 Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

.1 Ceiling suspension system members including joint pattern.
.2 Method of attaching hangers to building structure and termination at walls partitions, bulkheads, lighting fixtures and mechanical fixtures.
.3 Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

.2 Submit Shop Drawings detailed in measurement system (e.g. imperial or metric) to match Drawings.

.4 Samples: Submit samples in accordance with Division 01. Submit following samples in sizes indicated:

.1 Submit 300 mm (12") long samples of suspension system parts, including trim.

.2 Submit 300 mm x 300 mm (12" x 12") samples of acoustic panels.

.5 Certificates:

.1 Submit independent test data and design tables for each type of insert to be employed on this Project for hanger supports.

.2 Submit certification from structural Professional Engineer registered in the Province of Ontario stating that installed suspended ceiling systems are capable of supporting their own weight and weight of lighting, grilles and other mechanical and electrical fixtures required by the mechanical and electrical Divisions of the Specifications and are capable of resisting seismic motions in accordance with requirements specified herein.

.3 Obtain approval of electrical utility Authorities Having Jurisdiction for support of light fixtures, by ceiling grid and supports. Adjust grid, fixing devices and support hangers as required to obtain approval.

.4 Submit written confirmations to Divisions 22, 23 and 26, when requested by the Consultant, that suspended ceiling is capable of supporting additional weight of mechanical and electrical fixtures specified in Division 22, 23 and Division 26.

.6 Maintenance Data: Submit maintenance instructions to the Owner for recommended cleaning materials and methods for panels and trim. Include precautions for use of and composition of cleaning materials detrimental to acoustic materials and trim.

1.7 QUALITY ASSURANCE

.1 Applicator Qualifications: Provide work of this Section executed by competent installers with a minimum of 5 years' experience in the application of Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

.2 Source Limitations:

.1 Acoustical Ceiling Panel: Obtain each type through one source from a single manufacturer.

.2 Suspension System: Obtain each type through one source from a single manufacturer.

.3 Mock-ups: Build mock-ups to verify selections made under sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

.1 Build mockup of typical ceiling area as shown on Drawings or directed by Consultant on site.

.2 Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Consultant specifically approves such deviations in writing.

.3 Subject to compliance with requirements specified in this Section, reviewed mock-ups may become part of the completed Work if undisturbed at time of Substantial Performance of the Work.

.4 Licensed Professionals: Employ a structural Professional Engineer carrying a minimum $2,000,000.00 professional liability insurance and registered in the province of Ontario in accordance with requirements of Division 01 to:

.1 design components of the Work of this Section requiring structural performance.

.2 be responsible for full assemblies and connections

.3 be responsible for determining sizes, joint spacing to allow thermal movement and loading of components in accordance with applicable codes and regulations.

.4 be responsible for production and review of Shop Drawings.

.5 inspect work of this Section during fabrication and erection.

.6 stamp and sign each Shop Drawing.

.7 Provide site administration and inspection of this part of the Work.

.8 Submit certificate validating seismic assessment and field review of this part of the Work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials in original packages, containers and bundles, bearing brand and manufacturer's name and ULC or cUL labels.

.2 Store materials in a covered area, off ground, on flat, smooth, dry surfaces. Protect from moisture. Remove damaged or deteriorated materials from site.

.3 Comply with ceiling panel manufacturer's recommendations regarding temperature and humidity conditions before, during and after ceiling installation.

1.9 PROJECT CONDITIONS

.1 Environmental Requirements: Continuously maintain rooms or areas scheduled to receive acoustical ceilings at not less than 21 deg C (70 deg F), and at occupancy humidity, at least 3 Days prior to installation and 3 Days after work is completed.

.2 Schedule work to eliminate risk of damage to these materials due to adverse environmental conditions in rooms or areas when and after work is installed.

1.10 WARRANTY

.1 The Contractor warrants the work of this Section for period of 3 years from Substantial Performance of the Work against defects and/or deficiencies in accordance with the General Conditions of the Contract. Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner.

1.11 MAINTENANCE

.1 Supply extra materials described below for the Owner's future maintenance use that match Products installed and that are packaged with protective covering for storage and identified with labels describing contents.

.1 Acoustical Tile Ceilings: Full-size panels equal to 2.0 % of quantity installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of the following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Armstrong World Industries Canada Ltd.

.2 CGC Inc.

.3 CertainTeed Ceilings

.4 Rockfon

2.2 REGULATORY REQUIREMENTS

.1 Surface Burning Characteristics: All ceiling panels to meet fire resistance characteristics equivalent to Class A per ASTM E1264

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Design suspension system to support lighting fixtures according to Ontario Hydro regulations and submit certification in accordance with Rule 30-302 (1) of the regulations;

.2 Design suspension system to support safely and without distortion entire ceiling system and superimposed loads of:

.1 lighting fixtures

.2 air supply diffusers, boots, fire alarm grilles and exhaust and return air grilles

.3 drapery tracks and drapes

.4 power grid system, where indicated

.3 Prepare panels for sprinkler head penetrations and suspension members of curtain tracks;

.4 Coordinate installation and cooperate with the mechanical and electrical Subcontractors, to accommodate mechanical and electrical items, or any other work required to be incorporated in or coordinated with the ceiling system.

.5 Professional Engineer’s Design and Certification: Employ the services of a Professional Engineer licensed to practice in the Province of Ontario carrying professional liability insurance, and who is experienced in providing engineering services of similar kind, scope and complexity to those contemplated in this Section.

.6 Seismic Design: Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions for seismic design category of the Project according to the OBC, CAN/CSA S832 and ASTM E580 and as follows:

.1 Seismic Design Category D, E, F

2.4 MATERIALS

.1 Ceiling Suspension System: Provide suspension system complete with splices, clips, and perimeter moulding, of manufacturer's standard and aluminum types to suit applicable conditions unless special conditions and access areas are shown or specified. In high humidity areas Provide galvanized suspension system.

.1 Standard Exposed Ceiling Suspension System: ASTM C635, 15/16 face, direct-hung system; heavy-duty structural classification.

.1 Finish: Factory finished in non-yellowing, low sheen satin white enamel to Consultant's acceptance to match panels.

.2 Acceptable Products:

.1 "Series "DX Quick Release" by CGC Inc.
.2 "Prelude XL" by Armstrong World Industries
.3 "Chicago Metallic 1200 System" by Rockfon LLC
.4 "Classic Stab System" by CertainTeed Ceilings
.5 or Equivalent to the above

.3 Use with following ceiling panel types: all panel types unless noted otherwise.

.2 Acoustic Ceiling Tiles (ACT):

.1 Acoustic Ceiling Tiles (ACT-1 and ACT-2): CAN/CGSB-92.1-M and ASTM E1264

.1 Classification: Type and Form: Type III, mineral base with painted finish; Form 1, nodular or Form 2 or Type XX.
.2 Colour: White.
.3 Light Reflectance (LR): Not less than 0.85.
.4 Ceiling Attenuation Class (CAC): Not less than 22.
.5 Noise Reduction Coefficient (NRC): Not less than 0.75.
.6 Edge/Joint Detail: Square
.7 Thickness: Not less than 19 mm (3/4 inch)
.8 Modular Size:

.1 ACT-1: 610 mm by 610 mm (24 inches by 24 inches)
.2 ACT-2: 610 mm by 1220 mm (24 inches by 48 inches)

.9 Basis-of-Design Products: "Koral" by ROCKFON® or Equivalent as follows:

.1 "Eclipse™ Acoustical Panels" by CGC/USG Inc.
.2 "Cirrus" by Armstrong Ceilings
.3 "Cashmere" by CertainTeed Canada
.4 or Equivalent

2.5 ACCESSORIES

.1 Hangers: Minimum 0.104" (12 ga) overall thickness galvanized steel wire to zinc coating designation Z275, meeting "Heavy-duty" classification of ASTM C635.

.2 Seismic Stabilizer Bars, Struts and Clips: Manufacturer's standard pre-engineered units designed and tested to accommodate seismic forces for design category specified in this Section.

.3 Main Tees: 3.66 m (12') long, 23.8 mm (15/16") face width double web design, rectangular bulb at top of web, 38 mm (1-1/2") web height. Expansion cut-outs in main tees controlling buckling caused by heat expansion.

.4 Main Tee Splices: Designed to lock lengths of main tees together so that joined lengths of tee function structurally as single unit with tee faces at joint perfectly aligned and presenting tight seam.

.5 Cross Tees: 1220 mm (4') long, 25 mm (1") web height structural cross-section, design same as main tees, designed to connect at main tees forming positive lock without play, loss or gain in grid dimensions with offset over-ride of face flange over main tee flange to Provide flush joint. Provide 38 mm (1-1/2") web height of cross-tee for fire rated assemblies.

.6 Hanger Attachments:

.1 Cast-in-Place Concrete Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as indicated in ASTM C635 and as determined by testing according to ASTM E488 by an independent testing agency.

.1 Acceptable Products: “HHDCA Ceiling Hanger” by Hilti (Canada) Inc. or Equivalent.

.2 Composite Deck Anchors: Ceiling wire fastening assembly, “X-CW Ceiling Wire Assembly" by Hilti or Equivalent.

.3 Attachment to structural steel components: Comply with ASTM C754 unless otherwise indicated

.7 Panel Hold-Down Clips: As recommended by the ceiling tile manufacturer.

.8 Edge Mouldings at Ceiling Perimeters: Materials and finish to match tees.

.9 Fasteners: Galvanized and of size suited to loading conditions.

.10 Supplementary Steel Supports: Steel conforming to Section 05 50 00.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Inspect substrates and previously placed work to determine suitability and completeness. Start of work constitutes an acceptance of existing conditions, and failure of work due to unsatisfactory existing conditions shall be corrected at no cost to Owner. Similarly, if work needs to be removed to correct defects in substrates or previously placed work, both removal and replacement shall be done at no cost to the Owner.

.2 Do not commence installation until all work above suspended ceiling has been completed, inspected and accepted.

.3 Do not start installation until exterior glazing has been completed and exterior openings are closed in. Ensure wet work is completed and dried out to a degree acceptable to panel manufacturer before installation is commenced.

3.2 PREPARATION

.1 Temporary Ceiling Removal:

.1 Coordinate with metal fabricator and the electrical and mechanical trades to assess the complete scope of temporary ceiling removals to allow for metal fabrication and support framing, feeder runs, mechanical equipment and the like by the work of those Sections (note that the extent of ceiling removal has not been shown on architectural plans).

.2 Provide temporary protection, signage and barriers to protect others.

.3 Remove tile, panels and tee bar suspension from area that are required by other trades.

.4 Upon completion of the work of other trades and all required inspections, replace tee-bar and acoustic tile. Where tile or tee-bar are damaged, bent, discoloured, scratched or otherwise appear of lesser quality than surrounding area, replace with new material.

3.3 INSTALLATION

.1 Install ceiling panels and metal suspension system in accordance with applicable requirements of ASTM C636, reviewed Shop Drawings and manufacturer's directions.

.2 Install ceiling suspension and connections components in accordance with requirements of ASTM E580 for seismic design category of the Project.

.3 Install acoustic ceilings using tradesmen skilled in this class of work, in accordance with the manufacturer's instructions and as specified herein. Where manufacturer's directions are at variance with the Contract Documents, notify the Consultant before proceeding with the work.

.4 Neatly and symmetrically Install suspended ceiling to true lines, evenly balanced to pattern indicated on Drawings or as directed.

.5 Centre ceiling system on room axis unless otherwise indicated or directed leaving equal border panels not less than 1/2 a full width.

.6 Recessed items shall replace or be centered on acoustical panels, except where shown otherwise. Consult with the trades and Subcontractors performing the work required by the mechanical and electrical Divisions of the Specifications to co-ordinate work. Provide additional supports where required.

.7 Installation of Hangers:

.1 Install supporting inserts for hangers of suspended ceiling system into concrete slab above.

.2 Do not secure hangers to metal roof deck, ductwork, conduit, piping, equipment or support system for any of these. Attach hangers to the building’s structural members instead.

.3 Secure hangers to construction above per ASTM C636 and the following requirements:

.4 Space hangers for suspended ceilings to support ceiling grids independent of walls, columns, pipes and ducts and as follows:

.1 maximum 1220 mm (4') centres along support grillage,
.2 not more than 150 mm (6") from ends,
.3 within 150 mm (6”) from each corner
.4 maximum of 1220 mm (4’) around fixture perimeters.
.5 Provide an additional hanger at each corner of each opening to receive a recessed lighting fixture and each opening that has been framed by main beam members.
.6 Provide additional hangers at each diffuser, grille and other points of extra loading.

.5 If ductwork or equipment located in ceiling plenum area interferes with hanger spacing, Provide a trapeze or other arrangement reviewed by the Consultant to support main beams at proper spacing.

.8 Installation of Suspended Grid: Install direct-hung grid lay-in acoustic panel ceilings where shown. Install main tees, cross tees, and wall mouldings so bottom flanges are in flat, level plane at finish ceiling elevations.

.1 Lay out and erect grid system to Provide following panel patterns as shown:

.1 2x4 Pattern (610 mm x 1220 mm): Main beam tees spaced 1220 mm (48") oc and cross tees 610 mm (24") oc unless reviewed otherwise.

.2 2x2 Pattern (610 mm x 610 mm):Main beam tees spaced at 1220 mm (48") o.c, primary cross tees spaced at 610 mm (24") o.c and secondary cross tees spaced at 610 mm (24") o.c.

.2 Securely tie members to hangers. Properly lock main tees and cross tees at intersections. Assemble framework to form a rigid and interlocking system.

.9 Installation of Trims and Mouldings:

.1 At locations where ceilings abut walls, columns and other vertical surfaces, Install continuous wall moulding to trim ceiling edges. Install moulding with bottom horizontal leg at elevation required to support acoustic panel and to be flush with bottom flange of grid members, and with vertical leg concealed.

.2 Bolt mouldings to supporting construction at 610 mm (24") on centres and within 150 mm (6") of end of each moulding piece. Provide tight, inconspicuous butt joints in moulding if several pieces are required in any one run.

.3 At recessed-grid system for reveal-edge ceiling tiles, Install "W" shaped wall moulding, of profile specified in this Section, to retain recessed detail at ceiling perimeters.

.4 Fit panels moderately tight between upright legs of members. Cut panels neatly and accurately to fit closely around items piercing the finish ceiling plane. Provide special shapes and sized to Provide a complete installation by cutting panels to fit into less than full size openings.

.5 Secure each panel into grid opening with concealed hold-down clips.

3.4 ADJUSTING AND CLEANING

.1 After interior finishing work has been substantially completed, or when directed by the Consultant, inspect ceiling work. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members.

.2 Comply with the manufacturer's written instructions for cleaning and touchup of minor finish damage.

.3 Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

.4 Upon completion of the Project, finished surfaces shall be clean and free from dirt and other markings and in a good condition acceptable to the Consultant.

END OF SECTION

SEE ADD#16
Q#380

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide resilient rubber tile flooring including but not limited to the following:

.1 resilient rubber tile flooring.

.2 preparation of substrate.

.3 moisture reduction barrier.

.4 metal reducing strips and thresholds at junction with adjacent architectural finishes.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Division 01, for adhesives, sealants and any other material designated by Consultant.

.3 Maintenance Instructions: Submit 3 copies of Product maintenance manual to the Consultant prior to completion of the Work. The manual shall contain specific maintenance recommendations and give specific warning of any maintenance practice or materials which may damage or disfigure resilient flooring and bases.

1.7 QUALITY ASSURANCE

.1 Qualifications: Provide the work of this Section, executed by competent installers with a minimum of 5 years' experience in the application of the Products, systems and assemblies specified herein, and with the approval and training of the Product manufacturers. Ensure rubber flooring installers are certified by the material manufacturer with successful proven experience installing similar materials.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 Mock-Up: Provide complete room mock-up, minimum 10 m^2 (100 sq ft), complete with integral base showing corner conditions (4 inside corners and 2 outside corners) in locations designated by the Consultant and as required to demonstrate quality of workmanship. Maintain mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver and store materials undamaged in original wrappings or containers, with manufacturer's labels and seals intact. Store materials in a warm, dry area. Protect from damage due to weather, excessive temperatures, and construction operations.

.2 Deliver materials sufficiently in advance of installation to condition materials to room temperature prior to installation.

.3 Prevent damage to materials during handling and storage. Stack material not over 2 cartons in height, nor in excess of allowable floor loading. Store materials on smooth surfaces only, in an area designated by Consultant.

.4 Protect this work and the work of other trades at all times.

1.9 PROJECT CONDITIONS

.1 Environmental Requirements:

.1 Ensure ambient temperature of room and surface temperature of materials is not less than 18 deg C (65 deg F) for 48 hours before, during and after installation. Maintain minimum temperature as recommended by the Product manufacturer.

.2 Store adhesive on site 48 hours prior to installation. Remove rubber flooring from plastic wrap to facilitate equalization of temperature on site.

.3 Ensure adequate ventilation is provided during installation and curing of materials.

.4 Ensure humidity levels of spaces to receive rubber flooring are maintained at design levels for minimum 24 hours before installation.

.5 Avoid high humidity, cold drafts and abrupt temperature changes.

1.10 MAINTENANCE

.1 Extra Materials: Leave 1 carton of tile for each 93 m^2 (1000 sq ft) or less of each colour of tile installed, for the Owner's future use. Label cartons as to contents and indicate areas where tiles were used.

1.11 WARRANTY

.1 The Contractor warrants the work of this Section against defects and deficiencies in accordance with the General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant. Included in this warranty is the Contractor's responsibility for all costs associated with complete system replacement of areas defects or deficiencies (at no expense to the Owner).

.1 The warranty period for the flooring system (flooring material, adhesive and installation) is a period of 8 years starting from Substantial Performance of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Rubber Tile Flooring and Base

.1 Johnsonite/Tarkett
.2 Mondo Rubber
.3 Nora Rubber Flooring

.2 Underlayment and accessories

.1 Ardex Engineered Cements
.2 W.W. Henry Co.
.3 Koster American Corporation
.4 Mapei Inc.

2.2 REGULATORY REQUIREMENTS

.1 Provide Product with following flame spread rating and smoke developed rating when tested in accordance with following standards:

.1 Critical Radiant Flux (ASTM E648): > 0.45 watts/cm^2 – Class I

.2 Smoke Developed (ASTM E662): ≤ 450

.3 CAN/ULC-S102.2-M: Maximum Flame Spread: 100.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Provide Products free from blisters, cracks, chipped edges and corners, embedded foreign matter or other defects as required to complete flooring installation and to meet design requirements.

.2 Colour Uniformity: Use flooring from consecutive manufacturing process to maintain consistent colour match between adjacent sheets. Replace installed Products in areas that, in the opinion of the Owner of the Consultant, are showing undue colour variation.

2.4 MATERIALS

.1 Rubber Floor Tile (RUB):

.1 Tile Standard: ASTM F1344, Class I-B, Homogeneous Rubber Tile, through mottled.

.2 Wearing Surface: Smooth

.3 Thickness: 3 mm

.4 Size: 610 mm x 610 mm (24” x 24”)

.5 Colours and Patterns: to be selected by Consultant at a later date from manufactures full range.

.6 Acceptable Product: “Massetto” by Mondo or Equivalent.

.2 Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated. Do not use gypsum based materials.

.1 Underlayment: “Ultra/Plan” by Mapei Inc. or approved equivalent by Ardex Engineered Cements (or Equivalent).

.2 Patching Compound:”Plani/Patch” by Mapei Inc. or approved equivalent by Ardex Engineered Cements (or Equivalent).

.3 Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

.4 Metal Edge Strips: Extruded aluminum with mill finish of width shown, of height required to protect exposed edges of tiles, and in maximum available lengths to minimize running joints.

.5 Moisture Reduction Barrier: Application of systems for reduction of moisture vapour transmission and alkalinity control for concrete slab required to receive floor covering specified under this Section to be as follows:

.1 Moisture Vapour Emission Rate (MVER) Range: Ensure items provided are capable of treating high moisture vapour transmitting concrete surfaces up to 11.34 kg/93 m^2 (25 lbs/1000 sq ft) in 24 hours; Maximum Relative humidity: 100%; as determined by ASTM F1869 test.

.2 Final Product selection to suit condition encountered at time of installation. Where applicable, Provide manufacturer’s floor leveling systems for use with specified Products.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Substrates shall be clean and dry.

.3 Substrates shall be free of depressions, raised areas, or other defects which would telegraph through the installed resilient material.

.4 Temperature of resilient materials and substrate shall be within specified tolerances.

.5 Moisture condition and adhesive bond tests shall be performed as specified.

.6 For applications on concrete, verify curing, hardening, and sealing compounds have not been used. If there are any, do not proceed until compounds have been removed.

.7 For applications on concrete slabs "on-grade or below grade", verify vapor barrier below slab was installed. If no vapor barrier was installed, do not proceed with work unless written acceptance of such conditions is received and submitted.

.8 Be responsible to report conditions contrary to requirements that would prevent proper installation. Do not commence with work until unsatisfactory conditions have been corrected.

.9 Failure to report unsatisfactory conditions will be construed acceptance and approval of substrate conditions. Commencement of work shall imply acceptance of substrate with regard to conditions of substrate at time of installation.

3.2 PREPARATION

.1 Prepare concrete floors to receive resilient flooring in accordance with requirements of ASTM F710. Consult manufacturer for specific recommendations and prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings.

.2 Verify that substrates are dry and free of curing compounds, sealers, and hardeners.

.3 Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, paint, dirt, silicone, or any other foreign matter detrimental to flooring application using mechanical methods recommended by manufacturer. Do not use solvents.

.4 Pre-Installation Testing:

.1 Acidity/Alkalinity and Adhesion Testing:

.1 Conduct pH test to ensure alkali salt residue is within limitations acceptable to manufacturer and to avoid adhesive failure, discoloration, shrinkage and softening of floor covering.

.2 If pH results are higher than acceptable to manufacturer, neutralize floor prior to beginning of installation. Neutralize floor by sanding, vacuuming and by application of water and mild muriatic acid as recommended by manufacturer. Retest to ensure pH levels have been neutralized.

.3 Proceed with installation only after substrates pass testing.

.2 Moisture Testing:

.1 Relative Humidity Test: Perform relative humidity test in accordance with requirements of ASTM F2170 using in situ probes and measure internal relative humidity of slab.

.1 Ensure concrete slab and air space above floor slab are at service temperature and that relative humidity of area is similar to Project’s final conditions for 48 hours prior to measuring concrete relative humidity.

.2 Conduct minimum of 3 tests for first 1,000 sq.ft and one additional test for each 1,000 sq.ft. Conduct one test near center and others around perimeter of area.

.3 Proceed with installation only after substrates have a maximum 75% relative humidity measurement.

.4 Provide results to Consultant in writing prior to commencement of installation.

.5 Do not proceed with installation until moisture problems have been corrected.

.5 Moisture Barrier Application:

.1 Apply moisture reduction barrier at following locations:

.1 Basement slabs and Slabs-on-grades (regardless of pre-installation moisture testing results)

.2 Suspended slabs where slab moisture contents are above those recommended by floor covering manufacturers at time of installation after performing pre-installation testing.

.2 Prior to applying moisture barrier, mechanically prepare concrete substrate using dustless approved method to ICRI requirements to CSP (Concrete Surface Profile) #2 (Diamond Cup Ground) or #3 (Shotblasted).

.3 Apply moisture barrier in accordance with the manufacturer's recommendations across the entire surface being treated including up to and around the perimeter of restrained surfaces such as walls and columns.

.4 Do not proceed with work until unsatisfactory conditions have been resolved.

.6 Remove sub-floor ridges and bumps. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate. Prohibit traffic until filler has cured.

.7 Vacuum, prime and seal substrate to the resilient rubber flooring manufacturer's recommendations.

.8 Underlayment:

.1 Fill depressions, dished areas, low spots, voids, gaps, cracks, joints, holes and other substrate defects with underlayment, flat, even and flush with adjacent substrate. Remove projections and repair other defects to tolerances acceptable to the manufacturer.

.2 Floor fills, toppings and underlayment shall have minimum compressive strength of 24 MPa (3500 psi). Do not Install underlayment, leveler, patching and skim coat over expansion joints.

.3 Provide underlayment to achieve a flat substrate to within the following tolerances:

.1 3 mm (1/8") total maximum deviation + and - along a 3000 mm (10') straight edge applied omni-directionally over entire floor area.

.4 Provide a flat, smooth 600 mm (24") wide underlayment strip at the junction of resilient flooring with other finish flooring materials for a flush transition at the meeting edge. Feather strip edges to conceal its perimeter.

.5 Vacuum subfloors immediately prior to installation.

3.3 INSTALLATION

.1 Comply with the manufacturer's written instructions for installing floor tile and flash coved corners and base.

.2 Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

.1 Lay tiles in pattern indicated.

.3 Match floor tiles for colour and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

.1 Lay tiles in pattern of colours and sizes indicated.

.4 Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

.5 Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

.6 Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

.7 Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of colour and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

.8 Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 PROTECTION AND CLEANING

.1 Comply with manufacturer's written instructions for cleaning and protection of floor coverings.

.2 Perform the following operations immediately after completing floor covering installation:

.1 Remove factory applied wax, adhesive and other blemishes from floor covering surfaces.

.2 Sweep and vacuum floor coverings thoroughly.

.3 Damp-mop floor coverings to remove marks and soil.

.3 Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

.4 Provide and maintain necessary protection of bases. Replace damaged resilient bases with new materials at no additional cost.

.5 Cover floor coverings until Substantial Performance of the Work. Prohibit traffic on floor for 48 hours after installation.

3.5 DEMONSTRATION AND TRAINING

.1 Engage manufacturer to demonstrate cleaning and maintenance procedures to the Owner in accordance with requirements of Division 01.

END OF SECTION

SEE ADD#16
Q#380

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide resilient base including but not limited to the following:

.1 surface fillers, primer and adhesive.

.2 resilient toe bases at resilient floor areas.

.3 resilient toeless bases at carpeted areas.

.4 resilient stair accessories.

.5 resilient molding accessories

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting the work of this Section, convene a pre-installation meeting at the Project site to review the Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Division 01, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings: Submit Shop Drawings for the work of this Section in accordance with Division 01.

.1 Ensure Shop Drawings indicate material characteristics, dimensions, details of construction, joint layouts including movement joints, connections and relationship with adjacent construction.

.4 Samples: Submit samples in accordance with Division 01.

.1 Submit duplicate 610 mm (2'- 0") long sample of each type of resilient bases.

1.7 QUALITY ASSURANCE

.1 Manufacturer's Qualifications: Manufacturer shall have 5 years' experience in the successful manufacture and fabrication of flooring bases of the types and quality shown and specified herein. Submit proof of experience upon request

.2 Applicator Qualifications: Provide work of this Section executed by competent installers with a minimum of 5 years' experience in the application of Products, systems and assemblies specified herein, including 2 years in heat welding of seams and with the approval and training of the Product manufacturers. Upon request, provide proof of manufacturer's certificate to the Consultant prior to commencement of installation.

.3 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.4 Mock-Up:

.1 Build mockups to verify selections made to demonstrate aesthetic effects and set quality standards for materials and execution.

.2 Install minimum 12'-0" (3600 mm) long sections of each type of resilient base (2 inside and 2 outside corners) as directed at the site by Consultant. Do not proceed with resilient base work until quality control Mock-Up has been reviewed and accepted by Consultant.

.3 Reviewed and accepted quality control Mock-Up to be retained and serve as minimum acceptable standard for the resilient base work. Incorporate quality control Mock-Up into finished resilient base work if accepted by Consultant.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials in good condition to the Site in the manufacturer's original unopened containers that bears the name and brand of the manufacturer, Project identification, shipping and handling instructions.

.2 Store on site in designated space at minimum temperature of 20 deg C (68 deg F) for period of 48 hours immediately prior to, during and after installation. Store goods in rolls only.

1.9 PROJECT CONDITIONS

.1 Provide each flooring Product in accordance with manufacturer's recommended tolerances for:

.1 Substrate moisture content.

.2 Temperature and ventilation.

.3 Maintain relative humidity at application to % recommended by manufacturer when tested in accordance with ASTM F2170.

.2 Environmental Requirements: Air temperature and structural base temperature at base installation shall be above 20 deg C (68 deg F) for 72 hours before, during and 48 hours after installation. Allow base materials and application adhesives to acclimatize to these temperatures for 48 hours.

1.10 WARRANTY

.1 The Contractor warrants resilient bases for a period of 3 years from the date of Substantial Performance of The Work against defects and/or deficiencies in accordance with the General Conditions of the Contract.

.2 Promptly correct any defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant and at no expense to the Owner. Defects include but are not limited to: failure in adhesive bond and extensive colour fading.

1.11 MAINTENANCE

.1 Extra Materials: Supply to the Owner at the completion of the job 6000 mm (20'-0") of coil stock of each type of resilient base in colours specified for future repairs, boxed in original containers and clearly labeled. Extra stock shall be the same production run as the installed Products. Store extra stock in location as directed later by the Consultant.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of the Drawings, schedules and Specifications:

.1 Flexco

.2 Johnsonite Division of Duramax Inc.

.3 Roppe.

2.2 REGULATORY REQUIREMENTS

.1 Flooring materials shall be low VOC emitting materials when tested by a qualified testing agency.

.2 Surface burning characteristics: Provide Product with the following flame spread rating and smoke developed rating when tested in accordance with the following standards:

.1 Critical Radiant Flux (ASTM E648 or NFPA 253): > 0.45 watts/cm^2 – Class I

.2 Smoke Developed (ASTM E662): ≤ 450

.3 CAN/ULC-S102.2-M: Maximum Flame Spread: 100.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS

.1 Provide rubber stair treads as specified herein complete with preparation of substrate, and other accessories to complete installation to meet design requirements.

.2 Provide materials free from blisters, cracks, chipped edges and embedded foreign matter or other defects.

.3 Comply with applicable regulations regarding VOC content of adhesives.

.4 Colour Uniformity: Use treads from consecutive manufacturing process to maintain consistent colour match between adjacent installation. Replace installed Products in areas that, in the opinion of the Owner or the Consultant, are showing undue colour variation.

2.4 MATERIALS

.1 Rubber Toe Base (RB-1) (at resilient floor areas): ASTM F1861, PVC free, Type TS (rubber, vulcanized thermoset) or TP (thermoplastic rubber), Group 1 (solid, homogeneous); smooth surface with the following characteristics:

.1 Styles: Cove (base with toe)

.2 Thickness: Minimum 3.2 mm (0.125”) thick

.3 Height: 100 mm (4") unless otherwise indicated on Drawings.

.4 Lengths: Coils in manufacturer's standard length.

.5 Corners: Job-formed using adhesive, cove former fillet radius reinforcing strips, welding rod and accessories as recommended by the resilient base manufacturer.

.6 Colours: To be selected by the Consultant at a later date from the manufacturer's full range including designer colours.

.7 Acceptable Products:

.1 “Rubber Wall Base” by Johnsonite (or Equivalnet).
.2 “Marathon Rubber Cove Base” by American Biltrite (Canada) Ltd. (or Equivalnet).
.3 “Pinnacle Rubber Wall Base” by Roppe (or Equivalnet).
.4 “Wallflowers Rubber Wall Base” by Flexco (or Equivalnet).

.2 Rubber Toeless Base (RB-2) (at carpeted areas): ASTM F1861, PVC free, Type TS (rubber, vulcanized thermoset) or TP (thermoplastic rubber), Group 1 (solid, homogeneous); smooth surface with following characteristics:

.1 Styles: Straight (flat or toeless)

.2 Thickness: Minimum 3.2 mm (0.125”) thick

.3 Height: 100 mm (4")

.4 Lengths: Coils in manufacturer's standard length.

.5 Corners: Job-formed using adhesive, cove former fillet radius reinforcing strips, welding rod and accessories as recommended by resilient base manufacturer.

.6 Colours: To be selected by Consultant at a later date from manufacturer's full range including designer colours.

.7 Acceptable Products:

.1 “Rubber Toeless Wall Base” by Johnsonite (or Equivalnet).
.2 “Marathon Rubber Toeless Base” by American Biltrite (Canada) Ltd. (or Equivalnet).
.3 “Pinnacle Rubber Wall Base” by Roppe (or Equivalnet).

.3 Molding Accessories and Transitions (TRANSITION 3)

.1 Description: Provide resilient caps for cove resilient flooring, reducer strips for resilient flooring, joiners for tile and carpet and transition strips as noted on the Drawings and Schedules or where metal transitions are not indicated.

.2 Profile and Dimensions: As recommended by the manufacturer.

.3 Colours and Patterns: As selected by the Consultant from a full range of industry colours.

.4 Acceptable Manufacturer: Johnsonite or Equivalent.

2.5 ACCESSORIES

.1 Surface fillers and primers: Types and brands approved, acceptable to the resilient base manufacturers for applicable conditions. Use non-shrinking latex compound.

.2 Resilient base adhesives: Best quality, waterproof, clear setting type and brands as recommended by the resilient base manufacturer and meeting VOC limits stipulated herein.

.3 Stair-Tread Nose Filler: Two-part epoxy compound recommended by the resilient stair-tread manufacturer to fill nosing substrates that do not conform to tread contours.

.4 Metal Edge Strips: Extruded aluminum with mill finish of width shown, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.

.5 Joint Sealant: Provide CAN/CGSB-19.24-M, multi-component modified urethane base chemical curing sealing material compatible with adjacent materials finish and as recommended by resilient base manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Ensure concrete floors are fully cured. Verify concrete floor dryness by using test methods recommended by flooring manufacturer.

.3 Verify curing, hardening or other admixtures have been used and if used ensure these compounds have been removed.

.4 Installation of flooring shall be considered an acceptance of surfaces to be covered. If repair of surfaces is required after commencement of flooring work it shall be included as part of the Work specified herein.

3.2 PREPARATION

.1 Substrates shall be:

.1 dry and clean;

.2 free of cracks, ridges, depressions, raised areas or other defects which would telegraph through and interfere with adhesion and installation of flooring;

.3 temperature of resilient flooring and substrate shall be within specified tolerances;

.2 Perform moisture and adhesive bond test.

.3 Perform adhesive bond test in each major area, minimum 1 per 93 m^2 (1000 sq ft), prior to installation. Examine after 72 hours to determine whether bond is solid and no moisture is present. Do not proceed with work until results of bond test are acceptable.

.4 Concrete shall have dampness no greater than that recommended by the flooring and adhesive manufacturers when tested with moisture meter. Where floors exhibit negative alkalinity, carbonization or dusting conform to manufacturers' recommendations for removal of these elements that are detrimental to the work.

.5 Be responsible to report conditions contrary to requirements that would prevent proper installation. Do not commence work until unsatisfactory conditions have been corrected.

.6 Failure to report unsatisfactory conditions will be construed acceptance and approval of substrate conditions. Commencement of the work of this Section shall imply acceptance of substrate with regard to conditions of substrate at time of installation.

.7 Prepare horizontal concrete substrates according to ASTM F 710.

.8 Pre-Installation Testing:

.1 Acidity and Alkalinity Test:

.1 Conduct pH test to ensure alkali salt residue is within limitations acceptable to manufacturer and to avoid adhesive failure, discoloration, shrinkage and softening of floor covering.

.2 If pH results are higher than acceptable to manufacturer, neutralize floor prior to beginning of installation. Neutralize floor by sanding, vacuuming and by application of water and mild muriatic acid as recommended by manufacturer. Retest to ensure pH levels have been neutralized.

.2 Relative Humidity Test:

.1 Perform relative humidity test in accordance with requirements of ASTM F2170 using in situ probes and measure internal relative humidity of slab. Ensure concrete slab and air space above floor slab are at service temperature and that relative humidity of area is similar to the Project's final conditions for 48 hours prior to measuring concrete relative humidity.

.2 Conduct a minimum of 3 tests for first 1,000 sq.ft and one additional test for each 1,000 sq.ft. Conduct one test near center and others around perimeter of area.

.3 Ensure relative humidity probe test results do not exceed 75% unless recommended otherwise by flooring manufacturer(s) in writing. Do not proceed with installation until moisture problems have been corrected. Provide results to the Consultant prior to commencement of installation.

3.3 INSTALLATION

.1 Resilient Bases:

.1 Resilient base work shall be performed by experienced and competent workers in strict accordance with manufacturers' written instructions for material concerned.

.2 Fill cracks or irregularities with crack filler approved by resilient base manufacturer. Provide a solid backing over entire area behind resilient base.

.3 Immediately before installation, sweep and vacuum clean substrates to be covered by resilient Products

.4 Apply primer in strict accordance with manufacturer's written instructions. Permit primer to dry.

.5 Apply adhesive evenly and continuously with an approved notchtooth spreader at the recommended rate for full base adhesion and contact. Mechanical spreader not approved. Do not apply adhesive in a manner which promotes induced waviness in resilient base. Do

not spread more adhesive than can be covered before initial set takes place. Use waterproof adhesive throughout.

.6 Mix and spread adhesive evenly, in quantities which can be covered by resilient base within the adhesive's working time. If the adhesive over-dries, completely remove it using solvents compatible with adhesive and re-apply adhesive. Do not soil walls, bases, fitments, finish carpentry work or adjacent surfaces with adhesive. Promptly remove all excess and spillage of adhesive.

.7 Unroll coils of resilient base. Place resilient base flat to loosen coil set.

.8 Set wall base in adhesive tightly against wall and floor surfaces. Use lengths as long as practicable and not less than 500 mm (20") long.

.9 Install resilient bases to walls, columns and fitments as indicated on the Drawings, during final stages of completion of work, when ceilings and permanent partitions are finished, when prime paint coats are applied and when surface conditions are suitable for installation.

.10 Set resilient base in adhesive to produce a positive, permanent bond without gaps, tight against vertical and floor surfaces for a uniform fit.

.11 Install resilient base straight and level with maximum height variation of 1:1000, having vertical, tight and flush "hairline" butt joints with no two joints closer than 2' - 0" (610mm) apart.

.12 Roll resilient base with clean, polished 5 lbs.(2.27 kg) roller, against vertical and floor surfaces to ensure full bonding to surfaces.

.13 Ensure that installation of resilient base is tight, firm, and free of bubbling and separation of any kind from surfaces. Remove defective installation as directed by the Consultant and Install new resilient base as specified herein.

.14 Resilient base work shall be handed over to the Owner free of blemishes and in perfect condition.

.15 Job-Formed Corners:

.1 Accurately scribe and fit resilient base to metal frames and other obstructions.

.2 Outside Corners: Use straight pieces of maximum lengths possible. External corners shall be wrapped around corners as sharp as possible by scoring the back. Form without producing discoloration (whitening) at bends. Shave back of base at points where bends occur and remove strips perpendicular to length of base that are only deep enough to produce a snug fit without removing more than half the wall base thickness.

.3 Inside Corners: Provide mitred internal corners. Use straight pieces of maximum lengths possible. Shave back of base where necessary to produce a snug fit to substrate.

.2 Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.4 CLEANING

.1 Remove excess adhesive from floor, base and wall surfaces without damage.

.2 Clean, seal and wax floor and base surface to flooring manufacturer's instructions.

.3 Sweep and vacuum horizontal surfaces thoroughly.

.4 Damp-mop horizontal surfaces to remove marks and soil.

3.5 PROTECTION

.1 Protect installed flooring as recommended by flooring manufacturer against damage from rolling loads, other trades or placement of fixtures and equipment.

.2 Prohibit traffic on floor for 48 hours after installation.

END OF SECTION

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract.

.2 Division 01 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: *Provide* static dissipative resilient flooring including but not limited to following:

.1 substrate preparation.

.2 static dissipative resilient flooring.

.3 moisture reduction barrier.

.4 reducing strips and thresholds at junction with adjacent architectural finishes.

.2 Related Requirements: Specifications throughout the entirety of Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Division 01.

.2 In particular address the following items:

.1 Prior to commencing work of this Section arrange for manufacturer's technical representative to review with Contractor and Consultant, procedures to be adopted and conditions under which work shall be performed. Inspect surfaces to determine adequacy of existing and proposed conditions.

.2 Ensure Division 3 requirements for concrete are compatible with requirements of this Section. Ensure following meet acceptable criteria to ensure proper performance floor covering work:

.3 floor flatness and floor levelness requirements for static dissipative resilient flooring installation and their acceptability by flooring manufacturer;

.4 surface texture of finished floor required for static dissipative resilient flooring installation;

.5 acceptable approaches to remediation of high moisture and high pH floors;

.6 adhesive application and floor covering installation.

.7 Co-operate fully with other Subcontractors on the Work and promptly proceed with work of this Section as rapidly as job conditions permit.

.8 Co-operate with other Sections for application of all miscellaneous specialties.

.9 Supply items to be built-in in ample time to be incorporated into work of other Subcontractors, together with measurements and other information required for location of it.

.10 Ensure work which may create dust does not proceed during work related to painting and final finishing.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for *Project* in accordance with requirements of Division 01. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Division 01, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit *Shop Drawings* for work of this Section in accordance with Division 01. Submit *Shop Drawings* for all areas showing the following:

.1 seam layout for seams between rolls;

.2 coving details, treatment at walls and floor drains;

.3 treatment where flooring meets dissimilar materials and all other special conditions.

.2 Obtain reviewed *Shop Drawings* from *Consultant* prior to commencement of resilient flooring application.

.4 Site Quality Control Submittals: Submit a diagram of area showing locations and results of each of the following tests as required by pre-installation testing:

.1 Acidity and alkalinity test

.2 Relative humidity test

.5 Samples:

.1 Submit samples in accordance with Division 01.

.2 Submit duplicate 300 mm x 300 mm (12" x 12") sample pieces of sheet material, 300 mm (12") long integral base. Where applicable nosing, feature strips, treads, edge strips and applicable accessories.

.3 Submit samples for welding rod, each type of seam specified, to indicate quality of joint treatment, and each type of flooring accessory.

.4 Submit sample of internal and external corner of coved base having fused seams as specified.

.6 Operating and Maintenance Instructions Manual: Provide maintenance data for resilient flooring for incorporation into maintenance manual specified in Division 01.

1.7 QUALITY ASSURANCE

.1 Qualifications:

.1 Manufacturers: Provide Products for Work of this Section by manufacturer with minimum 10 years' experience in the manufacture of such materials.

.2 Installers: Provide work of this Section executed by competent installers with minimum 5 years' experience in the application of Products, systems and assemblies specified and with approval and training of the Product manufacturers.

.2 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.3 *Mock-Ups*:

.1 Lay a typical interior flooring area of approximately 10 m² (100 sq ft) in a permanent location within the building to be designated by *Consultant*. Include [2 steps,] [integral base,] each threshold condition, fused joint treatment and perimeter joint sealant.

.2 Sample flooring area, once accepted, shall become a permanent part of *Project* and shall be the standard of workmanship against which the balance of static dissipative resilient sheet flooring work will be judged.

1.8 DELIVERY, STORAGE AND HANDLING

.1 Deliver materials in good condition to site in manufacturer's original unopened containers that bears name and brand of manufacturer, *Project* identification, shipping and handling instructions.

.2 Store on site in designated space at minimum temperature of 20 deg C (68 deg F) for period of 48 hours immediately prior to, during and after installation. Store sheet goods on ends of rolls only.

1.9 PROJECT CONDITIONS

.1 Environmental Requirements: Air temperature and structural base temperature at flooring installation shall be above 20 deg C (68 deg F) for 72 hours before, during and 48 hours after installation. Allow flooring materials and application adhesives to acclimatize to these temperatures for 48 hours.

.2 Do not allow traffic on floor for following duration of time (after installation): 24 hours for walking traffic; 48 hours for light static loads; and 72 hours for heavy traffic or static loads.

1.10 MAINTENANCE

.1 Extra Materials: *Supply* to *Owner* at completion of job, 3% gross area as spare flooring of each colour, packaged in original cartons. Maintenance materials shall be same production run as installed materials.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers may be acceptable subject to conformance to requirements of Drawings, Schedules and Specifications:

.1 Flexco

.2 Forbo Industries

.3 Roppe.

.2 Comparable *Products* from manufacturers listed herein will be considered provided they meet the requirements of this *Specification*, offering functionally, aesthetically equivalent products in *Consultant's* opinion and subject to *Consultant's* review.

2.2 REGULATORY REQUIREMENTS

.1 Provide Product with following flame spread rating and smoke developed rating when tested in accordance with following standards:

.1 Critical Radiant Flux (ASTM E648): > 0.45 watts/cm2 – Class I

.2 Smoke Developed (ASTM E662): ≤ 450

.3 CAN/ULC-S102/S102.2-M: Maximum Flame Spread: 100.

.2 Electrical Resistance: EC: 2.5 x 10^4 – 10^6 ohms surface to ground; SD 1 x 10^6 - 10^8 ohms surface to ground; when tested according to NFPA 99, ASTM F150, EOS/ESD S7.1.

.3 Static Load Limit: 970 pounds per square inch when tested in accordance with ASTM F 970-00, Standard Test Method for Static Load Limit.

.4 Slip Resistance: EC/SD floor covering shall meet or exceed ADA recommendations of 0.6 for flat surfaces when tested in accordance with ASTM D2047.

.5 Castor Resistance: EN 425: Suitable for Office Chair Castors.

.6 Ensure that floor finishes specified in this Section do not exceed a maximum of 300 for flame spread rating and a maximum 300 for smoke developed classification when tested in accordance with CAN/ULC S102.2, unless otherwise indicated.

.7 In exit stairways, vestibules to exit stairs, lobbies, and service spaces / service rooms, ensure that floor finishes specified in this Section do not exceed a maximum of 25 for flame spread rating and a maximum 50 for smoke developed classification when tested in accordance with CAN/ULC S102.2.

2.3 DESIGN AND PERFORMANCE REQUIREMENTS:

.1 Provide Products free from blisters, cracks, chipped edges and corners, embedded foreign matter or other defects. Ensure materials contain no PVC.

2.4 MATERIALS

.1 Static Dissipative Resilient Flooring (SHV-SD): ASTM F1913, non-backed, non-layered, homogenous vinyl composition composed of polyvinyl chloride resin, stabilizers, fillers and pigments for use on approved slab on grade and suspended floors, maximum 3 colours and *Product* design selected by *Consultant* from manufacturer's full range:

.1 Tile:

.1 Size: 304 mm x 304 mm (12 inch x 12 inch)

.2 Thickness: 2.00 mm (0.08") thick

.3 Acceptable Products:

.1 Colorex EC/SD by Forbo Industries.
.2 Roppe ESD by Roppe.
.3 Flexco ESD Vinyl flooring by Flexco.

.2 Primers and Adhesives: Waterproof, of types recommended by resilient homogenous flooring manufacturer for specific material on applicable substrate, above, on or below grade.

.3 Sub-Floor Filler: Fast setting, white premix latex requiring water only to produce cementitious paste to manufacturer's recommendations.

.4 Metal Edge Strips: Aluminum extruded, smooth, mill finish and polished with lip to extend under floor finish, shoulder flush with top of adjacent floor finish.

.5 Moisture Reduction Barrier: Application of systems for reduction of moisture vapour transmission and alkalinity control for concrete slab required to receive floor covering specified under this Section to be as follows:

.1 Moisture Vapour Emission Rate (MVER) Range: Ensure items provided are capable of treating high moisture vapour transmitting concrete surfaces up to 11.34 kg/93 m^2 (25 lbs/1000 sq ft) in 24 hours; Maximum Relative humidity: 100%; as determined by ASTM F1869 test.

.2 Final *Product* selection to suit condition encountered at time of installation. Where applicable, Provide manufacturer's floor leveling systems for use with specified Products.

.3 *Provide* 1 of following:

.1 "Planiseal Series – Moisture Barrier Systems" by MAPEI Inc.;

.2 "Ardex Moisture Control Systems" by Ardex Engineered Cements;

.3 "Koester VAP I - 2000" by Koester USA Moisture Control System.

.4 Approved proprietary equivalent moisture control system recommended in writing by floor covering manufacturer and approved by *Consultant* in order to authenticate floor covering warranties.

.6 Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated. Do not use gypsum-based materials. Refer to Section 03 54 16.

PART 3 - EXECUTION

3.1 EXAMINATION

.1 Site Verification of Conditions:

.1 Verify actual site dimensions and location of adjacent materials prior to commencing work. Notify Consultant in writing of any conditions which would be detrimental to the installation. Commencement of work implies acceptance of previously completed work.

.2 Ensure concrete floors are fully cured. Verify concrete floor dryness by using test methods recommended by flooring manufacturer.

.3 Verify curing, hardening or other admixtures have been used and if used ensure these compounds have been removed.

.4 Installation of flooring shall be considered an acceptance of surfaces to be covered. If repair of surfaces is required after commencement of flooring work it shall be included as part of the work specified herein.

.5 Substrates shall be:

.1 dry and clean;

.2 free of depressions, raised areas or other defects which would telegraph through installed flooring;

.3 temperature of resilient flooring and substrate shall be within specified tolerances;

.4 perform moisture and adhesive bond test.

.5 Perform adhesive bond test in each major area, minimum 1 per 93 m^2 (1000 sq ft), prior to installation. Examine after 72 hours to determine whether bond is solid and no moisture is present. Do not proceed with work until results of bond test are acceptable.

.6 Concrete shall have dampness no greater than recommended by flooring and adhesive manufacturers when tested with moisture meter. Where floors exhibit negative alkalinity, carbonization or dusting conform to manufacturers' recommendations for removal of these elements detrimental to work.

.7 Be responsible for reporting conditions contrary to requirements that would prevent proper installation. Do not commence with *Work* until unsatisfactory conditions have been corrected.

.8 Failure to report unsatisfactory conditions will be construed acceptance and approval of substrate conditions. Commencement of *Work* shall imply acceptance of substrate with regard to conditions of substrate at time of installation.

.9 Pre-Installation Testing:

.1 Acidity and Alkalinity Test:

.1 Conduct pH test to ensure alkali salt residue is within limitations acceptable to manufacturer and to avoid adhesive failure, discoloration, shrinkage and softening of floor covering.

.2 If pH results are higher than acceptable to manufacturer, neutralize floor prior to beginning of installation. Neutralize floor by sanding, vacuuming and by application of water and mild muriatic acid as recommended by manufacturer. Retest to ensure pH levels have been neutralized.

.2 Relative Humidity Test:

.1 Perform relative humidity test in accordance with requirements of ASTM F2170 using in situ probes and measure internal relative humidity of slab. Ensure concrete slab and air space above floor slab are at service temperature and that relative humidity of area is similar to Project's final conditions for 48 hours prior to measuring concrete relative humidity.

.2 Conduct minimum of 3 tests for first 1,000 sq.ft and one additional test for each 1,000 sq.ft. Conduct one test near center and others around perimeter of area.

.3 Ensure relative humidity probe test results do not exceed 75% unless recommended otherwise by flooring manufacturer(s) in writing. Do not proceed with installation until moisture problems have been corrected. *Provide* results to *Consultant* prior to commencement of installation.

3.2 PREPARATION

.1 Prepare concrete floors to receive resilient sheet flooring in accordance with requirements of ASTM F710. Consult individual manufacturer for their specific recommendations and follow them as required.

.2 For existing floors conduct non-chemical methods of removal such as abrasive cleaning or blast cleaning, including methods described in ASTM D4259 on existing concrete slabs with deleterious residues.

.3 Moisture Barrier:

.1 Apply moisture reduction barrier at following locations:

.1 Basement slabs and Slabs-on-grades (regardless of pre-installation moisture testing results)

.2 Suspended slabs where slab moisture contents are above those recommended by floor covering manufacturers at time of installation after performing pre-installation testing.

.2 Prior to applying moisture barrier, mechanically prepare concrete substrate using dustless approved method to ICRI requirements to CSP (Concrete Surface Profile) #2 (Diamond Cup Ground) or #3 (Shotblasted).

.3 Apply moisture barrier in accordance with manufacturer's recommendations across entire surface being treated including up to and around perimeter of restrained surfaces such as walls and columns.

.4 Do not proceed with work until unsatisfactory conditions have been resolved.

.4 Clean floor free of paint, oil, dirt or any other foreign matter detrimental to sheet flooring application.

.5 Remove sub-floor ridges and bumps. Fill low spots, cracks, joints, holes and other defects with sub-floor filler.

.6 Clean floor and apply filler; trowel and float to leave smooth, flat hard surface. Prohibit traffic until filler has cured.

.7 Vacuum, prime and seal substrate to static dissipative resilient flooring manufacturer's recommendations.

3.3 INSTALLATION

.1 *Install* flooring in accordance with manufacturer's installation procedures and as specified herein. Mix and apply adhesives to manufacturer's recommendations.

.2 *Install* flooring wall to wall before installation of floor set cabinets, casework, furniture, equipment and fixed partitions.

.3 Apply adhesive uniformly using recommended trowel. Do no spread more adhesive than can be covered by flooring before initial set takes place.

.4 Lay static dissipative resilient sheet flooring using heat seam and welding rod process. Prepare heat welded seams with special tool for this purpose and heat weld with vinyl welding rod in seams. Use method and sequence or work in conformance with approved *Shop Drawings* and in conformance with manufacturer's recommendations. Finish seams flush and free from voids, recesses and raised areas. Lay flooring (with seams parallel to building lines) to produce a minimum number of seams. Border widths minimum 1/3 width of full material. Lay static dissipative sheet flooring true, level and with even tight joints. Fit borders accurately as required.

.5 Run sheets parallel to length or width of room as approved. Double cut sheet joints and continuously seal.

.6 As installation progresses, roll flooring with 45 kg (100 lb) roller to ensure full adhesion. Keep edges of sheet flooring at seams devoid of extra adhesive.

.7 Cut flooring neatly around fixed objects. *Provide* borders around permanent fixtures.

.8 *Install* floor markings where indicated. Fit joints tightly.

.9 *Install* flooring in pan type floor access covers. Maintain floor pattern.

.10 Continue flooring over areas which will be under built-in furniture.

.11 Continue flooring through areas to receive movable type partitions without interrupting floor pattern.

.12 Terminate flooring at centreline of door in openings where adjacent floor finish or colour is dissimilar.

.13 *Install* metal edge strips at unprotected or exposed edges where flooring terminates.

.14 Tile

.1 Ensure permanent HVAC is on operation and set at a minimum of 68o F (20o C) at least one week prior to installation. Acclimate material to jobsite conditions for a minimum of 48 hrs. prior to installation.

.2 Conduct moisture tests on all concrete slabs regardless of age or grade level. Concrete moisture vapor emissions shall not exceed 3.0 lbs per 1000 sq. ft. in 24 hrs; Measure the relative humidity in the center of the concrete slab in accordance with ASTM F2170. Relative humidity shall not exceed 75%.

.3 Conduct pH test to ensure it does not exceed a pH of 10.

.4 Use adhesive, patching and leveling compounds as recommended by manufacturer. Conduct adhesive mat bond test to ensure proper working time of adhesive.

.5 *Install* tiles on approved substrates, *Install* tile in alternating directions (quarter turned). Install tiles into wet adhesive and roll immediately with a 100 lb. roller. Always check for proper adhesive transfer. Ensure complete wet transfer of adhesive to tile backing.

.6 Do not allow heavy traffic or rolling loads for a minimum of 72 hours following the installation.

.15 Resilient Base

.1 *Install* resilient bases to walls and fitments as indicated on the *Drawings* and Room Finish Schedule, during final stages of completion of work, when ceilings and permanent partitions are finished, when prime paint coats are applied and when surface conditions are suitable for installation.

.16 Set resilient base in adhesive to produce a positive, permanent bond without gaps, tight against vertical and floor surfaces for a uniform fit.

.17 *Install* resilient base straight and level with maximum height variation of 1:1000, having vertical, tight and flush "hairline" butt joints with no two joints closer than 2' - 0" (610mm) apart. *Provide* mitred internal corners. External corners shall be wrapped around corners as sharp as possible by scoring the back.

3.4 CLEANING

.1 Remove excess adhesive from floor, base and wall surfaces without damage.

.2 Clean and seal floor and base surface to flooring manufacturer's instructions.

.3 Conform to manufacturers' maintenance instructions for complete routine maintenance.

3.5 PROTECTION

.1 Protect installed flooring as recommended by flooring manufacturer against damage from rolling loads, other trades or placement of fixtures and equipment.

.2 Prohibit traffic on floor for 48 hours after installation.

3.6 DEMONSTRATION AND TRAINING

.1 Engage manufacturer to demonstrate cleaning and maintenance procedures to Owner in accordance with requirements of Division 01.

Q#380

PART 1 - GENERAL

1.1 PRICING

.1 All costs associated with the work required by and associated with this Section shall be included as part of the Contract Price and in the price listed in item #1 of the Bid Form.

1.2 GENERAL INSTRUCTIONS

.1 Read and conform to:

.1 the General Conditions and the Supplementary Conditions of the Contract;

.2 Division 1 requirements and documents referred to therein.

1.3 SUMMARY

.1 Work Included: Provide athletic flooring including but not limited to the following:

.1 underlayment.

.2 athletic flooring.

.3 resilient base.

.4 reducing strips.

.5 moisture reduction barrier.

.2 Related Requirements: Specifications throughout the entirety of the Divisions of this Project are directly applicable to this Section, and this Section is directly applicable to them.

1.4 REFERENCES

.1 Reference Standards: Latest published editions of reference standards listed in this Section in effect as of the closing date and time of the Request for Tenders for the Contract, including any amendments adopted, are applicable unless otherwise indicated.

1.5 ADMINISTRATIVE REQUIREMENTS

.1 Pre-Installation Meetings:

.1 Prior to starting work of this Section, convene a pre-installation meeting at the Project site to review Project requirements and site conditions with pertinent parties. Conform to requirements of Section 01 30 00.

1.6 SUBMITTALS

.1 Product Data: Submit manufacturer's literature and data sheets for each type of material provided under this Section for the Project in accordance with requirements of Section 01 30 00. Ensure data sheets provide required information including detailed instructions for installing as well as maintaining, preserving and keeping materials in clean and safe conditions. Provide adequate warning of maintenance practices or cleaning agents detrimental to specified materials.

.2 Safety Data Sheets (SDS): Submit SDS for inclusion in Operation and Maintenance Manual specified in Section 01 70 00, for adhesives, sealants and any other material designated by Consultant.

.3 Shop Drawings:

.1 Submit Shop Drawings for the work of this Section in accordance with Section 01 30 00. Submit Shop Drawings for all areas showing the following:

.1 seam layout for seams between rolls;
.2 coving details, treatment at walls and floor drains;
.3 treatment where flooring meets dissimilar materials and all other special conditions.

.2 Obtain reviewed Shop Drawings from the Consultant prior to commencement of resilient flooring application.

.4 Site Quality Control Submittals: Submit a diagram of the area showing locations and results of each of the following tests as required by pre-installation testing:

.1 Calcium chloride test

.2 Acidity and alkalinity test

.3 Relative humidity test

.5 Samples: Submit samples in accordance with Section 01 30 00. Submit the following samples in sizes indicated:

.1 Athletic flooring 300 mm (12") square.

.2 Resilient base 300 mm (12") long.

.3 Resilient caps 300 mm (12") long.

.4 Reducing strips 300 mm (12") long.

.6 Maintenance Instructions: Submit 3 copies of the Product maintenance manual to the Consultant prior to completion of the Work. The manual shall contain specific maintenance recommendations and give specific warnings of any maintenance practices or materials which may damage or disfigure athletic flooring and bases.

1.7 QUALITY ASSURANCE

.1 Qualifications: Provide the work of this Section executed by competent installers with a minimum of 5 years' experience in the application of the Products, systems and assemblies specified herein and with the approval and training of the Product manufacturers.

.2 Colour Uniformity: Sheet flooring used shall be from consecutive manufacturing process to maintain consistent colour match between adjacent sheets. Installed areas showing undue colour variation, in the opinion of the Owner, shall be replaced.

.3 Single Source Responsibility: Ensure primary materials provided in this Section are obtained from 1 source by a single manufacturer and secondary materials are obtained from sources recommended by primary materials manufacturers.

.4 Mock-ups: Provide complete room Mock-up, minimum 10 m2 (100 sq ft) complete with integral base showing corner conditions (4 inside corners and 2 outside corners) in locations designated by Consultant and as required to demonstrate quality of workmanship. Maintain Mock-ups during construction in an undisturbed condition as a standard for judging the completed work.

1.8 MAINTENANCE

.1 Extra Materials: Leave 1 carton of tile for each 93 m^2 (1000 sq ft) or less of each colour of flooring type installed for Owner's future use or 2% of total quality installed. Label cartons or rolls as to contents and indicate areas where tiles were used.

1.9 DELIVERY, STORAGE AND HANDLING

.1 Deliver and store materials undamaged in original wrappings or containers, with manufacturer's labels and seals intact. Store materials in warm and dry area. Store linoleum rolls upright.

.2 Deliver materials in original packaging clearly labelled with Project information, flooring materials, location and other pertinent information.

.3 Prevent damage to materials during handling and storage. Do not stack flooring materials over 2 cartons in height or in excess of allowable floor loading. Store materials on smooth surfaces only, in area designated by Consultant.

.4 Protect this work and work of other trades from damage at all times.

1.10 PROJECT CONDITIONS

.1 Environmental Requirements:

.1 Ensure ambient temperature of room and surface temperature of materials is not less than 18 deg C (65 deg F) for 48 hours before, during and after installation. Maintain minimum temperature as recommended the Product manufacturer.

.2 Ensure humidity levels of spaces to receive linoleum are maintained at design levels for a minimum 24 hours before installation.

.3 Avoid high humidity, cold drafts and abrupt temperature changes.

1.11 WARRANTY

.1 The Contractor warrants the work of this Section for a period of 10 years from Substanital Performance of the Work against defects and deficiencies in accordance with the General Conditions of the Contract. Promptly correct defects or deficiencies which become apparent within this warranty period, to the satisfaction of the Consultant. Included as part of the Contractor’s warranty obligations is the Contractor’s responsibility for all costs associated with the complete system replacement of areas by any defects and deficiencies (at no expense to the Owner). Defects include but are not limited to: material shrinkage, cracking, splitting and defective workmanship including but not limited to failure in adhesive bond, bubbling, blistering, delamination and seam failure

PART 2 - PRODUCTS

2.1 MANUFACTURERS

.1 Products of following manufacturers (or Equivalent) may be acceptable subject to conformance to requirements of Drawings, schedules and Specifications:

.1 Athletic Flooring:

.1 Flexco;
.2 Mondo America Inc.
.3 Compass Flooring;
.4 Gym-Con;
.5 Roppe Corporation;
.6 Edgewood Athletics;

.2 Comparable Products from manufacturers offering functionally, aesthetically equivalent Products in Consultant’s opinion and subject to Consultant’s review, listed herein will be considered provided they meet the requirements of this Specification.

2.2 DESCRIPTION

.1 Regulatory Requirements:

.1 Provide Product with following flame spread rating and smoke developed rating when tested in accordance with following standards:

.1 Critical Radiant Flux (ASTM E648): > 0.45 watts/cm^2 – Class I
.2 Smoke Developed (ASTM E662): ≤ 450
.3 Maximum Flame Spread (CAN/ULC-S102.2-M): ≤ 100.

.2 Design and Performance Requirements:

.1 Provide Products free from blisters, cracks, chipped edges and corners, embedded foreign matter or other defects.

.2 Static Load Capacity: ASTMF970, Exceeds 10.54 kg/cm² (150 psi).

2.3 MATERIALS

.1 Sports Flooring (SPF-1):

.1 Top Layer: 6 mm thick prefabricated resilient athletic flooring, calendered and vulcanized, with a base of natural and synthetic rubbers, stabilizing agents and pigmentation.

.1 Basis-of-Design: “MondoArmor” by Mondo Inc. or Equivalent;

.2 Underlayment: resilient shock absorbing underlayment; 12 mm prefabricated synthetic rubber honeycomb (elongated hexagon-shaped) base, calendered and vulcanized, with special isoprenic rubbers, mineral fillers, stabilizing agents and pigmentation, designed and engineered for heavy impact resistance.

.1 Basis-of-Design: “Baselast EX” by Mondo Inc. or Equivalent;
